## PITTSBURGIANS SATISFIED

With the Talking Machine Business for the Past Year—Notable Feature of the Trade Was the Demand for High Grade Outfits—Columbia Co. Lease New Quarters—The Outlook for the Year Satisfactory.

(Special to The Talking Machine World.)

Pittsburg, Pa., Jan. 10, 1906.

The January round of the dealers in talking machine goods throughout Pittsburg showed that the holiday business had come up to and exceeded all expectations. There were none to kick. All reported the best business in the history of the trade. Another interesting fact stands out. An analysis of the machines sold shows that there were more high grade outfits sold and a correspondingly smaller number of the cheaper grades. In many instances persons who had purchased machines formerly exchanged these out-of-date instruments for new and improved ones. Many holiday purchasers were from that class of men who could write their checks for six figures if they cared to.

There could be no more gratifying single fact than this to start the new year. With such an experience behind them, the manufacturers can go ahead on lines which are no longer experimental, and there is no doubt but that the machines which will be put on the market during the coming year will be of a constantly advancing grade. In talking over this phase of the business with the president of one of the largest manufacturing concerns during his recent visit to Pittsburg, he said: "I believe that during the coming year there will be no machine in our catalogue which will sell for less than \$20." This is as it should be. The bane of the talking machine business is and has been the cheap machines which have been put out in the past. These were badly adjusted, poorly constructed mechanically, and their reproduction was at all times bad.

Manager McMurtry of the Columbia Co. has just closed a lease for the six-story building at 636 Penn avenue, and has already a force of carpenters at work fitting the same up for occupancy by the different departments of the company. The building will be known as the Columbia Phonograph Building. It is a modern fireproof structure with a handsome terra cotta front and will be of itself a constant advertisement for the business of the company. It is hoped to occupy the building by the first of February.

Messrs. Powers & Henry of the Talking Machine Co. have enlarged the capacity of their store by adding a room on the second floor, directly overhead, and connecting the same with their ground floor by a handsome stairway. The windows of their store during the holiday season were perhaps the most tastefully decorated of any talking machine store in the city. The basic colors used were white and gold, and the effect was very striking indeed.

The talking machine department of the music store of the S. Hamilton Co., which was opened just before the holidays, had a very prosperous month. Their display of Edison, Victor and Columbia goods was a good one, properly arranged and admirably handled.

Merrill L. Bardwell, formerly of the Powers store in Buffalo, has returned to Pittsburg and entered the employ of the Columbia Phonograph Co., in charge of floor sales.

Michael Bard, of the firm of Bard Bros., of Wheeling, spent a few days in Pittsburg early in

## WANTED

Capable man to take charge of our talking machine repair department. We are jobbers of both Edison Phonographs and Victor Talking Machines. Nobody but a competent man and a rustler need apply. Address Dept. D,

J. W. JENKINS' SONS MUSIC COMPANY,

Kansas City, Mo.

January. Bard Bros. have been exceptionally successful in their new venture in Wheeling, and the senior partner looks forward to winning still greater laurels in the future. Their success only shows what can be accomplished when there is specialization in the direction of selling talking machines.

In course of an illustrated article the Pittsburg Post says some complimentary things of the enterprise of the Theo. F. Bentel Co., and adds: "They carry at all times about 100,000 cylinder records and 50,000 disc, ranging in price from 35 cents up to the grand opera records at \$5 each. They supply over 750 dealers in Pennsylvania, New York, Ohio, West Virginia and Kentucky, from the wholesale department. In the retail department machines and records are sent all over the world, including South America.

"Over 2,300 active retail customers buy from the firm weekly, and they dispose of about 50,000 Edison records every month. Among their customers are numbered many Pittsburg millionaires. The institution is the largest purchaser of Edison records in the country.

"The Theo. F. Bentel Co. is capitalized at \$100,000, all paid in, and is officered as follows: Theo. F. Bentel, president and treasurer; W. J. Tipper, vice-president, and Edwin E. Natcher, secretary.

"The firm believes in judicious newspaper advertising, and, like John Wanamaker, lays aside 2 per cent. of its income for this purpose. This was the result of a long correspondence had with Mr. Wanamaker on the subject by Mr. Bentel. When first starting into business Mr. Bentel took up the question of advertising with Mr. Wanamaker, and suggestions were passed back and forth and finally a decision was reached as to the percentage of income to be used for advertising."

## BYRON G. HARLAN AS SANTA CLAUS.

The Well Known Singer Helps Elks to Bring Christmas Cheer to Needy Children.

The Orange (N. J.) Lodge of Elks fittingly exemplified that "charity" is of the fundamental principle of the Order on last Christmas day, when 350 needy children were made happy.

Mr. Harlan was the inspiration of the entertainment and chairman of the committee that undertook the affair. Santa Claus was personated by Mr. Harlan, who amused the boys and girls by his actions and funny songs. In addition to the Christmas tree there was a big turkey dinner, and also an entertainment of Edison's moving pictures and music.

Expressions of pleasure were on the faces of all present, and the poor mothers with infants in their arms and the little ragged children who received shoes, stockings, sweaters, mittens and underwear were too happy to believe it true.

Perhaps none really got more pleasure out of it than did Mr. Harlan. He said his mother suggested the idea to him when he was out West last summer. He thoroughly believes "a good deed well done" is always a pleasure.

## LYON & HEALY'S NEW DEPARTMENT.

(Special to the Talking Machine World.)

Chicago, Ill., Jan. 12, 1906.

Lyon & Healy have opened another department to their already large and growing business. In the last four weeks they have sold over thirty complete outfits for the study of French, German and Spanish. L. L. Lewis, B.A., who is in charge of this department, has had considerable experience with these courses. He is an honor graduate of Queens University. He prepared himself for a trip to Cuba and Mexico in less than a year, taking spare time outside business hours with one of these outfits. The International Correspondence Schools of Scranton are the authors and editors of these courses,

## SUBSTITUTES FOR OPERA CHORUS.

The Gentlemen Who Deal Out Humor for the Daily Papers Utilize the Talking Machine in This Connection Most Effectively.

The strike of the chorus at the Metropolitan Opera House during the past few weeks has been the subject of much jocular comment in the New York papers, and all sorts of suggestions for substitutes were made to Director Conried by the cartoonists. For instance, the clever artist of the New York Times conjured up the following idea of a talking machine chorus to take the place of the missing artists:

The idea might have been acted upon were it not for the fact that Herr Conried compromised and paid the twenty-five dollars per week demanded by the strikers.

The cartoonist of The World some days later worked up a somewhat similar idea in another form, which is worthy of reproduction, as it shows what a place the talking machine has won in the minds of leading cartoonists as well as literary men.

It is very probable that had not Herr Conried acceded to the demands of the chorus some such substitute as talking machines would have been welcome. Indeed, the experiment would be highly interesting, apart from the humor of it.

## VICTOR CO. CHANGES PLAN.

The Victor Talking Machine Co. have changed their plan of sending out sample records to dealers and distributors. Hereafter the regular monthly records cannot be sold to the consumer or retailer until the 28th of the month preceding the date of the supplement. In other words, the February records cannot be placed on the market at the regular retail or wholesale prices until January 28. Nevertheless the samples of same are forwarded to the distributor on the first of the preceding month. Same can be shown to the dealer, but not sold.

## GOLD MINES!

The properly conducted store, properly advertised, is really a gold mine. Keep your men busy—let me write your advertising. Write me to-day.

R. E. GRANDFIELD, Fall River, Mass.

## CAPITAL NOW \$10,000,000.

The American Graphophone Co. at the Meeting Held Last Week Increased Their Capital to the Foregoing Amount and Changed the Par Value of Their Stock from Ten to One Dollar Per Share—Directors Increased to Seventeen—Splendid Report of the Year's Business.

At the annual meeting of the stockholders of the American Graphophone Co., held at Bridgeport, Conn., on the 8th inst., the report of the president was received and showed not only a sound and healthy condition of the company but a continuation in growth and enlargement. In view of the rapid growth of the business and the constantly increasing demand for the Company's output making a further increase in capital desirable, it was voted, upon the recommendation of the Board of Directors, to increase the capital stock of the company from \$5,000,000, which had consisted of \$2,500,000 preferred and \$2,500,000 common stock, to \$10,000,000, consisting of \$2,500,000 preferred and \$7,500,000 common stock. It was also voted to change the par value of the stock from \$10 to \$100 per share, and to increase the number of directors to seventeen.

The annual statement of the American Graphophone Co. for the year ended September 30, 1905, shows an increase in net earnings of \$105,283, and an increase in surplus of \$91,104. The income account, with comparisons, is as follows:

		Increase.
Net earnings .....	\$803,643	\$105,283
Other income .....		*31,565
Charges, depreciation, etc. ....	174,094	47,627
Preferred dividends .....	117,210	24,864
Common dividends .....	54,067	30,033
Reserve account .....	160,000	*120,000
P. & L. surplus .....	298,272	91,104

\*Decrease.

## OPEN COIN-SLOT PARLOR.

Gordon Bros., of Worcester, Mass., have opened a coin slot parlor in Lawrence, where they have a very fine line of Edison goods.

## WHY NOT QUARTERLY BULLETINS.

In Place of Monthly Lists—The World Opens Its Columns for a General Expression of Opinion on This Subject.

The question has arisen among manufacturers of records as to the wisdom of issuing a quarterly bulletin of new records in place of the monthly lists now appearing.

We do not know that any company has definitely decided to follow this course, but the matter is being considered from all sides, for and against. We would like to see a general expression of opinion from dealers and jobbers, and we offer the columns of this paper for an open discussion as to the wisdom of this move and its probable effect on the trade, if it should be universally adopted.

The scope of this question is broader than it appears at first glance. We believe that a thoughtful consideration of this matter by the trade at large will bring out some valuable suggestions. Let us hear from you, gentlemen.

## TALKING MACHINES AS A SIDE LINE.

A Leading Small Goods Man Descants on This Feature of the Trade and to Good Purpose.

A large retailer in musical merchandise, in speaking of the talking machine business as an auxiliary to his business, said to The World in the course of a conversation bearing upon that subject: "When I first took the matter into consideration, I could see nothing in it, and for a long time looked upon it as a detriment to any business. I found out, however, that some of my customers wanted these machines, and if I could not supply them, and the records as well, they would go elsewhere, and in so doing, would in all probability buy more or less musical merchandise, so I placed in stock a few machines as an accommodation. In a short time I found that instead of conflicting with my interests they

were of a direct benefit to my trade as they were the means of bringing in customers that had never before visited my place, and through the sale of a few records or a machine was able to sell them a good bill of my other wares. Later, I found that the talking machine was a good seller the whole year around, while much of my other stock moved only at stated seasons, and that the sale of a talking machine meant a continued revenue from records. I now regard the talking machine part of my business as one of the most important, and have gone to a great deal of expense to properly take care of it by the erection of booths, etc. The man who says it is only a passing fad and cannot be made to pay, has never gone at it in the right way, and cannot handle any class of musical merchandise profitably. In the talking machine business, like any other branch of the musical trade, a dealer must study his customer. If I see that the desire is for classical and sacred music, I never think of offering a coon song or a piece of rag-time music except by request, and when I am in doubt I pick out some excellent rendition of some one of the old time favorite songs that appeal to all classes. Another thing I have learned, and that is never to judge the size of a bank roll by the dress worn by the customer. There are many successful dealers in talking machines in the country at the present time, and as each year rolls on I expect to see the number greatly augmented. I regard the business as still in its infancy, and as perfection comes nearer, the time will come when the talking machine will be a fixture in almost every home where there is any love for music. I see that sometimes it is spoken of as the 'poor man's' instrument. I take notice that the rich are becoming the best customers, and enjoy it as much as the poorest."

At the regular directors' meeting of the Betini Phonograph Co., 156 West 23d street, New York, on the 10th inst., the strong showing made by Manager Barklow was favorably commented upon and commended. The company is doing an excellent business.

## Do You Use Our Needles?

EVERYONE WHO DOES USE THEM RE-ORDERS. THERE MUST BE SOMETHING IN IT. GET IN THE SWIM—ORDER TO-DAY.

## NEEDLES.

Wholesale-Retail

We can give you the lowest possible price for first-class needles. We do not handle any inferior grades. Everything purchased from us guaranteed to be the best obtainable.

LARGEST TALKING MACHINE HOUSE IN THE CITY.

## TIMELY TALKS ON TIMELY TOPICS.

Music publishers may have their grievances against record manufacturers, but the properly informed know that the existing copyright law affords them no protection, so far as court decisions to date have dealt with the question. More's the pity; but facts cannot be overcome by frenzied statement conceived in error and expressed in bias and prejudice. A contributor, signing himself "Silas Deane," in an esteemed contemporary, begins a violent tirade by saying: "The latest thing that has come to afflict the sheet music business is the free phonograph record." Then he goes on and gives rein to opinions which are not only untruthful and misleading, but is the veriest balderdash to those at all familiar with the methods followed in choosing selections for making records. "Talent" are not on the same footing as in the music trade; their usefulness depending entirely on their specific adaptability. The idea of music publishers engaging to buy records if their melodies are used is preposterous, if the leading companies are aimed at; for they require a signed agreement covering certain conditions of sale, the violation of which is no light matter. The free distribution of records is therefore out of the question. In this particular instance a little information is a dangerous thing, and the voicing of it in the manner described ridiculous in the extreme.

\* \* \*

Jack of all useful trades is the moving picture machine, which has been successfully applied to natural science research, microscopy, electrical and physical phenomena, medical science, chemistry and anthropology, and, latest of all, to a native devil dance in Borneo. The march of civilization is so rapidly taking undeveloped peoples beyond their native customs that it is of the greatest importance some means should be adopted for placing them on record. And in

this work the moving picture is the ideal agent, for by its aid is obtained a truthful and permanent record of native ceremonies and customs.

\* \* \*

With the frequency which the amplifying horn is referred to as an indispensable adjunct in the reproduction of sound by means of the talking machine, news comes that an invention is nearing perfection to supersede the horn entirely. The sanguine prophet of this revolutionary innovation declares that not many moons will wax and wane before the hornless machine will be a practical and commercial success. The mechanism employed and the results obtained are described as akin to the music box. Possibly advocates of the horn may have something to say concerning this alleged latest discovery, and in that event the controversy may be conducted in a manner more forcible than elegant.

Jobbers and dealers who failed to see far enough into the future to gauge the overwhelming holiday trade that ensued, were greatly bothered for lack of goods to meet the demand. It is not stating it too strong to say that the exceptions were few, indeed. An Eastern jobber of the earliest experience in the trade and of impeccable financial standing, must have been wise to the coming events which cast their shadow before, as he placed his holiday order for his leading line in June last. In other words, he got in on the ground floor, and when the trying times came along and the clamor for goods the loudest, this jobber was happy with a full supply, and his reward was proportionate to his wisdom. Further comment is needless.

Speaking of the shortage of stock, one of the manufacturing companies, on behalf of their sales department, said: "It is due the general manager of sales to say that no official of this company

has worked harder in the past four months to apportion fairly and equitably among the jobbers the output of machines. It has been his daily task to sit down with a tabulated sheet showing the orders on file and designate how each day's output should be shipped." As this pressure has now been relieved, the company suggests (the advice is of general application) that unfilled orders should not be cancelled, "for the sale of talking machines has ceased to be a matter of seasons. It is an all-year-round business, with less variation in volume each month than many lines generally regarded as more staple. The sooner this fact is recognized the better it will be for all concerned." No truer words were ever penned, and events since the first of the year—only a few brief days—prove this assertion beyond a doubt.

A prominent New Jersey physician, who has an unenviable reputation for his unintelligible writing, not so very long ago had occasion to leave instructions for a nurse who had charge of one of his patients. Learning that they had a correspondence school phonograph in the house he dictated his message, and found it such a successful means of communicating his wishes to both patient and nurse that he is seriously thinking of purchasing several and installing them in homes where the care of a nurse is a necessity. He knows that they can easily misinterpret his writing, but cannot fail to understand his verbal instructions when delivered by means of a phonograph.

One of the shrewdest men in the trade, eminently successful and president of a concern with a world reputation, in advising with a buyer and jobber, told him to treat his customers all alike as to price. "Have one selling figure on your machines, records and accessories, and stick to it," he remarked, "until Hades freezes over. Any other policy is hazardous, if not suicidal." These observations came up in the course of a conversation regarding the status of jobbers as such as distinguished from dealers who are only heavy

## Announcement to the New England Trade

Our talking machine business has grown so steadily and rapidly, that for the third time in six years we have found it necessary to remove to larger quarters. We have just had completed the largest stock department for records in the United States at our headquarters, 48 Hanover street, covering an entire floor containing 10,000 square feet, devoted solely to the wholesale trade. With our new facilities we are enabled to carry in stock at all times records in sufficient quantities to take care of the largest orders. To our patrons we are sincerely appreciative for their favors and to those dealers who have not favored us we invite them to call or communicate with us, and we will use our best endeavors to make their dealings with us pleasant and profitable for them.

48 Hanover Street

BOSTON, MASS.

buyers, a matter which has been referred to in previous issues of *The World*. Judging from present practices, which the future may change, though it does not seem likely, the discussion seems fruitless and a waste of time and energy. It is held the manufacturers are disinclined to make any distinctions. That one time a company of high standing, with transactions in every section of the globe, had three different discounts; but the plan would not work, so it was surrendered and the system adopted now in vogue on sales to jobbers and dealers, with no intermediate differences as to terms than is allowed on quantity purchased. So the applicability of treating all alike in this connection is readily recognized.

Elsewhere in our news columns the details of several sales making the highest records ever known are given. It looks as if 1906 is to go so far ahead of any previous years as to render comparisons "odorous," according to the predictions of an authority. If sales of such magnitude are already materializing, what may be expected when things are in full swing.

The time and attention devoted by the retail dealers in talking machines to their window displays for the holiday season proved conclusively the fact that if a dealer wants to sell anything it must be shown to the public. The dealers as a whole were exceedingly well pleased with the December trade, and in the volume of business pronounced it fully up to their expectations. There is a general feeling that they would have made more money if the price of records had been maintained up to January 1, but that loss was partially made up by the increased sale of both records and machines. Most of the dealers are preparing for the spring and summer campaign, and will carefully watch for any novelty connected with the talking machine business that will yield an additional profit. There is a growing tendency on the part of many of the dealers to confine themselves to one line of products, owing to the cost of carrying complete stocks of all makes and being unable to return unsalable goods, or to get rid of them on the "bargain counter." Many dealers had on hand a number of used records, which they had taken in exchange, and which under the new rules they could not return. These they have been selling at any price as "slightly used."

Samples of the National Phonograph Co.'s grand opera records were in the hands of the jobbers on the 2d of the month, as per advance announcement circulars. The records will be shipped the dealers with their regular February order. While the demand for these beautiful records was expected to be large, the actual orders placed exceeded the estimate of General Sales Manager Wilson over 100 per cent. The business of the company for the year is calculated on a new high-record basis. On December 31 they were behind 50,000 phonographs of the various sizes actually booked for delivery.

At a meeting of the Western Railroad Classification Committee at Los Angeles, Cal., talking-machine interests will petition for a reduced rate on their goods—the classification to be first class, instead of one and a half, as now. The leading manufacturing companies, jobbers and dealers will be represented before the committee. The classifying of freight is based on its fragility, but the trade are prepared to present proof that not a single case of talking-machine goods has been damaged in transit, a record unequalled in any line of business, due to the care with which packing is looked after. The rate prevails west of the Mississippi river only.

In announcing that their new cylinder, standard size, records would be on the market about February 1, Leeds & Catlin Co., New York, also state they have no idea of making a six-inch record. As Mr. Leeds remarked: "In our judgment the time for the six-inch record as a commercial proposition has not arrived. Of course, companies who manufacture a machine to use with the half-foot record are in the proper position. As

it is their own affair, and know their own business best, it would be presumptuous on our part to criticise. Our company makes records only, and not machines, and for the present, at least, we do not contemplate entering that field. When the six-inch machines become generally distributed, both in the trade and with the public, then it will be time for us to commence making cylinders of that dimension."

A gentleman who began to feel that the conversation and manner of speech in his home were not as pleasant and refined as they ought to be, was one day reading Robert Burns' poem addressed to a louse he had seen on a lady's bonnet at church. When he came to the verse

"O, wad some power the giftie gie us,  
To see oursel's as ithers see us"

he made a new version, as follows:

"O, wad some power the giftie gie us,  
To hear oursel's as others hear us!  
It wad frae monie a blunder free us  
and foolish notion."

After a little reflection he said to himself, "The talking machine's the thing," so he purchased one and asked a friend to select some day when neither he nor any member of the family knew what was to be done and have recorded every word spoken in the sitting room of the home. When the records had been made they were given to the assembled family. One after another began saying, "I didn't say any such thing!" Ah, but there were the words and the voice, and the very tone of expression. Curiously enough, the gentleman found that he himself was often shown to be one of the rudest of all.

But he says that phonograph has wrought a moral revolution in his home, and he would not part with that one lesson for a thousand dollars; and often now he murmurs to himself:

"O, wad some power the giftie gie us,  
To hear oursel's as others hear us"

God bless Bobby Burns and the man that invented the talking machine.

The year 1905 was one of unexampled prosperity to the entire country and great strides were made in all industrial businesses. In few other industries have greater advances been made than in the manufacture of talking machines, observes the Edison Phonograph Monthly. The growth of the business has been of a phenomenal character and quite beyond the expectations of even the most optimistic men connected with it. Regarded but a few years ago as a fad that would soon run its course, the phonograph has, by its rapid evolutions, won widespread recognition as an article quite as staple as a piano and as likely to endure.

Had a prophecy been made a dozen years ago that a phonograph store would ever be opened in the ultra fashionable shopping district of Fifth avenue, the prophet would have been regarded as only fit to make a "maniac" record on the phonograph of that day, but one of the most perfectly appointed retail warerooms in the city has been opened by Stanley & Pearsall at 541 Fifth avenue, almost in the shadow of Delmonico's and other noted establishments of that famous thoroughfare. George A. Stanley, the head of the firm, who was until a short time ago the manager of the talking machine department of the Jacot Music Box Co., is a veteran in the business, having been actively engaged in it for the past sixteen years, and has seen the talking machine develop from a scientific toy to a work of art that adorns the homes of the wealthiest in this city of great riches. In their new warerooms they carry the Victor line only and cater to the trade that is found in that thoroughfare. They believe that business promises great things for the future, and by looking at their patrons it can easily be seen that the millionaire enjoys the tuneful melodies as thoroughly as his less fortunate fellow citizen, laughing at the coon songs and ragtime melodies as much as they.

"The phonograph has opened up a new and lucrative field for professional musicians," remarked the manager of a talking machine establishment this week. "Quartettes and soloists

are in demand for the production of the records, and some of the large manufacturing establishments have orchestras in their employ to furnish all the latest musical gems. Like the piano, the phonograph has come to acquire a recognized place in most homes, and its perfection has raised it from the plane of a mere curiosity. Grand opera stars now sing for the manufacturers, and their voices are reproduced with remarkable distinctness. It is to the lesser musicians, however, that the phonograph is proving most profitable. Many gain steady engagements with the record manufacturers, and the wide sale of the machines is bringing to the notice of the public deserving singers who might otherwise be a long time in attaining popularity to which they are justly entitled."

A new variety of clocks now made in Europe speaks the hours instead of striking them, through an ingenious application of the phonograph. Many nervous people who object to the strident and often harsh sounding bells proclaiming the hour and half hour will appreciate a softly modulated voice announcing the time.

The French inventor has made clocks with speaking discs of various kinds to serve as alarms. You can be awakened by the vigorous crowing of a cock or the sound of a well-known voice. They are arranged to call out in various degrees of modulation, some loud enough to rouse the heaviest sleeper.

As alarm clocks, they should in time, supersede all others, for the discs can be changed as often as necessary, so that the sleeper will not become so familiar with the call as to sleep on, which often happens in the case of the ordinary clocks with bells. If a boy is awakened out of his slumbers by a loud call to "Wake up!" or "Time for school!" muttered in the familiar voice of his mother or father he is much more apt to heed it than an ordinary alarm bell.

## NATIONAL PHONOGRAPH CO.

**Demands of This Growing Business Necessitate the Erection of More New Buildings.**

The National Phonograph Co. are steadily adding to their great manufacturing plant at Orange, N. J., and although the buildings now occupied cover in the neighborhood of twenty acres, new ones are being erected one after another in order to take care of the vast amount of business done by them. A new three-story concrete building, 187 feet long by 40 feet wide, was completed not long ago, and will be used for a machine shop and manufacturing purposes.

As every inch of floor space in the old buildings is being used to the best possible advantage, two new buildings are now under way for the sole purpose of manufacturing the new Edison battery which is used for running automobiles, trucks, cams and vehicles of all kinds.

Within the next ten days the new building for nickel-plating purposes will be completed. It is 287 feet long and 50 feet wide, made of concrete and steel construction. It has a 50-foot span, without any columns, and 50-foot beams, with a seven-foot monitor top for ventilation. A 20-ton crane will be used in this building to carry the heavy articles from one end to the other.

For the manufacturing of the new Edison battery the foundations are now being laid for a concrete building 600 feet long by 62 feet wide, extending along Ashland avenue, the same as the smaller one, only this one extends the length of the entire block from Charles street to Lakeside avenue. It will be four stories high. The different floors will be divided into departments.

## VICTOR CO.'S GREAT BUSINESS.

It is said that the business transacted by the Victor Talking Machine Co., of Camden, N. J., during the present year will exceed \$12,000,000. In view of the expansion of their business and the arrangements made to meet it, it is certain that this wonderful record will be far exceeded in 1906.

## One dealer sold \$54,000 worth

of *VICTOR* goods in three months, and the population of his town was only 100,000.

He saw the opportunity to get in on the demand we create by our magazine advertising. He realized that a part of the 46,000,000 people reached each month by the magazines carrying our advertisements lived right around him and wanted

## Victor Talking Machines and Records

But he didn't depend upon us to do all the work for him. He pitched in and did some advertising on his own hook in the local papers—told people he had the *VICTOR* and would be glad to play it for them if they came to his store.

Other dealers have been just as successful by working along these lines.

Why don't you try the same thing?

**VICTOR TALKING MACHINE COMPANY**  
**CAMDEN, N. J.**

 P. S. One of the most valuable "hints" to a keen dealer is: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.)

Artistic Monthly Bulletins furnished free for this purpose.

### OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

#### DECEMBER 10.

Berlin, 524 pkgs., \$8,613; 455 pkgs., \$7,062. Brussels, 31 pkgs., \$420; Bombay, 50 pkgs., \$766. Buenos Ayres, 59 pkgs., \$2,000; Calcutta, 19 pkgs., \$651. Callao, 13 pkgs., \$373. Cartagena, 5 pkgs., \$126. Colon, 6 pkgs., \$105. Cienfuegos, 15 pkgs., \$325. Glasgow, 46 pkgs., \$753. Hamburg, 3 pkgs., \$150; 3 pkgs., \$285. Havana, 42 pkgs., \$1,145; 20 pkgs., \$2,545. Hayre, 21 pkgs., \$2,185. Iquique, 7 pkgs., \$210. La Guaira, 20 pkgs., \$467. Liverpool, 38 pkgs., \$1,905. London, 13 pkgs., \$134; 848 pkgs., \$12,864; 229 pkgs., \$4,753. Mexico, 4 pkgs., \$123. Melbourne, 184 pkgs., \$5,583. Milan, 37 pkgs., \$700. Para, 75 pkgs., \$17,491. Rio Janeiro, 11 pkgs., \$178; 20 pkgs., \$1,840. Savanilla, 3 pkgs., \$370. Southampton, 10 pkgs., \$320. ### TALKING MACHINES IN MANCHURIA.

Recent Boycott of American Goods Disappearing—Some Interesting Facts About the Trade in Talking Machines and Supplies in the Far East.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 8, 1906.

Consul-General Sammons, of Niuchwang, furnishes an interesting report on the use of phonographs, graphophones and gramophones in Manchuria. The recent boycott had the effect of creating popular prejudice toward American machines, but it is expected that this prejudice will entirely disappear shortly and that the growing demand for machines of this kind will restore the popularity of those from the United States. Mr. Sammons writes:

Phonographs, graphophones and gramophones are sold in this market in small numbers, mostly by native dealers, who purchase cautiously through Shanghai houses. A cheap style of graphophone has sold here for from \$30 to \$40 Mexican, approximately \$15 to \$20 gold. Some of these instruments, ordered three or four years ago, when the Russians occupied this port, remain unsold. The indications are that a more costly instrument of the gramophone variety will become more popular. From \$140 to \$160 Mexican is paid for the better grades by Chinese, who take very enthusiastically to musical instruments of this kind. The Chinese have peculiar ideas regarding music box trade-marks. One quite famous trade-mark, showing a dog alert to catch his master's voice as it came from the horn, proved distasteful, for the reason that it seemed to couple the canine with the human listeners. Therefore, such a trade-mark had to be altered so as to show an old man listening to the music instead of a little terrier with a quizzical, expectant expression, mystified by a human voice coming from a metal funnel.

#### IN THE ARMY AND ON THE STREETS.

A few phonographs have been used by the Japanese army in lower Manchuria, largely through the efforts of the Young Men's Christian

Association, and the soldiers have shown continued interest. Whenever the phonograph is in operation there is always a crowd of interested soldiers who will not leave until the music ceases. A phonograph, graphophone or gramophone equipped with a Chinese record invariably attracts a throng, the limits of which indicate the zone of the carrying power of the instrument. Records used in this part of China are made, as a general thing, at Shanghai. Those reproducing the songs of Chinese actresses seem most popular. Phonographs are frequently used in public to attract a crowd, but there are in private Chinese families quite a number of small and inexpensive instruments of various patterns, largely of the toy variety. The cheaper grades bid fair to be supplanted by the more costly instruments.

#### EFFECTS OF THE BOYCOTT.

It is a significant fact that many small stocks of these instruments now in this part of the world do not appear in public under the Stars and Stripes. The license originally allowed the boycott agitation resulted in many far-reaching and incidious ramifications, such, for instance, as the tendency to disguise an article of American manufacture. This catering to the boycott sentiment is reflected in the removal of "U. S. A." from many of the musical instruments offered for sale in Chinese shops. Moreover, in the Oriental mind the fact that some of the instruments do not find buyers is not wholly supposed to be on account of the obsolete style or price, but is partially due to an aversion to barter in the wares of the boycotted nation. In some instances, where the fact that musical instruments are manufactured in America is disguised, the agents remove the words "Made in U. S. A.," and notify the trade that "They come from England."

There is, nevertheless, a growing demand for musical instruments of this class, and the outlook indicates steadily increasing sales.

### BUILDING UP A GOOD BUSINESS.

John F. Wilhelm, of the Eureka Talking Machine Co., 511-513 West Broadway, this city, is rapidly coming to the front as a manufacturer of disc talking machines. His new 1906 model tapering arm machine is meeting with remarkable success.

A novel feature used by Mr. Wilhelm to both sell machines and enhance the sale of records is as follows: By purchasing twenty one-dollar discs the buyer obtains a first-class machine, of which a cut appears in the Eureka's advertisement in this issue. Mr. Wilhelm is now prepared to place his instruments extensively before the trade, and has some highly interesting propositions to lay forth, which would pay those concerned to inquire about.

The National Discophone Co., New York, has applied for their discharge from bankruptcy. The application was unopposed, and it will doubtless be granted by the United States District Court in due course.

**Amplifying Horns**

Mulberry and Murray Streets,

NEWARK, N. J.

## BUSINESS CONTINUES BRISK

**In Manufacturing Branches of the Talking Machine Trade—Retail Has the Usual Relapse After Activity, But an Improvement Is Noted This Week—Cut in Price of Disc Records Helping Business.**

Not a great deal of difference is noticeable between the pre-holiday week and the present time, so far as business is concerned. Retail trade doubtless has suffered a slump, but it is only temporary, judging from the activity so pronounced in jobbing circles. Manufacturers declare the demand for goods is more insistent than ever, and aver they will find it difficult to fill orders promptly for either machines or records, and then only in part. Enlarged plants and greater facilities are significantly mentioned by all the prominent companies whose goods are the staple commodities of the trade, and this information is based upon measures now under consideration by the respective directorates.

The reduction in the price of disc records is now producing results primarily anticipated, and the increased orders have justified this step, which is now known to have been inevitable, no matter what the so-called wiseacres and chronic kickers predicted. The policy of the originators of the cut is regarded by the progressivists as not only proper, but reflecting enterprise and foresight of a high order. The improvement of manufacturing conditions, it is held, cannot be curtailed or hindered in their natural course of development by the hypercritical or ultra-conservatives, who are referred to as passing judgment from a selfish consideration alone. All changes require time for adjustment; and it appears affairs in the trade have again assumed their wonted tranquillity, and satisfaction reigns supreme. A year of magnificent accomplishment is regarded as absolutely certain.

## GOT FATHER TO WORK.

**Hitherto Unsuspected Influence of the Talking Machine—Stimulates Lazy Men to Activity.**

Another proof of the tremendous influence of the talking machine is to hand from the capital of the West—Chicago. Martin Stenstrup, of that city, is the living proof of its power to effect reform in the habits of an individual. Martin had been an industrious worker at his trade of interior decorator, but after he had taken part in several strikes the do-nothing habit got him, and he loafed around the house while his wife did washing and scrubbing to support the family.

One day Mrs. Stenstrup was stricken with a bright idea. She purchased or borrowed a talking machine, and also procured one record upon

which were traced the strains of that beautiful, pathetic ballad:

"Everybody works but father;  
He sits around all day."

She set up the instrument in her home and saw to it that whenever her indolent worse half settled himself down for his day's rest, it was set in motion. When she could not tend the machine herself she had one of the little Stenstrups wind it up, again and again.

For a while Stenstrup endured the vocal reproach without flinching. At last it got on his nerves. He arose, smashed the machine, and went to look for a job. He found one, and has it yet. His reform seems to be complete and permanent.

But truly, the talking machine had to do something to redeem itself, and create a reason for its further being.

## THEIR FOREIGN OFFICES.

The National Phonograph Co. have established a branch house at Calle Prolongacion del 5 de Mayo, 67-77, Mexico City, with Rofael Cabanas as local manager. The Australian house of the company is located at 340 Kent street, Sydney. It began business on January 1. Both offices are under the control of their foreign department, in charge of Walter Steevens.

## S. A. FLOYD IN NEW QUARTERS.

S. A. Floyd, the progressive talking machine dealer of Harrisburg, Pa., has recently moved into his new building, which is a five-story structure. He is occupying the ground floor and basement, using the entire forty-eight thousand square feet of flooring for the exclusive use of his talking machine business, to which he is devoting his entire energy. He carries a very extensive stock of both Columbia and Victor goods, and is in a position to handle both wholesale and retail. Mr. Floyd is a very popular gentleman, who is destined to be heard from.

## EDWARD B. JORDAN APPOINTED.

Edward B. Jordan, who has been recently re-appointed by President Roosevelt to his second term as Internal Revenue Collector for the second district of New York State, is a prominent talking machine cabinet manufacturer in Brooklyn. He makes cabinets for the Columbia Phonograph Co.'s graphophones, and also for the National Phonograph Co.'s slot machines. His son, Edward J., Jr., runs the plant, making his New York headquarters at the noon hour at "Ye Olde Tavern."

J. G. Williams, a prominent bookseller of Worcester, Mass., has a well appointed talking machine department.

## MAKING SELECTION OF RECORDS.

**How Plans Are Laid and Developed—Feeling the Pulse of the Publisher and Public—Some of the Good Sellers.**

"How do I make up selections for our records?" said the manager. "It requires some experience, of course, but after all it is something like this: We have a man who calls upon the music publishers, who load him up with their publications. With one exception, no charge is made to us for the music, the understanding being they are only too glad to have their songs, selections, waltzes, marches, etc., reproduced. Then I go through all the music papers carefully to see what is being used, together with the names of the professionals, and from that we can, in a measure, judge whether they are worth while. The musical criticisms of daily papers, which are closely scanned, affords us a line on the operas and higher class music. When the selections are decided upon we pick out the 'talent' suitable to learn the piece. Here is where mistakes are occasionally made. For example, we would prefer consulting the 'talent' as to the people whose voices are best adapted for the purpose, but we found this did not work, as the parties of whom we sought advice on this point almost invariably insisted on recommending themselves for the assignments, and this plan had to be wholly abandoned. After the decision is finally made at the laboratory, then the task of learning the pieces is entered upon. Before the record is made, however, the voices or sound are tested, and the result at once 'thrown back,' from this the record maker can tell if the reproduction is of proper quality.

"We have asked publishers to designate whether their music should be sung by a soprano, tenor, baritone or bass voice," continued the manager; "but evidently they do not care to extend this courtesy, for they never comply with our request. Relying on our own resources, we must do the next best thing, and take chances. For instance, a song cannot be called a 'hit' until it is heard, no matter what kind of a 'knock-out' its publishers may believe it to be, or what is said about it in the newspapers. We have trained men who sit in the 'gallery of the gods' in theaters catering to the public through popular songs, and they seldom fail to pick the winners, though mistakes will be made. This occurred with the song 'Sympathy,' which we thought little of at the time it was first recorded, and for months we held it up. But we cannot get enough of the records now, and the same is true of 'Everybody Works But Father.' Just ordered four thousand made up to-day, and this is only a really small fraction of what has been turned out. Harris' songs always sell, as they have a swing people like, and we never miss it with any of his writings. These names are selected at random simply as illustrations of the popular lines, which at the present comprise a large majority of records sold. Good violin records are hard to get, though they sell well. Often what trained musicians may prefer are of technical interest only, and fall flat. To be sure, every record is inspected and tested by several experts, each on his or her own account—women are excellent judges for certain things—and the least imperfection causes its instant rejection."

## FOR MUNICIPAL INSTITUTIONS.

We note that in various parts of the country people interested in local missions are presenting them with talking machines and records. They have proven a great source of entertainment, and have been found almost invaluable. In public institutions they are also great favorites, and the time will come when municipal bodies will find it necessary to equip hospitals, workhouses and such places with talking machines, owing to their value as therapeutic agents.

The La Porte Music Co. have opened a store for the sale of talking machines, records and supplies at 1004 Main street, La Porte, Ind.

"THE EDISONIA CO. take pleasure in informing the trade that they have an absolutely perfect instantaneous repeating attachment for Standard and Home Phonographs. Positively guaranteed or money refunded. No drilling or disfiguring of machine. Can be put together in one minute. Retail price (Standard or Home), \$2.25; usual discount to the trade. Sample, \$1.50 prepaid to any dealer in the world. The Standard repeater will be ready February 1st, the Home about February 20th."

**The Edisonia Company, New and Walsey Sts., Newark, N. J.**

# *That Fearful Grating Sound*

that has marred the reproduction of all disc records is due to the fact that heretofore on all reproducing machines the needle has been the means of propelling the reproducer across the record. ¶ To entirely do away with these unpleasant foreign sounds and reproduce only the pure, sweet musical tones, the

## *NEW TAPER ARM*

# *Talk=O=Phone*

is equipped with an ingenious mechanical feed device which propels the reproducer independent of the needle. This results in wonderful clearness of the reproduced sounds and the effect is so marvellous it must be heard to be appreciated.

### **NOTE**

It will be observed that the new Talk-O-Phone operated on this principle gets entirely away from the old fundamental principle of reproducing machines, namely, the needle feed. Our patents on this new device are very broad, and this arrangement cannot be used on another machine. We do not operate under any shop rights or license from any one.

*Talk=O=Phone*  
*Prices:*

**\$18.00**

TO

**\$50.00**

¶ Dealers selling reproducing machines should write immediately for our full descriptive matter and for prices on the new TALK-O-PHONE. If you are interested in supplying your customers with the only machine which brings out from disc records the pure musical tone only, you must have a sample of this new TALK-O-PHONE.

**THE TALK=O=PHONE CO.** *10 Midland St.  
Toledo, Ohio*

## PRACTICAL SUGGESTIONS AND COMMENTS.

### SUBSTITUTE FOR METAL MANDREL.

Wm. J. Hunt, Wanatah, Ind., writes as follows on a very timely topic: "Much trouble is experienced with the present tapering mandrel on cylinder phonographs, in that they are the cause of splitting so many records. It is my opinion that something besides metal should be used in the construction of these mandrels, as owing to the metal naturally being always more or less cold, unless warmed in an artificial manner, and the composition of the record being so highly sensitive to change of temperature that when a record is placed on the mandrel it soon contracts to such an extent that if it does not in this manner split the record, very often it is broken in the effort to remove it from the mandrel. This trouble is very little experienced in the summer time, but is a common occurrence in the winter. It is very likely that if everyone would use the proper precaution very few records would ever be broken through this cause; but it is very natural that the average person does not take into consideration the causes of the tightening of the record and place them too tight on the mandrel to begin with, thus not allowing for the slightest contraction. I therefore will suggest that some substance that does not possess such a chilling effect should be used in the construction of these mandrels, or perhaps a self-adjusting mandrel could be constructed. The above mentioned defect is one of the greatest drawbacks to the lasting qualities of the cylinder record, as very seldom are records broken in any other manner, and the manufacturers of this type of machine should give this matter consideration."

### MESTRAND'S VALUABLE CONTRIBUTION.

Arthur C. Mestrand of Bennington, Mass., an expert on sound reproduction, submits the following in conjunction with the statements of Messrs. W. F. Hunt and W. M. Gateshead, published in the November issue of the Talking Machine World, regarding the divers causes of rattling and blasting reproducers. Mr. Mestrand says:

"A very popular, but equally erroneous, idea prevails regarding the cause of a reproducer blasting and rattling. Many claim that the fault lies with the record, or in the recorder 'stylus leaving its track, and jumping entirely from the record, thus leaving a disconnected line,' to quote Brother Hunt's statement. This is a mistake, Mr. Hunt, but do not feel aggrieved over the fact, as I can assure you that Thomas A. Edison himself was unable to ascertain the cause of it for several years; that is to say, the true cause.

### THE CAUSE OF BLASTING.

"Blasting is invariably caused by a diaphragm being so thin as to be unable to rapidly follow the undulating sound waves engraved upon the cylinder. The effect is similar to the visible vibrations of an elastic held taut and pulled in the middle. The over-thin diaphragm is not able to re-assume its normal position in order to receive the next shock, and the result is commonly known as blast.

"This is more generally the case with records wherein the sound waves are either too close together or too far apart, as with a strident soprano or a deep bass respectively and so deeply cut as to cause a greater shock upon the diaphragm than it can stand.

### "RATTLING" AN OBSCURE TERM.

"'Rattling' is a rather obscure term, as such a thing could not exist provided the reproducer is correctly 'set up.' 'Rattling,' as I understand the term, is caused by the following: First, the diaphragm touching the side of the reproducer; second, the follow-ring not being tight enough, or third, the fulcrum of the sapphire arm being too short in proportion to the other end. If, with a diaphragm of average size, let us say a No. 6½ or 7, properly adjusted, with a sapphire arm working at right proportion, a reproducer still insists on blasting, same defect can usually

be remedied by increasing the weight. This has a tendency to sustain the pull on the diaphragm, thus preventing the diaphragm from following its own inclination, resulting in blast.

"I have yet to see the record which would persist in blasting after I had had recourse to the above mentioned remedies. For five years I have been persistently experimenting with reproducers and am considered a reigning authority upon that subject. I claim no credit to myself, as the greater part of the knowledge has been obtained through the work of others, but I can sincerely assure you that I have found the above statements to be correct in each and every case, and there is no doubt that however much a recorder blasts during its operation any reproducer, if properly treated, will eradicate the nuisance."

### LONGEVITY OF THE RECORD.

A writer in a London paper says: "There is from time to time much discussion as to the longevity of the record. It is contended that the weight of the soundboard or of the reproducer if too heavy considerably shortens the life of a record. Yet I have not yet seen any suggestion as to the special value of hearing tubes in this direction. The weight of the horn, adding as it does to the pressure on the record, is an important factor in the wear and tear of the record. I make a rule of never using a horn with the records I prize most highly. I find, too, that when they have once heard them, my friends, too, prefer the tubes. Hearing tubes may be used both with disc and cylinder machines. Almost anyone can, with a rubber joint, easily fit the end of the tube over the neck of the sound box, exactly as in the case of the phonograph."

### INQUIRY ABOUT HARD RECORDS.

A correspondent in Saginaw, Mich., writes: "Will you kindly let me know if there is a hard record made that is like the Lambert record? If so kindly let me know."

The so-called hard record, such as was made by the Lambert concern, can be manufactured by the Leeds & Catlin Co., 53 East 11th street, New York, if the order is of sufficient size. No firm carries it in stock, so far as can be ascertained, as the results by its use are said to have been not wholly satisfactory.

### THE STAR MODULATOR.

Commenting on the Star Modulator, made by the Star Novelty Co., of Grand Rapids, Mich., the Talking Machine News of London says:

"States inventors have been remarkably active of late in connection with the talking machine. Two devices for disc machines are the Star Modulator and the improved machine of the Talkophone Company. It is claimed for the former that it makes the record more distinct, practically does away with 'scrape,' and further that it leaves the tone under the control of the operator. In fact, it appears that it fulfills the function of a mute without entailing loss of tone with decrease of volume. The means by which this is secured are simple. It takes the shape of a backing to the needle arm, which acts as a damper and prevents vibrations due to the unevenness of the record service. The Star Modulator has been praised by the Columbia Company as well as some of the leading wholesale houses in the States."

### THE TREATMENT OF DEAFNESS.

In our Parisian contemporary, the Phono Gazette, Charles Chaney offers a scholarly treatise on "The Phonograph in the Treatment of Deafness," in the event that there is the minimum of the sense of hearing left. He suggests treating it by acoustical exercises, and under headings of Principles, Application of these Principles, Procedure and Results, outlines that which should prove a blessing to mankind, at least to those afflicted with deafness. The first idea presented is that one reason why deafness steadily increases is because the subjects lose the habit of listening, since it involves so much trouble on friends to

carry on conversation, which at best enervates the subject himself, thus reacting on his nerves in general and on the nerves of the weak spot in particular. The talking machine, taking neither time nor strength from any human being, can cause no such nervousness, and interest in the machine itself would accentuate the concentration. The suggestion is made as to the intensifying and extreme focussing of the sound waves by means of shells on the order of the telephone receiver. The manner of adjusting such appliances to the phonograph and the routine to be gone through daily is then given and begins with instrumental selections, then vocal, of which the words are to be written for the subject so that he may recognize the sounds and then grow accustomed to them. After these vocal records, those which speak will be called into service and used also with printed translations, which are only to be seen line by line, and after trying to hear them without.

### TO CLEAR OFF CYLINDER RECORDS

Speaking of the best way to take off old worn-out records on the wax cylinders, the Phono-Trader says: "There are many preparations on the market, but for cheapness, simpleness and quickness, you will have a difficulty to beat this: Get a large piece of flannel and soak it well with turpentine. Rub lightly and briskly on old record for a few minutes, then polish with another piece of dry flannel, and the effect will be most pleasing. I have tried this and never found it wanting. A few cents' worth of turpentine will clean off 50 records.

### VALUE OF HEARING TUBES.

Hearing tubes should be part of the equipment of every user of talking machines, without in any way minimizing the value and importance of horns. For the purpose of entertaining either large or small parties the horn, of course, stands alone, says a writer in a London contemporary. Yet for obtaining the maximum of enjoyment from a record hearing tubes are absolutely unrivaled. In the first place the use of hearing tubes makes it possible to enjoy records even in the dead of night, without the risk of annoying either your landlady or your neighbor. The sound is hardly so much as given out if the trumpet is removed. On the other hand, so full and perfect is the rendering as heard through the tubes that it seems as though one were actually in the presence of the singer or the band. Needless to say, the metallic sound produced by the horn is entirely absent. Further, flaws and imperfections in the record are at once detected, which makes hearing tubes of value to both large and small buyers of records. The value of this hint will be understood when one remembers that in many factories records are always tested by this means.

## Rapke's Specialties

# Zon-o-phone 10-Inch Records

## 50 Cents Each

### What Our Customers Say:

*Holyoke, Mass., December 16th, 1905.—Every lot of records which are received seem better than the last, which is not true of any other make, and I use them all.*  
E. A. ELLSWORTH.

*Brockton, Mass., December 1st, 1905.—Your records received yesterday and I will say for them your 10-inch records are the best on the market to-day.*  
L. R. PORTER (Dealer).

*Baltimore, Md., December 4th, 1905.—We wish to congratulate you upon the fine list of records coming out this month.*  
C. S. SMITH & CO. (Jobbers).

*Toronto, Canada, December 9th, 1905.—We wish to compliment you upon your very fine December list of records, samples of which we received yesterday. We think this list is beyond doubt the best you have ever put out.*  
JOHNSTON'S, LIMITED (Jobber).

*New York, December 5th, 1905.—Permit me to compliment you upon the excellence of your December list of 10-inch Zon-o-phone records.*  
B. SWITKY (Jobber).

### WHAT WE SAY:

*Our January Records are the best we have ever made.*

**WHAT WE WILL DO**—We will gladly send you our entire January list to try, and if you don't think them better than any records you have ever heard, **RETURN THEM AT OUR EXPENSE.**

### JANUARY LIST:

326 **Under the Flag of Victory March.** A brilliant record of this favorite march composed by the well-known German march king Von Blon.

327 **Vorspiel (Prelude) to the "Meistersinger."** An exceptionally fine reproduction of the favorite Wagnerian opera. This record introduces many flute, oboe and other reed effects.

#### ZON-O-PHONE CONCERT BAND.

328 **American Army Life March.** This is an original composition written around many popular army calls. The trumpet and drum effects are very good.

329 **Offenbachiana (Potpourri).** Introducing several gems selected from Offenbach's operas. The various combinations of reeds used are especially good.

330 **Tell Me Pretty Maiden.** Ever favorite sextet from the comic opera "Florodora."

331 **What a Friend We Have in Jesus.** Played in march time. Introducing this very popular hymn.

332 **Whistler and His Dog (Caprice).** Characteristic piece composed by the well-known trombone virtuoso Arthur Pryor. This record introduces many fine band effects and a very realistic dog bark. The whistle effect is very good.

#### HAGER'S ORCHESTRA.

333 **Composia Waltzes.** This selection introduces the favorite melody in F. "In Old Madrid" and the "The Palms." Can be Used for dancing.

334 **Medley Two-Step from "Moonshine."** Introduces "Robinson Crusoe's Isle," "Foolish" and "Don't Be What You Ain't."

335 **Medley Two-Step from "The Earl and The Girl."** Played in two-step time. Introduces "How Would You Like to Spoon With Me" and "It's Good Enough for Me."

336 **My Yankee Irish Girl Medley March and Two-Step.** Popular medley two-step. Introducing some fine orchestra effects and good bells.

337 **Selections from "Fritz in Tammany Hall."** A bright lively selection introducing "Yankee Boodle," and other hits from this opera.

338 **Silver Heels March and Two-Step.** Catchy composition by the writer of "Hiawatha," "Moonlight Serenade," etc. The arrangement introduces some very fine reed, brass and trap effects.

339 **The Whistlers (Intermezzo.)** This selection is one of the gems of the late German Comic Opera, "Frühlingssluft," now playing in New York City. The reed and whistle effects are especially good.

#### SONGS WITH ORCHESTRA ACCOMPANIMENT.

340 **Central Give Me Back My Dime.** (Duet by Collins and Harlan). An interesting conversation over the 'Phone between two dusky lovers.

341 **Fair Fisher Maid and Her Catch.** (Duet by Miss Ada Jones and Mr. Len Spencer). A clever imitation of the society belle spending the summer at the sea shore.

342 **Golden Wedding.** (Duet by Miss Ada Jones and Mr. Len Spencer). These clever artists give us a celebration after fifty years of married life, winding up with "Oh, for the Golden Wedding."

343 **Have You Seen My Henry Brown?** (Miss Ada Jones). A new coon song by A. Von Tilzer.

344 **How'd You Like to Spoon With Me?** (Billy Murray). One of the hits in "The Earl and The Girl."

345 **In Old Madrid.** (J. F. Harrison). A good record of this old time favorite.

346 **Just a Little Rocking Chair and You.** (Billy Murray). Theo. Morse's latest hit.

347 **Musical Yankee.** (Len Spencer). A bright record full of jokes illustrating the various instruments.

348 **Nothin' from Nothin' Leaves You.** (Bob Roberts). Coon Song by Fred. Snyder.

349 **Robinson Crusoe's Isle.** (Billy Murray). Sung by Miss Marie Cahill in Dan V. Arthur's latest production "Moonshine." Words and music by Benjamin H. Burt.

350 **Somebody's Sweetheart I Want To Be!** (Byron G. Harlan). One of Cobb and Edwards new ballads.

**We add 25 new Records each month.**

### Advantages of Zon-o-phone Records.

- 1st. The record thread is finer, enabling us to get more on a record.
- 2nd. The surface of the record is smoother than any other disc record (less scratch).
- 3rd. Our material is harder and tougher, making it wear longer.
- 4th. Our tone quality is mellow and natural, not high pitched and metallic.
- 5th. We list more new late "hits" each month than any other Company.
- 6th. Zon-o-phone 10-inch records, only 50 cents.

# Earn More Money

International Correspondence Schools,  
Box 918, Scranton, Pa.

Please tell me how I can increase my business by the sale of I. C. S. Language Outfits. I am an Edison dealer in good standing.

Name .....

Address .....

## Increase Your Sales

**T**O earn more money—to increase your sales—to double your profits—cut out, fill in, and mail the above coupon to the International Correspondence Schools. They will show you how you can easily and quickly increase your sales in a way that has been tried and proved a success by a very large number of Edison dealers.

Mind, the sending of this coupon does not obligate you to pay one cent. It simply gives the I. C. S. an opportunity of proving how easy it is for you to increase your sales in a cheap and sure way. This they do by equipping you to sell

**I.C.S. LANGUAGE SYSTEM**

WITH  
*Thomas A. Edison*  
PHONOGRAPH

The I.C.S. language-instruction records are the most perfect form of language instruction in the world, and have been approved by the French, German and Spanish Embassies at Washington, by the United States Government, and by the leading colleges in the country. Dealers who have handled "Double-Service"—language instruction, as well as amusement records—are all strong in their praise of it as a business producer. "Double-Service" has increased the sales of a great many other phonograph dealers. To learn how it can increase **YOUR** sales, fill in the coupon and mail it now.

## Double Your Profits

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

Replying to an inquiry from a dealer why they should not establish a system of exchanging records, the National Phonograph Co. replied thusly: "The suggestion is not a new one by any means, and we have on one or two occasions referred to the unreasonableness of such a proposition. \* \* \* It would be just as reasonable to ask publishers of sheet music to take back old copies in exchange for new ones after the owner had played the music over until he was tired of it. This is the attitude of the National Phonograph Co. concerning this subject, and it is quite improbable that any exchange proposition of this kind will ever be allowed." That this argument replies adequately to the inquiry is not to be disputed. Further proof is offered by the action of all the record manufacturers, who recently abolished the exchange proposition with a unanimity of action that should be convincing.

A novel idea in displaying their products has been adopted by the Columbia Phonograph Co., at their wholesale store at 353 Broadway, New York, which may prove worthy of imitation by the trade.

On a pedestal is mounted one of their largest sized machines, the whole being draped about with an American flag. On the plate of the large machine thus mounted is placed another machine, somewhat smaller in size and having a highly polished aluminum horn. The large machine is regulated to run as slowly as possible, and when fully wound will turn its burden about four times a minute for one and a quarter hours without rewinding. By placing electric lights advantageously and setting mirrors at a distance of a few feet so as to form the three sides of a square, with open front to the onlooker, the effect is extremely brilliant and attracts immediate attention.

Daniel J. O'Neill, younger brother of Doc. O'Neill, of the Western travelers for the Zonophone Co., recently entered the employ of the house in the home office, New York. Being under the tutelage of Mr. Miller, he is in the line of making good.

The Talk-o-phone Co., Toledo, O., are reported as about placing on the market a finer line of machine cabinets than anything heretofore shown in the trade. Their premiums are said to excel in this respect, and now the regular goods will be handsomely equipped.

A calendar pocket diary, with colored maps, colored pages, substantially bound and neatly lettered with their name in gold on the cover, is being distributed gratis by the Douglas Phonograph Co., 89 Chambers street, New York. A book of this kind is not only useful but always appreciated by recipients.

The Ball-Fintze Co., Edison jobbers, recently moved into a new building, 100x100, three stories and basement, specially built for them, and which they claim is the largest of its kind in the country in their line. Talking machines and supplies are shown on the entire second and third floors. They sell wholesale exclusively.

J. A. Smith, Camden, N. J., not only carries a large stock of Victor goods, but has recently added a line of musical merchandise, which he is finding extremely profitable to handle, besides harmonizing splendidly with his business. Being a liberal and clever advertiser, his trade has been increasing in a satisfactory manner.

Sumner W. Rose, of Bilioxi, Mich., has favored us with a photograph of the interior of his talking machine headquarters, which contains a very excellent idea in the way of a stage effect that in a large room, could be elaborated as a means of displaying talking machines, especially for concert work. The stage effect is secured by means of a painted canvas, and occupies but little room at rear of store, adding considerably to its attractiveness.

It is becoming quite a thing nowadays for the talking machine to be used at home weddings and parties. During the past month we have come across more than fifty papers published in all parts of the United States in which reference has been made to the talking machine being utilized for such a purpose.

It has been suggested, says the Music Trade Review, that if Jerome H. Remick & Co., with their sheet music and perforated roll interests in a chain of department stores East and West, would only add a talking machine annex in these respective establishments, they would have a full business hand, and a handful of business besides.

Speaking of great orders, report is that John M. Smyth Co., Chicago, and an installment house concern known throughout the West, recently engaged to buy 155,000 disc records from an Eastern manufacturer for early delivery.

J. L. Orme & Son, Ottawa, Ont., who represent the Columbia line in that city, are carrying a vast number of records and machines in stock. They have recently provided a number of special rooms for displaying their instruments.

"Do you know, I've heard that all these street pianos that you see and hear around town are owned by one company, which merely leases them by the day."

"The idea! That's a grinding monopoly, sure enough, isn't it?"

The reported indistructible cylinder or round record, of English origin, is not very highly complimented by the trade here who have investigated its merits. The great drawback is its nasal tone or rasping or scratching reproduction of sound, especially musical numbers.

At the meeting of the jobbers of the Middle West at Cincinnati, O., Saturday, 20th inst., several matters of importance to the trade of that section will be taken up and permanently disposed of. A number of Eastern jobbers are expected to be present on special invitation at this gathering.

Negotiations are now under way for the Healy Music Co., Chicago, to establish a talking machine department, which will be on a large scale.

Keene Phonograph Co., Pierre, N. D., have been incorporated under the laws of the State of North Dakota with a capital stock of \$20,000.

In a recent number of the Revue Universelle an article appeared on Dr. Charcot's Polar expedition. Among the illustrations was one of a phonograph, which having been placed near a number of penguins, was recording the cries of these birds.

It is semi-officially announced that the Auburn Button Works, makers of the International records, are about to open a jobbing department of their own in New York.

The Columbia Phonograph Co. control four stores in Brooklyn—915 Broadway, 125 Myrtle avenue, 289 Grand street and 124 Flatbush avenue.

## PHOTOGRAPHING THE VOICE.

Some Interesting Experiments by Victor H. Emerson, of the Columbia Phonograph Co.—Noted Actresses Make Records of Their Voices—The Remarkable Changes in Each—Demonstrates How the Voice Makes an Impression on the Mind.

Recent experiments by Mr. Victor H. Emerson, of the Columbia Phonograph Company, have resulted in methods by which the voice can be photographed, and the photographs compared with others, so that the exact differences between voices that sound almost alike can be noted.

Phonographic records of two voices that sound almost the same to the ear will, when photographed and the pictures enlarged by microscopic methods, show slight differences that will explain just wherein lies the variation.

For this purpose a very delicate recording apparatus has been perfected by Mr. Emerson. It

Through the kindness of Mr. Emerson and the Columbia Company, the Sunday World has been able to make for itself records of the voices of several prominent persons, including Mme. Sarah Bernhardt.

The words, "I love you," spoken with all the feeling possible into the recording machine, were selected for the test, and most interesting were the results.

The photographic reproductions in each case showed that when you say "I love you" with all your heart in it, it looks like a lot of little jagged lines. And the stronger the feeling, the deeper the marks.

Of course the Sunday World didn't intend to get records of all the different ways of saying it. Only a few. The divine Sarah—how must it look when her rich, passionate voice rolled out the words "Je t'aime," which, if you know any French, means the same thing. Or when Miss Margaret Anglin, whose delineation of the passionate Zira thrills her audiences, or Robert Lor-

SARAH BERNHARDT'S VOICE.

ROBERT LORRAINE'S VOICE.

MARGARET ANGLIN'S VOICE.

HELEN PULLMAN'S VOICE.

receives the human voice and registers it on a wax cylinder even more carefully prepared than the ordinary wax cylinders used for making records. The little knife that cuts into the wax leaves a mark varying in depth and width with the force of the sound waves.

In making these records the force of the sound waves that are started in motion by the voice causes a point that rests on a rapidly revolving wax cylinder to dig, shovel-like, into the surface.

APPARATUS FOR TRANSCRIBING TALKING MACHINE CURVES. (From The Scientific American.)

The mark is very tiny and very shallow. You can scarcely see it. But it is there, and when other records are made from a mold taken from this original tone, and put into a graphophone, the reproduction will be almost exactly the same as the original tone.

aine, who, in "Man and Superman," plays the lover who wills not to be won yet finally submits; or a little girl, like dainty Helen Pullman, as the five-year-old Claudia in "The Prince Chap."

These were the "subjects" selected, and it is their ways of saying "I love you" which are reproduced.

Mme. Bernhardt, when first approached on the subject, demurred. It sounded silly to her, this talking into a phonograph, especially words of love. But she finally consented, and the recording machine was taken to the Lyric Theatre during a matinee of "Phedre" and placed in the wings, in easy reach of the actress. Mme. Bernhardt found time during the progress of the play to say her little piece. Tired from the exertion of an exacting scene, she stood panting before the brass funnel of the machine, while the operator set it in motion. Then, at the proper moment she opened those lips on whose every utterance audiences hang spellbound, and the words fairly fused from them.

"Je t'aime!" The little machine, whizzing and whirring, seemed to stop for a moment as though it felt the thrill. Did it realize who was saying this to it? Perhaps, for what could be nearer to being human than this sensitive apparatus that

registers our voices? Again and again Mme. Bernhardt said the fateful words, words that would have brought a king or a prince to her feet; but the little machine was stanch and registered her voice.

That Robert Loraine made the record that is identified as his there could be no question in your mind if you had heard him making it. He stood before the recording funnel at the laboratory of the Columbia Company in West Twenty-sixth street as though about to make his vows to the fairest and sweetest girl in the world. And from his lips rolled the words "I love you." There was resonance, strength, in every note of his rich, round voice. There was tenderness and passion.

Miss Anglin struck the machine in a different way, as you can see from the written record. Where Mme. Bernhardt's "Je t'aime" is demanding, if you please, the American actress' tones are pleading. Yet, who shall say that one is not as forceful as the other?

With the little "Prince Chap" girl, you who have seen her and heard her little prayers in the play can understand how sweet and pleading her utterance of the word sounded. But they had a deal of power in their pleading and would have affected anyone who could have heard them.

These, then, are the four records. Can you see in them as they are reproduced here any resemblance to the voices of any one you love? If so, you may preserve them for future reference. At any rate, the little pictures will show you just how and why a voice makes an impression on your mind, which is, of course, a magnificent recording cylinder. And the next time your "onliest one" tells you, "I love you," you will fully realize why it makes you feel happy.

## TRADE NOTES FROM ST. LOUIS.

Record for December Satisfactory—Running from 25 to 50 Per Cent. Better Than Last Year—Pleased With the Outlook.

(Special to The Talking Machine World.)

St. Louis, Mo., Jan. 10, 1906.

All reports as to the talking machine business during the month of December are exceedingly good. The Christmas trade was much larger than anticipated, and the best kind of machines were sold in a large volume.

W. C. Fuhri, manager of the Columbia Phonograph Co., states that their business was 33 1-3 per cent. better than the same month a year ago, and that the demand for the finest instruments was very large. They had a large sale of their new extra long cylinder machines. He also reports a big trade at all their Western branches. Mr. Fuhri predicts that 1906 will be a big year in this line.

D. S. Ramsdell, vice-president and manager of the St. Louis Talking Machine Co., reports a very fine holiday trade and a big month's business for December, and states that trade continues active. J. Frank Mahret, sales manager for this concern, is spending the holiday season in Covington, Ky. O. O. Morgan, city salesman for this company, has been confined at his home for the past month with a severe attack of tuberculosis.

E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., reports that their trade for the month of December is the best month they ever had in both Victor and Edison machines, and that the prospects for the future are excellent. This department was recently enlarged, as described in this paper, and their facilities for entertaining customers, including salesrooms, are unsurpassed.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., reports a trade during the holidays away beyond anticipation. The past year has shown a splendid increase in the business of this department, and both Mr. Conroy and Mr. Clancy consider the talking machine still in its infancy compared with what it will be.

All the other talking machine stores indorse the statement that this branch of the musical lines is enjoying a fine trade, and look for it to be even better during 1906.

# STOP FOOLING

WITH UNSATISFACTORY DEVICES AND GET THE **STAR MODULATOR**

FOR DISC MACHINES, WHICH GETS AT THE ROOT OF THE TROUBLE

**A BIG PROFIT TO THE DEALER.**

**TO SHOW IT IS TO SELL IT.**

**RETAILS AT \$1.00**

ASK YOUR JOBBER; IF HE HASN'T IT, WRITE DIRECT.

SEND 50 CENTS FOR SAMPLE, NAMING SOUND BOX WANTED FOR.

Dealers in disc records are aware that the indentations of the sound-waves on the records are lateral, i. e., on the sides of the grooves, and not on the bottom, as they are on the cylinder records, and in the manufacture of records all parts of the material of which they are made is not of the same hardness, and does not always fill the mould or die in which they are made, thus leaving soft spots and small notches not caused by the sound-waves.

As the needle passes these spots, which are in all records, cheap and expensive ones also, the spring of the point and needle bar against the diaphragm cause it to make a "scoop" (slight as it is) into these spots, producing the "scratch" and "squawk" so painfully evident. By putting an equal pressure against the outside of the needle-bar, as we do with the Modulator, the needle point does not dig into these spots, and "scratching" and "squawk" is almost entirely eliminated, and music is as near perfect as it can be made without perfect records, which we do not ever expect to see.

As tension (with thumb-screw) is tightened the vibrations become quicker in the diaphragm, and every shade and detail of the tone is made finer and necessarily more distinct. The greater the tension, the softer the music, as the vibrations are not as long, and in this manner we obtain any strength of tone. As will be understood by one who has a knowledge of the laws of physics, this device eliminates in the most scientific manner the defects inherent to Disc Machines. Any variation made while playing.

## TALKING MACHINE AS WITNESS

In a Recent Law Suit in Boston—Demonstrates Its Position as One of the Most Accurate Scientific Recorders.

As related in the last issue of the Talking Machine World, the use of a talking machine in a trial at law was permitted in the United States Court at Boston recently, although the talking machine has been allowed in evidence in England. The instrument was used in the trial of the owners of a large business block against the Boston Elevated road. One element of the suit was that of damage caused to the owners of the block by the constant noise of the cars, and it was to give the court an idea of this noise that the counsel for the plaintiff offered phonograph records, taken in the building, to illustrate the effect of the noise of the trains upon the use and enjoyment of the property. The counsel for the defense, of course, interposed an objection, and in reply to his argument the counsel for the plaintiff said: "The phonograph is one of the most accurate scientific recorders, and I offer it on the same ground upon which photographs are put in evidence. Originally the photograph was in the position now occupied by the phonograph, and I remember well the strenuous opposition which was raised to the admission of the former at one time. The phonograph, as we all know, is a scientific instrument, and to my knowledge it has been put in evidence at least once in the English courts, though never before, I think, in the courts of this country. It is difficult to describe a noise or compare one noise with another. The best that can be done is to offer a record of it." Although the opposing counsel objected on the ground that the development of the instrument and the art of managing it were not sufficiently advanced to warrant its admission as evidence in a court of law, the learned judge decided that the phonograph was a competent, if mechanical witness. If this decision is sustained, and becomes a precedent, a new element of interest will be injected into law cases. For instance, if a man were suing for divorce on the grounds of incompatibility, he might offer some very interesting evidence in the way of records of his wife's curtain lectures. In fact, the uses of the phonograph in law suits will be limited only by the ingenuity of the lawyers.

C. Ilsen, of Ilsen & Co., Cincinnati, O., when in New York recently, made a number of valuable trade connections and placed a bunch of nice orders.

## MAY LOCATE IN KALAMAZOO.

Duplex Phonographs the Invention of Chas. E. Hill, of Lincoln, Neb., Will Probably be Manufactured in That City.

(Special to the Talking Machine World.)

Kalamazoo, Mich., Jan. 8, 1906.

It is now practically assured that another industry will soon be added to Kalamazoo's list of manufacturing concerns. The new institution will make phonographs, or talking machines, and already those interested in the enterprise are advertising the fact the machines are made in this city, for in the ads published appears the catch phrase, "Made for you in Kalamazoo."

The head man of this concern is Charles E. Hill of Lincoln, Neb., and several times during the past month he has been before the Commercial Club of this city and succeeded in interesting many local business men in his appliance, which is a duplex phonograph. At present the Kalamazoo Novelty Co. has the contract to make a number of the machines, but it is the intention of the promoters to erect a factory here for the purpose of manufacture. Plans have been perfected for an aggressive advertising campaign, and the machines will be sold on the mail order plan.

While Mr. Hill was in Kalamazoo he received a very favorable impression of the city and many courtesies were extended to him by members of the Commercial Club.

## TRADE NOTES FROM DALLAS.

(Special to the Talking Machine World.)

Dallas, Texas, Jan. 2, 1906.

December closed with the greatest rush known in talking machine circles in Texas. All of the jobbers and a great many dealers had permitted their stocks to run low and were unable to supply the demand. In turn, the factories were unable to fill their orders, hence the trade was not as great as it might have been.

The Southern Talking Machine Co. has recently made considerable improvements in decorations of windows in addition to a large electric sign in front of their store on Main street.

S. H. Wumble has again gone on the road for the Texas Phonograph Co., Inc., the big Houston talking machine jobbers.

Dallas Talking Machine Co. report that they will greatly enlarge their business during the ensuing year.

Smith & Co., Dallas, have leased a large building and added a line of furniture and will do a

large installment business. J. D. Wheeler, formerly associated with the Southern Talking Machine Co., has purchased the Dallas branch of the Texas Phonograph Co., and will continue the business under his own name at their old stand, 345 Main street, Dallas.

H. M. Holleman, president of the Texas Phonograph Co., of Houston, passed through Dallas en route to New York and the East, where he will visit factories and arrange to carry the largest stock of phonograph goods in the South. He reports that they have taken a three years' lease on the building in Houston facing on Capitol and Fannin streets.

## AUGMENTS INTENSITY OF SOUND.

A Novel Apparatus for Amplifying Phonographic Reproductions That Will Prove Interesting to Readers of the World.

A novel apparatus for increasing the intensity of sounds has been invented by Messrs. G. Laudet and L. Gaumont of Paris, which is said to be of great value in amplifying phonographic reproductions, particularly in large auditoriums. The principle underlying the construction of this apparatus consists in transmitting the sound vibrations concerned to and from a convenient flame. After the first experiments made in this connection, utilizing the human voice, had given satisfactory results, the voice assuming a remarkable intensity, the experimenters continued their investigations, employing sources of sounds of mechanically determined intensity, with continued success.

The instrument (shown in the accompanying engraving), explains the Scientific American,

A NEW MEGAPHONE.

consists of an equilibrated distributor to regulate the amount of the burning gas mixture, and a burner wherewith the gases are consumed in an ignition chamber. The apparatus submitted to the academy was arranged for registering the reinforcement of sounds of any kind on ordinary phonograms. Air and acetylene were employed as burning gases.

The distributing mechanism consists of a chamber, A, into which the combustible mixture is introduced under pressure through a conduit, B. A vane, C, supported on knife edges as at O, is mounted at the bottom of the chamber, A, an elastic ring being provided to insure airtightness in O. Any motion given to the pencil is transmitted to the vane, C, inside of the distributor. On either side of C openings, D and D', are provided through which the gaseous mixtures are allowed to issue in respectively equal amounts as long as the vane is immovable. Any displacement of C will, however, result in an increase of the amount of gas issuing on one side, while the amount issuing on the other side is reduced. The total amount of utilized mixture remains constant, and the pressure in the interior of the chamber is also unaltered.

The gases are collected and conveyed to the burners through a series of conduits, E, E, E', E'. The burners consist of a series of disks cooled by an air current, HH', the gases being expanded and reduced to a temperature such that combustion always occurs in the chamber, F F', just at the point where the gases escape from the openings of the burner. The apparatus comprises two funnels, G G'. The power of the sounds obtained, which is truly remarkable, depends on the amount of gas mixture used and on the energy expended during its combustion.

Wm. F. Kunkel & Co., who recently opened their new piano parlors at 119 North Liberty street, Baltimore, Md., are handling in addition to pianos and other musical specialties a full line of talking machines and records.

## NORTHWESTERN DEALERS PLEASED

Over the Record for the Past Year—The Holiday Trade Especially Satisfactory—Some Recent News.

(Special to the Talking Machine World.)

Minneapolis and St. Paul, Jan. 8, 1906.

The talking machine dealers without exception report an immense holiday trade and splendid results for the year's business.

"Far and away the best trade we ever had in that department," said W. J. Dyer, of W. J. Dyer & Bro., with reference to the results for the year. "We couldn't begin to take care of our trade during the holidays, as we were unable to obtain the stock. We had a big sale of high-priced Victor machines."

"We are not sorry by any means that we put in the Victor machine," said W. L. Harris, president of the New England Furniture & Carpet Co., "as that has been one of the best paying departments in the store. We had a big holiday trade, and I anticipate a splendid growth during the coming year."

"Our trade during the year was hardly as good as we expected, considering the immense stock we have been carrying, but we had a very satisfactory holiday trade," was the report of Mr. Moody, manager of the department at Donaldson's store. Here are carried the Victor, Columbia and Edison.

The Minnesota Phonograph Co. reports a very successful year, with a big increase over business for 1904. In addition to the Edison, that company is now handling the Victor, which it took hold of early in December. M. H. Lowry, formerly with the New England, transferred to the Minneapolis branch of the former company December 1. The business at this branch was fully as good during the holidays as at the St. Paul store, though it has been opened only a few months.

J. H. Wheeler, manager of Columbia Phonograph Co., said: "We had a better trade during the holidays than in 1904, and in higher-priced machines. The sale of records was also much larger. The year as a whole was very satisfactory in both towns."

## THOSE EDISON NOTE BOOKS.

At Least Fifty Treat of the Phonograph—Edison Talks of Coal Economy.

Last Sunday's New York Times contained a very interesting talk with that famous inventor, Thomas A. Edison, in which he says that it is only a matter of time when an express train can be run from New York to Buffalo with two bushels of coal, and tells what it will mean to the world when a method of saving the 90 per cent. waste in coal consumption can be devised.

The interviewer in the course of his conversation laid eyes upon the big bundle of dusty well-thumbed note-books which were in the office, and in which are recorded the various stages of nearly every invention conceived or executed by one of the greatest geniuses in modern times. In this connection the writer says:

"At least fifty note-books deal with the phonograph, which remains a pet invention of its creator. Thus stage by stage and page by page the genius of Thomas A. Edison is curiously recorded, a genius which is half painstaking and half common sense; nor is it in any way spooky as revealed in these beautifully written diaries. Asked if the many 'N. G.s.' which star or mar the pages represented a waste of time, the Columbus of chemistry began murmuring something about:

Him who sings  
To one clear harp in divers tones,  
That men may rise on stepping stones  
Of their dead selves to higher things—  
or words which meant the same.

G. W. Hall & Co., Bellefonte, Pa., in their installment business, use the form of agreement adopted by the National Piano Dealers' Association at their last annual meeting, and which is considered the only one that will stand legally.

## THE POWER OF SUGGESTION.

New Use for Talking Machine—It Is Found That When the Machine Plays a Cackling Song the Hens Take a Hint and Lay an Egg—Idea of a Mt. Morris Man.

The impossibility of getting hens to lay in the winter season, when eggs are scarce and high, an achievement which has baffled the brightest minds of this country for years, appears less difficult of attainment than it did, indeed it is confidently claimed by several credible witnesses who have seen the results, that a resident of Mt. Morris, N. Y., already has the problem more than half solved, and that his success is bound to revolutionize the hen and cause two eggs to be laid where one has been reluctantly dropped in the basket heretofore.

The innovation in egg-production is hardly due to the exercise of the same blessed philanthropy which causes two blades of grass to grow where one grew before, but is rather the invention of a mind devoted to getting even with the hen. All winter eggs have been scarce and costly. Indeed, the cackling of laying hens has not been heard on the picket line since August.

In this crisis Joseph appeared in the person of Druggist H. M. Gates, who bethought himself to apply the talking machine to the relief of the situation. The idea came to him one day in a moment of inspiration, while he was listening to the measures of a cackling song as rendered by a talking machine. "If," he argued, "a talking machine were placed in the hen house and kept playing the 'cut, cut, cuddacket' of a laying hen, why would not the constant repetition of this familiar jubilee simulate an imitative response on the part of the hens, and, if the hens could be got to cackling, why would they not lay, as a logical corollary to their cackling, through the power of suggestion?"

The reasoning seemed good to Mr. Gates, and he at once went about the construction of a modern hennery in the back yard of his residence lot, in which he installed fourteen Black Minorca hens and a cockerel. The hens had been fed high all the fall, but as yet had refused to lay an egg. In their new quarters, under the stimulus of phonographic suggestion, an appreciable change has been noticed in their egg productivity. At first only one or two eggs were secured daily, but as the fowls became accustomed to the new conditions, it is understood the ratio has increased. By varying the tunes, still better results have been noted. Of course it may be a mere coincidence that the egg production increased when the concert opened, and it may be of no sci-

entific importance that one day when a continuous performance of "Turkey in the Straw" was on the boards, fourteen eggs were gathered.

There is certainly nothing impossible in the theory of music acceleration of egg productivity. Those who have reported the facts do not appear to stretch them beyond the point of credibility. No hen is yet reported to have laid two eggs in one day. The total, as reported, does not for any one day exceed fourteen eggs. Mr. Gates will not say a word about any feature of the performance, but reliable people claim that when the talking machine is turned on, the hens will come down off their perch one after another and lay an egg.

More talking machine records have been sold in the vicinity of Mt. Morris since the story began to be repeated than ever before. "Did you ever!" "What folly!" "Preposterous!" exclaim the skeptical. But Dr. C. C. Willard of that town does not think so. He has ordered an assortment of records for his hen house. The cackling song seems to be the most effective, and the most in demand, but "Way Down Upon the Suwannee River" is also recommended to produce good results.

Many have been inclined to doubt the story or at least deny the connection between the talking machine and the increased egg production, but facts are stubborn things.

## PROVING CASE WITH TALKING MACHINE.

Mrs. Isaac L. Rice, who lives at Eighty-ninth street and Riverside Drive, has made a formal complaint to the Federal authorities regarding the noise made by the tug boat and steamer captains who use their whistles as alarm clocks for sleepy barge captains as breakfast calls and as signals to their friends ashore. She has also applied to the Commissioner of Police in New York in an effort to stop this nuisance, and in telling him of her trouble she stated that she has a talking machine with records to prove that the average number of ear-piercing whistles every night is 2,600. She said that on one especially noisy night she recorded 7,000 distinct toots.

## CHICAGO AS DISTRIBUTING CENTRE.

As a distributing point for talking machine goods, Chicago is described as the best place in the country. Those familiar with the quantity of machines, records, etc., shipped to the Western metropolis declare its magnitude is marvelous, and the wonder is the manner of absorption by the consumer, not to mention the trade. Cincinnati is also referred to as a capital market.

NEW YORK, JANUARY 15, 1906.

WITH this issue The Talking Machine World begins the second year of its existence, and we cannot permit this opportunity to pass without extending to our friends, supporters and well wishers everywhere our thanks, as well as a most cordial appreciation of the support which they have given this enterprise from its inception. It has been our good friends who have aided our humble efforts so warmly that have made this enterprise one of the marked successes in trade journalism. There were many who figured that the industry was not sufficiently broad enough, or developed enough to support a journal devoted exclusively to its interests. We figured differently, however, and we concluded that a journal honestly and impartially conducted would exercise a potent influence in extending the industry, in stimulating and encouraging trade and acting as a helpful force to all departments of the talking machine industry.

WE had faith in the talking machine men, and believed that when they realized that we were inspired by a desire to serve the best interests of the trade without fear or favor that we would win them as our supporters and friends. The results have proven that we have diagnosed the situation accurately, and the World to-day is a conceded force for the good of the entire talking machine trade. There is no country on earth where it is not read, and, we may add, read with interest, for we have many communications from this and foreign lands which embody terms of the highest praise for our work. We have planned an active campaign for the present year, involving much expense, and we can insure everyone who is buying or advertising, or who desires information, the largest values which can be provided in a steadily growing circulation and influence.

AT this time of year there is an unusual amount of retrospection indulged in and the recalling of the growth and condition of business in 1905 is a genial and grateful task, for the year stands out conspicuously as notable for

its prosperity. It has been characterized by a great volume of trade, with strong and advancing prices, and there are now confident anticipations of good business for the new year, based upon enormous crops, uninterrupted industrial activity, broadening markets and general well-being. Nineteen hundred and five ranks as the best year that the talking machine trade has ever enjoyed, and manufacturers towards the close of the year were simply overwhelmed with orders. They were unable to supply their customers with what they clamored for, and goods had to be parceled out here and there, making a fair division in order to supply the most pressing needs of the dealers.

THE present year starts in with conditions most favorable in every way, and it is interesting to note that January, usually considered by talking machine men to be a dull month, is making a splendid record for itself, as our advices from manufacturers and the great trade centers where we maintain correspondents show that most liberal orders are now being placed for immediate and for future delivery. Some of the talking machine men should profit by their experiences of last year and place their orders early, for it is absurd to suppose that manufacturers can create sufficient reserve stocks to supply orders which come pouring in upon them for immediate delivery. It cannot be done, at least not with the present facilities.

THE cut in the price of records has, as many predicted, stimulated an enormous demand, and the sale of records will be unprecedented. Some of the concerns were working night and day shifts before the holidays and are still unable to supply the orders which come rushing in upon them like a tidal wave.

THE talking machine business is only in its infancy as far as development is concerned, and there is in it an extraordinary activity in invention, in manufacturing, in the widening of markets and in the complexity of business relations. In the midst of the great changes which have taken place in every line of business, the talking machine trade has shown a phenomenal development. It is a new industry, but it is steadily expanding and reaching a point which was considered impossible only a few years ago.

THE WORLD is playing its part in the development of this industry, for, as a well-known jobber from the Southwest, who recently called at the offices of this paper, remarked that until this publication appeared he had no accurate knowledge of the breadth and extent of the talking machine trade. He said that every month that he received The World he felt a greater pride in his business, and the fact that it was composed of good, bright, wide-awake, energetic business men, acted as a spur and inspiration to him. We trust that as the years pass the influence of the World will be strengthened so that it may contribute largely to the progress which may be made in the special lines to which it directly appeals, and certainly as the industry it stands for to-day it is an illustration of the productiveness in the development of new methods and agencies which have come to the surface in the extraordinary industrial, inventive and commercial progress which has characterized the last decade.

THE talking machine will play no unimportant part in the future of civilization; modifications and improvements will be made, but when we cast a few retrospective glances at its onward career we are forced to admit that its advance has been nothing short of phenomenal. To-day it is used in a number of ways which seemed almost impossible a few years ago, and that which was looked upon as a toy has now become not only a great entertainer, but an educator and an aid to business as well.

THE general trade conditions at the present time are most encouraging, and every talking machine jobber and dealer should help to make the year a record breaker, for a very hopeful feeling pervades the trade and commercial circles generally, and there are anticipations of a marvelous trade for the present year unless, of course, there should be some disturbing factor which is now not even hinted at. The talking machine dealers, too, are particularly fortunate in having records cut down while everything else in the manufactured line is going up. It is really a novelty to find one trade wherein the cost of one of the most important accessories has been reduced.

BUSINESS, however, cannot be won by adopting a policy of indifference. Indifference never made business of any kind, and one thing is certain: that the talking machine dealers have splendid examples of business enterprise before them at all times in the heads of the great machine producing concerns. They are men still young in years who have won their position simply through the exercising of ability and keen business intelligence, never halting on the vantage ground won, and ever progressing forward to win higher points.

DEALERS need not go outside this industry to find examples of splendid business men who have easily won positions of eminence in the industrial world. It doesn't pay to go at a business half-heartedly, nor does it pay to substitute the hammer and tongs method for a good urging or persuading. Merely hammering away at all times may be in the end convincing, and it is better a mighty sight to hammer than to keep still; to keep everlastingly at it will win in the end, but the knowing how to act is the great essential. The talking machine trade should interest young, active and ambitious men. There is good encouragement in the business for workers, for there is a broadening future, and it is better to be in a growing trade than to be in one which is steadily declining. This industry has a large future before it, and the men who are identified with it, if they will only keep up with the procession, will win good results in a business way.

THERE is no gloomy procession of failures in the talking machine industry, and there is no room for croakers, but there is a splendid opportunity for bright, forceful men who appreciate the possibilities of the talking machine, and who will do their utmost to stimulate sales in a clean, healthful, dignified manner. The fact that talking machines to-day are sold on the installment plan widens the chances of sales. It makes an ever-increasing circle, because it increases the sales possibilities.

THE WORLD is trying to help you in your business, and you can do us a favor and yourself as well, if you will send the name of

several parties in your vicinity who you think would be interested in the paper we are putting forth. We shall be glad to send a sample copy to them, thus increasing the interest in talking machines in your vicinity. Let us work together for the good of the industry—"For the future in the distance and the good that we can do."

**T**HE talking machine is an American invention. It is the product of American genius, and it is known all over the world as a clever entertainer, and it is now advancing to the point of a helpful adjunct to the business life of the world. It has been known under a number of different names, which have been used by the various concerns exploiting their own product, and yet the generic title of talking machines which has been given by this publication fittingly applies to the product of the entire industry, for to-day the public does not specify more than such a "talking machine" when asking for any particular make or special title under which it has been exploited.

The questions propounded the salesmen are, Have you such and such talking machines? And the name talking machine will hardly be supplanted by any other. The term may not be specially beautiful, but it is fitting, and the Americans are eminently practical people. And while the machines do more than "talk," they sing and play, and while other names may be more beautiful, expressive, more euphonious, yet the term talking machine has come to stay, and it applies to every product in which sound is reproduced either by disc or wax records.

**O**NE reader asks, Why are there so many legal controversies in the talking machine trade?

Well, the men in this industry are perhaps no more combative or belligerent than in any other, and yet it has not been discovered that they are lacking in aggressiveness, and aggressiveness is sometimes another way of spelling fight.

Conditions in this trade do not differ materially from those in any other new industry. The list of patents, many illustrations of which are shown in every issue of *The World*, show that inventive minds are busily engaged in seeking possible improvements in the machines of to-day. Now, it does not seem improbable that there should be a considerable clashing of interests, because one man is apt to trespass upon another's inventive preserves even without a fixed inclination to do so.

### TO PRESERVE INDIAN SONGS.

Phonographic Records Are Being Made by  
Archaeological Institute.

"We are making phonographic records of some old Indian and Spanish songs, and are trying to keep a permanent record of other phases of a civilization that has passed, or is at least practically gone, on this continent," said Mitchell Carroll, head professor of classical philology in the George Washington University, Washington, D. C., and associate secretary of the Archaeological Institute of America, the other day. Professor Carroll, who is working hard to increase the interest in the organization, then added: "We are further making a study of other antiquities of this country, especially that in relation to the Indians. We are endeavoring to make these studies bear fruits which shall in the future inure to the benefit of our own civilization. That is the end sought by this society. It embraces in its membership the best people of the communities where the local societies are organized, and

while the interest is not and never has been so great as it ought to be, still the conditions are improving all of the time."

### NOVEL USE FOR PHONOGRAPH.

An Irish Firm Utilizing This Instrument as an Assistant Salesman in the Drug and Grocery Business.

(Special to the Talking Machine World.)

Belfast, Ireland, Jan. 2, 1906.

The management of the old established grocery and drug house of Messrs. Wm. Dobbin & Co., Ltd., North Street, this city, have—with laudable enterprise—placed genuine "Standard" Edison phonographs on their counters, which call attention, clearly and unmistakably, to their seasonable goods by means of records that announce the specialties in each of their departments. We may mention that any person can make and reproduce similar records inside three minutes.

Messrs. Dobbins & Co. are to be congratulated on having "broken the ice" in connection with this innovation as a modern business method, which was suggested to them by T. Edens Osborne, who supplied the instruments.

### TALKING CLOCK INVENTED.

(Special to The Talking Machine World.)

Fremont, O., Jan. 5, 1906.

A young man of this city who is an inventive genius and has already invented and patented a number of valuable articles is now at work and has about perfected another invention, which, if a success, will be a wonder and bring the young inventor fame and fortune. The invention consists of a graphophone attachment for a clock. Instead of the clock striking the hour as now, the clock with the attachment will call out 6:15, 8:30, 12:45, etc., just the same as the human voice.

Wallace Bentley, of Wallace Bentley & Co., the well-known jobbers, Pittsburg, Pa., was in New York last week on special business.

## Get Ready for a Big Business

**L**OWER PRICES and "exchange propositions" are now the order of the day, and you will find a big increase in Record selling as a result. Get ready for it; keep your stock up and keep it in the best sort of condition by having ample room for the storing of the records.

### SYRACUSE WIRE RECORD RACKS SOLVE THE PROBLEM

They save space, keep the stock in best possible condition and enable you to locate any Record instantly. They also aid you in stock-keeping, because you can tell at a glance when stock is low.

Illustration shows our 2 C. Disc Record Rack, which will hold over 800 Records, up to and including 11-inch. We make a great many patterns of Disc and Cylinder Record Racks, from \$5 up. Send for our Catalogue 109 to-day.

Price, \$8.00  
Discounts to Jobbers

## BOSTON'S TRADE HAPPENINGS.

Trade for December Phenomenal—Every Month Last Year Showed an Increase in Trade—Men of Eminence Interested—Steinert-Victor Deal One of Great Magnitude—Ormsby to Pacific Coast—Manager Taft's Great Record—Ditson Co. Victor "Pushers"—Langley & Winchell Organized to do a Wholesale Business—News of the Month.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 8, 1906.

Phenomenal is the term to use when describing the talking machine business in Boston for the month of December, and if there is any stronger word which can be applied to the trade just before Christmas, please apply it, for the business deserves it. Every month last year witnessed an increase in the volume of business for, with the elimination of the harsh, grating sounds and the many improvements in the machines, all prejudices have been wiped out and now everybody wants a talking machine. People are a good deal like sheep. They follow their leader, and when Boston people learn that J. Montgomery Sears, T. Jefferson Coolidge and men of that standing in society are buying talking machines, they go and do likewise. Consequently, business is more than good. The outlook for the new year is very brilliant, for it is realized that the talking machine gets a firmer hold upon public appreciation every day. It is no longer a luxury. It is a necessity, and its diversified uses make it all the more valuable.

The chief matter of interest in this section is the recent deal whereby M. Steinert & Sons Co. secured the agency for the Victor machines. They have opened up a wholesale department under E. P. Cornell at 37 Arch street under the name of the New England Talking Machine Co., and have established a retail department in their Boylston street store with Fred Ellis as manager. As the Steinerts now have 16 branch piano stores in New England, and are planning to increase the number to nearly 40, there will surely be something doing when these stores all take hold of the Victor talking machine. It is rumored here that the Edison line will also be taken on, but this is as yet indefinite.

J. H. Ormsby, manager of the retail department of the Columbia Phonograph Co., has asked for a transfer to the company's store in Southern California because of his health. For many years he has suffered with throat trouble, which does not yield to treatment in this climate. His physician has ordered him to go to California, and he will probably be seen there before long as manager of the company's business. Mr. Ormsby is one of the biggest hustlers in the business. He is an old timer in it, even though he is young, and is one of the most valued members of the Columbia staff.

When it comes to getting business, Manager Taft and his associates at the Eastern Talking Machine Co. evidently have it down pat, for when the writer called at the store just before Christ-

mas there was hardly standing room, and the salesmen were really sweating. Although business dropped off some after Christmas, it still is brisk and the wholesale department, under Manager Chamberlain, is making a record. Edison phonographs have the call here and the recent changes in the building make the transaction of business convenient and pleasant.

With the Oliver Ditson Co., the Victor pushers in Boston, there has been considerable difficulty in getting the goods with which to fill their orders. Manager Bobzin has found it almost impossible to keep enough on hand, all because the orders he sends to the factory cannot be filled promptly, owing to the rush of wholesale business there. The new automatic needle clamp is meeting with great favor here.

The new firm of Langley & Winchell, organized to do a wholesale business in "Everything for the Talking Machine Dealer," starts in business at 95 Summer street this week. They occupy the lower floor of the building used by the Winchell Co. for their retail business in talking machines, the Reginaphone, music, etc. Here a specialty is made of the American records, and a big business is being done. They have secured a large stock of Columbia goods.

At Read & Read the Zonophone and the Talkophone are being pushed, along with the Edison. Mr. Read says that the new tapering arm for the Talkophone is a great improvement.

Manager McCallum, of the talking machine department in Henry Siegel & Co., has proven himself to be a veritable hustler since he took charge. He worked up an enormous Christmas business, and was complimented by the "powers that be" for his success.

E. F. O'Neil, the Zonophone ambassador, was here this week.

The new H. & S. sound box is being pushed with much vigor by the Winchell Co., and is meeting with much success here. It is a distinct improvement.

## TALKING MACHINE, NOT BAND

Utilized to Play Wedding March Because the Police of Trenton Had Forbidden Using the Latter.

(Special to the Talking Machine World.)

Trenton, N. J., January 3, 1906.

Told by the police that it was illegal for him to hire a brass band and have it play in Padderatz Hall for the wedding Sunday night of his cousin, Abe Harris, of South Warren street, hired a talking machine of the largest kind, and to the strains of that instrument Isaac Bash and Miss Lena Herschfeld marched before the rabbi and were married.

Harris told the talking machine man that only sacred music was to be furnished for the reception which followed, but despite this warning, the tune of "Everybody Works but Father" came from the instrument, to the delight of the guests. There was nothing in the ordinance against music from a talking machine, and the police did not disturb the festivities.

## NEWS FROM THE PACIFIC COAST.

Reduction in Price of Victor Records Much Discussed—Brown Builds Up Talkophone Trade—Machines as Premiums.

(Special to The Talking Machine World.)

San Francisco, Cal., Dec. 30, 1905.

Considerable excitement has been caused among the local music dealers by the reduction in price of Victor talking machine records. The dealers say that this reduction was especially unwelcome at this time just before the holiday season when our purchasers did not mind spending a few more cents for a good record. Every house had quite a large amount of orders on hand which were invoiced at the dollar rate, and which will cause considerable trouble to adjust properly by reason of the recent order. All the dealers are in hopes that the Victor Talking Machine Co. will fix matters in a way that business will not suffer as much as appearances now indicate.

C. E. Brown, general manager of the Talkophone Co., went to Los Angeles last week, and will remain there a considerable length of time. When Mr. Brown took charge of the Talkophone Co. some eight months ago the sales of their machines were practically nothing in this part of the country. Under his leadership the sales have increased until at the present time the talkophone machine has become as popular as many of the older and better known makes. Several new inventions have been patented since Mr. Brown entered, and the most valuable of these he says he has purchased and incorporated in the talkophone. One of Mr. Brown's principal schemes is to give machines away with subscriptions to daily papers, making it incumbent upon the recipient of the machine to buy \$35 worth of records from the firm that furnishes the machine. The plan has worked well here with the Chronicle, and I noticed in Seattle the Spokesman-Review is doing the same thing. It will not be surprising if the Los Angeles papers will soon adopt the method, knowing that Mr. Brown's in town.

## EDISON CO. ENTERTAIN EMPLOYEES.

At the reception given last week by the officers and staff council of the Edison Electric Illuminating Co. to its twelve hundred employees at their building, 360 Pearl street, Brooklyn, the programme included ten orchestral selections which were supplemented by a wide variety of selections on a talking machine and an electric piano. The progress of electric inventions was displayed in a wonderful manner throughout the building, and the employees were both amazed and delighted with what they saw and the generous treatment they received.

The man who thinks he is funny should talk into a phonograph—and then be compelled to listen, says the funny man of one of the local papers. If some people should have to hear themselves talk they'd be tired enough some times to enjoy a solid night's sleep.

## TALKING MACHINE NEWS FROM THE WEST.

Dealers Must Have Had a Whopping Trade Judging from the Liberal Orders Which Have Been Flowing to Chicago Jobbers—How the Talking Machine Has Made Its Way Into Common Speech and Illustration—National Phonograph Co. Salesmen Hold Important Meeting—Edison Commercial Machine Growing in Popularity—Off to Pacific Coast to Fight for Better Freight Rates—20th Century Graphophone Supersedes Orchestra—Eckland Eloquent and Enthusiastic—The News of the Month.

Telephones: { Central 414.  
Automatic 8643.

World Office:  
195-197 Wabash Ave.

(Special to the Talking Machine World.)

Chicago, Ill., Jan. 10, 1906.

It must have been a whopping big holiday trade with the dealers throughout the country. Certainly in the West. The trade ordered liberally enough, goodness only knows. But the way orders are now coming indicates that stocks are most thoroughly cleaned up. Orders are piling in for both machines and records. For automatic machines of all kinds, also. Factories are crowded, and some of them are away behind in their orders. 'Twas a glorious victory. And 1906 promises to be a record breaker unless all signs fail. There is blessed little prospect of their failing.

Just as an indication of the way the phonographic product has wormed its way into common speech and illustration, note what happened at a dinner tendered DeWolf Hopper at the Chicago Press Club the other day. Opie Read, the famous novelist presided. In introducing Mr. Lee, the editor of the Calumet Record, Mr. Read spoke of him as editor of the Columbia Record, and then with great apparent embarrassment corrected himself. The joke was greeted with great applause. Apparently everyone present was acquainted with the Columbia Record.

There was a meeting of the salesmen of the Chicago office of the National Phonograph Co. the other day to meet Sales Manager C. H. Wilson, in conference regarding the 1906 campaign. Tuesday, January 2, witnessed the influx of the greatest number of orders into the Chicago branch in its history. Nelson C. Durand, manager of the commercial department of the National, is here looking after the installation of the commercial department at the Chicago office.

It occupies fine quarters on the sixth floor of the building which was recently added to the already spacious premises occupied by the company. Extending along the Wabash avenue front are the offices of the commercial department. Then comes a room devoted to the demonstration of the commercial machine. Beyond a handsome

burlap and oak panel partition is the commercial dictation school where will be found a number of desks equipped with machines where operators will be trained free of charge. Form letters will be secured from different concerns, electrical, commercial and otherwise, which will embody the peculiar technical and trade terms pertaining to the line.

Thus the National Phonograph Co. will soon be prepared to furnish on prompt notice operators familiar with the terminology peculiar to the needs of the applicant. This school will be in operation about January 10. The rest of the big floor will be used for general reserve stock.

Manager Nisbett will leave on the 11th with A. F. Voullaire, traffic manager of the company, for San Francisco to attend the meeting of the Western Classification Bureau, where they will make a gallant fight to secure the reduction of freight rates on machines and records from one and a half times first class to first class on less than carlots and to third class on car lots. Mr. Nisbett thinks that there is a strong prospect of their winning their point. General Manager Geo. W. Lyle, of the Columbia Co., who has also been a prominent figure in the fight, will be on the coast at the time of the meeting and will probably be able to arrange matters so as to attend. After the meeting, Mr. Nisbett will go to Seattle, Portland, Helena, Butte and other points, returning to Chicago via Salt Lake City and Denver.

Mr. Willson, the new Chicago manager of the Columbia Phonograph Co., is making things hum. From all reports he is more than realizing the large things that were expected of him when he received his promotion.

The Columbia Phonograph Co., The Talk-o-Phone Co. and James I. Lyons all had elaborate displays at the recent novelty show held at the Coliseum.

The Central Camera Co., northwest corner Adams and Wabash, are large dealers in talking machines and are doing considerable advertising on talkers in the daily papers.

The Hartman furniture store on Wabash avenue are contemplating discontinuing the sale of talking machines. "Required too much atten-

tion" is the reason given, although they have no complaint to make concerning sales and profits. It stands to reason that no concern can make a success of talking machines, on a large scale at least, unless they have a practical and experienced man who can devote his entire time and attention to the business. This is something that the Hartman people did not see fit to indulge in.

The Steve Crean System, 94 Dearborn street, who teach cornet playing to anyone anywhere by means of the talking machine, are now making excellent headway as their system is beginning to become known. This should be as good a line for talking machine dealers to handle as language courses. Steve Crean, who makes all the records used by the company in their course, is one of the world's greatest cornetists.

E. C. Plume, wholesale manager for the Columbia Phonograph Co., while in Milwaukee recently on a business trip, had the pleasure of seeing a Twentieth Century Graphophone installed in the place of an orchestra in the Academy of Music in that city. Mr. Thomas, the local representative of the Columbia Company, always progressive and looking for new ways to increase the business of the Milwaukee office, obtained permission from Mr. Thanhauser, the well-known business manager of the Academy of Music to give the Twentieth Century Graphophone a trial. This demonstration was so successful that Mr. Thanhauser and his associates immediately decided that it would be both entertaining and economical to use the graphophone in lieu of an orchestra during the holiday weeks, and in all probability it will become a permanent feature at this playhouse, the tone and volume of the machine being such that it filled to the remotest corners of the playhouse with the beautiful strains of many superior band and orchestra selections, everyone present voting it a decided success. What next!

H. K. Miller has been engaged to represent the National Phonograph Co. on the Pacific Coast. He is a practical man of long experience, having been previously in the business for himself in New York state.

Among the talking machine dealers who have recently visited Chicago are: George Mickel, Nebraska Cycle Co., Omaha, Neb.; H. E. Sidels, Lincoln, Neb., and C. E. Staymore, of the Early Music House, Fort Dodge, Iowa:

E. C. Plume has lately added the following to the list of Columbia jobbers: W. A. Dean Co., Sioux City, Ia.; Arnold Jewelry & Music Co., Ottumwa, Ia.; M. M. Marrin, Grand Rapids, Mich.; Robert Smallfield, Davenport, Ia.

General Manager George W. Lyle, Wholesale Manager Walter L. Eckhardt and President E. D. Easton, of the Columbia Phonograph Co., were all Chicago visitors just prior to the holidays.

O. W. Eckland, a well-known talking machine man of many years' practical experience, is now manager of the installment department of the Chicago office of the Columbia Phonograph Co. He was connected with the Chicago branch in this capacity when it first opened. He celebrated his return to the ranks of the faithful by tendering a banquet at the fifty-odd canvassers under his direction at the Fraternity Hall on 64th street. There was a delightful exchange of witticism, experience and story and Mr. Eckland unbosomed himself about as follows:

"May great blessings rest upon the army of tireless and conscientious talking machine salesmen to whose assiduity civilization is indebted for disseminating some of the brightest songs of the world's greatest artists, as were it not for these emissaries of light some of the brightest diadems of music would be forever consigned to oblivion, and ignorance would trample roughshod over the brains divinely created.

"The installment salesman—ah! the installment salesman—how much bitterness, happiness and ambition is wrapped in that one word. The Columbia daily reports show us that under this title Messrs. Easton, Lyle, Dorian, Eckhardt and our managers have each in their turn sailed forth 'neath the armor of a new modeled talking machine to invade the fields of ignorance and superstition which is so often found to be the battleground of Eckland's energetic canvassers,

## STANDARD METAL MFG. CO.

MANUFACTURERS OF

## PHONOGRAPH HORNS AND SUPPLIES

Our Horns, as our name implies, are "Standard" in every respect. We make all the different styles and sizes in any metals or colors, including the new Morning Glory Horn, which is cut on a new plan to distribute sound more evenly.

NEW YORK OFFICE AND SAMPLE ROOM: - 10 WARREN STREET

# The "PIANINO" is the only Nickel-in-Slot Electric Piano

playing from perforated Music Rolls which is **An Absolute Success**

## Style No. 1

Including one roll of music, upon which there are six pieces, with direct current motor,

**\$500**

## Style No. 2

Including one roll of music, upon which there are six pieces, with alternating current motor,

**\$550**

## The Pianino

is the product of many years' experience in building Automatic Electric Pianos, and is presented to the public as the acme of perfection. The Pianino is the only Electric Piano playing from perforated music rolls which is an absolute success. The music is played with such accuracy and expression that it is almost impossible to believe that the instrument is played mechanically and not by expert human hands. The Pianino is the only Electric Piano fitted with an automatic rewinding device, which when the end of the roll is reached, automatically rewinds itself in thirty seconds. The pianino therefore requires no attention, which makes it valuable for all public places of amusement. Another important feature not found on any other automatic piano is the regulating device, whereby the time can be changed to any desired tempo. The perforated paper music rolls are only 5 1-2 inches wide; contain six pieces each, and play from fifteen to twenty minutes. As a money-maker the Pianino bids fair to head the list.

## The "Pianino"

Is the latest addition to our line of Electric Pianos, and from present indications bids fair to head the list as a money-maker. No one is more fond of music than the American people. Then why not give it to them? Music is elevating and refined, and will be found in some shape or form in all the better class of saloons, cafes, hotels, etc. Here is an opportunity to give your patrons music, and at the same time prove an income to you. The Pianino will pay 50 per cent. to 200 per cent. on the investment, and increase your bar trade 15 to 25 per cent.

*Liberal Inducements and Exclusive Agency given  
in Unoccupied Territory*

**THE RUDOLPH WURLITZER CO.**  
CINCINNATI MANUFACTURERS CHICAGO

"What is a canvasser? He is an individual endowed with all the beautiful selections which the talking machine contains; in mind he is strong, yet pliable, determined, yet reasonable, at one time he is pointing his way to untutored mind and at another meeting we find him with all the powers at his command.

"To the good canvasser, let us give all glory and all honor which he has so nobly won, and when he has at last outlived the days allotted him on this earth let us lay him to rest in that field prepared by divine hands, and may this epitaph ever live in the minds of an appreciative people, 'Here the installment man found a heaven, may his memory immortal part and on our minds may these last words be graven.' Please sign contract on this line."

### MESSAGE TO NEWSBOYS.

The Edison Phonograph Delights the Newsboys of Houston at Their Entertainment on New Year's Day—Record Will be Sent to Mr. Edison—An Interesting Occasion.

(Special to the Talking Machine World.)

Houston, Tex., Jan. 6, 1906.

One of the interesting features of the newsboys' New Year's dinner given by the Houston Improvement League at the Woman's Rest Room dining parlors Monday evening was a reproduction of a specially made record upon H. M. Holleman's gold plated Edison phonograph, which spoke to the boys the following words as they began their dinner:

"In connection with the splendid dinner provided the Houston newsboys by the Improvement League, the Texas Phonograph Co. will present a musical program on the Edison phonograph, whose inventor was once a newsboy himself; also the following special message by James O. Reavis of Nashville, Tenn., Secretary of Foreign Missions of the Presbyterian church of the United States."

"My Dear Friends: It gives me great pleasure to speak a word to you this evening. I want to tell you of a newsboy in Louisville, Ky. His name is Billy Green. Billy had a great misfortune in life. He lost his feet and his hands. The boy is not able to walk nor handle anything. Billy got a little wagon and was placed in it, and the newsboys would haul him down the street every morning, and there Billy would sell papers and chewing gum all day for a living. One day a wealthy man passed by and said: 'Billy, I want some chewing gum,' and he threw out a dime to Billy. The chewing gum was only worth a nickel, and as the man walked down the street Billy called out after him: 'Say, mister, come back here.' The man came back to his side, and found Billy had a nickel to give him, and said: 'The chewing gum is only worth five cents, and you gave me ten cents; it is a nickel too much, sir, so I give you back your nickel.' The wealthy man walked on down the street and said to himself: 'That boy is honest; he is a good boy.' Months went by, and this wealthy man had a position in his store. He wanted an honest boy to take it, and so he looked up and down the street to find Billy. He found him and said: 'Billy, I've got a place for you in my store. You are honest; you are the kind of boy I want.' So Billy was promoted to a position in the wealthy man's store. Well, years have gone by now. Billy remained at his post in the store. He saved his money, and the other day he was able to buy that entire store. He has money in the bank. He drives a nice horse, and Billy is one of the highest respected men in the city of Louisville. Now, boys, it all comes from being honest. The man who is honest over a nickel will be honest over dollars. This newsboy had faith in himself, faith in his mission and faith in God. I believe every boy here can pull to the top if Billy, without hands and feet, can become a wealthy man just because he is honest. I wish you all a happy New Year and great prosperity in selling your paper."

The record containing the above rendition on the phonograph was heartily cheered by the boys,

and will be sent, with their compliments, to Thomas A. Edison at his laboratory at Orange, N. J.

### HERE'S AN ENTERPRISING MAGISTRATE.

(Special to the Talking Machine World.)

Jeffersonville, Ind., Jan. 9, 1906.

The usual monotony that attends the ordinary ceremony set for eloping couples visiting Jeffersonville has been modified by Magistrate John Delanty, who has equipped himself with a talking machine, which peals forth the wedding march while the vows are being said.

To the strains of the talking machine Magistrate Delanty yesterday married James Romer and Gertrude Kennedy, of Louisville. He also married J. W. McGriffin and Miss Sarah Thomas, of Louisville. William Tucker and Maud Hornback, another Louisville couple, were married by Magistrate B. F. Ferguson.

### ORDERS SEVEN FULL CARLOADS

Of Zon-o-phone Records for Kohler & Chase—Another by Order from Lyon & Healy—New Machine Out This Week.

What is considered to be one of the largest orders on record was placed last week with the Universal Talking Machine Manufacturing Co., New York, by Kohler & Chase, San Francisco. It consists of 165,000 ten-inch records, making seven full carloads, and is for immediate shipment, a car a week to be shipped. While this is a vast number, the order embodies but 375 selections.

Another nice order for the same company came from Lyon & Healy, Chicago, for 10,000 ten-inch records. As a matter of fact, the Zonophone people have orders on hand for 200,000 records, and in consequence are called upon to increase their pressing plant in Newark, N. J., by at least 25 machines. The management state they will discontinue the manufacture of seven and nine-inch records altogether.

Their new \$35 taper arm machine was put out this week. A new sound box, improved turn-table and other parts are the features. The cabinet is polished quartered oak, piano finish.

### CAN'T DO WITHOUT IT.

A Story Told by Bard Bros., of Wheeling, Which Illustrates the Indispensability of the Talking Machine.

Bard Brothers, the talking machine men of Wheeling, W. Va., say that after a man once has a talking machine he cannot do without it. For proof of this they point to the fact that a machine which they sold Tuesday of last week to a Wetzel County man was stolen and he came the day after and purchased another one, for the reason that he did not want to be without one of these machines even for a day.

This machine was one of the first to be sold in Wetzel County, and the entire community took a great interest in it. The purchaser kept it in his place of business, and kept it going practically the entire day. It aroused great interest and attracted many persons to his store.

It happened that while he was not watching some one walked off with the machine. After spending a day attempting to locate it he hunted up Bard Bros. and purchased another machine similar to the one he first owned. This is held up as a proof that once a talking machine is owned the owner must always have one.

### O. F. KAUFFMAN ENTERTAINED.

O. F. Kauffman, proprietor of the music house, 48 North Eighth street, Reading, Pa., as well as the Reading Phonograph Co., 911 Penn street, was entertained by his employees on Christmas eve. He was inveigled into a specially decorated room on the third floor, where Edward A. Gicker, acting as toastmaster for the occasion, made a very charming address, eulogizing Mr. Kauffman for his enterprise and his appreciation of his employees. Mr. Kauffman responded in a very happy address of thanks.

# Do you get your goods promptly?

Something the matter with your dealer if you don't. You can't afford to wait for your goods and make your customers wait.

Get in touch with a new dealer. Better for you to give your business to another dealer than for your customers to take their trade to another store.

We want your business and will take care of it. When you place your order with us you can rest assured that it will be attended to at once. Goods are invariably shipped the same day that the order reaches us.

Look over your stock and see if there isn't something you need in Victor machines, records and accessories, or in specialties, such as trumpet horns, fibre cases and English needles.

Or send us your next rush order and see how quickly you get the goods.

A postal card mailed to us to-day will bring our catalogue to you by return mail.

## The Victor Distributing and Export Company

77 Chambers Street, New York

## NEW CONCERN IN SIOUX FALLS, S. D.

(Special to the Talking Machine World.)

Sioux Falls, S. D., Dec. 30, 1905.

Albert D. Wayne arrived in the city recently from Chicago, and has launched a new business enterprise in Sioux Falls—an exclusive talking machine exchange, carrying the complete line of new style Edison and Victor talking machines and records. Floyd C. Ramsdell, machine expert, also from Chicago, has a partnership interest in the business. Mr. Wayne and Mr. Ramsdell have for years been connected with the manufacturing, Mr. Wayne in the capacity of traveling representative and Mr. Ramsdell expert mechanic. The new store is in the new Sherman block, corner of Twelfth street and Phillips avenue.

## WM. TIPPETT'S NEW TALKING MACHINE.

(Special to the Talking Machine World.)

Marquette, Mich., Jan. 2, 1906.

William Tippet of Palmer recently constructed a phonograph on which he expects to get a patent. It is similar in appearance and build to the ordinary disc machine, but he claims to have devised improvements. His machine, he claims, does not have to be rewound so often; that the selection plate travels even and smoother and that the speed can be regulated and maintained to a nicety at any desired tempo. He is now conducting some experiments with a resonator which he thinks he can perfect so that it will do away with the scratching noise which mars the playing of selections in the case of the resonator now in use.

## COMPANY WITH \$1,000,000 CAPITAL.

(Special to The Talking Machine World.)

Portland, Me., Jan. 2, 1906.

The Pacific Telegraph Co. has been organized in South Berwick, to manufacture and deal in telephonic instruments, graphophones and phonographs. The capital is \$1,000,000; \$30 of

this is paid in, according to the "Portland Express." The officers are Ralph Swain Earle, Boston, president; E. Sargent Cox, Boston, treasurer.

## SWITZERLAND'S MUSIC BOX TRADE IS INJURED.

(Special to the Talking Machine World.)

Washington, D. C., Jan. 5, 1906.

Consul Keene, of Geneva, furnishes the State Department with a brief report on Switzerland's watch and musical-box industries. He writes in part: "Musical boxes have found in phonographs, gramophones and pianolas of all kinds keen competitors, and exports fell from \$590,580 in 1893 to \$399,703 in 1903 and \$308,800 in 1904. The year 1905 will not give better results at the end."

## ANOTHER PATENT FOR RAPKE.

A second patent on his "new and useful improvement in talking machines" was given to Victor H. Rapke, New York, by the Commissioner of Patents last week. This machine as a whole was illustrated in last month's World and attracted marked attention and evoked many inquiries from all parts of the country. There is no doubt that the result achieved by Mr. Rapke's manner of suspending the amplifying horn vertically and its peculiar adjustment, for which his claims of inventive novelty have been allowed on a broad basis by the Patent Office, greatly improves the quality of sound.

## THE PHONOGRAPH POPULAR.

That great inventor, Edison, once stated that he would never be satisfied until he knew a phonograph was in every home in the land. If Edison came to Newport he would see half a dozen or more enterprising merchants pushing the phonograph, in and out of the Christmas holidays. It is safe to state that there is hardly a street, in "North Newport" at least but what there is a phonograph, and in some streets there

are as many as three machines. On one street, one night not long ago, four phonographs were working at the same time.—Newport (R. I.) Herald.

## SHEBLE ON TRADE CONDITIONS.

The Well Known Talking Machine Supply Man Is Most Optimistic Over the Outlook—Enlargement of Plant Necessary.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 9, 1906.

Mr. Sheble, of the Hawthorne & Sheble Mfg. Co. of this city, in a recent interview relative to trade conditions states that never in the history of the talking machine business have they seen such brisk trade as at the present time. He goes on to say: "We have very largely increased our facilities to manufacture talking machine supplies, and since early in September have been running overtime, but even then we have by no means been able to accept all of the business which has been offered us. We have instructed our salesmen to refrain from soliciting new business, so as to give us better opportunity to attend to the requirements of our old trade. Our well-known No. 5 Horn Crane has had such a phenomenal sale that we have been obliged to rebuild our entire Nickel Plating Plant in order to largely increase the output. Our outfit of Flower horns alone is today nearly three times as large as was our entire horn output one year ago, and we are still further increasing our output by the addition of numerous special machines so as to take care of trade requirements. The demand for the better grade Flower horns is largely on the increase, and I believe before very long the cheaper style Flower horns will be used only on the low priced machines, while the better grade Flower horns will come into universal use. So many dealers have an idea that the talking machine business practically ends with Christmas. Such, however, is a very erroneous conception, as in our experience the largest business is done during January, February and March, with March as the preferred month."

## AUTOMATIC SALESMEN

for more expensive Phonographs and Record Movers, is the universal opinion of the trade in regard to our machines.

## LOVE AND DUTY.

A TALKING MACHINE TALE OF THE HOLIDAY SEASON.

(Written specially for The Talking Machine World by Howard Taylor.)

It was basketball night at the Lyric Theater. The boxes glowed like huge bouquets in the light of the chandeliers; the bright banners of victors and vanquished alike, blending into one; such is the friendly rivalry of college sport.

Behind the showy bunting, "monarchs of all they surveyed," cheered and applauded the knights of the leather sphere.

On the stage the dashing chorus maidens in their brilliant apparel, sang, danced and capered bewitchingly in an ardent endeavor to win a smile, or perchance a flower, from the vigorous heroes who ruled the town that night. In the background a sea of faces rose from orchestra to gallery, but it did not count. The songs had been sung and the fair toes flung aloft many a time before, but never so sweet the songs nor never so high the toes as upon this eventful occasion, and the long-haired gentlemen in the boxes knew that it was all for them. Among these conceited youths—I might almost say, the most conceited

The ballad had ceased—the beauty in black had bowed her appreciation and left the stage. A coquettish glance, however, which her dark eyes had cast at the moment of her departure, remained with Tom. The song and the singer did not harmonize. A pretty girl in a low-necked, sleeveless gown, singing to him of his home, and shrugging her bare shoulders at him as she sang, did not appeal to his better self just then. It was all a great, great mistake. She should have been a little country lassie, pure and simple as the song she sang. He regretted now the note which lay in the bunch of roses he had flung her: "My Dear Miss Ormond—They have good broiled lobster at Sherry's. There is a table there for two. Will you go?" That coquettish glance said "yes."

With his heart far away on the farm, amid the naked trees and frozen brooks, he went to dine with a chorus girl at Sherry's. "Bah! I'm a fool," he said to himself, but being a man of honor, "dead game," to use a slang expression, he felt compelled to see it through. Imagine his surprise at the following revelation: The waiter had scarcely sped away with an exorbitant order before Tom realized that the girl before him was very far removed from the average type of stage beauty. She was human, and listened with a marked show of interest when he confided to her how her little song had touched him. He described to her also, in glowing terms, his home and the many pleasant scenes of his early childhood. Thoughts buried for years, came to light now in response to the call of his little friend across the table. As he finished speaking, she placed her tiny gloved hand upon his arm, and showed him his duty.

"Mr. Raymond, you tell me a whole year has passed since you have seen your mother's face. You must go to her at once. If you had lost a mother—" she stopped, and a tear ploughed the rouge on her cheek.

"Will you go?" she pleaded.

"I will," he answered her, and he kept his word.

It was upon a cold winter's morning that a young man alighted at the little depot of Maple Grove, and walked briskly down the wind-swept road toward a white farmhouse.

A woman stood at the sitting room window, shading her eyes with her hand. She saw something familiar in that quick, swinging stride.

"Could it really be Tom?" she whispered to herself.

He had reached the front gate—he was running up the gravel walk—yes, she was sure now—it was her boy.

"Father! father!" she quavered, "Tom is here!"

A fervent "Lord, I thank Thee!" came from the depths of the woodshed, and then, as the old man appeared, all three were mingled in a loving greeting.

The prodigal had returned.

They had so much to ask their boy, he had so much to tell them, that it was far into the night when at last the lights were out, and they retired to a well-earned rest. As Tom mounted the creaking stairs to his little room in the attic, the rising moon was bathing the snowy landscape in a flood of silver. Rippling white beams lay athwart the floor, and kissed the old prints on the whitewashed walls. Every chair seemed dearer than ever before, and the bed far more luxurious. Thinking of these things, a delicious drowsiness stole upon him, and he slept.

At the breakfast table next morning Tom's mother piled his plate high with flapjacks, knowing how he loved them, and talked with him the while. The father sat opposite, listening hungrily to the ringing voice of his son, and thinking proudly what a fine man he had grown. They discussed the crops, the weather, and, finally, the mortgage.

"No; the mortgage is not clear yet. We had

to think of your education, Tom dear," said the mother softly, stroking his curls just as she used to do in the days when he was little and chubby, and yes—sometimes dirty, too.

He stayed with them a week, and when the time came for him to go back to New York, they gave him a hundred dollars they had saved, assuring him that they could well afford it.

"The old pasture lot will be put in corn next spring; it will raise a famous crop—we may be rich, who knows?" they told him. The old mother thrust the worn wallet into the hands of her son, her face aglow with the pleasure of giving.

"Take it, Tom, for our sakes," she insisted. But Tom shook his head. He had changed. The homecoming had ripened his nature from a thoughtless boy to a clear-sighted man. Miss Ormond had been instrumental in bringing that homecoming to pass. Would she approve of the hundred dollars leaving the old home when a mortgage held its merciless hand above it, and his loved ones?

"No, mother; I can't take it. I'm not going back to college. I've decided to work instead."

Thus he left them, their tear-dimmed faces at the window, eagerly watching for the last glimpse of their boy. He turned a bend in the road, waved them a last adieu, and was gone.

Upon his arrival in the great metropolis he called on Miss Ormond at her hotel, and found her upon her knees before a talking machine, putting it in order for reproduction.

"Oh, Mr. Raymond, I am so glad to see you," she exclaimed cordially, by way of greeting.

"Allow me to introduce to you my latest possession. You shall hear it presently, but first of all you must listen while I tell you how I came to possess such a beautiful piece of mechanism."

She motioned him to a seat, gave the machine a final adjustment, and continued:

"I have been making talking machine records for the Neapolitan Co. for some time, and I was greatly pleased yesterday upon my arrival home from rehearsal at the theater to find this outfit awaiting me. A very kind note from the manager accompanied the gift; I will read it to you."

From a pigeon-hole of her desk she drew forth a large envelope, bearing the gold trade-mark of the greatest talking machine corporation in town.

"It is quite flattering," she laughed. "Listen."

"We take great pleasure in sending you to-day by messenger, one of our De Luxe machines, begging you to accept the same as a token of our regard for both you

## Increase Your Business

## MAKE NEW BUSINESS

Get sales where none grew before

WE have no less than twenty-five original propositions whereby talking machine dealers, large or small, can increase their business and profits. Write to-day for full particulars—free.

Our latest is one of our best. It's ten times better than any trading stamp scheme extant. You will be able to sell machines and records to people that you could not get for customers on any other proposition. The best of it is that they make money as well as yourself. Just to get acquainted with you we will send you the plan with all details fully worked out for a plunk—one dollar, \$1.

If it isn't just about the best thing you ever heard of we will cheerfully refund the dollar. This offer is open for a limited time only, and we would therefore advise you to take advantage of it at once.

O. W. ECKLAND &amp; CO.

128 Dearborn Street, Chicago, Ill.

"THE LADY IN BLACK."

of them all, posed Tom Raymond. I use the word, pose, because Tom was posing. He was handsome, and the girls had spoiled him into an exaggerated opinion of his charms—a sad, sad circumstance.

A stately blond beauty in a decolette gown of black, tripped to the footlights, smiling languidly at the royal ovation tendered her. As the last huzza of welcome died away, the orchestra broke into the ballad, "My Dear Old Country Home." Then in a rich contralto, Miss Daisy Ormond—so the programme announced this fair vocalist—began to sing.

Tom was enraptured at once, and threw her a bunch of American beauties in a delirium of boyish enthusiasm. But as the song progressed, his college life fell away; he forgot the wine suppers, the broken rules, and the hundred and one misdoings he had gloated over until now. Instead, came to him from the girl on the stage a vivid picture of his home. He could see the old farmhouse nestling against the white hillside, his mother in the doorway, bent and worn with toil. Streaked with gray was the golden hair, and crow's feet were setting their stamp upon her sweet face. Then from out the barn, weighted with pails of foaming milk, his father came into view. He, too, showed the trace of years. His walk was slow and feeble, and a look of care, almost of heartache, lingered about the firm mouth.

As a setting to this rustic picture, the chickens clucked to him from inside the garden fence, and from his stall old Dick, the dappled gray, neighed an invitation. Even the sparrows swinging amid the snow-laden boughs chirped, "Come home, Tom; come home."

and your work. Hoping the instrument may bring you pleasure, and with our very best wishes, we are  
Yours most sincerely,

NEAPOLITAN TALKING MACHINE COMPANY.

By G. F. TOMKINS, Gen'l Man'gr.

"Allow me to congratulate you, Miss Ormond," cried Tom, enthusiastically, as she finished reading. "May I hear one of your songs, please?"

"You will not think me conceited, will you?" she asked, demurely, as she inserted the blank cylinder.

"Of course not," he answered, indignantly; "you know me too well for that."

"I hope so," she murmured, and started the machine.

She had chosen the same song he had heard her sing at the theater, "My Dear Old Country Home":

When the shades of evening deepen,  
And my work for the day is o'er,  
A picture of my dear old home  
I seem to see once more.  
It drifts from the dying embers:  
A farmhouse on a hill,  
And I see a face at the window:  
She's waiting for me still.

CHORUS.

I'm going home to mother  
Ere another day goes by,  
I know there is no other  
Beneath the deep blue sky.  
Who is half so dear to me,  
No matter where I roam,  
O Mother, how I long to see  
My dear old country home.

"It was grand—wonderful!" he told her, and

"RUBBED HIS GLOSSY NECK AGAINST HIS SLEEVE."

his tone proved his sincerity. "How satisfying it must be to you to be able to sing like that."

She thanked him, pleased with his praise, and then their conversation, drifting from subject to subject, came at last to his visit home.

"It did me a world of good, and I have you to thank for it," he said.

"I knew it would," she answered, simply. "Who could go home to a fond and loving mother without coming away better for the visit? Oh, Mr. Raymond, if you only knew the loneliness, the utter emptiness of life without a mother's care—" she stopped, and he saw that she was crying.

"My dear Miss Ormond—Daisy (ah, how sweet that name), what is it? Tell me; I cannot see you suffer so? Are you ill?"

"Yes; I am ill," she sobbed; "tired out with a life of gayety and dissipation. I would give the whole world for just an hour in arms that held me close and whispered 'daughter.' Mr. Raymond, a chorus girl's life is a hell; the very name implies everything that is bad, a disreputable person, an outcast. She paused in an effort to recover her composure, fearing that he might misjudge her, but failing completely, she burst into a very torrent of weeping.

In an instant he was at her side, pouring words of love into her ears. She listened rapturously; her white arms went about his neck; her lips touched his and lingered there, and a sweet smile cleared away the clouds of her sorrow.

A sacred, magnificent thing is true love.

"Shall we go home to Maple Grove, dear?" he asked her.

"No, Tom; not now. Let us wait until we can prove to them that we have not done wrong; I mean that you have not done wrong in marrying a chorus girl."

"Oh, forget it!" he laughed. "You must cease to be a chorus girl at once. I want you to cancel all your engagements; your professional career will be entirely unnecessary now that you have me to work for you."

She obeyed, sure of his ability and strength, and ere long they were married and comfortably ensconced in a snug little flat on Twenty-third street.

"By the way, Daisy," remarked Tom one day after they had become settled in their new home, and had time to think of other things, "what do you say to sending that talking machine, with some of your records, down to the folks at Maple Grove as sort of a harbinger of better things to come? They will be glad to get it, I know. Why, I can see their dear old faces now, as they listen to 'My Dear Old Country Home.' That will fetch them if anything will."

"Tom, you are a wonder!" she answered, laughing; "come, let us pack it up right now."

They set at work, and soon a package labeled "fragile, handle with care," was journeying toward Maple Grove. A card within bore the inscription, "Happy Christmas, from Tom."

"Well, we are fixed now, and I guess I had better get next to a job; good-bye, Daisy, you dear little girl. I will be back in no time with news that will make you stagger." Speaking thus confidently, Tom Raymond started out to look for work. As failure after failure followed his weary search for employment, he laughed at what the morrow might bring forth and refused to be discouraged. However, the end seemed near when they arose one bleak December morning, the morning before Christmas—think of it, with but fifty cents to their names and nothing for breakfast. Daisy tried to comfort him, but her effort to be cheerful fell rather flat, and Tom was, for the first time, really disheartened.

A paper lay upon the table, and mechanically he turned it over, just as he had been doing for days. Suddenly his eye caught this notice in the amusement column:

TEXAS BILL'S WILD WEST.

Special Feature

UNTAMED STALLION "WILDFIRE," \$1,000 IN GOLD (And the Horse)

TO THE MAN WHO RIDES HIM.

Hundreds of other attractions. Admission, 50c. and \$1. Winter Circus Grounds, New York.

Week of Dec. 18th, 1905.

Tom leaped to his feet, kissed his little wife a hurried good-bye, and raced down the narrow stairs, two steps at a time.

It was a long walk to the Winter Circus Build-

ings, but the lack of car fare made it necessary. However, his heart was in it, and at last his destination loomed up before him. He paid his fifty cents at the door and entered to await, and to embrace when it came, the opportunity to win for Daisy. Oh, how slowly the dreary moments dragged. What cared he for the fancy shooting, the besieged stage coach, the heroic rescue? He was there to win a thousand dollars in gold for the little woman waiting for him at home with nothing for dinner but her love for him, and there was not much nourishment in that.

At last an individual with flowing hair and resplendent in a costume of buckskin, strode to the center of the enclosure, and in stentorian tones, proclaimed the following:

"Ladies and gentlemen, we now take pleasure in presenting to your notice, Wildfire, the untamed stallion of the West. He has never been ridden, and, believe me, ladies and gentlemen, he never will be. To impress you that I am positive in my statements, I hereby offer one thousand dollars in gold and the horse, as per our advertisement, to the man who successfully accomplishes the feat."

The cowboy band struck up "Hail to the Chief," and then, surrounded by herdsman, and fighting every step of the way, a beautiful black horse entered the arena. He shook his great head in proud disdain, and lifted his polished hoofs daintily.

Tom rose from his place on the bleachers, and jumping lightly from seat to seat, reached the ground almost in the path of the cavorting stallion. He went directly to the individual in the resplendent costume, and said to him quietly, "I would like to try for that thousand dollars."

"Young man, take my advice and go back to your seat. Wildfire will break every bone in your body—he's killed five people already."

"That's all right. Does your offer stand, or is it a bluff to draw crowds?"

"Bluff? Ha! ha! Well, hardly. Ride him and the money's yours; but if you break your neck, don't blame me—that's all."

Tom smiled and took off his coat.

"Ladies and gentlemen, Mr.—I didn't catch the name."

"Smith," said Tom.

"Ladies and gentlemen, Mr. Smith will now mount Wildfire, and I beg to assure you that I am mighty glad it is Mr. Smith, and not"—here he bowed profoundly—"yours truly."

Then turning to the vaqueros who held the plunging animal, he shouted: "Throw him, boys!"

Mr. Smith wants to get aboard. He won't stay there long enough to get acquainted, though, I reckon," he added, with a grin.

A brute was this man in buckskin.

In obedience to their chief's command, the lariats whistled through the air, and Wildfire, caught in their entangling circles, fell flat upon his side, kicking viciously in a vain effort to regain his feet.

Tom watched carefully for a still moment, when the dangerous hoofs were quiet, and when it came he sprang into the saddle. Horse and rider rose together in a cloud of dust; the lassos were cast loose from the graceful limbs, and the demon horse of the prairies was free. With his head between his stiffened knees he began to buck. Tom's senses reeled, and the blood flew in a cloud from his nostrils. Up and down, to the left and right, like leaves in the autumn wind, they struggled for the mastery.

The horse expected the cruel spur to gore his flank, and the quirt to leave its stinging ridge

"WITH HIS HEAD BETWEEN HIS STIFFENED KNEES, HE BEGAN TO BUCK."

along his shoulder. He had always suffered these tortures in the past, and when they did not materialize as usual, he marveled, and then beneath his flattened ears drifted soothing words: "Whoa boy—easy Wildfire—I won't hurt you, old fellow—and you won't hurt me. I have broken many a colt down on the farm, boy, and they never threw me with the hold I have on you now. They couldn't, you see, so they learned to like me instead. Slow down to a canter now, and we will show these brutes what kindness will do; then we'll go home to Daisy."

A quiet as of death had fallen upon the multitude. They had watched the struggle with eager faces, expecting every moment to see the intrepid rider dashed to earth, a mangled corpse beneath those flying hoofs. But they were to be disappointed; no tragedy was to add its gruesome charm to their entertainment, for after the first vicious display of bucking, the horse dropped into a canter, then into a walk, and eventually came to a dead stop before the individual in the resplendent costume.

Tom leaped lightly to the ground and ran to Wildfire's head. The noble animal pushed his velvet nose into his new master's hand, and rubbed his glossy neck against his sleeve.

A roar like unto the storm-tossed sea came alike from grand stand and bleachers, the people howling their approval in one mighty burst of sound. Tom's horsemanship had won their esteem, despite their love for the tragic.

The money and horse were paid over, and Tom went home on air, figuratively speaking, with a thousand dollars in his pocket, and a superb horse beneath him, while the good news he had for Daisy made his heart thump tremendously.

She was sitting at the window when he en-

tered. She had not witnessed his triumphant approach, for he had left Wildfire pawing the asphalt around the corner. Throwing the bag of gold into his wife's lap, he went to the sink and began wiping the blood from his face, briefly telling her his experience between gasps, his head beneath the spigot.

Daisy came to him there, took his streaming head in her hands, while she sobbed out her appreciation.

"All for me!" she cried; "all for me! You went into the very jaws of death for me, O my king, my life—how I love you!" She kissed his eyes, his mouth, his hair, in an ecstasy of joy.

That night a telegram winged its way over the wires to Maple Grove:

"Will be home for Christmas.

"Tom—Daisy—Wildfire."

The old folks sat together in the sitting room. Near them on the table stood a talking machine, and from the polished horn issued the sweet strains of a rich contralto voice singing "My Dear Old Country Home." They listened spellbound to the flood of melody, and when at last it ceased, the tears were coursing down their furrowed cheeks as they had not done for years.

"Father, it was like our Tom to send us that machine," spoke up the woman at last. "He knew how we would enjoy it, and that voice," she continued, "is the kind that makes you cry. Father, the girl who sings that song is unhappy—I know it just the same as though she was here to tell me. She's cryin' out to the mother she longs for, but has never seen. I'd just like to take her in my old arms and comfort her."

"Mother, you're a fool!" interrupted the man. "She's one of them pesky, low-necked, short-skirted chorus girls, I'll bet—she can sing some, though," he admitted, reluctantly.

A knock came at the front door, and they both arose to answer it. It was the man from the telegraph office with a message for them. They opened the yellow envelope with trembling fingers: "Will be home for Christmas. Tom—Daisy—Wildfire." What could it mean?

"It's too much for our old heads, mother; we'll just have to wait and see."

The little train from New York drew in at the distant station. A funny little train it was, with its freight and passenger cars.

"Mother," said the man again, "there's freight to-day, I guess; the engine's drilling."

"Yes, father; I heard Deacon Smith say he expected some, so I reckon that's it—Father!" her voice was high-pitched now in its intense earnestness, "there's two people walking down the road, leading a big, black horse between them. They're turuing in at the lane—it's Tom!" She could wait no longer, but gathering her skirts about her ran to meet them, her flying apron waving a cordial greeting. The old man followed more leisurely, and his heart beat high with joy when he recognized the stalwart form of his son.

"Welcome home, and God bless you!" was all he could say.

In a flood of passionate eagerness, Tom told them his story, and ended by placing Daisy's little hand in his mother's calloused palm. Then he turned to his bewildered father, and handed him a bag of gold.

"We have come home to stay, dad," he explained. "The money is to help with the mortgage, and these"—he held out his strong young arms—"will do the rest."

Wildfire, left to himself, sauntered up to the joyous quartette and neighed softly. Old Dick answered him from the distant stable, assuring him of a warm and hearty reception at Maple Grove.

Daisy, with her arm in that of her new mother's, sang sweetly "My Dear Old Country Home."

A light, joyful, serene, shone in the face of the older woman: "The voice in the machine. Tell me, child, is it not the same?"

Daisy nodded an affirmative.

"Thank God! now my old heart is content. Kiss me, my daughter."

The bells in the chapel across the way rang out, "Peace on earth, good will toward men."

THE END.

## A JANUARY TIP!

### DO YOU WANT TO MAKE MONEY?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

## BUEGELEISEN & JACOBSON

113-115 University Place  
Corner 13th Street, NEW YORK

## In the Domain of "Automatics"

The passing of the old year has marked a period of unprecedented success and development in the field of automatic creations, musical and otherwise, and everywhere is evidenced a frenzied desire for improvement. This undoubtedly has had much to do with the remarkable advance in this industry and reflects credit and honor on those whose brains and untiring energy have placed them at the head of the many varied branches of this trade.

As the demand for these mechanical devices grows the manufacturers are confronted with the difficulty of obtaining competent help in the factory. In other words, the business is now passing through the process of specialization, and therefore plants with any pretension to output are compelled to educate their own forces.

The question whether or not this new phase of the musical industry is a benefit to the trade in general, and whether it will or will not depreciate the sales of our old standard instruments is much discussed. We are strongly of the opinion that in all ways it is destined to be a decided help in maintaining and augmenting the present healthful conditions.

The growth throughout the country of these emporiums of music, where a passerby for a few pennies may hear any of the modern musical selections or the masterpieces of old writers, through the medium of the automatic piano, talking machine, banjo or other device, is creating a love for music among a class of people who, without this educator, so to speak, would never enter a music or talking machine store, be the salesman ever so clever or his proposition ever so enticing. It familiarizes them with the possibilities of enjoyment to be derived from the ownership of such an instrument, which desire eventually ends in a purchase.

To state that our modern arcades appeal merely to the untutored, would be an injustice to their enterprising managers, for glancing over the crowds that flock to these centers of amusement, we find a conglomeration of humanity in all stations of life. The manufacturers of talking machines and records are not the only ones who benefit by this new enterprise, for the publishers of sheet music and makers of the various piano player rolls are reaping a rich harvest from this publicity of their late productions; in fact, the parlor men have long realized it, and many are running a department in connection with the arcade, where the different songs and selections may be bought at attractive prices.

The automatic musical instrument and the automatic machine is not limited to this territory alone, and is finding its way into all places devoted to amusements; and to-day cafes, hotels, parks, rinks, dancing pavilions, etc., etc., are not considered complete without the presence of these representatives of our numerous mechanical and acoustical geniuses. The number of various devices now on the market designed to tempt the curiosity of the public is large, and is still growing, and yet the incessant demand is for more—to supply which the manufacturer is kept working night and day, with no prospect of a let up.

The present month of January, generally considered as dead, offers no breathing spell. With all the stock on hand sold the manufacturer now faces the difficulty of placing something new on the market, and in such numbers as to fill the orders which will commence to pile in next month. The manufacturers have for some time realized the value of The World as an advertising medium for this trade, and all are unanimous in the verdict that through its aid they have doubled their business.

\* \* \* \*

The American Mutoscope & Biograph Co. of this city have for some time been making a specialty of reels of the current events, and the suc-

cess which they are meeting with proves the value of this up-to-date method. The recent hanging of Mrs. Rogers is only one of the many. Yet, one machine with this reproduction took in \$26 in three days, crowding the parlor on Fourteenth street, in which it was placed, to overflowing and bringing a rich harvest of pennies to all machines. The mere expression that one machine made \$26 does not perhaps convey the full extent of what this means. But when we consider that 2,600 people looked into one of the four hundred machines in this parlor in that time it gives a more perfect idea of the enormous demand for new features.

\* \* \*

In recognition of the universal interest that exists among all classes and at all times in the art of palmistry, the automaton palm reader has been invented and built by Marvin & Casler Co., the well-known slot machine manufacturers of this city. Up to the present time no real attempt had been made to reduce this art to a scientific or mathematical basis. The present machines generally found in slot parlors work purely by chance, and in no sense read the palm, or take any account of the individual operating them, yet these are all good money makers. The automaton, however, actually does gauge and read the palm, and delivers a card bearing a reading that is actually suited to the hand of the operator, and his alone.

The readings are made by "Fletcher," of New York, a noted palmist, and are copyrighted in

his name. There are nine types of hands, and each style has 25 series. This naturally increases the earning power of one automaton, as a person working the machine once and getting a reading that he recognizes as being true, will invariably spend more for further details.

This machine is undoubtedly a wonderful product of mechanical skill, and reflects honor on its manufacturers. The Knickerbocker Syndicate, 320-22 Fifth avenue, this city, have secured the agency throughout this country and Canada, and the only complaint heard from them is they can't get enough machines to supply demands.

\* \* \* \*

A despatch from Paris says a novelty has been introduced in the electric cabs of Paris. If a traveler wishes to read his paper he places a two-cent piece in a slot and touches a button, and an electric lamp will light up the cab for ten minutes. The new device will now be extended to all public vehicles in the city.

\* \* \* \*

A new parlor has just been opened by William Allen, in Meriden, Conn. All the latest type of machines are to be installed.

\* \* \* \*

No more profitable attraction can be found than the coinoperating pianos for use by talking machine dealers in their parlors or in the penny palaces which are now proving so popular throughout the country. They are money makers and crowd catchers, and cannot afford to be overlooked by any live manager.

A \$2,000 FREIGHT BILL.

Graves & Co. Pay High Tariff on Three Carloads of Edison Phonographs.

(Special to The Talking Machine World.)  
Portland, Ore., Dec. 30, 1905.

What is one of the largest freight bills ever paid by a local retail firm is that which Graves & Co., the music dealers at 328 Washington street, paid the Northern Pacific Railroad yesterday, when another carload of Edison goods arrived. A freight bill of nearly \$2,000 argues an undoubtedly great retail and jobbing trade. In assuming this unusual freight bill, Graves & Co. have not only captured a distinction in paying an exceptionally large tariff, but have also captured the distinction of being not only the largest phonograph dealers in the Northwest, but the only dealers hereabouts ever shipping in talking machines and phonographs by the carload. The

shipments for December alone have amounted to three carloads, one on December 1, car No. 100, 387, of 416 cases of phonographs, weighing 26,155 pounds, amounting to \$588.49; December 4, Northern Pacific car No. 7457, with 433 cases, weighing 33,953 pounds, amounting to \$763.99 in freight; and on December 18, N. P. car No. 46,790, 428 cases, weighing 27,649 pounds, amounting to \$622.10; total, \$1,974.58.

In speaking of the matter, F. W. Graves said: "The holiday trade has exceeded even our most sanguine expectations, and the three carloads of phonographs which we have received from the Edison laboratories at Orange, N. J., this month, have all been prompted by necessity; we had to have the goods to supply the trade. Not only has the Portland business been excellent, but we have had to work night and day to fill the orders which have been pouring in from all parts of the Northwest. We ordered another carload of phonographs last night, and are praying that it will reach us speedily."

VICTOR LETTER TO DEALERS.

Some Facts That Will Prove of Interest.

Camden, N. J., Dec. 20, 1905.

To Victor Dealers:

We are pleased to note that 90 per cent. of the distributors and dealers are well pleased with our plan and the change in prices on records. We are convinced that those who are not did not in the beginning thoroughly understand the plan and the advantages to be derived. Therefore, we wish to again emphasize a few of them, with some new features, viz.:

1st. Cutting out the exchange enables you to make a profit on *all* the goods you sell instead of only two-thirds as heretofore.

2d. Had we given sixty days' notice, other companies would have cut immediately, and your business would have been hung up for that length of time, allowing competitors to get a great lead over you and us.

3d. It was best for us to reduce the price on December 1st because we have found from actual figures for a number of years that the sales of records in the month of December are smaller than other months in the year, and January, February, March and April are the largest record months. If you had a larger stock on hand December 1st than at any other time, it would be harder on us than any one else, because we stand by our special offer practically all of the difference in price: therefore, we thought it was a good thing to do, notwithstanding the fact that we are the greatest losers by changing the price at the time you had the largest stock. Naturally, it was bound to cause some confusion making a big change of this kind at any time, and we are greatly surprised that it has caused so little.

4th. It was impossible to put the contract system into effect until the change in record prices was made, and we desired to do so as soon as possible.

5th. We prophesied that the business would be increased 100 per cent., but we had no idea that it would be increased to this proportion under two or three months. We are very much gratified to advise you, however, that the first fifteen days in December have already doubled any previous fifteen days and have equaled any entire single month. Therefore, we are confident, this means that within three months the business will be three times as large as it was heretofore instead of only doubled. We are confident that this move is the best one the Victor Company ever made, and are sure you will agree with us inside of ninety days, if you do not at this time. Yours very truly,

LEON F. DOUGLASS, Vice-President.

Walter L. Eckhardt, manager wholesale department of the Columbia Phonograph Co., General, New York, is waging an aggressive campaign in the trade, and the list of Columbia jobbers—the most desirable, it is said—is growing apace. Mr. Eckhardt is filling this important position with credit to the company and himself.

# Everybody wants them!

# SOFTERTONE

# Needles & attachments

FOR VICTOR EXHIBITION AND CONCERT, COLUMBIA, AND ZONOPHONE SOUND BOXES

SOFTERTONE NEEDLES reduce the volume and bring out every detail and shade of tone in the Record

# Play Six Records

SOFTERTONE NEEDLES may be played on the same or different Records at least six times without injury to the Record—in fact, a Record will last three times as long when a Softertone Needle is used.

**IMPORTANT:** When ordering mention Name and Style of your Sound Box

The attachment for the Victor Exhibition Sound-Box also fits the Columbia and Zonophone Sound-Boxes. Price, Softertone Needles, in packages of 200, 25 cents. Price, Softertone Attachments, each 25 cents. Dealers' discount same as they are receiving on Victor machines.

FOR SALE BY **LYON & HEALY** CHICAGO

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)

Washington, D. C., Jan. 8, 1906.

**REPEATING MECHANISM FOR PHONOGRAPHS.** Clinton J. Kurtz, Salem, Ore., assignor of one-fourth to Jacob Wenger, same place. Patent No. 808,387.

This invention relates to an improved repeating mechanism for phonographs and the like, the object of the invention being to provide im-

Fig. 1.

proved means which will compel the reproducer to automatically return to the starting end of the record and continuously repeat the same record until the apparatus is stopped or runs down. In the accompanying drawings, Figure 1 is a plan view illustrating the improvements. Fig. 2 is an end view, partly in section. Fig. 3 is a front elevation, and Figs. 4, 5, and 6 are enlarged views of details of construction.

**PHONOGRAPH.** William Haverman, Cleveland, O. Patent No. 806,806.

The object of this invention is to provide a phonograph which shall give a very large volume of sound and shall direct the sound to different parts of the room, so that the phonograph may better serve, for example, to entertain an audience or furnish music for dancing. To this end the inventor has devised a phonograph having a plurality of reproducers associated with a plurality of horns and all operating from a single stylus. By this means the volume of sound is very greatly increased, and it may be directed to several points, as desired. The drawings clearly illustrate the invention. Figure 1 is a perspective view of the phonograph complete. Fig. 2 is a side elevation of the reproducer, together with

a horn and its support.

Fig. 3 is a side elevation, partly cross-sectional, of the reproducer, having two reproducing disks. Fig. 4 is a bottom view of the same. Fig. 5 is a view showing the attachment of the reproducer to the supporting arm.

**PHONIC APPARATUS.** Daniel Higham, Bridgeport, Conn., assignor to Highamophone Co., Jersey City, N. J. Patent No. 808,052.

This invention relates to phonic apparatus employing an intermediate friction mechanism between a primary and a secondary vibrating means, such as shown in Mr. Higham's United States Patent No. 678,576, of July 16, 1901, and in his allowed United States application filed December 12, 1904, Serial No. 236,609. The object of the present invention is to produce a friction device for use in apparatus of the character mentioned, which shall be so constructed as to avoid the objectionable noises referred to. The inventor has discovered that if the angle of inclination of the sides of the V-shaped groove is given a certain determined relation to the coefficient of friction between the shoe and the material constituting the friction roll this side-to-side movement of the shoe will be avoided and the noises resulting therefrom avoided. This is an important improvement and of great value. Generally stated, the angle of inclination of the sides of the V-shaped groove should be one whose tangent is approximately equal to the coefficient of friction existing between the shoe and the material constituting the friction-roll.

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

Fig. 5.

Fig. 6.

It has also been found that by giving the link which receives the pull of the shoe a proper position of inclination the said noises may be further diminished, while a still further diminution is obtained by an escape pocket or outlet for dust that accumulates between the shoe and friction roll. It is also beneficial to make one shoe-section of the compound shoe slightly wider than the friction-roll and one slightly narrower. The invention will be best understood by reference to the accompanying drawings, in which Figure 1 is a side elevation of friction-wheel and jointed friction-shoe in operative position. Fig. 2 is a plan view of Fig. 1. Fig. 3 is a vertical section of Fig. 1 on the line 3-3 of said figure.

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

Fig. 5.

Fig. 6.

Fig. 4 is a diagrammatic view serving to illustrate one part of the invention, and Fig. 5 is a broken detail.

**INDICATOR.** Frank Paul Peleger, El Paso, Tex. Patent No. 807,862.

The object of the invention is to provide a new and improved indicator more especially designed for use on phonographs, music-boxes, and like instruments and arranged to permit the user of the instrument to quickly adjust the speed regulating device of the instrument according to the proper time in which a certain piece of music is to be performed. A practical embodiment of the invention is represented in the accompanying drawings. Figure 1 is a sectional side elevation of a phonograph provided with the improvement and Fig. 2 is a sectional plan view of the same on the line of 2-2 of Fig. 1.

**MANUFACTURE OF SOUND RECORDS.** W. H. Hoyt and W. J. Gaven, Bridgeport, Conn., assignors to the Burt Co., Hackensack, N. J. Patent Nos. 808,842 and 809,263.

This invention has reference to the production of pressed or molded sound-records—that is to say, of sound-records which are made by impressing the undulations corresponding to sound-waves upon a suitable tablet in the form of a disc, cylinder, or other suitable form.

Heretofore pressed or molded records have generally been formed upon tablets of homogeneous material, having the same coefficient of expansion and contraction throughout their mass. For this purpose various materials or compositions have been used with commercially satisfactory results. For making cylindrical records compositions of a waxlike character have been most commonly used. For making disc records compositions of earthy material compacted under pressure by means of a suitable binder, such as shellac, have been commonly used. These arti-

cles must have a mass of thickness sufficient to give them the strength required to withstand the incidents of handling and transportation, and in order to reduce the cost it has been proposed to make the body of the tablet of a relatively cheap substance (such as pasteboard or papier-mache) and to spread thereupon a surface of the sound-recording composition. In such cases, however, the inconveniences arising from tablets composed of two substances differing in respect of their coefficient of expansion have prevented the lasting or successful use thereof. Records have also been made of a very thin shell of celluloid, xylonite, and like materials backed up by a thicker shell of pasteboard or the like without causing

the adjacent surfaces of the two surfaces to adhere, so that each can expand and contract at its own natural rate.

The present invention has for its object to reduce the cost of the production of sound-records without any injurious effect upon the quality of the surface and without sacrifice of the strength of the tablet and without incurring the objections which exist in composite tablets.

The invention is applicable to compositions which are for all practical purposes homogeneous throughout, but which contain an ingredient whose presence is necessary to give to the surface the hard glazed finish and other qualities absolutely indispensable for proper sound reproduction. For example, in the compositions of earthy

material now commonly employed in the production of disc records an ingredient such as shellac is necessary to give the proper finish to the surface. This ingredient serves also as a binder and in making these compositions (whether for sound-records or other purposes) has always been distributed uniformly throughout the mass. This ingredient will be herein termed the "glaze." Specifically we have discovered that a pressed sound-record formed of earthy material and containing the glaze only on the surface—that is to say, in a relatively small part of the entire thickness of the tablet—the body of the tablet being formed of a similar composition containing an ordinary binder—has not only all the acoustical qualities of the sound-records as now made, but

practically the same strength and resistance to shock and the same coefficient of expansion and contraction throughout its mass. Inasmuch as the glaze is the expensive ingredient in the composition, the invention materially diminishes the cost of production of these articles.

The invention may be applied in various ways. Practically we have found the following process to give good results, and it constitutes the best way in which we have contemplated applying the principal of the said invention. We form two batches of the plastic composition. One of these contains the usual ingredients mixed with an ordinary binder, such as Manila gum. The other contains the same (or like) ingredients with shellac instead of Manila gum. The two batches

are rolled into sheets, that which is to form the surface of the tablet being quite thin relatively to the thickness of the sheet which is to form the body of the tablet. These two sheets when heated unite strongly together. The combined sheet is used as in the ordinary process of pressing records, the side containing the glaze being applied to the matrix. The pressure impresses the sound-record upon the tablet and compacts the whole into what is practically a homogeneous tablet. A great many plastic compositions of the kind referred to herein are in common use, and the preparation thereof is well understood. Such compositions may be formed of terra alba 10 parts, barytes 10 parts, and flock 4 parts (by weight), with Manila gum for the ordinary stock and shellac for the surface stock. A suitable pigment may be added. The process is graphically illustrated in the accompanying diagram.

### OUTLOOK FOR 1906 VERY GOOD.

E. A. Hawthorne, of the American Record Co. Reports Great Activity—Expect to Manufacture 5,000,000 Records This Year.

In a conversation recently with E. A. Hawthorne, sales manager of the American Record Co., who make the Indian records, he stated that the factory of the American Record Co. in Springfield, Mass., was operated during the months of November and December with a double shift, working day and night to try and keep pace with the orders.

The business that has been developed by this company in the short space of thirteen months has been exceptional. Mr. Hawthorne said if the present rush of orders continues they will manufacture at least 5,000,000 records during the year 1906.

"The superiority of the record and a proper understanding of trade conditions, has brought this company well up in the front in the talking machine business," said Mr. Hawthorne. That they have become a factor of influence is evidenced by the establishment of the new prices for disc records.

The American Record Co. were the first to discontinue the exchange proposition, and as early as October 14, 1905, submitted the new terms to their dealers, which involved doing away with exchanging records and offering the 10-inch records at 60 cents. The response which this proposition met with on all sides proved the wisdom of the move, and the widespread demand that other companies should establish the same conditions, led to the general reductions by the other companies in December.

The outlook for the year 1906 is unusually

bright, and it is the opinion of jobbers everywhere that the public to-day is "talking machine mad," as one of the dealers expressed it. This is a condition which bespeaks an era of good times in the talking machine industry.

### THE MAN WITH AN EDISON RECORD.

Charles G. Andrews, manager of the phonograph department of the Boston Cycle and Sundry Co., is not only one of the most successful as well as popular talking machine men in the East, but has done much to make the phonograph as popular as it is to-day. Mr. Andrews was born in Chelsea, Mass., a suburb of Boston, which has the reputation of turning out more live men than any other city of its size. Here "Char-

CHARLES G. ANDREWS.

lie" went to school, and after graduating from the Chelsea High School entered the employ of James M. Linscott, who at that time was doing a modest bicycle business in Chelsea. The boy proved so apt and showed such promise of business qualities that when Mr. Linscott removed to Boston to start a business, which has since made him famous, he took Charlie Andrews with him. About this time the phonograph was put upon the market, and Mr. Linscott added this branch as one of the departments in his store, assigning Mr. Andrews to take charge. It was a small beginning, the entire stock of records being less

than is contained in one bin now at the mammoth establishment of the company.

How well Mr. Andrews succeeded every dealer in New England knows. Kindly accommodating, polite, patient and thoroughly businesslike, the young fellow soon became well known and popular. The business thrived to such an extent that a wholesale department was created. Among his other talents Mr. Andrews possessed the happy faculty of discerning which were the "sellers" among the new list of records, and his judgment has seldom failed the retailers who advise with him. Soon the wholesale department became inadequate, larger quarters were secured, and still larger, until to-day the Boston Cycle Co. has been obliged to devote an entire floor of a large building at No. 48 Hanover street, Boston, and to erect bins containing from 50 to 150 records each to accommodate the trade. This has just been completed, and it is the largest display of records in New England, if not in America.

Another floor is devoted to the retail department and offices of the company. The top floor is utilized for the manufacture of record cases, Such, in brief, is the career of this gentleman, who has contributed much to the advancement of the phonograph trade. He is still a very young man, and as the years go by, with experience ever ripening, the possibilities for good among the trade's business interests cannot be estimated, if the past successes of Charlie Andrews be taken as a criterion.

### POINTERS FOR MANUFACTURERS.

Trade Possibilities Unveiled by the Talking Machine World in Almost Unknown Europe.

Along the entire east coast of the Adriatic in Istrian and Dalmatian Austria, the talking machine is never encountered, and yet this entire region should prove a bonanza for the enterprising commercial agent, since the people are at that stage of life where they would take strongly to this sort of pastime.

In Montenegro, too, the talking machine could supplant the bards who gather the people under the trees at the road side and recite tales from the folklore to the accompaniment of the gusla.

At Fiume, the chief seaport of Hungary, an agency for one brand of American talking machine exists.

At Budapest, capital of Hungary, talking machines are quite frequently encountered in the stores.

A feature of the pan-Slav art exhibition at Belgrade, capital of Servia, on the occasion of the coronation of King Peter, was a painting of an old man and a young girl, Balkan peasant types, listening to a talking machine.

At Bucharest, capital of Roumania, the people are largely Parisian in their tastes, and American talking machines find ready sale, being seen in many of the stores.

Rustchuk, the commercial metropolis of Bulgaria, likewise lists the talking machine among its articles of sale, while at Jirnova, far in the interior of the principality, of an evening the peasants and officers gather about the horn at the inn to listen to "Carmen" and the "Kara-George March."

### ARTHUR COLLINS' NEW COLONY.

There is a rumor among the talent that Arthur Collins is going into the real estate business. Not that he contemplates giving up singing, but is taking it up as an investment. He has induced several of "the boys" to investigate property at Hempstead, L. I., and if his hopes are realized, there will be the beginning of a talking machine colony in that locality before long.

97 Chambers St., New York

(Special to The Talking Machine World.)

London, Eng., Jan. 5, 1906.

One of the oddest collections in the British Museum is a set of talking machine records of the voices of prominent persons of the present. They are not offered for general inspection, but a hundred years hence the historian may describe to his readers how Queen Victoria's voice sounded to him, as well as the voices of the other members of the royal family and the leading statesmen of to-day. In all there are already filed away more than five hundred records. The collection is being added to constantly.

\* \* \*

The Vienna Academy of Sciences already possesses a collection of several thousand records of dialects and languages. They include the songs of the American Indian and the war chant of the Malay. Idioms and peculiarities are also recorded, and the collection will not be regarded as complete until every race and division of race has contributed to the collection.

In addition to their value in the future, they are being used for a comparative study of language. Arrangements are now being made to record the cries of animals, and a large staff of voice hunters are kept constantly employed in these two branches.

\* \* \*

T. Edens Osborne, the progressive talking machine dealer of Belfast, Ireland, is making splendid use of Mme. Patti's opinion of the gramophone, in which she said: "It reproduces the human voice to such a fine point that in listening to the records of Caruso, Plancon, etc., it seemed to me as if these artists were actually singing in my saloons—I have never heard anything to equal it." Mr. Osborne adds: "The great prima donna never sang for the gramophone, therefore her eulogy is important, because absolutely uncolored by interest and prejudice. The gramophone has evolved from its 'primitive cradle-dome' to one of the marvellous inventions of the age, its reproduction being almost human."

\* \* \*

Hans Starcke of Elberfeld (Germany) has taken out a patent on a device by which a phonograph is connected with a telephone. Even should nobody be present when a telephone call is made, the words are recorded upon the phonograph and can be repeated ad libitum at any time.

\* \* \*

The King of Spain has a number of wax models of himself that open and close their eyes. Within each is a little phonograph that cries "Long Live Spain." Alfonso takes great delight in sending them to little friends among the royal families of Europe.

\* \* \*

The Russell Hunting Record Co., Ltd., manufacturers of the "Sterling" record at 81 City Road, are building up one of the largest businesses on this side of the water. It was in February that this company was organized, and although they only started delivering records in July they have sold up to December 1 over one million records. The factory is now turning out over ninety thousand records per week, and the "Sterling" record has made quite a sensation in this country. The officers of the company are Louis S. Sterling, managing director; Russell Hunting, superintendent record department; P. A. Smithurst, works manager.

\* \* \*

One of the most striking indications of the present phenomenal popularity of talking machines is the adoption by the best section of the Belfast public of high-priced instruments and classical selections. Indeed, to the gramophone

and genuine Edison phonograph belong the credit of popularizing the best songs of the day and raising the tone of local music lovers. Thanks for both instruments, the public here are quite familiar with many songs long before they are heard in any of our theatres, opera houses or music halls. In this connection one hears the "gamins" and messenger boys frequently whistling airs from comic and other operas that have so far never been "staged" in Belfast, but which he has learned by attending T. Edens Osborne's Saturday night open air gramophone and phonograph concerts. The most elite gatherings in Belfast and neighborhood are not now considered à la mode without some selections on the gramophone, phonograph or Columbia machines.

#### TYPE OF MACHINE AT WORK ON CANAL.

Drawn by H. T. Middleton after Jellier in The Phila. Record.

#### AMERICAN RECORD CO.'S NEW LIST.

We understand that the American Record Co. are preparing a new list of records to be known as "Catalogue 'E,'" which will supersede Catalogue "D," and include Bulletins Nos. 1, 2 and 3. The list of records for January will be known as Bulletin No. 1 in connection with Catalogue "E." It is the intention of the American Record Co.

## IN THE LEAD

There are many attachments on the market, ranging from 50c. to \$1.50, that are supposed to improve the sound of Phonographs and yet the sale of the

#### LEWIS PHONO-CONSONATOR

at \$3.50 increases daily. The sales for 1905 increased on an average of 30% over the preceding year.

## PHILADELPHIA'S BUDGET OF NEWS.

Past Year Breaks All Records—Rosenfeld Illustrated Song Machine—Victor Co. Acquire More Land—Force of Good Advertising—Value of the Talking Machine as Side Line—Posting of Bulletins Help—Enterprising Camden Jobber—Manager Goodwin's Activity—Doctor Uses Talking Machine as Entertainer—Department Stores Double Sales.

(Special to The Talking Machine World.)

Philadelphia, Jan. 12, 1905.

Local dealers in talking machines and supplies say that 1905 holiday business was the best transacted since being in business. Ninth street is quite a Talking Machine Row, for at 19 South Ninth the Penu Co. holds forth; at 25 South Ninth, the Western Co.; and at 13 North Ninth, the Disk Co., and at 41 North Ninth the Wells Co. Near by, at 923 Market street, is H. A. Weymann & Son, while at 1019 is the main general office of the Columbia Phonograph Co. Without going too much into detail, it can be said that all of these salesrooms enjoyed most satisfactory business, and see no reason why 1906 trade should not be good also. At present writing trade conditions are fair—about normal for the season, although there is a good satisfactory call for new records.

A representative of Wm. F. Boogar, who operates a public phonograph entertainment hall at 938 Market street, said that the Rosenfeld illustrated song machines in the hall were the best money makers being operated. "Our patrons are certainly delighted with them," he said, "the combination of moving pictures with phono music being just the thing which has taken their fancy. We are running twenty-five machines." Mr. Boogar runs a well-ordered entertainment hall, and the best element supports it.

The Victor Talking Machine Co., of Camden, have acquired additional land adjoining their present plant at Front and Cooper streets and will, it is understood, add additional buildings in the near future. In almost all departments work is being "rushed," and a great deal of overtime is being put in. Manager L. F. Geissler is looking after details in a masterly manner and is given excellent assistance by a willing corps of capable assistants. Briefly put, the company is behind orders, but is doing all it can to catch up. Two incidents worthy of note developed the past week. One shows the tremendous force of a good advertising phrase. Madam Bernhardt wanted her 4-foot dog housed at the Bellevue-Stratford, Philadelphia's gilt-edge hotel. The manager wouldn't have it. "We'll put the dog out on our farm," he said to Madame's agent. "We are connected by telephone with the farm, and every day the dog can hear 'His master's voice'—or rather, the divine Sara's." But Bernhardt wouldn't have it, and went to another hotel. The picture of a dog listening to the human voice recorded by the Victor Company being objectionable to the guileless denizens of China, this concern is accommodatingly providing the Chinese with advertising cards showing a venerable resident of the Flowery Kingdom listening soulfully to the dulcet tones of Victor records "spieling off" Chinese ditties and solos. The Victor Co. have their own

printing plant on Federal street, Camden, and all hands there are very busy.

An uptown Philadelphia jeweler and optician has added a small stock of talking machines and supplies to his store, and in referring to the fact said: "I was led into the matter by a number of my friends who owned talking machines. Their machines got out of order and they asked me to repair or mend them. I got interested, industriously studied the mechanism of the machines, ascertained where supplies could be secured, and am now prepared to do almost any kind of repairing. My skill as an optician and jeweler stood me in good stead, and it is my advice to brother opticians to look into the phonograph field and add it as a side line. While now I only carry enough stock to oblige a few customers, if I see a good opening I intend to go into it quite heavily. It is an interesting and attractive field, to my notion, and a profitable one as well. One thing against it for the small dealer, it seems to me, is that he can't afford to carry the enormous stock of cylinders and discs made necessary by customers' demands. They want a record at once; do not want to 'wait until it is sent for.'"

Said an Eighth street retailer: "I have found that posting a bulletin of new records increases the demand for them. I bought a marking outfit and have my clerk stamp out the list of new tunes, songs, etc., and post them conspicuously in the show window. These lists attract immediate attention, and I get lots of orders to send for the records at once. Of course I announce I take orders subject to delivery and require a small deposit with each order. It seems to me all companies making records should send every retailer printed slips each month to post in conspicuous places. It would boom sales, and the companies would be the gainer. The lists should be printed in type large enough to be easily read at a distance of ten feet. Of course the companies ought to send them gratis."

Charles E. Robertson, 4074 Laucaster avenue, is attending to the talking machine wants of West Philadelphia patrons, and has a tastefully equipped showroom. His Christmas trade was very good and regular business is increasing.

John A. Smith, Broadway near Chestnut street, is probably the largest retailer and jobber of talking machines and supplies in Camden, N. J., and handles both Edison and Victor goods. During the holiday season he showed his faith in printers' ink by taking entire page advertisements in the local newspapers, and then hired additional clerks to take care of the extra business. Mr. Smith has been honored with a number of political appointments in his resident city and is now a member of the State Democratic Executive Committee. He was a trade visitor to

New York this month, and kept his eyes open for novelties.

T. R. Goodwin, manager of the Columbia Phonograph Co.'s new Camden, N. J., branch salesroom, reports satisfactory business. The salesroom is at Broadway and Mickle streets, in the Hall Block, and at night attention is effectively called to the stand by changeable electric light signs as well as talking Columbias, which inform passersby that latest songs and compositions can be secured within. The showrooms are neatly furnished, and a number of sample phonographs are all ready to be shown visitors. Although open but a short time, sales are increasing.

Dr. H. G. Bonwill, 921 South Fifth street, Camden, N. J., has put a Victor phonograph to eminently practical use. The doctor, having a very large office practice, must see patients one at a time, and to interest waiting callers in the anteroom he sets a talking machine going with lively, entertaining airs. The result is pleasing to doctor and callers. The latter forget their impatience in "having to wait," and the doctor realizes his clients are, so far as possible, enjoying good music. An attendant changes records, etc. Dr. Bonwill's thoughtful idea is good enough to be copied by other physicians.

All the large department stores of Philadelphia now have a regular talking machine section, presided over by a competent manager. During the holidays extra advertising resulted in booming sales of records, machines and supplies. As a rule all makes of machines and supplies are handled, customers being left to choose as they please. One department store exactly doubled its sales over 1904 and intends going into the business on a larger scale than ever, having faith in its worth and permanency.

While unable to personally call at the Hawthorn & Sheble Mfg. Co.'s plant this month in time to close his letter, your correspondent ascertains from a reliable source that the works are very busy and orders in indicate a steady run for an indefinite period. The company's H. & S. sound board is meeting with great success.

A humorous "hit" of one New Year's mummer's float January 1 was a scene where "Mother" was so busy listening to a phonograph's dulcet tunes that father was en route to the divorce lawyer; baby was smashing a fine mirror, and little Willie was putting the wiuter's jam where it would do the most good.

Local jobbing houses say there are many news stands, cigar stores, and similar stands putting in small retail stocks of talking machines and supplies, showing that the demand from suburban points is growing.

William McArdle, "Envoy Extraordinary and Plenipotentiary for Indian Records," as some of the trade affectionately call him, has been making the rounds of the various "Indian" record encampments in New York State. He reports a lively interest in American records among all the "tribes" and succeeded in establishing several new "tepees" where the public may go to hear and be convinced that "music hath charms."

## VICTOR TRAVELERS DINE.

Enjoyable Re-union at the Hotel Majestic of the Men Who Travel.

The travelers of the Victor Talking Machine Co. were entertained at a banquet at the Hotel Majestic on the evening of Jan. 3. There was an elaborate layout, and everybody was in fine spirits, owing to the great record made during the past year, and the splendid prospects for the new. The only invited guest was H. N. McMenimen. It may be worthy of note to add that six new men have been added to the traveling department of the Victor Co. for the new year, giving them an unusually large force. We also understand that A. Williams has been appointed assistant traveling manager of this company.

## USING COMMERCIAL MACHINES.

The Travelers' Insurance Co., of Hartford, Conn., are now using commercial phonographs in their daily office work. The *modus operandi* is to dictate letters to the machine after which stenographers take the records, set the machine going and transcribe from it on the typewriter. Eleven of these machines are now in use in their New York office, and four have been installed in Hartford, largely as an experiment. Later more will be added.

## PHONOGRAPHIC ADDRESSES HEARD.

An interesting feature of the "smoker" by the Electric Club, of Cleveland, O., recently were addresses by C. F. Rush and Professor Thomson by means of a talking machine. These gentlemen were not present in person, but their addresses were keenly enjoyed by reason of the fact that during the time the talking machine was in operation the portraits of the speakers were thrown on a screen.

## MANUFACTURERS NOTIFY DEALERS.

VICTOR CO. AND DEALER'S DISCOUNT.

The sales department of the Victor Talking Machine Co., Camden, N. J., recently sent the following notice to the trade: "The 40-10 per cent. discount will still be quoted to dealers who have purchased the required \$500, or do so in the future, on all articles of the Victor line, with the exception of the staple seven, ten and twelve-inch records, which are sold at the net prices of twenty-one, forty and sixty-six and two-thirds cents, respectively. The retail dozen price remains operative only on 'Black Label' and 'Red Seal' records, and no seven, ten or twelve-inch staple records must enter into any 'dozen price' calculation. The 'per piece' price must invariably be paid for these."

PROPOSITIONS FROM THE UNIVERSAL CO.

Last week the Universal Talking Machine Manufacturing Co., in a trade circular, said: "To enable our dealers to get rid of old records they may have, we will allow seven cents for each

nine or ten-inch record if they buy one new one for each old one returned. Two seven-inch records are equal to one ten-inch record. This exchange will be discontinued February 1, 1906. For each ten-inch record you have in stock, we will furnish you a new ten-inch record for 28 cents, if ordered for delivery before January 15, 1906."

## SCIENCE MEASURES A NUISANCE.

Phonograph, Photometer and Oscillometer Tell Court of Elevated Train Annoyances.

(Special to The Talking Machine World.)

Boston, Mass., Dec. 30, 1905.

The first use of the phonograph in court in a damage suit for noise has resulted in a verdict for the plaintiffs.

A. P. Loring, owner of the Albany Building, sued the Boston Elevated Co. for \$150,000 because trains passing around the corner of the building caused annoyance.

A phonograph was brought into court to reproduce the noise made by the trains as they passed.

A photometer was also used to show the diminution of light due to the erection of the elevated structure, and an oscillometer showed photographs of the air waves disturbed during the passing of a train.

A verdict of \$45,000 was given with interest.

## NEW SCHEME TO WIN PENNIES.

Phonograph men propose to put a novelty on Chicago's streets next summer to compete with the hand organ and "piano" in penny-getting. A large phonograph mounted on a small cart will add to the din of the residence districts, playing popular airs, by band, orchestra and human voice. Monologues of the usual insufferable variety will also be ground out. It will take two Italians to operate this instrument, one to extend the open palm and the other to adjust the records.

## FOREIGN CALL FOR "INDIAN" RECORDS.

Foreign business for "Indian Records" manufactured by the American Record Co., was unusually large during the month of December. Orders have been received from all the important centers of foreign trade, and large shipments of the Blue records have been made. Excellent connections have been established with Australia, New Zealand, South Africa, Brazil, India and throughout the Continent of Europe. Mr. J. O. Prescott, manager of the export department, states that they have been shipping in the neighborhood of 8,000 records weekly to London.

J. Charles Groshut, general manager, was recently elected secretary of the Edwin A. Denham Co., Inc., importers of talking machines and novelties, 31 Barclay street, New York. His new honors are in recognition of his excellent business judgment, industry and success in handling the company's affairs.

## TRADE NOTES FROM PACIFIC COAST.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 6, 1906.

The business in talking machines and records was especially large during the month of December, the talking machine playing a prominent role with Santa Claus this year. However, the trade experiences a relapse just now, and this will no doubt continue for several weeks to come.

Sherman, Clay & Co. had fixed up a very handsome window display in Victor talking machines. Records and machines surrounded a very neat model of "His Master's Voice." The entire scene was tastefully enclosed by a winter scene.

Some of the newspapers are still continuing the subscription contest idea by giving a talking machine free with every subscription.

The department stores have done an especially big business during the past month in talking machines. Sherman, Clay & Co. report that the orders from these department stores were simply enormous.

## EDISON GRAND OPERA RECORDS.

The first bulletin ("Supplement A") of the new Grand Opera records issued by the National Phonograph Co. for February, 1906, is as follows:

- By Heinrich Knote, Baritone.  
B. 1—Höchstes Vertrauen ("All confidence thou ow'st me.") "Lohengrin" ..... Wagner  
Sung in German. Orchestra accompaniment.  
By Andreas Dippel, Tenor.  
B. 2—"Ach, So Fromm" ("None so rare.")  
"Martha," ..... Flotow  
Sung in German. Orchestra accompaniment.  
By Gustave Berl Resky, Baritone.  
B. 3—"Di Provenza il Mar," ("Hath thy home in fair Provence.") "La Traviata" ..... Verdi  
Sung in Italian. Orchestra accompaniment.  
By Florencio Constantino, Tenor.  
B. 4—"La Donna è Mobile" ("Fair woman is fickle")  
"Rigoletto" ..... Verdi  
Sung in Italian. Orchestra accompaniment.  
By Antonio Scotti.  
B. 5—"Vi Ravviso, O Luoghi Amati" ("Oh, remembrance of scenes long vanished") "La Sonnambula," ..... Bellini  
Sung in Italian. Orchestra accompaniment.  
By Scarpay Resky, Soprano.  
B. 6—Aria, "Suicidio" ("The Suicide Song") "La Gioconda" ..... Ponchielli  
Sung in Italian. Orchestra accompaniment.  
By Romeo Berti, Tenor.  
B. 7—Arioso "Pagliacci" ..... Leoncavallo  
Sung in Italian. Orchestra accompaniment.  
By Signor and Signora Resky.  
B. 8—Duet, "La Favorita" ..... Donizetti  
Sung in Italian. Orchestra accompaniment.  
By Anton von Rooy, Baritone.  
B. 9—"O Kehr Zurück" ("O, brother, come.")  
"Tannhauser" ..... Wagner  
Sung in German. Orchestra accompaniment.  
By Anton van Rooy, Baritone.  
B. 10—"Chanson du Toreador" ("Toreador's Song")  
"Carmen" ..... Bizet  
Sung in French. Orchestra accompaniment.

## FRED. C. MACLEAN RETIRES.

Frederic C. MacLean, one of the best-known travelers east, is no longer with the Douglas Phonograph Co., New York, the connection ceasing with the close of the year. "Mac" speaks of going into the stock brokerage business on his own account, a step along the primrose path of wealth getting, which he is enabled to take through a handsome legacy of an esteemed relative deceased.

## AN ACCEPTABLE SANTA CLAUS.

John (Casey) Kaiser, of the Douglas Phonograph Co., made an acceptable Santa Claus at the Christmas distribution of gifts to the scholars of Calvary Church, when 400 were present. He used his best record making voice, and was voted a big success.

When A. L. Irish, president of the Talk-o-phone Co., Toledo, O., was in New York last week, and after a careful survey of the situation, he concluded to retain their present branch house at 244 West 23d street. Manager Reed, one of the princes of the business, will have the interior rearranged and repartitioned, so as to meet the requirements for offices and warerooms.

The Rogers Specialty Co. was incorporated with the Secretary of the State at Albany on December 8, for the purpose of handling phonographs and other specialties in that line, with a capital of \$4,000. Directors: G. M. Rogers, L. V. Wildman and Mary A. Rogers, all of this city.

# Edison Grand Opera Records

WITH the issuance of the *Grand Opera Records* for the EDISON PHONOGRAPH the chain of strong selling features that has made the Edison Goods so deservedly and pre-eminently popular is materially strengthened. Ten numbers of the *Grand Opera Records* are ready now. *Sigs. Scotti, Dippel, Knoté, Van Rooy* and other famous stars of the Metropolitan Opera Company, together with eminent artists abroad, have contributed their services. All the sweetness, power and purity of tone characteristic of these peerless voices have been faithfully reproduced by our Gold Moulded Process. *Edison Grand Opera Records* are unequalled—yet they will be given to the public at **75c.** each—a price that is within the reach of all, and that will insure an exceptionally wide sale.

This low price, in addition to guaranteeing a volume of sales, will enable every dealer to carry a large stock, thus meeting the certain demand and securing the maximum sales, without tying up too much capital.

We want to impress on you the necessity of placing an early order for a generous line of *Grand Opera Records*. These records will be extensively advertised in the leading magazines and newspapers appearing in February and March, and every Phonograph owner, and every owner of talking machines using cylindrical records, will be interested. An individual announcement in your local newspaper would be very profitable. Order today.

# “KEEPING EVERLASTINGLY AT IT BRINGS SUCCESS”

and “A Satisfied Customer  
is the Best Advertisement”

The above well known and oft repeated maxims represent the entire scale of business success.

**Everlastingly At It** We are never satisfied with results and are constantly experimenting with new ideas, adopting later methods and effecting changes that show decided improvements.

**Success** Is spelled with a big S when it is used in conjunction with American Records. On the market less than two years, we have made a reputation for merit and superiority of product.

**Satisfied Customers** We are daily in receipt of letters from our customers praising our business methods. It is our constant aim to make our business relations mutually profitable.

**WE WIN WITH  
INDIAN  
RECORDS**

**To Our Jobbers and Dealers:**  
We are prepared to furnish, on application, free of charge, a number of artistic cuts and designs that can be used in a two column newspaper or half page space in magazine, for the purpose of advertising "Indian Records" locally.

**THIS IS CUT NUMBER 1**  
and is characteristic of the series.

## BIG FREIGHT REDUCTIONS.

**Talking Machine Men Will be Glad to Know That the Railroads Have Conceded Important Reductions in Freight Rates—The New Tariff Will be Operative After April 1—Splendid Results Accomplished by Well Known Trade Representatives.**

Talking machine men everywhere will be interested to learn of a change in the freight tariff which will go into effect on and after April 1.

There has been for some time a desire on the part of some of the manufacturers to secure a reclassification for talking machines, and through their efforts they have succeeded in bringing about a new condition, so that after the first of April there will be but one classification for talking machines and records throughout the United States and Canada, this being a reduction from one-and-one-half first to first classification in less than carload lots and to third class in carload lots. This decision was reached on Thursday, the 8th inst.

This new decision will be hailed with delight by talking machine men, for it will mean a large saving to them annually. The dealers on the Pacific slope will particularly benefit under the new tariff. The history of the move for re-adjustment of tariff began some three years ago, when George W. Lyle, now general manager of the Columbia Phonograph Co., then stationed in Chicago as manager of the Chicago office of said company, was impressed with the fact that a great deal of profitable business throughout the West was lost because of the almost prohibitive freight rate, talking machines and records being classified in the Western Association as double first, whereas in the official (or Eastern), and the Southern the classification was but first.

After studying the matter carefully, he considered it of sufficient importance to warrant his attending the annual meeting of the Classification Committee, which was held that year in July at Charlevoix, Mich. An argument was made before the committee, sample machines and records shown, and it was quite evident that the high classification was due to the general opinion of the committee that talking machines were a novelty and a fad, with very large profit to the manufacturer, and that the railroads should be allowed to share in such general profit. This false impression, as well as others equally erroneous, were argued against in full, and upon a vote being taken by the full committee, a concession was made in that the classification on records was reduced from double first to one-and-one-half first, classification on machines not being changed.

While this was a move in the right direction, it was by no means satisfactory, especially in view of the fact that all other classification committees gave a much lower classification, and at the next annual meeting, at a cost of considerable time and money, the matter was again brought before the committee, sample machines and records shown, reductions in list-prices quoted, and the matter once more fully argued, the result being a further move in the right direction in that the classification on machines was reduced to one-and-one-half first. This was by no means satisfactory. It was, however, a move in the right direction, and last summer the matter was again taken up; this time the other companies joining with the Columbia in filing applications for a reduction, Mr. Lyle appearing before the committee as general manager of the Columbia Phonograph Co., ably assisted by George M. Nisbett, manager of the Chicago branch of the National Phonograph Co. At this meeting full particulars were again given relative to the loss of business because of the excessive classification and all other matters fully discussed which were of importance, but to the surprise of all interested, an adverse vote

was taken and no change made in the classification.

The talking machine men, however, were not to be discouraged, and the next move which was made was the securing of a special commodity rate to far western points.

This was such an entering wedge that it was decided by all the talking machine companies to make further application at the meeting of the Western Classification Committee, held in Los Angeles, Cal., on the 16th of January last, this meeting being attended in person by G. M. Nisbett and F. A. Voullaire, representing the National Phonograph Co., and Geo. W. Lyle, representing the Columbia Co.

The matter was fully argued there by Mr. Nisbett, representing the National Phonograph Co., and discussed fully with the individual members of the committee when the meetings were not in session, and as a direct result the application for a reduction was approved by the committee, a vote taken, and the desired rating extended, the same to be effective April 1.

Certainly splendid results have been accomplished by the representatives of these companies, who have so successfully won out with the officials of the various railroads, and the thanks of the entire trade will go out in grateful acknowledgment to the men who showed such determination to carry the matter through. The new conditions go a step further, too—they explode completely the old theory that the talking machine is but a toy and a fad, which would have but an ephemeral existence. Its position is established as one of the commercial products of this country, which can no longer be unjustly discriminated against by the railroad companies.

## TO FOUND UNIQUE UNIVERSITY.

**A Heidelberg Professor Plans to Use the Talking Machine in Giving Lectures in the University Which He Is to Establish in Columbus, O.—The Advantages of Having Instruction Repeated at Any Time.**

(Special to The Talking Machine World.)

Columbus, O., Feb. 10, 1906.

Should the intentions of Dr. William Alexander, late of Heidelberg, Germany, but more recently of New York, be carried out Columbus will be the seat of the most unique college in the world.

Dr. Alexander was the guest of a prominent business man in Columbus recently, and it is asserted that during that time the preliminary arrangements for the organization of a corporation to revolutionize the methods of disseminating knowledge were made.

It was with the utmost reluctance that the doctor talked about the proposed college, but he finally expressed himself as follows:

"We will utilize the phonograph in our work, and by this means students in different parts of the world can have the same opportunities at home that are now afforded by the best colleges, aside from the hazing and rowdyism features.

"Only instructors of the first grade of ability will be employed, and Europe and America will be drained of their greatest scholars and investigators in science to equip our college.

"These will deliver lectures and make demonstrations each day just as is done in any regular college, but these lectures will be reproduced on phonographic records as many times as is necessary.

"Our teachers of languages will be natives of the countries in which these languages are spoken. Thus the student will have the benefit of the accent, which so many teachers of languages lack.

"We will begin with sixty instructors, many of whom have been engaged, and this number will be increased as circumstances may demand.

"Classes of not less than fifty will be formed all over the world. They will erect buildings for our laboratories, etc., which will be on a par with those of any college in the world. Then our classes must be organized, and we will seek to employ such protection as we may for our plan of education in all of the civilized countries."

Mr. Alexander is a native of Ohio, but has spent the greatest part of his life in the universities and colleges of Europe.

## NEW SAN FRANCISCO CONCERN

**Incorporated for the Purpose of Selling Talking Machines Throughout the Great Northwest—C. E. Brown to go East—Other News.**

(Special to the Talking Machine World.)

San Francisco, Cal., Feb. 7, 1906.

The Tealon Talking Machine Co. has been incorporated under the laws of California with headquarters in this city, although the principal operations of the company will be in Western Washington and in western Montana and Idaho. The officers are: Chas. E. Brown, of the Talk-o-phone Co., president; E. N. Clintsman, manager of the wholesale small goods department for Kohler & Chase, vice-president; C. H. Carder, secretary, and D. S. Markowitz, general manager. The new concern will handle talking machines and supplies of all kinds, but particularly the Talk-o-phone and Zonophone records. The first store to be opened will be in Spokane, Wash., and a store is being fitted up there which will be ready for occupancy in a few days. This concern is destined to play quite a part in the further development of the talking machine business throughout the Northwest. Its capital is \$10,000.

The Talk-o-phone Co. reports an elegant business. C. E. Brown, just returned from Los Angeles and San Diego, where he closed two very large newspaper talking machine subscription deals. He left last Saturday for Portland, Tacoma, Seattle, Spokane, Helena and Salt Lake City, and will be gone about three weeks. In all of the above-mentioned towns he will make the newspaper subscription talking machine deals, which is his discovery. He intends to operate these plans on a large scale.

It is learned here that Mr. Brown will leave for the East on May 1, to personally conduct newspaper talking machine schemes similar to those which are now conducted by him here.

Kohler & Chase are doing an excellent business with the talking machine subscription contest which Mr. Brown started here.

Charles Francis Jones, of Leeds & Catlin, of New York, was in San Francisco during the past week in the interests of the Imperial records. Mr. Jones has enjoyed his visit very much during his stay, having been shown all points of interest in Mr. Brown's auto car.

Dealers will be gratified to learn that the freight rates on machines have been reduced.

## PLAYS ON THE EMOTIONS.

At the recent meeting of the Socialists held in Baltimore to commemorate the anniversary of the Red Sunday, which is so-called because of the slaughter on the streets of St. Petersburg of the peasant men and women who were making a personal petition to the czar, a great talking machine mounted on the stage playing the "Marseillaise" and other revolutionary airs, supplemented by much impassioned oratory, aroused the vast audience to such a high pitch that money and jewelry were thrown on the stage to help their brethren in Russia.

H. C. Mehden, 145 Amsterdam avenue, New York, has one of the prettiest and best-equipped talking machine stores in the city. He is carrying a very choice stock and is building up a very excellent business.

## A CAPITAL "FOLLOW UP" LETTER.

That Will be Found Handy for Dealers Who Wish to Reach People Not Personally Accessible.

Very frequently dealers are given the names of prospective buyers who may not be personally accessible owing to their living in the country, and therefore a letter with "pulling" power is the next best thing. One used by the McKenzie Bank Safe Co., Harrisburg, Pa., is such an excellent form that it is reproduced below for the benefit of those who may want to write a letter of the same kind, as it can be varied to suit any line of goods, as follows:

"We received a letter this morning from the \_\_\_\_\_, advising us of your inquiry in reference to a \_\_\_\_\_ talking machine or \_\_\_\_\_ records. The company appreciate the courtesy of your communication and advised us to treat you in a way that would add another happy customer to their long list of patrons throughout the United States and the world. Our store is at 28 South Fourth street, Harrisburg, Pa., very close to the Pennsylvania depot, also the Chestnut Street Market, so that it is very convenient, should you make a call to our city. Or we shall take great pleasure in sending you \_\_\_\_\_ talking machine and a two or three dozen record case, filled or partly so, with any of the famous \_\_\_\_\_ records that may please you, you to send us a list either by name of piece or by number.

"If you choose to state your preference as to song, spoken pieces or band music, we will be pleased to pick you out a small collection, which we know will give you entire satisfaction. We will send these to the nearest express or railroad depot, not asking you for any money until the goods reach you, so that you may not be deprived of the pleasure which the great singers and bright lights of our country afford you, which is practically an up-to-date theatre at your own home. We don't think anything better

could be invested which would afford you and your numerous friends as much pleasure as a \_\_\_\_\_outfit, to which you can add the best records produced by this great company, monthly, as they come out. This you can accomplish by placing an order with us to send you each month a certain number of records that are in line with your own good taste. Thanking you for your order in advance, and trusting to be favored with your valued patronage, and a call at our establishment when in our city, we beg to remain."

## TALKING MACHINE'S LATEST PUPILS.

In one of the strangest schools in the world a new roster of pupils has recently been matriculated. These pupils are parrots—twenty in number—forming the nucleus of a class from which a woman trainer in Philadelphia expects to realize many hundreds of dollars next Christmas, when all the birds have become proficient talkers.

There is nothing novel in this. The unique feature of the plan is that she trains the birds to speech and song by means of the talking machine.

This idea originated with Mrs. Jacob Hope. A parrot without conversational ability is worth \$10 or \$15. One that has an entertaining number of phrases at its command will bring from \$100 to \$150.

There is money, Mrs. Hope believes, in teaching parrots to talk. Her ambition is to make money, and in teaching her feathered pupils she regards the talking machine as the best educational agency.

## AN IRON THROAT NEEDED.

Excepting those familiar with the difficulties of record making, know the trouble and expense involved. When in Milwaukee recently, Arthur Collins, the famous baritone, who couples up with Byron G. Harlan, the tenor, said, when asked how many records he and Mr. Harlan had made: "Millions of them. I have

been in the business eight years and Mr. Harlan has been at it five or six. There are not many people who make a success of it, owing to the fact that it requires an iron throat, powerful lungs and a peculiar singing voice. Then, care must be given to the most minute details and every word has to be pronounced distinctly, with every vowel and consonant accurately enunciated. In New York we have an orchestra assisting and no record is sent out unless it is absolutely perfect. A mispronounced word or a hlast throws the record out."

## AN INTERESTING NOVELTY

Is the Phonograph Watch Which Speaks the Time—Will be Introduced to the American Market at an Early Date.

"The latest novelty in Paris," said an importer who has just returned from Europe, "is the phonograph watch. It is the newest and, to me, the most interesting application of the principle of the disc talking machine.

"The watch is the size of an ordinary pocket time-piece, but instead of a dial it has a disk that revolves rapidly when you press the stem, and in place of hands an arm carrying a needle-point such as is used on the transmitter of an ordinary talking machine. The case, when opened, forms an ear-piece. When you place the watch to your ear and press the stem, the disc revolves, the needle is thrown into contact, and the watch literally tells you the time, repeating the hour and minute as long as the pressure on the stem continues.

"For use in the dark the new watch has a decided utility, to say nothing of being a fascinating novelty. Paris was wild over them when I was there. They sell for from 25 francs in nickel cases, up to 150 francs in gold. The discs in use only repeat the hours in French, but I arranged to have a quantity made to tell time in English, repeating the hours myself for the 'master record,' and will have them on the American market next season as a Christmas novelty."

## TALKING MACHINE NEWS FROM THE WEST.

Trade, Both Wholesale and Retail, Is Satisfactory—John Rogers Joins Lyons House—A. D. Geissler Takes Management of Talking Machine Co., Succeeding F. K. Babson—Improvements at National Phonograph Co.—Zon-o-phone With Healy Music Co.—20th Century Graphophone for Winter Park Concerts—Lyon & Healy Victor Record Plans—New Hawthorne-Sheble Co. Quarters—The News of the Month in Detail.

Telephones: { Central 414.  
                  { Automatic 8643.

World Office:  
195-197 Wabash Ave.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 10, 1906.

Trade is of good dimensions both in a retail and wholesale way. The dealers have their troubles in the difficulty experienced in getting goods as needed from the factories, and no one can give any hope that the congestion can be relieved in the near future. And that's the worst of it.

John Rogers, of the Knoxville Typewriter and Phonograph Co., Knoxville, Tenn., has come to Chicago for a couple of months or so and is helping out James I. Lyons, the well-known talking machine jobber, who is simply swamped with the details of his large business, and who gladly welcomed the temporary assistance of an experienced hand. Mr. Rogers explained the arrangement by saying that while his firm are confining themselves entirely to the retail business, they have long thought of branching out in the jobbing business, and the opportunity of entering the Lyons jobbing house for a while was one not to be declined on account of the valuable knowledge he would gain. Mr. Rogers says that the talking machine business is developing with remarkable rapidity in the South, and that the talking machine is winning even greater prestige there than in the North. His firm alone put out 3,000 machines in Knoxville last year. All cylinder machines. It's a cylinder town. There are now 4,000 cylinder machines in Knoxville and just fifteen disc machines. On the other hand, Memphis and Nashville, in the same State, are distinctly disc towns. Mr. Rogers' company handle the Columbia and the Edison goods.

Arthur D. Geissler, son of L. F. Geissler, general manager of the Victor Talking Machine Co., has been made manager of the Talking Machine Co., of this city, one of the largest, if not the largest, distributors of Victor goods in the country. Mr. Geissler arrived in Chicago on Monday of this week to assume his new position. He was greatly pleased with the shape he found the business in. "My predecessor, F. K. Babson, leaves me a magnificent business and a splendidly organized force," said Mr. Geissler. "Naturally I am going to devote my attention principally to the wholesale end of the business, our retail business being distinctly a side issue. The Talking Machine Co. is now an exclusive Victor distributor, but to counteract any false impression which may have gained currency, I want to say that we are simply like any other jobber, buy our goods in the same way, and get no concession or privilege that is not given to other Victor jobbers." Mr. Geissler is well pleased with Chicago. He is a man of pleasing personality, and is gifted with a physique which tells of vast stores of energy. He is a man of long experience in the talking machine business, having had charge of the wholesale small goods and talking machines for Sherman, Clay & Co. for several years prior to going to New York to accept a position with the Victor Co., which he relinquished to come to Chicago.

Changes are still being made at the Chicago headquarters of the National Phonograph Co. New record rooms are being installed for the benefit of visiting Edison jobbers, and other improvements are in progress. Manager Nisbett is expected home from the coast about Feb. 15.

Lyon & Healy have hit upon the expedient of ordering a number of Victor records in advance of their general delivery to the trade. For instance, dealers who are willing to trust to Manager Goodwin's selection can now obtain some of the finest numbers in the March list. It's quite an innovation, one that requires nerve, as it means the ordering of large quantities of records in advance. Mr. Goodwin, by the way,

is now spending a week or so with Paul Healy and R. B. Gregory at the famous Muldoon "Muscle Farm" in New York State.

The Healy Music Co. have secured the agency for the Zonophone Co.'s machines and records, and will handle them in a jobbing as well as retail way. Mr. Faber, who will have charge of the department, is very enthusiastic regarding the move, and Ray Healy looks wise when he speaks of it, as much as to say that the talking machine world is about to witness something very much like a comet athwart the horizon. The Healy Co. will, by the way, move next May into the store now occupied by the Rudolph Wurlitzer Co., at 298-300 Wabash avenue, when the Wurlitzer Co. will move to their recently acquired building at 266-268 Wabash avenue.

The Columbia Phonograph Co., Chicago branch, has recently made a contract whereby the Twentieth Century graphophone will be used for the inside winter concerts at ten of the Chicago parks in lieu of the orchestras which have been used heretofore. It is certainly a triumph for the Twentieth Century, and a use for the machine which dealers in other cities may well make a note of.

O. W. Eckland & Co., 128 Dearborn street, Chicago, have some excellent schemes for increasing the sales of talking machines which dealers would do well to investigate.

The Chicago offices of the American Graphophone Co. and the Hawthorne-Sheble Mfg. Co., have been moved to larger quarters on the second floor of the Adams Express Co. building, 185 Dearborn street. Manager Noyes says that business is excellent.

## GIVE OLDER TITLES A BETTER SHOW.

Too many dealers and too many of their salesmen are making the mistake of playing only the latest records issued when the purchaser of a phonograph is endeavoring for the first time to make up a selection of suitable records, remarks Edison Phonograph Monthly. To the salesman who has heard all of the older numbers it is quite natural that the new list is the most attractive, and a purchaser who makes up his selection from them gets a lot of well-made and varied selections. On the other hand,

the older numbers include hundreds of desirable selections, many of which would be preferred by the purchaser if he knew that they could be had.

Many a dealer carries on his shelves for months excellent records from every standpoint, and records that would find a ready sale, simply because it does not occur to him to play them for customers. In this way he puts down many records as being slow sellers when really they are only slow because he does not give them the same chance that he does the later titles. Then, too, many dealers would be able to dispose of many of their apparently slow-selling records, if they would make more of an effort to put them forward and play the later ones only when asked for. Every dealer should make an inventory of his stock at intervals to ascertain how many of the apparently slow sellers he has on hand and play these frequently. He will be surprised to find how many of them he can sell.

## J. W. BINDER TAKES CHARGE

Of the Columbia Graphophone Co.'s Commercial Graphophone Department—A Valuable Acquisition.

The latest development in talking machine circles in this city has been the creation by the Columbia Phonograph Co. of a commercial graphophone department. The growth of this branch of the company's business during the past year has been so rapid that the creation of this special department was an absolute necessity.

In casting about for a suitable man to head the new department, the choice fell upon J. W. Binder, who for nearly two years past has been in charge of the commercial business in Pittsburgh. The head office of the new department has been located at the company's executive offices at 90 West Broadway, and Mr. Binder assumed his new duties on the first of February.

Prior to entering the employ of the Columbia Phonograph Co., Mr. Binder had for a term of years been connected with the Philadelphia Press and he brings to his present position the energy and activity of a successful salesman and a thorough knowledge of, as well as an enthusiastic belief in, the commercial graphophone.

A. Haug, superintendent of the Universal Talking Machine Mfg. Co.'s factory, who underwent a capital operation at the hospital, returned to his home last Thursday after a confinement of three weeks. He expects to resume his position shortly. His many friends in the trade will be glad to hear of his rapid recovery and restoration to health.

## GROWING FACTOR IN BUSINESS

Is the Talking Machine, Which Is Fast Supplanting the Ordinary Stenographers Who Are Ill-Trained—Old Method of Dictation Too Slow for Modern Affairs—Talking Machines First Used to Report Congressional Debates—How the Business Men Employed the Machine—Valuable in Court Reporting—Probable Effect on Women Workers.

The application of machinery to business has become one of the most important, perhaps the most important, of latter-day innovations. Not only has the volume of business been vastly increased, but new classes of workers have been called into action. The introduction of the typewriter meant more to the great waiting army of women toilers than the discovery of gold in the Klondike meant to its army of miners. The woman typist and the woman stenographer really were the pioneer business women. They opened the way for countless other women in countless business positions. It was through the typewriter that women began to develop their latent capacity for affairs. It will probably be their strongest commercial hold for many years to come.

The stenographer, however, is slowly but surely disappearing. The expert stenographer will continue indefinitely to hold an important place, but the ordinary product of the business college is too slow for these rapid days, too inaccurate for the precise and direct methods now required. It is an old story that the average office stenographer has failed to give complete satisfaction. The majority of girls who take up this branch of industry have a grammar-school education only, and come to their work about as badly equipped in the way of general information and liberal culture as it is possible to imagine. In the Girls' Technical High School, Manhattan, a great deal of time has to be devoted to academic work in order to produce an accurate and intelligent stenographer, and the same disadvantage is observed in other schools of the kind. It is said in business offices that a newly graduated stenographer who can be depended upon to spell the names of American cities correctly is a rarity, and nearly all stenographers have painfully to acquire a complete vocabulary of unfamiliar words before they are of any great value in business. That this state of affairs should have continued for such a long period of years is a serious reflection on the public school system and on the girls who have gone into office work. It proves the disorganized, or rather the unorganized, condition of women in commercial life.

### BUSINESS COLLEGES TAKING UP MACHINES.

To take the place of the imperfectly educated, badly equipped stenographer, comes the automatic talking machine, which records and gives back the impression of the human voice. It is probable that few business women realize the extent to which this machine has already entered into competition with them. The business colleges realize it, and after the first protest, have accepted the fact as inevitable and incombustible. They are even beginning to introduce the machine into their courses and to teach its use in connection with typewriting.

The first place in the world where talking machines were made to take the place of stenographers, in a large way, was in the United States Capitol building in connection with congressional debates. The method was found so satisfactory that it has remained in continuous use ever since. Under the old method, the expert shorthand reporters took their notes in the Senate and House, afterwards dictating them to a corps of ordinary stenographers, who had the task of transcribing them by typewriters. The present method shortens the time by half, and has also been found much more accurate. The reporters merely confide their notes to the machine, the cylinders being turned over to rapid and intelligent typists, who transcribe from transmitting machines. Practically two persons, instead of three, handle the matter; thus eliminating danger of errors; the typists are able to work much more quickly because they are saved the work of reading their

notes, which are often puzzling and require thought to translate.

These advantages, the saving of time in dictation and transcription, and the ability of each clerk to turn out a larger amount of work, is felt in business offices, and even more than other considerations, such as the need of accuracy and intelligence on the part of the stenographer, are acting in favor of the new system. The business man, the lawyer, the banker, are rapidly adopting it. Some business houses have as many as seventy-five talking machines in everyday use. From a dozen to twenty machines is no unusual number for a house to order at one time.

### HOW TALKING MACHINES ARE USED.

The machine in compact form is placed in the back of an ordinary roll-top desk, the connection with the electric light wire being entirely out of sight. In case the office is not equipped with electricity a storage battery system has to be added, and for remote localities, where this system is not perfectly practicable, the machine is run by clockwork. The business man reads his letters, dictating the answers to the machine. If he has a more than ordinarily competent secretary he dictates briefly: "Write to Smith & Jones, Dubuque, Ia., and tell them that their matter is under consideration with the board, and will probably come up for adjustment at the next meeting." Or, "Write a strong letter to Briggs about those Perkins orders." Usually, however, he dictates his letters in full. If he makes a mistake he may push the recorder back and talk over his former words, using a louder tone, or he may say: "No, cut that out, and say this." The typist, as a rule, hears the letter before she begins to write. On her desk is a transmitting machine with ear tubes. Few horns are in use. The transmitting may be done as many times as the typist wishes, thus avoiding all possibility of mistakes. The record may be reproduced slowly or rapidly, as is suited to the speed of the operator. At night the office boy puts the cylinders into the shaving machine, which shaves them smooth for to-morrow's use. The cylinders may be used over and over until they are shaved very thin indeed.

The use of the talking machine in court reporting has become more general than anywhere else. One large reporting office in New York has a plant of twenty-four rooms, thirty-eight machines, twenty-eight typewriters, eighteen operators, and four boys to serve the needs of twenty-two court and unofficial reporters. From 1,000 to 2,000 pages of dictation are sent out every day. A whole day's court proceedings are in neat typewritten copy, ready for delivery, before the next day's proceedings begin. The immense volume of matter relating to the inquiry of the Slocum disaster was dictated to the machine. Three expert stenographers and three first-class typists did the work, and the testimony was out at eight o'clock in the evening of the day it was taken.

### EFFECT ON WOMEN'S WAGES.

Business women are interested to conjecture the effect of the new system on their prospects. It is certain that the talking machine will ultimately succeed to a very large extent the woman stenographer. The effect of the application of machinery has always been to increase the volume of business, thus giving employment to a larger number of individuals. Women will therefore not suffer, in the long run. The expert, soundly educated woman will continue to occupy the place she has made for herself in the industry. The woman secretary, competent, conscientious, discreet and helpful, is a modern development of too high a value ever to be displaced. The passing of the ignorant, low salaried stenographer is an event which will not be regretted by any one.

The fear that wages will be lowered is hardly to be entertained, says the Evening Post. The increased amount of work done should make up for the balance. Typing is a mechanical process and requires only a fair degree of intelligence. The operator must be a good speller and a rapid worker. She must have cultivated manual dexterity and the power of listening. Girls who have become accustomed to the machine say that the nervous strain soon passes and they grow so used

to the slight reverberation of the machine that they almost cease to be aware of it. The effect on their hearing has not, so far, been at all bad.

## OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 9, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

JAN. 15.

Bombay, 141 pkgs., \$2,869; Buenos Ayres, 13 pkgs., \$748; 5 pkgs., \$752; Caibarien, 14 pkgs., \$207; Cardiff, 5 pkgs., \$173; Campeche, 16 pkgs., \$102; Ceara, 6 pkgs., \$143; Cienfuegos, 6 pkgs., \$130; Dublin, 3 pkgs., \$150; Gibraltar, 2 pkgs., \$110; Hamburg, 53 pkgs., \$5,600; Havana, 34 pkgs., \$749; 14 pkgs., \$557; Havre, 19 pkgs., \$917; Kingston, 8 pkgs., \$163; La Guayra, 8 pkgs., \$208; London, 22 pkgs., \$2,302; 1,269 pkgs., \$14,313; Nagasaki, 12 pkgs., \$260; Port au Prince, 8 pkgs., \$282; Rio de Janeiro, 10 pkgs., \$408; Santiago, 53 pkgs., \$1,903; Southampton, 1 pkg., \$188; Sydney, 144 pkgs., \$5,470; Trinidad, 8 pkgs., \$130; Valparaiso, 8 pkgs., \$298; Vera Cruz, 6 pkgs., \$173; Vienna, 13 pkgs., \$407; Wellington, 47 pkgs., \$934.

JAN. 22.

Belfast, 49 pkgs., \$384; Bombay, 7 pkgs., \$187; Bremen, 8 pkgs., \$825; Brussels, 55 pkgs., \$765; Buenos Ayres, 9 pkgs., \$370; Genoa, 13 pkgs., \$253; Glasgow, 19 pkgs., \$564; Hamburg, 62 pkgs., \$2,728; Havana, 9 pkgs., \$307; 57 pkgs., \$2,344; Liverpool, 10 pkgs., \$169; London, 22 pkgs., \$2,344; 1,313 pkgs., \$14,946; Manila, 10 pkgs., \$274; Manzanillo, 2 pkgs., \$110; Tampico, 17 pkgs., \$543; Vienna, 20 pkgs., \$704; Yokohama, 137 pkgs., \$4,443.

JAN. 29.

Berlin, 106 pkgs., \$1,754; Caibarien, 9 pkgs., \$273; Cape Town, 13 pkgs., \$194; Havana, 13 pkgs., \$849; 38 pkgs., \$1,947; Havre, 30 pkgs., \$1,049; La Guayra, 15 pkgs., \$336; Liverpool, 2 pkgs., \$100; London, 6 pkgs., \$240; 43 pkgs., \$3,015; Melbourne, 22 pkgs., \$361; Para, 7 pkgs., \$359; Santa Marta, 3 pkgs., \$142; Santiago, 14 pkgs., \$586; St. Johns, 12 pkgs., \$248; Sydney, 55 pkgs., \$1,504; Valparaiso, 33 pkgs., \$1,817; Vera Cruz, 28 pkgs., \$638; Vienna, 28 pkgs., \$1,120.

FEB. 5.

Antwerp, 50 pkgs., \$260; Auckland, 13 pkgs., \$263; Buenos Ayres, 20 pkgs., \$731; 25 pkgs., \$6,200; 10 pkgs., \$514; Calla, 6 pkgs., \$159; Colon, 1 pkg., \$163; Glasgow, 20 pkgs., \$428; Hamilton, 12 pkgs., \$222; Havana, 17 pkgs., \$919; 29 pkgs., \$1,494; Liverpool, 20 pkgs., \$235; London, 31 pkgs., \$1,021; 1,446 pkgs., \$23,211; 1,340 pkgs., \$14,982; Manzanillo, 11 pkgs., \$191; Matanzas, 9 pkgs., \$197; Melbourne, 179 pkgs., \$2,353; 13 pkgs., \$339; Montevideo, 8 pkgs., \$180; 29 pkgs., \$3,130; Para, 14 pkgs., \$711; Santiago, 35 pkgs., \$1,444; Shanghai, 37 pkgs., \$1,707; Tampico, 2 pkgs., \$669; Valparaiso, 6 pkgs., \$500.

## CLEVER WINDOW PUBLICITY.

Ernest E. Robinson, of the Columbia Phonograph Co.'s retail store at 872 Broadway, in addition to his many other qualifications, is an artist when it comes to ideas in window dressing. His latest "attention attractor" is a novelty easily constructed and well worth the notice of the retail trade. A dummy gramophone is set in the center of the window, and on the plate a number of discs are set on edge and held in place by boxes containing cylinder records. In an opening in a screen formed of more records back of these, is placed an electric fan motor, and the current of air pressing against the upright discs causes them to continually revolve, and the one in front of the window, if he or she remains long enough, will believe the problem of perpetual motion to be solved.

## Do you want to do more business?

*Victor* trade is right at your very door. It is brought there by our magazine advertising, and some local newspaper advertising of your own will bring it into your store.

The magazines containing our advertising go to 49,000,000 people every month. We tell them about

# Victor Talking Machines and Records

and get them interested—we even bring some of them to your store.

But if you want to reap the full benefit of what we do for you, if you want everybody in your neighborhood to know you have the *Victor* goods, if you want to get all the money within your reach, start in to advertise.

It's no experiment. Other dealers are doing it and just coining money; and there is no reason why you shouldn't fall in line and be counted in with the money-makers.

**Victor Talking Machine Company**  
**CAMDEN, N. J.**

 P. S. One of the most valuable "hints" to a keen dealer is: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.)

Artistic Monthly Bulletins furnished free for this purpose.

## THE GIRL HE LEFT BEHIND HIM.

A Tale of the Philippine War.

(Written specially for The Talking Machine World  
by Howard Taylor.)

A girl sits at the window, gazing with heavy eyes out at the dreary landscape.

The postman comes, but the little package she yearns for so eagerly is not in his leather sack.

"I'm sorry, Miss," he says, as he sees the dumb agony in her pretty face, "but there is nothing for you. Perhaps to-morrow—"

"Yes, perhaps to-morrow." She repeats it after him mechanically, but there is no hope in her voice.

Away in the far-off Philippines her lover is fighting for his country.

The morning of his departure comes to her now as though it were but yesterday. Once more she hears the blare of trumpets, the roll of drums, and the cheers of the people as the gallant soldiers of Uncle Sam swing by.

The gay troopers sing as they march, and his mellow tenor rings out above them all:

When loudly boom the guns of war  
And battle flags are flying,  
Who is it strives to win or die  
Without regret or sighing,  
Who gives up mother, home and friends,  
And leaves his sweetheart to  
Lay down his life for Uncle Sam?  
The man in army blue.

Then comes the chorus, and the whole applauding multitude takes up the martial refrain:

Forward he goes to battlefields,  
Proud in his country's might,  
Willing to die, but not to yield,  
Fighting for truth and right;  
And when the gallant victory's won,  
The name of our soldier's true  
Is blazoned with the words, "Well done,"  
The man in army blue.

No, he would not yield, she knows that.

Was he lying on some sun scorched hillside wounded unto death, and calling for her in his delirium?

She buries her face in her hands and weeps at the horror of the picture.

## CHAPTER II.

A young man in the uniform of a general sits in his tent talking into a phonograph. His face bears the marks of toil and conflict, and his voice muffled inside the recording horn sounds strained and harsh:

"For heaven's sake, darling, tell me why I do not hear from you. Has any one come between us? I have sent you record after record, filled with my love for you, but not a word has come back to me from across the ocean. Are you ill, that you cannot speak? My heart is heavy, for I fear that some great calamity has befallen you. If you receive this, and the light of your love is still burning, I pray you to send me an answer that I may live again. Yours devotedly, Jack."

"SHE LISTENS TO THE VOICE OF HER LOVED ONE."

A scurry of hoofs, ever growing louder, sounds outside the tent, and the cry "Mail!" echoes through the camp.

General Jack Warfield hands a package to the courier. The little brown man in khaki salutes and leaps into his saddle. Again sounds the heat of hoofs on the sandy road; a cloud of dust is wafted across the plain, and he is gone.

## CHAPTER III.

Down the winding path a horseman gallops, his wiry steed going fast despite the heat. In a clump of trees a band of Filipinos lie in wait. As he comes abreast of them, a volley of rifle shots ring out upon the still air, but the intrepid rider speeds on unscathed. He crosses himself,

mutters a prayer in Spanish, and sinks the spurs deeper into the reeking flanks of his pony. He is out of the zone of bullets now, and the mail is safe this time.

## CHAPTER IV.

The girl still sits by the window. The postman comes again, but now his face is wreathed with smiles as he hands her a package bearing the odd stamp of the Philippines. She thanks him joyously and unwraps it with nervous fingers. Then she places the shiny black cylinder she finds within upon her talking machine and listens rapturously to the voice of her loved one.

A band is playing down the street; the melody drifts in at the window. Yes, they are singing, too:

When the bloody strife is o'er,  
The boys march home again  
Mid plaudits from the ones they love.  
Where is our hero then?  
He lies at rest beneath the sod;  
He fought and perished, too,  
To keep afloat the flag he loved,  
The man in army blue.

Her joy turns to sorrow, and her head is again bowed upon her breast, while the song goes on:

Come, laud our hero to the skies,  
Join in a mighty chorus  
To sing the highest praise of him  
Who won our freedom for us.  
O let the glorious anthem pierce  
The whole world through and through  
In honor of our valiant son,  
The man in army blue.

The music grows louder. Can it be that the boys are coming home? She looks in the direction of the sound, and her whole soul is in her eyes.

A regiment is marching up the avenue, and at its head is Jack.

She runs to the gate—he sees her—she is in his arms.

He has returned to the girl he left behind.

Editor's Note.—The verses used in this story are from the song, "The Man in Army Blue," written by the author and Mr. William Mountain, and not yet published.

Australia must be a great "talker" country, judging from the way World talks. are coming in.

# INCREASE YOUR RECORD BUSINESS!

## THE TRAY SYSTEM FILLS THE LONG FELT WANT.

Every dealer will readily see the advantages obtained by using this System of carrying records in stock. It is concise and appeals at once to the prospective customer. Every dealer using this System speaks in the highest terms of its convenience and selling power.

By actual experience sells as many records as a first-class salesman. Makes a more attractive looking stock than can be obtained by any other method.

NOTE—On Saturday Evening, Feb. 3rd, our entire stock of records was destroyed by fire. An order for 80,000 records was immediately wired to the factory and we are now prepared to take care of all orders promptly. Everything Fresh and New.

# BOSTON CYCLE & SUNDRY COMPANY

48 Hanover Street

J. M. LINSOTT, Manager

BOSTON, MASS.

## BUSINESS BOOMING IN BOSTON.

**All Predictions for the New Year Bowled Over—Retailers and Jobbers Find It Difficult to Replenish Stock so Active Is Demand—Big Orders from Eastern Talking Machine Co.—Many Improvements at Winchell's—Victor Operatic Concerts.**

(Special to The Talking Machine World.)

Boston, Mass., Feb. 8, 1906.

"It beats all how trade keeps up," was the remark of a talking machine man this week, and this remark was repeated, in different ways, in every talking machine establishment visited. Business is really remarkably good, so good, in fact, that none of the retail establishments have very large stocks on hand.

It has been found almost impossible to replenish the depleted stocks—stocks which grew small during the holiday rush a month ago—because it has been impossible to get goods from the factories. Every retail store reports that orders for records and for machines of all makes are still unfilled.

There is an evidence of rushing business in every store, in the fact that a steady stream of customers are pouring in. Business during January was particularly good, and it has shown a steady increase every day so far this month.

The Eastern Talking Machine Co. report the best business of their career. As an evidence of this they sent an order two weeks ago to the factory for 9,000 records, and followed it this week with an order for 7,000 more. This is "going some." Wholesale Manager Chamberlain says business has been better than he dreamed of three months ago. His department showed much more business during the month of January than in December, a really remarkable fact when all the holiday rush is taken into consideration. So earnest is the need for getting machines that the Eastern Talking Machine Co. have actually been forced to pay expressage on many shipments in order to get them in time for their customers' needs.

Improvements, enlargements and developments are in progress at the store of the Winchell Co., on Summer street. An additional number of glassed record rooms have been constructed, including two which will be used for smoking rooms. These two rooms are made so that the other rooms can be kept sweet and clean from tobacco smoke on account of the ladies. They will prove to be a great comfort for the gentlemen customers. A feature of the eight large rooms which are used now for the display of machines and records is the dummy elevator in each room. By means of these the salesmen can communicate instantly with the stock room above and, without leaving the customer, can get any record he desires from the stock. A balcony is being constructed over the business office for the high-class instruments and records, and also for the Regina music boxes, on which this young company have built up an exceedingly good business. A new store has been opened by the Langley-Winchell Co. at Providence, under the charge of J. H. Magner, and excellent reports are received from there.

At the Winchell Co. a fine new \$50 Columbia machine, with all the parts nickel plated, is being shown and a full line of the Edison grand opera records.

The Columbia Phonograph Co. has been doing an exceptionally big business ever since the new year began. Since the return of Retail Manager Ormsby, new life has been put into the retail department, and it is piling up a record. Mr. Ormsby expects soon to be transferred to the California coast, where he may recover his health. He has been suffering from a severe throat trouble for many years, and it will not yield to treatment as long as he lives in this climate.

Oliver Ditson Co. report great gains in the business on the Victor machines and records. Manager Bobzin grows firmer in his belief that "there is nothing like the Victor." The Ditson Co. make it a business to get all the latest improvements in machines and discs, and find that

it pays to keep up to the times, and many times ahead of them.

Victor operatic concerts have been a feature at Steinert Hall each Tuesday since the M. Steinert & Sons Co. established an agency for the Victor machines here. The wholesale office on Arch street shows a big advance in the volume of business this month. Its field is being extended daily by Manager Cornell.

## TRADE NOTES FROM ST. LOUIS.

**Members of the Trade Without Exception Report a Larger Trade Than a Year Ago—"Forty Per Cent Increase for January," Says One—Some Late Trade Happenings.**

(Special to The Talking Machine World.)

St. Louis, Mo., Feb. 10, 1906.

The talking machine dealers have been wonderfully surprised at the large trade they have had since the holidays. They were all looking for a quiet month in January, but the reports are unanimous that both the wholesale and retail business was far ahead for the same month a year ago, and they also state that the demand for the best class of goods has been very large.

W. C. Fuhri, manager of the Columbia Phonograph Co., states that their business for January was 40 per cent. better than that for the same month a year ago. He also states that their trade at all the branches in this territory was equally as favorable. This concern still retain their second store in the 'Frisco building, on Olive street. Mr. Fuhri left last week for a short business trip to Little Rock, Ark.

D. S. Ramsdell, vice-president and general manager of the St. Louis Talking Machine Co., states that their business for January showed a remarkable increase over that of January a year ago. He said they were looking for a quiet month, and were decidedly surprised to find trade so good. Oscar O. Morgan, city salesman for this concern, who was reported quite sick in our last letter with tuberculosis, died on Tuesday, Jan. 9, and the remains were shipped to Baltimore, Md., for burial.

P. E. Conroy, president of the Conroy Co., states that trade in their talking machine department has been exceedingly good, both wholesale and retail. He also reports a heavy demand for records.

Manager E. L. Garvin, of the Western Talking Machine Co., expressed his pleasure at the large volume of business transacted during January. B. F. Phillips, salesman for this concern, returned on Tuesday, Jan. 30, from a two weeks' visit at the National Phonograph Co.'s headquarters, Orange, N. J.

Manager E. B. Walthall, of the talking machine department of the O. K. Houck Piano Co., reports having had a very large trade during the month of January, and particularly so on high-class goods. F. E. Miles, manager of the talking machine department of the O. K. Houck Piano Co., at Memphis, Tenn., is expected here this week to make a short stay.

Fred C. Stierlin, secretary of the Thiebes-Stierlin Music Co., also reports having had a very fine wholesale and retail trade in their talking machine department during January.

F. L. Krusch, representative for the National Phonograph Co. through the states of Illinois and Iowa, was a recent visitor here.

Malcolm B. Henry, western sales manager of the Hawthorne & Sheble Mfg. Co., with headquarters in Chicago, spent one day here recently.

## MEXICAN NATIONAL PHONOGRAPH CO.

Among the incorporations filed with the secretary of the State of New York recently was that of the Mexican National Phonograph Co., Lakeside avenue and Valley road, Orange, N. J., for the purpose of manufacturing pronographs and all kinds of talking machines. Capital, \$25,000; incorporators, Wm. E. Gilmore, Alfonse Webster and John Randolph, all residents of Orange.

## VICTOR LINE WITH PHILIP WERLEIN.

(Special to The Talking Machine World.)

New Orleans, La., Feb. 5, 1906.

Philip Werlein, the big piano dealer of this city, has secured the wholesale distributing agency for the Victor Talking Machine Co. for this city and locality. In view of Mr. Werlein's reputation as a hustler in this connection he is a valuable one to all concerned. Mr. Werlein has been handling for some time the Zonophone, which he will continue to represent.

## ADOPT USE OF COMMERCIAL MACHINES.

Talking machines for use in dictation are being tested in the office of General Freight Agent Brockenbrough, of the Baltimore & Ohio in Pittsburg, with a view to their adoption as a means of facilitating correspondence. The machines, receiving and remitting instruments, are in use in the test. The machine supplements the use of stenography, and a clerk who can operate a typewriter can thus write the letters when the regular stenographer is busied with other duties.

Dealers should not overlook our Jobbers' Directory on pages 32 and 33.

## TIMELY TALKS ON TIMELY TOPICS.

Besides having a natural gift for bright, clean and successful business affairs, C. V. Henkel, president and general manager of the Douglas Phonograph Co., New York, has clear ideas about the talking machine trade, which he believes is on the soundest kind of basis, and is certain to witness development little short of stupendous. Recently indulging in an informal talk on this subject with *The World*, he said: "True it is that the past two years were wonders so far as this business is concerned, but the next two will go beyond anything the most enthusiastic talking machinememen have dreamed of in their philosophy. The trade, in my opinion, should be on as substantial a foundation as the piano line, artistically and commercially. To my mind a talking machine as a musical instrument is superior to a piano, whether played manually or mechanically; it is piano just the same. But the talking machine is a perpetual delight, as it reproduces not only the choicest works of the most famous and finished artists on every known instrument, but the finest efforts of the greatest vocalists, not to mention the happiest selections of the most popular song writers and professional entertainers. What is best of all in connection with the talking machine is the vast improvements toward absolute perfection in sound reproduction that are constantly appearing, and the end is not yet. Can you name any musical instrument that can compare with the incomparable talking machine? I am sure it is beyond me."

"Changing the subject," continued Mr. Henkel, "suppose Congress passes a new copyright bill, which requires the record manufacturer to pay royalty on protected compositions, musical or otherwise? If the music publishers become too arrogant or dictatorial in their terms, what is to prevent our big companies from making arrangements direct with the composers? They have the capital and can and will be more liberal with the writers, and will pay promptly all that is coming to them, which I hear is not a regular practice of many publishing houses. In short, as Bill says, this habit is more honored in the breach than in the observance. Besides, the music publishers, unless they buy a piece outright, only acquire, by the usual form of as-

signment employed between the composer and themselves, the sole right to publish. The privilege of reproduction, whether on a record or perforated music roll, is reserved, if not expressly, then by implication, which is as strong legally. Therefore writers of this class can ignore the publisher altogether on this score and dispose of the product of his brains and genius in a more attractive market, namely, the record maker, who can publish also if he is so inclined. And this would not be a bad plan, as dealers are adding sheet music to their stock, and finding it a paying line. It is a new outlet for these goods which promises to develop rapidly."

Manager Haynes, of the Columbia Graphophone Store, in Lowell, Mass., tells interesting stories about people who occasionally come in to hear music. One night, not long ago, a sweet little boy of about four years was in the store with his mother. He was such an interesting little fellow and seemed so thoroughly to enjoy the music and the surroundings that Mr. Haynes couldn't resist speaking to him. "You like the music, do you?" he said. But the little boy just looked at the manager and said never a word. The boy's mother talked with the little fellow a minute and then said to Mr. Haynes: "He doesn't know whether to talk to you or not. I've just got him a book about fairies and he really believes he is in fairyland now."

A little while after the little fellow, who had heard about the fairies, couldn't restrain himself any longer. He insisted that the music was fairy music and that the bright horns were made especially for fairyland. Then he capped the climax by asking the manager: "What do you eat? Do fairies eat same's I do?" Mr. Haynes had to admit that that particular fairy did eat about the same sort of food.

Following the announcement that brass horns had been advanced 20 per cent. and cranes or stands the same amount, W. A. Lawrence, of the Standard Metal Mfg. Co., 10 Warren street, New York, said to *The World*: "Frankly, the price of horns should be advanced when the condition of the raw material market is considered. At the same time our company have not increased their figures a penny, though if the other concerns in the line desire to confer with us on the matter I would be very glad to co-operate with them. As it stands, we will not advance unless compelled to, but will protect our trade. I do not think brass will go any higher, still at the present cost horns could stand a 10 to 15 per cent. raise." The horn situation is peculiar, the demand being heavy, with the supply reported short.

General Chaffee tells of an irascible major in the army, who at the time of the maneuvers held at Ft. Riley, Kan., about a year ago, stumbled over a newspaper correspondent as he, the officer, was making his round of inspection. As the newspaper man was in a locality where he had not the slightest right to be, the major's ire was awakened, says the New York Tribune.

"Here sir," shouted the officer, "you blankety-blank specimen of supreme impudence, what the dash are you doing here with that instrument?" And he pointed to the camera that the newspaper man had with him.

Whereupon the latter replied: "Well, sir, I brought it along for the purpose of taking a few photographs, but had I known that I was to have had the pleasure of meeting you I should have brought a phonograph instead."

He didn't know the possibilities of the talking machine—a story most too good to go unpublished. During the recitals given by the Musical Echo Co. a short time ago to the public, the manager announced that he would reproduce the voice of Tamagno, the great Italian tenor, who was dead, but whose voice still lived. The rec-

ord was played without any special comment, and several others followed. He then announced that he would play a selection from Caruso. A gentleman in the audience got up and asked if he meant that was the voice of Robinson Crusoe. The audience at once became interested; the gentlemanly manager explained that it was Cav. Enrico Caruso. The gentlemen excused himself, stating that as he had just reproduced a voice of one who had long been dead he did not know what the possibilities of a phonograph were, upon which the audience became almost hysterical.

The installment business in all grades of talking machines has grown to enormous proportions, and one dealer estimated that 60 per cent. of all the sales was on that basis. Records have not yet been included in this method of doing business, and so far have been strictly cash sales. A conservative estimate of the increase in the number of stores selling talking machines over a year ago has been placed at 30 per cent., and it is no uncommon thing to see a talking machine in the windows of sporting goods houses, cigar stores, dry goods stores and even barber shops. These are not classed by the regular dealers as legitimate competitors, as they carry but a small stock of records, and depend more on the occasional sale of a machine.

Evidently jobbers who claim to be distributors only, and therefore should be classed as simon pure jobbing houses, proposes advancing their trade status in this respect to the further consideration of the manufacturers. They hold, among other things, that it is much better to have one or two, possibly three (according to size and population of point) distributors with large stocks, than to have ten or more scattered in the same territory. At any rate, jobbers who advance this argument declare they will keep on agitating and advocating their claims to recognition on this score, coupled with the suggestion that graded discounts should be accorded buyers (now ranking as jobbers from the size of orders placed) and the dealer so placed.

As yet no further progress has been made in the proposed revision of the copyright statute. The Register of Copyrights, Thorvald Solberg, expressed himself, a few weeks back, as follows: "We are hoping to arrange for the third session of the copyright conference some time in January. Both the chairman of the Senate committee on patents and the chairman of the House committee on patents have expressed the opinion that the loss of a little time in the introduction of the bill would be less serious than any protracted discussion before the committee, or necessity of revision at its hands." Here it is February, and no word has gone forth as to just when

## Increase Your Sales

For years we have been studying the best methods of making the talking machine business a most profitable one for the dealer.

If your business is not all you think it ought to be, why not give us a try. We have twenty-five original plans all of which have proven winners of high degree.

It don't take much to get a sample.

Send us a dollar and we'll send you one of our latest plans complete. If it doesn't impress you as just about the biggest thing you ever struck and well worth putting in operation, we'll return the dollar. Isn't that fair enough?

Write to-day.

# DO YOU WISH TO MAKE MONEY? GOOD MONEY!

Then we can help you, for we manufacture a line of records which are sold at prices which must popularize them with the people, and

**WHILE OUR 10 INCH RECORDS ARE RETAILED AT 40 CENTS,**

it should be understood that there is no cheapening of quality, in fact we have received the strongest praise for the excellence of our records. Our products are strictly high grade as to tone, articulation and volume, and mechanically, the very best finished product on the market. Their wearing qualities have been thoroughly tested.

Now you can do no better than to get into communication with us on the subject of records, for the trade mark which appears on this page will become the most popular in this country.

*Our discount to Jobbers is liberal,* and we cater in every way to the largest trade interests.

We should be glad to supply samples of our product upon application, and we have a catalogue, containing a list of our records, which may be had for the asking.

Be sure that you take this matter up with us at once and learn of our trade discounts.

We may add that we will be glad to stamp up special labels that are furnished to us on large orders.

There is going to be a big business in records this year, and you may as well have your full share of the trade. We can help you to do it, and make you dollars, as we said at the beginning of our statement.

May we hear from you?

INTERNATIONAL RECORDS—10 INCH

INTERNATIONAL RECORDS—10 INCH

## INTERNATIONAL RECORD CO.,

40 Washington Street, Auburn, N. Y.

the measure in question is to be framed up, let alone being submitted for final endorsement to the ultimate copyright conference.

Bearing on the bill the attitude of record manufacturers has never been openly and unequivocally announced. Their position may be presumed without going into details. This is made clear by the unofficial statement made by R. L. Thomae, who was present at the second and latest conference in New York, and well known in talking machine circles from his long connection with the Victor Talking Machine Co. His recommendations to the Librarian of Congress at the time, as well as to Mr. Solberg, as he outlined them to *The World*, follow: "While I attended the conference as an associate of the music publishers' delegates, I was not entitled to the privileges of the floor. What I said, therefore, was in the nature of a private conversation with Mr. Putnam and Mr. Solberg, both of whom I know personally. You know that in registering music, books, etc., under the law two copies of the publication are required to be registered with the Librarian of Congress. Now, I said to these officials, when we were discussing the new copyright bill, that when we came to deposit two copies of every cylinder and disc record made with them they would need an additional wing to the library building. For I hold that records are a reproduction of sound in the same sense a photograph is the copy of a painting. If the latter is entitled to copyright, registration and protection, as it is, why not talking machine records? That's the only point I made at the conference."

H. C. Miller, a manufacturer in another line at Waterford, N. Y., but a talking machine enthusiast, has devised a horn arrangement which depends downward instead of standing vertically. The horn is arranged to go through a cabinet, and in emerging at the bottom the flare faces a sounding board. The sound effect is said to be mellowed, improved, and in a measure strengthened. This is the very opposite of the idea originated and patented by Victor H. Rapke, of New York, whose invention has been illustrated and described at some length in previous issues of *The World*. Mr. Rapke's horn adjustment is designed for both cylinder and disc machines, the latter just about now perfected, and it is certainly a marked improvement in tonal quality. Both of these gentlemen are sure they have made discoveries of note, and should it prove true their commercial success would be commensurate with their practical value.

With the introduction of superbly designed and finished cabinets, the trade are "keeping tabs" on centers in which the demand for these elegant and worthy goods is the greatest. A comparison of notes shows that Pittsburg, Pa., is the best market in the country, though only a few months have elapsed since the first was sold there. Dealers in that husky, bustling city aver they have been more than astonished at the way these artistic goods are absorbed. As multi-millionaires are a specialty of the "Smoky City," this may account for the call for \$500 and \$1,000 cabinets, with Watteau panels and finished in burnished gold, not to mention the solid mahogany line with gold plated trimmings. The age of sumptuous luxury in the talking machine business is just dawning.

The chaplain on a certain battleship was giving a magic-lantern lecture, the subject of which was "Notes and Scenes from the Bible." He arranged with a sailor, who possessed a gramophone, to discourse appropriate music between the slides. The first picture shown was Adam and Eve in the Garden of Eden. The sailor cudgeled his brain, but could not think of any-

thing appropriate. "Play up," whispered the chaplain. Suddenly a large idea struck the jolly tar, and—to the great consternation of the sky pilot and the delight of the audience—the gramophone burst forth with the strains of "There's Only One Girl in the World for Me."

Mrs. Henry Peck had been resting in her family plot in Stoneview for several months, and Hen. Peck was enjoying a well-earned rest. He returned late from the club and was sinking into a fitful slumber when a well-known voice smote on his ear. The accustomed curtain lecture proceeded while, perspiring and trembling, he hid himself under the bedclothes, expecting every instant to have the apparition of the late Mrs. Peck drop some weighty household implement on his defenseless head. The voice at length ceased, and stillness of an intense character succeeded. He turned on the lights and took a solemn oath to forswear all bachelor joys. In the meantime his next-door neighbor, after putting away the record of Mrs. Nagg, locked the phonograph for the night.

Material for making talking machine cabinets is exceedingly scarce, and buyers are scouring the market for raw stock, according to an authority whose company is one of the largest consumers in the market. Metal—steel and iron—of the right brands, employed in manufacturing the same line of goods, is obtainable only at very much higher prices, while the mills are tied up with orders for months ahead.

Talk of foreign music publishers entering the record making field is received with apparent tranquillity by the regular manufacturers here. Aside from several patents which are spoken of as detrimental to the development of trade in the United States with these goods, those directly interested declare the duty is prohibitive; for example, seven-inch records are dutiable at the rate of 25 per cent. ad valorem, and ten-inch records at 45. Masters are also classified at the latter high rate.

Notwithstanding the belief that with the final adjudication of the Berliner and Jones patents—in their connection with the reproduction of sound, composition for records and the process for duplicating records—which are now pending in the United States courts, litigation on talking machine inventions would be pretty well cleared up, but other suits are to come.

During the week ending Jan. 20, when the two automobile exhibitions were on in New York, a number of prominent talking machine jobbers were in attendance the entire time, among them being the following: J. W. Jenkins, of the J. W. Jenkins Sons Co., Kansas City, Mo.; C. Grinnell, of Grinnell Bros., Detroit, Mich.; H. M. Holleman, of the Texas Phonograph Co., Houston, Tex.; Louis Buehn, of the Wells Phonograph Co., Philadelphia, Pa.; B. B. Crew, of the Philips & Crew Co., Atlanta, Ga.; Messrs. Osgood and Currier, of the C. E. Osgood Co., Boston, Mass.; G. L. Ackerman, of Ackerman & Co., Scranton, Pa.; Messrs. Linscott and Patton, of the Boston Cycle and Sundry Co., Boston, Mass.; William Weruer, Easton, Pa.; John Sykes, Trenton, N. J.; W. J. Andrews, Syracuse, N. Y.; S. K. Hamburger, Harrisburg, Pa.; W. C. Finch, of Finch & Hahn, Schenectady, N. Y.; John N. Willys and W. O. Crew, of the Elmira Arms Co.; W. H. Hug, of Klein & Heffelman Co., Canton, O.; N. D. Griffin, of the American Phonograph Co., Gloversville, N. Y.; Messrs. Pardee, Ellenberger and Silliman, of the Pardee-Ellenberger Co., New Haven, Conn.; W. F. Carroll, of the Utica Cycle Co., Utica, N. Y.; P. A. Powers, Buffalo, N. Y.

According to a recent decision of the General Board of United States Appraisers, on the exportation of cases manufactured with the use of imported fiber cardboard, a drawback will be allowed equal in amount to the duties paid on the materials so used, less the legal deduction of 1 per cent.

## Are You Selling Language Teachers?

In other words, are you selling I. C. S. Language Outfits? If not, you are neglecting one of the most profitable and valuable features of the phonograph business. You may sell this Outfit not only to customers who regularly buy amusement records, but to the class of people who ordinarily would not make any use at all of the phonograph. Dealers who are handling "Double-Service" to-day state that it increases their business 30 per cent. or more.

### THE I.C.S. LANGUAGE SYSTEM WITH Thomas A. Edison PHONOGRAPH

is the most perfect system of language instruction in the world. The records are made by the Edison Gold Mould Process, from perfect master records approved by the highest authorities in the land. We guarantee the pronunciation to be absolutely correct. The instruction matter has for many years been remarkably successful in enabling people to easily read, correctly write, and fluently speak the French, German and Spanish languages. It costs only 50 cents with the coupon below for YOU to try this out in your own business.

*Can you afford to neglect  
any chances for  
increased business?*

**International Correspondence Schools,

(Special to The Talking Machine World.)

London, Eng., Jan. 5, 1906.

The Neophone Co. are now located in their magnificent new building at the corner of Tabernacle and Worship streets, where they are occupying five floors with splendid facilities to meet their growing business. The ground floor is used for show rooms and offices, the record, sales and store departments being on the floors above. The record making department is in the basement, where hydraulic machinery of a powerful type is installed. Here they have facilities for turning out 20,000 records a day.

Dr. Michaelis, the inventor of the Neophone, exercises his usual keen supervision over the producing departments. He is a great believer in the disc machine and says that all developments of importance will be associated with that instrument in the future. This company have achieved a great success, and are steadily branching out. We understand that they are about to make an important connection whereby their products will be widely sold in the United States.

It may be of interest to know that Dr. Michaelis has achieved great success with his new Neophone records. These discs are made of cardboard, covered with a specially prepared surface and are unbreakable. It is said: "They surpass in purity of tone and resonance any records yet produced, and combine the sweetness of the gold-moulded cylinder with the great volume and naturalness of the best disc record." Their immunity from breakage enables them to be made in a size hitherto impossible, and 20-inch records

are now sold which will play from eight to ten minutes. The ordinary sizes are 9 and 12 inches, and their prices are 6d. (12 cents) and 1s. (25 cents) each, respectively.

\* \* \* \*

A rather novel feature for the entertainment of those who wait for hours outside the doors or unreserved parts of theatres has been inaugurated by Lewis Waller, the eminent actor manager, at the Imperial Theatre. On Wednesday evenings the doors are opened earlier than usual, and to entertain the crowd he has installed a large talking machine which gives an impromptu concert, commencing with an overture by a noted military band, and concluding with a selection, in his own voice, from "Henry V." This idea has appealed to other theatrical managers, and is now being used throughout the provinces for the purpose of keeping the audiences entertained until the curtain rises.

\* \* \* \*

The National Phonograph Co., Ltd., of this city, are now publishing an English edition of the Edison Phonograph Monthly, which has met with the greatest appreciation from the trade. It is handsomely printed, and contains much of interest to the trade regarding Edison phonograph progress, as well as much technical information. The second number, which has just made its appearance, is in every respect equal to the first, and is a credit to the advertising department of the London office.

\* \* \* \*

The fire which totally destroyed the recording plant of the National Phonograph Co., in Paris, has only caused a temporary inconvenience, inasmuch as they at once continued the manufacture of the French records at their large plant in Brussels. New quarters, as well as necessary machinery, have been secured, and the new recording plant in Paris will resume work immediately. The demand for Edison records throughout France is steadily growing, some of the most eminent artists being connected with this branch.

It may be worth noting that the famous Garde Republicaine Band, of Paris, which has just paid a visit to London, is among the great organizations that have made records for the National Phonograph Co., and the visit of the band has brought about a great demand for these band records.

\* \* \* \*

Baroness Cederstrom, better known as Mme. Patti, has at last been induced to make a number of records of her famous songs and arias with which her name is indissolubly connected. The records were made at Mme. Patti's castle, Craig-y-Nos, Wales, the accompanist being London Ronald. The Gramophone Co., for whom these records were made, are to be congratulated on securing records by this famous artist, whose name is revered wherever music is loved.

\* \* \* \*

During the recent general election talking machines were employed by many of the candidates, but by no one, perhaps, so effectively as by Arnold Herbert, the Liberal candidate for South Bucks, who obtained the services of an expert, and spoke three speeches into a huge phonograph. Admirable records were made, and the instrument was taken round the villages of South Bucks, reproducing nightly with wonderful clearness, Mr. Herbert's eloquent periods. The mechanical orator tempered the political oratory with songs and band selections.

\* \* \* \*

Employees of the Russell Hunting Co., Ltd., held the first annual dinner at the Finsbury Town Hall recently. About two hundred employees were present, the board of directors being well represented, with Edgar S. Perry in the chair. Interesting speeches were made by Charles Howell (Howell Bros.), who proposed the toast of the firm, which was responded to by Louis Sterling, managing director. C. Dunlop proposed the Trade, and Mr. Balcombe (Barnett Samuel & Sons), responded. Russell Hunting (Casey) proposed the Artistes; Messrs. Ernest Pike and Hamilton Hill replied. Mr. Smith-

# ZON-O-PHONE

## Records Sound Better

50c.

**T**HERE is a musical charm about the Zon-o-phone Records which captivates all listeners. They have a velvety smoothness—a distinctness and clearness which creates new friends and admirers daily. Jobbers and dealers have praised our latest creations in unstinted terms. ¶ There are excellent reasons why the Zon-o-phone has grown so in trade popularity. A critical examination will show that our record thread has a peculiar fineness whereby we can get more on a record. The material is harder than is used in the ordinary record, thus insuring greater durability. The tone quality has a pleasing mellowness which has caused them to become the best sellers. ¶ We make a specialty each month of producing some attractions which are appreciated by talking machine men who desire to bring all the selling strength possible into their business.

hurst, works manager, proposed the Employees; Mr. May responded. Miss Lillian Bryant, musical director (A. G. S. M.), and Carl Herzog, managing director, New Polyphon Co., also spoke. Following the speakers a very delightful programme was rendered, a number of prominent artists assisting. The success of this company has been phenomenal, and their steady growth was the theme of many of those present, both employees as well as members of the company. It goes without saying that this is only the first of many enjoyable reunions of this enterprising company.

### TO REPLACE CATALOGUES.

A Suggestion Which Could be Adopted Most Effectively by Directors of Museums and Other Public Institutions.

The directors of the Museum of Natural History and the Metropolitan Museum of Arts ought to take note of the fact that a very excellent suggestion has been made to the effect that coin-controlled talking machines might be placed in these or similar buildings for the purpose of describing the features of the various exhibits. Instead of buying a catalogue containing pages of matter that may be of no immediate interest in order to get access to the paragraphs that touch on the subjects on which the information is required, the visitor, if this plan were adopted, need only drop in his coin, stand by the exhibit he is studying, and listen to the fullest details regarding it. In this way the largest measure of information could be secured without much expense. The suggestion comes from England, and it is worth consideration, for notwithstanding any genius that we may be credited with as a nation, we must admit that some good things come to us from our European cousins once in a while.

### SEVEN-INCH RECORDS AGAIN POPULAR.

Less than a year ago it was predicted by many connected with the talking machine trade that the 7-inch record would soon disappear from the stock of jobbers and dealers. A sudden demand seems to have arisen for this size of record, due probably to the fact that it is now a close competitor with the cylindrical product at the same price.

In making inquiry among the manufacturers, we have been advised that several anticipate furnishing up-to-date selections in the 7-inch size. The American Record Co. report having recently closed a contract for 500,000 7-inch records. They

### INTERIOR VIEW OF DOUGLAS PHONOGRAPH CO.'S HANDSOME STORE.

Perhaps in no branch of the music trade industry is greater attention given to artistic warehousing display and decoration than by the talking machine trade. Piano dealers are known everywhere for the chaste elegance of their stores, but the talking machine people have eclipsed them in point of handsome interiors and effective arrangements. Perhaps the character of the goods are responsible, in a measure, for the many beautiful decorative effects so marked a feature of stores in the trade, and the ambition to have a place

are now regularly listing twelve 7-inch popular up-to-date records each month.

### THE CANADIAN AGENCY

For the Heise System of Wire Record Racks  
Made by the Syracuse Wire Works Secured  
by R. S. Williams & Sons Co.

The Syracuse Wire Works, Syracuse, N. Y., are finding a large demand for their wire racks for records among the most progressive houses in the

trade. This week they have sent a full equipment of their racks, the Heise System, to the new Toledo branch of the Columbia Phonograph Co., as well as to their new store in South Bend, Ind. They have also consummated arrangements with the R. S. Williams & Sons Co., Toronto, Ont., to handle their goods in Canada. They will carry a large stock, and will be fully prepared to cater fully to the demands of the Canadian trade. The No. 2 D rack for disc records which is illustrated in the advertisement of the Syracuse Wire Works in another part of this paper is proving a very popular specialty, and it is evident that there will be an increasing demand for this rack.

that will occupy a niche just a little higher than the one hitherto enjoying national reputation in this respect is evident on every hand. The result of this entirely worthy spirit of emulation adds to the constantly growing list of superbly equipped and artistically designed store interiors, and among them may be noted that of the Douglas Phonograph Co., 89 Chambers street, New York, jobbers of national standing, a view of which is herewith presented.

### CONCERT BY GREAT ARTISTS.

The Cable Company's branch at Knoxville, Tenn., has recently been giving a number of complimentary recitals in Cable Hall, in which the Victor talking machine has been the entertainer. The program has been gotten up in a novel way, the participating artists being printed on the program just as if they were to appear in person. The entire affair was most delightfully conceived and carried out.

### W. H. FREELAND TAKES CHARGE.

William H. Freeland, for many years with Hamilton S. Gordon, has connected himself with I. Davega, Jr., of 125 West 125th street, New York, assuming the management of the talking machine department. A full line of Edison and Victor talking machines, records and supplies of all kinds, is being handled, especial attention being paid to foreign records. Mr. Freeland is well and favorably known to the trade, and is certain to build up a splendid trade in his new sphere of activity.

Robert L. Gibson, Philadelphia, Pa., known for his improvements in sound-boxes, needle attachments, etc., was in New York last week on special business.

## SOFT TONE.

### ELITE, No. 1.

Used in the various attachments now on the market. Gives a very soft tone.

Packages of 200.

### EUREKA, No. 2.

Will play from 50 to 100 records without changing needles. Requires no attachment. Fits any type Sound Box.

Packages of 50.

### DOUGLAS SCRATCHLESS, No. 3.

Our celebrated Glass Needle. Will play over 150 Records with reasonable care.

No other needle will give as much detail.

Owners of operatic Records will obtain the most minute effect in Melba and Caruso Records which other needles lose.

Boxes of 12.

## MEDIUM TONE.

### EXCELSIOR, No. 4.

The very best all around needle made.

Will play several records without change.

Can be used on Talk-o-phone or American Records.

Packages of 100 and 300.

### ROYAL, No. 5.

The celebrated gilt needle used extensively in Europe.

The plating gives a very smooth surface to the needle and reduces the scratching sounds.

Packages of 200.

### AMERICAN, No. 6.

This is the same needle as our gilt needle, but is blued instead of being plated.

Packages of 200.

## LOUD TONE.

### IDEAL, No. 7.

The imported English needle, extensively advertised and sold at \$2.00 per thousand under another name.

Packages of 300.

### PERFECTION, No. 8.

The most popular needle ever sold.

For large rooms and dancing. A worn out Record played with this needle will sound like a new one.

Packages of 100 and 300.

### CONCERT, No. 9.

For exhibition and concert use. The loudest needle made.

This needle has an immense sale all over Europe, and the demand since we introduced it in the U. S. has been very flattering.

**JOBBER'S AND DEALERS SUPPLIED. PRICES UPON APPLICATION.****WE DO NOT SELL NEEDLES IN BULK.****ALL OUR NEEDLES SOLD ONLY IN ORIGINAL PACKAGES.**

## QUARTERLY RECORD BULLETINS.

Some Decisions Pro and Con Regarding This Subject Which Will Become of Interest.

Springfield, Vt., Jan. 9, 1906.

Editor Talking Machine World:

Dear Sir:—I am pleased that you have opened your columns for a discussion of monthly lists. Twenty-four new records every month is a large assortment of records for the average dealer who buys 300 new records each month, and then they have the records on hand that are not so popular or salable. It would be an improvement to have quarterly bulletins, and not over 36 new records each quarter. I think the trade in my section would be better pleased with quarterly bulletins. Yours truly, ALBERT A. MAGWIRE.

Wanatah, Ind., Feb. 5, 1906.

Editor Talking Machine World:

Dear Sir:—In regard to the issuing of quarterly record bulletins instead of monthly by the manufacturers, I, for one, wish to state that I would consider the move a sad mistake. In my experience I find that the frequent issuing of new record bulletins is the life of the talking machine trade. People are anxious to get the new songs so as to keep up to date. Of course, I help in keeping up the interest by mailing out the new bulletins as soon as issued to regular as well as possible customers, and invariably each one of them calls to hear the new records, and they do not only purchase the new records, but often some of the older selections and other supplies. The oftener you have something new to offer the oftener the customer will visit your store. If bulletins could even be issued more frequent than at present it would improve the business. Another fact which makes people anxious to get the new records is the continual improvement in their quality. I think a better plan than the less frequent issuance of record bulletins would be for manufacturers to eliminate more of the older selections from the catalogue and make over only the staple ones and list them in their supplements so as to bring and keep records up to the improved method of recording. I well realize that this method would put the manufacturers to considerable extra expense, but think that it would result in increased sales of records, as people would appreciate the improvement in them. WM. F. HUNT.

The matter of how frequent records should be issued has received careful consideration on the part of manufacturers, and the following brief statements, given The World at different times, substantially reflect the views of those quoted:

National Phonograph Co.: "We admit that the too frequent issue of records often interferes with the sale of what promises to be a brisk trade on certain numbers; but, from our experience, coupled with the opinions of many in the trade, a fresh list should not be put out at a longer interval than two months. In obedience to the general demand, however, the monthly bulletin will continue to be furnished indefinitely. Should any change be made, which is not at all likely, the trade will be apprised in due time. That is one reason why our grand opera records are not sent out under three months, because, being a new article of permanent value, it gives the trade ample time for their proper introduction. They, however, are altogether a different proposition from the popular airs of the day, for if the latter are not marketed while in vogue, many of them would be dead stock in two or three months."

Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General: "Our company has seriously considered the advisability of restricting our record bulletins and making quarterly, or possibly bi-monthly, instead of monthly lists."

## TRADE NOTICE.

Use the Lyric Diaphragms, all ready to put into Cylinder or Disc Talking Machines, and be convinced of their superior Musical quality. Will not blast, and more distinct and natural in tone. Large profits for dealers putting them in machines already sold. Write us for prices, sample by mail 20 cents.

LYRIC MFG CO., 118 & 120 Market St., Newark, N. J.

It is a question, however, that the manufacturers should determine as a body and not individually. Personally, I know when lists are issued too often they are detrimental to their predecessors in point of sales. One interferes with the other, but the great sellers are the popular music of the day, and this the public and the trade calls for; and therefore so long as the other record makers cater to this demand monthly, our company will doubtless keep right along as heretofore. That too many records are placed on the market is self-evident."

Practically the same opinions are held by the Victor Talking Machine Co., American Record Co. Universal Talking Machine Mfg. Co., Leeds & Catlin Co. and International Record Co. Of the same tenor is the following comment made in the September last issue of The Talking Machine World, which condenses the views of the foregoing concerns:

"Whether records are issued too frequently seems to be a question for each company to settle for itself, as there is far from a unanimity of opinion on the subject. Consideration has been given to the complaint that the monthly installment of new records comes so closely on the heels of the preceding lot that sales are greatly interfered with just about the time when the merits, or worth, or popularity of certain numbers are beginning to be felt. On the other hand it is held that at the present day popular numbers—vocal, instrumental and otherwise—are the controlling factor in the business from a strictly commercial standpoint, and profits are what everybody is looking for first, last and all the time. Consequently the more frequently—not under a month, of course—records of this description are furnished the better."

## TRADE NOTES FROM SPOKANE.

The Spokane Phonograph Co. Transact an Immense Business—Orders in Carload Lots Which It Is Impossible to Fill—Utilize Special Rooms for Display Purposes.

Spokane, Wash., Jan. 18, 1906.

Editor Talking Machine World, New York:

Dear Sir—We were quite amused at an article in your last issue just received, entitled a \$2,000 freight bill. The Portland party evidently believes in taking all the credit he can see in sight, or anywhere near. The three carloads of goods spoken of contained 1½ cars for this company, but the National Phono Co. pooled the two lots together and shipped them to the coast to save freight. We also had a half car that was pooled with Seattle people and reshipped back here. As to filling carload lots, the company cannot do this. We gave them orders for two cars and they shipped the whole order in small lots, pooling with Seattle and Portland houses. We have put in orders now that would more than fill a car, but the same will be shipped in small lots, as the factory can turn them out. We have not been able to fill orders since we started; that is, completely. This is the old firm of Foster & Foster, who made the talking machine business in the State of Washington, and the writer has done more hard work to place the Edison goods on the market in this State than any other man in this Northwest territory. When we opened up in Spokane, it was but a branch of our coast store, and an Edison machine was unknown in this city, while now there is more than a thousand and hundreds in the very best well-known homes.

We were one of the first to use small parlor rooms to show up machines and records, and our store has increased from time to time, and still we want more room. We carry 50,000 records, and double deck to the ceiling, using balconies, besides having a large ware room for machines. In regard to high freight rates, we pay even a higher rate than those on the coast, the coast being \$2.25 in cars, while our rate is \$4.27 in cars or \$5.27 in open lots.

We appreciate your paper very much, and always look forward to its arrival each month.

Very truly yours,

SPOKANE PHONO CO.,

Per W. H. FOSTER, Mgr.

## Get a tighter hold on your trade

It's a comparatively easy matter and it means more money for you.

Every customer who comes to you should be made to feel that there is no other store like yours.

Whenever he or she wants Victor machines, records, trumpet, horns, fibre cases, English needles or other accessories, yours should be the store that instantly comes to mind.

Please your customers and get their good will and your business will run along easier. As nearly as you can, try to anticipate the wants of your customers so that you have what they ask for. Show them that you have an up-to-date store and want to do everything in your power to please them.

There are times, of course, when you won't have what they want. But you ought to be able to get it for them without delay.

Your jobber should keep you posted on the newest articles and should be prompt in filling your orders. If your jobber is that kind of a man, stick by him.

If, on the other hand, he keeps you waiting for goods and needs jacking up before you get them, we would like to do business with you.

We ship all goods the same day the order is received. You can easily figure out just about when you ought to get them.

Why not get a copy of our latest catalogue? Drop us a postal to-day.

## USE OF COPYRIGHT MUSIC NOT A BREACH OF STATUTE

Is the Decision of the Court of Last Resort in Belgium in the Suit Brought by Music Publishers Against the Manufacturers of Records for Talking Machines—A Summary of the Decree Will be Interesting to Makers of Records in This Country.

In the suit fought through to a final issue between the music publishers and manufacturers of records, with whom were joined the makers of all mechanical musical instruments, the court of last resort in Belgium decided every point in favor of the latter. The case was identical with that carried to the higher courts in France, but in which the manufacturers of talking machine records were mulcted in large amounts for royalties on certain kinds of copyright music used by them. The full decree has just come to hand. It is quite extended and abounds in legal verbiage. To summarize: The case was tried before the Fourth Chamber of the Court of Appeals of Brussels, the applicants being the Compagnie Generale des Phonographes, Pathe Freres and Societe Ullmann agst. Massenet and Puccini. The defendants in this action were the complainants in a previous action in the lower court, where they were successful in having the recording of copyright music by record manufacturers recognized as a breach of copyright. The talking machine manufacturers appealed against this decision, and the decree just handed down upholds their objection. The first defendants in the present suit are of French, and the second of Italian nationality. The appellants are French.

The judgment, in brief, is as follows: In matters of literary and artistic property the relations of Belgium with France and Italy are regulated by the International Convention of Berne of 1886. By the terms of this convention it seems that only foreign authors have the right to reproduce their works or to authorize their reproduction in Belgium in any manner or form whatsoever. This principle is subject to an exception expressed thus: "The manufacture and sale of instruments reproducing mechanically airs of music does not constitute musical infringement." The defendants contend that this exception is not imperative, and cannot attack broader rights than the interior legislations of the countries of the union may accord the authors against the unauthorized reproduction of their works; and that in consequence there is reason, in Belgium, to apply without any restriction the law of 1886.

It is stated that the supporters of the original act have been inspired by economical prejudices and that the States of the Union have yielded at the instance of the powers, which desired to protect an industry employing numbers of their workmen, and of which the future appeared to be compromised by the recognition of the absolute right of the authors. By the terms of the convention concluded between Belgium and Switzerland in 1867, for reciprocally guaranteeing artistic and literary property, the manufacture and sale of music boxes or analogous instruments cannot be subjected to any restriction or reserve. The decree proceeds to say that the introduction, manufacture, and sale of music boxes, or

analogous instruments reproducing the airs of music cannot be restricted between the two countries by any measure in execution of the present convention.

It adds that the text of the convention, like the French-Swiss one of 1882, leaves not the least doubt that the contracting parties engaged themselves to place the industry of mechanical instruments of music under shelter from claim of the authors, within their respective countries, and that the Berne convention has only consecrated anew that measure of industrial protection. It seems certain that those responsible for the act had principally in view the industry of music boxes, chiming watches, and hand-organs, very important at that time in certain countries of the union, and especially in Switzerland; but it is also true that the terms of the article are generous, and comprehend all instruments which mechanically reproduce music. Even if that disposition was exceptional in that it gave a check to the general principle acknowledging the absolute right of authors in their works, "it is not permitted to the judge," says the decree, "to make a distinction between the ancient instruments which have inspired the international accord, and the new instruments, which have entered into the terms of that accord." The talking machine is a mechanical instrument, or at least serves to mechanically reproduce music, and so enters into the category of the instruments of which the manufacture and sale are declared to be legal.

The decree sets aside the objection of the defendants that the placing on sale of copies of a disc or cylinder record constitutes a "veritable edition." It points out they have nothing in common with the conventional signs permitting publications to be read, and that, isolated from the instrument, they remain without any utility. It goes on to cite a decision of the English Court of Appeal of December, 1899, upholding a decision of the Lower Court, rejecting the demands of the authors that the right conferred by law on a composer of a musical work includes the prevention of a reproduction of the work on talking machine records. It further states that the same question has been agitated in France and decided in the same sense by the Court of Paris, which decided that the reproduction of music on talking machines does not constitute a musical infringement, because they are mechanical instruments, and the law has in a general fashion exonerated similar instruments.

The decree remarks that if the convention of 1886 were to be interpreted in the sense urged by the authors, it would result that, in Germany, France and England, foreign authors would enjoy more extensive rights than native authors. Dealing with the further objection that the machine reproduces at once the music and the words which are adapted to it, but that the airs with words are none the less airs of music entering

in the terms of the convention, it is stated that the authors of the words will be the sole persons having the right to complain, and it is pointed out that the defendants are the composers of music, and not at the same time the authors of the words reproduced by the machines of the appellants. The decree concludes by saying that it seems inequitable that the authors cannot, except in the case of public execution, secure any profit from the reproduction of their works, nor oppose such reproduction except in certain conditions; but that the court must decide that the authors are without right so long as the convention of Berne has not been modified or denounced. For these reasons the court sets aside the judgment appealed from, declares the defendants without right in their action, non-suits them, and condemns them to costs of both instances.

## SELLING NEEDLES BY WEIGHT.

How the Little Items Are Handled in Quantities Without Counting.

The cut in the prices of talking machine records has, according to the leading dealers, caused a much healthier tone in that branch of the business by greatly increasing its volume. The trade in needles has taken such a jump since January 1 that a Chicago house, which receives the goods in bulk, employs boys to weigh the needles and put them up in envelopes of 100 each. This is done on equally balanced scales: 100 needles are kept lying on one scale and the boy pours out enough upon the other scale to balance, which gives him the exact hundred without counting them.

## BIG RECORD PLANT AT AUBURN.

(Special to The Talking Machine World.)

Auburn, N. Y., Feb. 9, 1906.

The International Record Co. have a splendid plant in this city, located at 40 Washington street, and C. H. Woodruff, the local manager, while discussing business with The World, remarked that there was every assurance of an enormous business during the spring and summer. He stated that the orders which had been coming in from the jobbers and dealers were extremely large, and that with the ample facilities at the command of the International Record Co., he felt that they were well equipped to take care of the needs of the trade to the fullest extent.

## PROOFS OF PROSPERITY.

A sure indication of the healthy condition of the talking machine business can be gathered from the volume of the supply business which is being transacted at the present time. The Hawthorne & Sheble Manufacturing Co., of Philadelphia report that during the month of January, 1906, they shipped out on orders 98 per cent more goods than in the corresponding month of last year, and that orders are still on the increase.

Long Distance Telephone—Number 1745 Gramercy.

NEW YORK, FEBRUARY 15, 1906.

A PERSONAL survey of the talking machine field in the principal cities East and West during the past two months has furnished indisputable proof of remarkable trade conditions which exist in this industry. The business is going ahead by leaps and bounds, and the manufacturers, notwithstanding their enormously increased plants, have been unable to keep up with the avalanche of orders which have been pouring in upon them from every quarter of the globe. They are doing their utmost to relieve the situation by working overtime, and some are preparing for substantial additions, in order to more promptly meet with the requirements of the trade.

BUSINESS in the Middle West in all lines is unusually brisk, and the talking machine jobbers and dealers are enjoying their full share of business prosperity. Big orders have been placed for machines and supplies, and probably the largest orders for records ever taken have been given out to leading houses within the past sixty days.

It would seem from present indications that the cut in record prices has stimulated an unprecedented demand, and it is no longer the vogue to take orders for a few records, for the quantity orders run up into big figures nowadays.

The leading manufacturers have taken liberal space in periodicals of wide circulation, and in this manner they have helped the jobbers and dealers in their respective sections.

ONE of the largest manufacturers, while discussing business conditions with *The World*, predicted an unprecedentedly brilliant business for 1906. Certainly, proof of the unusual demand for everything in the talking machine line is furnished by the fact that ample as have been preparations for increased trade, the manufacturers are still unable to cope with all the business which is being turned their way from every section of the country.

Another encouraging trade sign may be seen in

the fact that from all over the country orders are being placed for some of the most expensive talking machine products. This emphasizes the fact that the talking machine men have good reason to be optimistic and enthusiastic as regards the outlook for the new year.

THE majority of talking machine men find conditions most encouraging, and there is no reason why the new year should not result in as substantial an increase as 1905 exhibited over the preceding year. The country has plenty of money, and people are inclined to buy more liberally in all lines. Collections, too, which are always a pretty exact indication of the state of affairs in the business world, were never better than at the present time, therefore to sum up the business situation, we may say that there never was a year in this industry which opened amid more favorable circumstances than those which surround the inception of 1906.

IT is the unanimous opinion of many talking machine men everywhere that great and widespread as was the prosperity of 1905, it will be far surpassed during the present year. Nor is it difficult to find a sound basis for this optimism. Wherever we turn our eyes we find evidences of prosperity; crops have been unusually large and prices for farm products have been high. The iron and steel industry never was more active than it is at present. The railroads are even now having more freight than they can carry with any degree of promptitude, and they are spending vast sums for improvements.

THE bank clearings of the country show a large increase, and merchants in general, as well as the majority of manufacturers, are extending their facilities as the result of increased business, and in the conviction that the demands upon them will be greater than ever.

Politically and financially, the country is on a safe basis. In fact, the signs of prosperity due to the natural healthy growth in expansion are many and varied, while the pessimists must seek in vain for untoward conditions.

LAST month there was a meeting of talking machine jobbers in Cincinnati, and in March another meeting will take place in Pittsburgh. This will be the third meeting which has occurred in the West within the past few months, and these meetings show that there is a steady trend among the talking machine people toward organization of some kind. Jobbers and retail associations in other lines have accomplished some excellent results, and there is no reason why the talking machine people cannot also win some good things through united effort. It is to be hoped, however, that at the start they will not attempt to accomplish too much. The great trouble with the promoters of organized work is that at the start they try to do too many things, and as a result usually fail in accomplishing anything.

NOW, if one definite object is held up as worthy of accomplishment, and all others are sidetracked until the one most desired point has been won, then it is safe to say an organization is on the right trail, and one which will lead ultimately toward better things. It is a very nice thing to have a lot of pet theories on easy tap; they are mouth-filling and pleasant to discuss with one's friends, but getting right down to solid business, there are really only a

few business matters upon which competitors may act in concert. The moment arbitrary rules are adopted, or ironclad agreements made regarding sales, there comes a break, because the American business man will not submit to fettering his own possibilities. He wants freedom of action, and he will have it, and the talking machine jobbers might take a lesson from other trade associations, and not attempt to accomplish too much at the outset. If they do they will be liable to fall down, and falls usually injure.

SOME well-known talking machine manufacturers have been taking up actively a matter which is of the most vital interest to the entire trade, one which affects not only manufacturers but jobbers and dealers everywhere. Quiet but effective work has been carried on, and through concerted action the talking machine men have been enabled to secure a reduction in freight rates for talking machines through a reclassification of machines and records. This new rate will be placed in effect on April 1, and there will be but one classification for talking machines and records throughout the United States and Canada. This new rate will insure a reduction from one-and-one-half first to first classification in less than carload lots, and to third class in car lots.

RAILROAD men for a number of years have placed a high classification on talking machines on the ground that the talking machine was a novelty and a fad, and the rates on records was double first in some sections of the country.

Naturally this high freight tariff interfered seriously with the business, particularly in the far West, where the exorbitant tariff made the profitable handling of talking machines almost out of the question.

Great credit is due the talking machine men who successfully won out in this freight rate fight. They have fought the matter persistently for more than two years, as at first the railroad officials were not inclined to grant a lessening of freight charges. But after various discussions a reduction was secured which will take effect as we have stated.

THIS new freight rate will mean the saving of a good many dollars to talking machine dealers in every part of the Union, particularly those on the Pacific Coast. This new condition shows how completely the old ideas regarding the talking machine being a fad have become extinguished. When selfish business institutions like railroad corporations concede to an industry its just demands in such a manner, it is at once a compliment to it, and is as well a splendid indication of how radically public sentiment has changed toward the talking machine. It is not only a good illustration of a recognition of changing conditions, but it is the kind of recognition which means added profits to merchants, for the members of this trade will save a good many dollars at the end of the year through the inauguration of the new freight tariff.

WE wish to make *The World* the forum of the trade in the truest sense, and would suggest to the readers everywhere to send in specimens of their advertising, as we desire to feature this in future issues. Also we will take up trade discussions regarding selling points, business methods to develop trade, and other essentials in which the talking machine men are directly interested.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., Feb. 12, 1906.

ATTACHMENT FOR MUSICAL INSTRUMENTS. John O. Houser, Pittsburg, Pa. Patent No. 811,295.

This invention relates to certain new and useful improvements in attachments to be used in connection with graphophones, phonographs, and the like reproducing musical instruments.

The primary object of the invention is to provide an attachment for improving the sonorous qualities of an instrument and to regulate the volume of tone produced by an instrument, at the same time maintaining a mellow and soft sound.

Figure 1 is a side elevation of a graphophone equipped with this improved attachment. Fig. 2 is a side elevation of the attachment. Fig. 3 is an end view of the same. Fig. 4 is a vertical sec-

tional view of the attachment. Fig. 5 is an end view of a portion of the improved attachment, illustrating a diaphragm used in connection with the attachment. Fig. 6 is a vertical sectional view of a modified form of construction that may be used in connection with the attachment, and Fig. 7 is an end view of a portion of the same.

PHONOGRAPH SPEED-INDEX. Peter Weber, East Orange, N. J., assignor to New Jersey Patent Co., Orange, N. J. Patent No. 811,010.

This invention relates to an improved device for addition to an ordinary phonograph for indicating the speed at which the mandrel may be operated. This is a desirable practical requirement, since, as is well known, it is highly important that a phonographic musical record

should be reproduced at the same surface speed at which the original master-record was secured, and with present devices the determination of the proper speed is a matter of careful adjustment and with most users a question of mere guesswork. This invention provides a very simple index by means of which the phonograph may be adjusted at the desired speed without the necessity of any experimental manipulation.

Figure 1 is a sectional view of a part of the mechanism of an ordinary phonograph, showing the top plate, motor-frame, governing lever, governing-disc and adjusting screw, with my present improvements applied thereto; and Fig. 2, a top view looking down on the adjusting screw.

HORN FOR EAR-TRUMPETS, ETC. Gustave Harman Villy, Manchester, England, assignor to United States Horn Co., New York, N. Y. Patent No. 12,442.

This invention relates to improvements in con-

nection with horns or trumpet-like sound distributors or collectors for use upon phonographs, gramophones, and other like instruments, and also for ear-trumpets, fog-horns, and other sound distributing and collecting devices, the object being to provide a horn or trumpet-like device which can be folded when not in use, so as to be capable of ready transportation and for placing within the case of the phonograph or in the pocket of the user when it is to be applied to an ear instrument or the like. The accompanying

drawings represent one form of the invention. Figure 1 is an elevation of the complete or erected horn. Figs. 2, 3, and 4 are detail views illustrating the manner in which the horn can be collapsed or folded. Fig. 5 is a perspective

view illustrating one convenient application of the improved horn to a phonograph. Fig. 6 is a detail view on an enlarged scale.

REPEATING ATTACHMENT FOR PHONOGRAPHS. Edward L. Aiken, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 810,018.

This invention relates to devices which are applied to phonographs and other talking machines

by means of which the sound-box may be automatically raised at any desired point of the record and returned to any other desired point, whereupon the sound-box is caused to descend into operative engagement with the record, so that the same selection can be played over and over again without any attention on the part of the operator.

The present invention has for its object the provision of such an attachment which will be simple in construction, cheap to manufacture, reliable in operation, and which will effect the elevation and depression of the sound-box without sudden or abrupt movements.

Reference is hereby made to the accompanying drawings, in which Figure 1 is a plan view showing the invention in its preferred form applied to a phonograph, of which only the adjacent parts are shown. Fig. 2 is a front elevation of Fig. 1. Fig. 3 is a section on line 3 3 of Fig. 1 and shows the parts in the positions assumed during the return movement of the sound-box. Fig. 4 is a similar view showing the same parts in the positions assumed during the forward travel of the sound-box. Fig. 5 is a section on line 5 5 of Fig. 3. Fig. 6 is a section on line 6 6 of

Fig. 4. Fig. 7 is a section on line 7 7 of Figs. 4 and 9. Fig. 8 is a section on line 8 8 of Fig. 1. Fig. 9 is a view similar to Fig. 8 and showing the parts in the positions which are assumed when the sound-box is in its lowered or operative position. Figs. 10 and 11 are diagrammatic views illustrating a modification. Figs. 12 and 13 are similar views of a second modification. Figs. 14 and 15 are similar views of a third modification.

# MONEY!

A subject that interests everybody. If we could but impress on your mind the amount of money that you could save by using "The Heise System" of Wire Racks for your stock of records, we would be unable to supply your wants fast enough to suit you.

We illustrate our latest Heavy Stock Size Rack for Disc Records, the 2-D, capable of holding over 1000 records from 7 in. to 12 in.

The Price is \$10.00

Subject to a Discount to Jobbers Only.

Catalogues for the asking.

**SYRACUSE WIRE WORKS**  
SYRACUSE, N. Y.

SOUND-BOX FOR TALKING MACHINES. Bentley L. Rinehart, Camden, N. J., assignor to Victor Talking Machine Co., same place. Patent No. 819,981.

This invention relates to sound-boxes for talking machines, and particularly to that part of

the same which is known as the "stylus-bar," and comprises means for mounting the same upon the sound-box, whereby the same is more efficiently held in position, while at the same time greater freedom of movement is allowed to the action of the stylus-bar and stylus in connection with the talking-machine record. It will be seen by these illustrations that by this construction

the stylus-bar is held loosely in position when the sound-box is not in use; but when the needle is brought upon the sound-record so as to be inclined thereto at the usual angle there is a tendency to rotate the stylus-bar about a horizontal axis, so that one of the trunnions is forced downwardly into the groove of the screw 15, while the opposite trunnion is forced upwardly into the groove of the screw 12. This position of the stylus-bar also results in a tendency of the trunnions to move longitudinally in an upward direction; but said movement is prevented and the stylus-bar is held in the requisite transverse

position by means of the pin 14, which forms a thrust-bearing. In these forms of construction many advantageous results are produced, among which may be mentioned great freedom of movement of the stylus-bar and the fact that in constructing a large number of sound-boxes the bearings or screws when once placed in position will always have the same amount of friction and other effects upon the stylus-bar which will cause all of the sound-boxes so manufactured to have the same degree of quality of tone and uniformity of action without the employment of delicate ad-

justing means, which are liable to become displaced after continuous use. These constructions also do away with the use of springs or other resilient mountings, which vary in their quality, resiliency, and durability in different sound-boxes and at different times in the same sound-box.

MEMBRANE OF GRAPHOPHONES, ETC. Arturo Camilo Piccinini, Buenos Ayres, Argentine. Patent No. 804,264.

This invention relates particularly to the sound-box casing or diaphragm support and to the stylus support, and the objects of the invention are to provide an extremely simple and effective form of casing or diaphragm support which may be produced at an extremely low cost, and also one in which a multiplicity of parts is avoided, and, further, to provide an extremely simple and efficient stylus support which may be readily assembled and quickly and accurately adjusted while the graphophone is in operation.

AMPLIFYING HORN. Chas. J. Eichhorn, Newark, N. J., assignor to the Tea Tray Co., same place. Patent No. 797,724.

The objects of this invention are to secure greater stiffness and strength in an amplifying horn at the smaller end thereof where it is coupled to a talking machine, recording machine, or similar apparatus or device, it being understood that such horns are usually attached and supported at their smaller end, the large end projecting in a horizontal direction away from the bearing or support to which the horn is secured. Other objects are to enable the horns to be manufactured with greater facility and ease, to present a neat finish at the extremity, and to secure improved effects in the reproducing operations.

## MRS. LANDER WANTS INFORMATION

Regarding the Stockholders of the New England Phonograph Co.

(Special to The Talking Machine World.)

Augusta, Me., Feb. 9, 1906.

A petition for a writ of mandamus to compel the clerk of the New England Phonograph Co., a corporation organized under the laws of the State of Maine, prayed for by Edna Lander, of Gardiner, a stockholder, was made before Judge A. M. Spear at the court house Saturday forenoon. The clerk of the defendant corporation is A. C. Stilphen, an attorney of Gardiner, and he appeared to offer objection to the granting of the petition. The plaintiff was represented by George W. Heselton, of Gardiner.

From the testimony offered at the hearing it appears that Mrs. Lander, desiring to possess a knowledge of the true identity of the stockholders and other information of interest concerning the defendant corporation, made demands at divers times upon the secretary of the corporation for the privilege of an examination of the records of the corporation. It was asserted that the secretary had permitted Mrs. Lander, "through courtesy," to make minutes of certain portions of the corporation records, although he is said to have refused to recognize her legal right to do so, claiming that as the one share of stock which she owns had never been legally transferred upon the books of the corporation, she was not a registered stockholder, and acting without her legal rights in making an examination of the records.

At the conclusion of the testimony Mr. Stilphen filed a writ to dismiss the petition. The case is an important one and one that involves intricate points of law, and it is presumed that the decision rendered in this action would have great bearing upon legal actions affecting the interested parties that might follow. Judge Spear took the matter under advisement.

Victor H. Rapke, 1661 Second avenue, New York, is perfecting a label system for Victor record stocks. He has also placed on the market labels for the Edison grand opera records of the same size and style as his line for the regular list, starting with "B1."

## FOREIGN AND NATIVE MACHINES

Contrasted Much to the Advantage of the United States—Wherein Machines and Records Excel—European Trade in South America.

A comparison of foreign talking machines with those of domestic make by an expert on such matters, who is spending some time in this country looking over the field, results very favorably for the American product. In speaking of the disc machines from an impartial standpoint, he said: "The one great point of excellence first noticeable is in the records. They are much clearer and more even than the average foreign production, and but for the fact that the vocal selections are not in the native tongues of the various European countries, the 'folk songs' to which they have been accustomed, they would be far more popular abroad than their own product. A good example of this is shown by the enormous sales of the high-grade operatic records in Italian. So far as the mechanism of the best grade of European machines is concerned, motors, as a rule, are inferior to the American product, although there are a couple of exceptions to this rule. So long as there is any doubt as to the validity of the Berliner patents, the European makers will not endeavor to compete for business in the United States, but will devote their attention to South America, which promises to be a very profitable field. The large manufacturers are emulating the example of their competitors in this country by making exhaustive researches tending to the perfection of the talking machine in every detail, and the most eminent students of acoustics and applied mechanics have taken the matter up."

## THE VALUE OF A SIDE LINE.

Mr. Jacot is a Great Advocate of the Instalment System as Applied to Music Boxes Which Go Well With Talking Machines.

Mr. Jacot, of the Jacot Music Box Co., is a great advocate of the instalment plan in the sale of music boxes and similar merchandise, and his company have found the plan to be attended with the utmost success. In a recent interview he said to The World: "There are many people who want the things that adorn and beautify the home, but who feel that they cannot afford them. When they look at a music box and hear the price mentioned, they regard it as a luxury only obtainable by the wealthy. But when a salesman can show them, that by saving a small sum daily, they will in a short time become its absolute owner, they will quickly add it to their cherished possessions. We have placed thousands of them in homes on the small weekly payment plan, that under other conditions would never have been charmed by their sweet tones. Dealers in that class of musical merchandise, who wish to become successful, no matter whether they are in a small village or big city, must sooner or later adopt this plan. Those that have done so have found their sales leap up with a bound. In our experience, the percentage of loss has been very small, and under a good system, any danger is practically eliminated. Dealers in talking machines are finding the Mira music box a splendid side line, as the two dovetail splendidly together."

## HARRY BROWN WITH STEINERT CO.

Harry Brown, for many years manager of the talking machine department of the J. A. Foster Co., of Providence, R. I., has now connected himself with the M. Steinert & Sons Co., of Boston. "Harry" is looking after the growing trade of the many branch stores of the Steinert Co. Mr. Brown has had many years' experience in the talking machine line; is thoroughly familiar with each phase of the business, and we predict he will be as successful with the new company as he has given satisfaction with his former employers.

## The House of York

Is not only noted for the manufacture of

The Best Band Instruments

on earth, but for the publication of some of the

Best Band and Orchestra Music

"Columbia House of York"

in the market. The pieces named below are published for both Band and Orchestra; we shall be pleased to send you our complete catalogue, price-list and sample parts on request.

Remembrance March, Walter Lewis; Mazie Waltzes, Ellis Brooks; The Morton March, Ellis Brooks; The Minstrel King March, Jos. Norton; Little Nugget Overture, Geo. D. Barnard; The Emblem, Solo for Trombone, Baritone or Cornet, Ellis Brooks; Golden Leaf, Solo for Trombone, Baritone or Cornet, Geo. D. Barnard. And many others besides. Remember the address.

J. W. YORK & SONS  
GRAND RAPIDS, MICH.

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

The New Jersey Court of Errors and Appeals has decided that where the defendants did not affix a trade word or mark to an article after it had been purchased by them for a consumer, they were not entitled to claim the right to use the word as a trade-mark. The court said: "A mark that is not fixed to an article of barter until after it has been purchased for a consumer lacks the essential elements that entitle a trade-mark to equitable protection."

With the addition of twenty-one new pressing machines made by the Universal Talking Machine Mfg. Co. to their pressing plant in Newark, N. J., and with two working shifts—night and day—their daily capacity will be 16,000 records. This will be again increased as soon as further machines are obtainable, and now in course of construction. The company are 200,000 records behind on orders. Their Zonophone discs stand second to none in the world for tonal quality, brilliant yet true, and smooth. Their band and orchestra numbers are superb. So experts say.

President Babson is devoting the closest attention to the work of producing records that must stand the severe tests of criticism by eminent experts, and as instance of this, though forty masters are made weekly, only twenty-five titles are bulletined monthly. His process of elimination is drastic, but it is eminently effective. In issuing their list, commencing with April, covers of special design, each different, will be used. Advance proofs show some elegant pictorial effects and artistic colorings.

A new end piece for horns used on Edison machines, whereby a different size can be used without removing the entire attachment, is being made by the Standard Metal Mfg. Co., 10 Warren street, New York. The device fills a long-felt want. The company are also preparing a

catalogue—their first—of their entire line, which embodies some of the best finished goods on the market.

In the United States Circuit Court, Philadelphia, on Jan. 17, Judge Holland handed down orders discontinuing suits in the cases of the Edison Phonograph Co. against the Victor Talking Machine Co., and the Mutual Phonograph Co. against the Victor Talking Machine Co.

Wm. Pelzer, of the National Phonograph Co.'s legal department, was taken ill at Albany, N. Y., while concluding a trip through Pennsylvania and New York States, and came home, where he was confined for a week. He is now around and about again.

After a run through New England and calling on the New York City jobbing trade, P. B. R. Bradley, chief traveler of the International Record Co., Auburn, N. Y., left for Pennsylvania and Ohio, and subsequently will be in the West for a couple of weeks. His report of business is of the best.

When the Iris Music Co., which conducted the music and talking machine departments of the Adams Dry Goods Co., New York, was petitioned into bankruptcy Friday last, the Leeds & Catlin Co., manufacturers of Imperial records, secured a judgment of \$1,313 against the concern and Louis Iris personally. The bankrupt company has abandoned the business; assets, \$2,500, consisting of stock and outstanding accounts.

Again M. A. Miller, the attorney-promoter, is figuring as closing a deal in the trade. This time it is a patented record composition of German origin, and possessing merit for which \$100,000 was the upset price. Later this quotation is reported as having dropped materially.

Several prominent people were mentioned in connection therewith, but all preserved an inscrutable silence as to the "inside story."

The United States Horn Co., a corporation of recent organization, but not operating, acquired patent No. 812,442, issued Jan. 30 (originally numbered 739,954, and dated Sept. 29, 1903), for amplifying horns, by assignment from Gustav H. Villy. They are also said to have secured the Nelson patent, which is spoken of as controlling the manufacture of fiber and paper horns. The Nova Phone Horn Co., New York, reports from the United States Horn Co. state, have been served with a restraining order.

General Manager Macnabb, of the Universal Talking Machine Mfg. Co., states his travelers, who are now back on their regular fields, are handing in great reports. Doc. O'Neill turned a nice trick in Pittsburg, Pa.; and, previous to going West, B. Feinberg performed a similar feat in Boston. Wm. T. Boyd, in Ohio, is already going ahead of his record. G. L. Goodday is no longer with the company. For the first time the Rudolph Wurlitzer Co., Cincinnati, have taken on Zonophone records, their initial order calling for 5,000 ten-inchers and fifty machines.

Dan McCarthy, with Sherman, Clay & Co., San Francisco, Cal., has been East for a couple of weeks, dropping in to see the talking machine and record manufacturers. This company have seven large rooms devoted exclusively to the line, handsomely decorated and equipped. The establishment was fitted up by L. F. Geissler before accepting his present position as manager of sales with the Victor Talking Machine Co., Camden, N. J.

The beautiful line of record—cylinder and disc—cabinets, shown by the Douglas Phonograph Co., 89 Chambers street, New York, is considered the largest and most attractive in the country. In fact, the company are looked upon as the pioneers in this branch of the jobbing business, credit which is due and is true. Their selection of designs and finishes demonstrates almost faultless judgment, if such a term can be appropriately applied to things finite.

H. H. Stanley, who has been in China and Japan since January, 1904, for the Columbia Phonograph Co., General, returned to San Francisco, Cal., a few weeks back. His work has been of a most valuable and far-reaching character, and has resulted in a material widening and strengthening of the company's trade relations in that part of the world. Mr. Stanley is attached to the San Francisco office, and is personally esteemed a prince of good fellows in the best sense of the word.

Final decrees have been issued by Judge Platt, of the United States Circuit Court, in the suits of the National Phonograph Co., Hartford, Conn., against the American Graphophone Co., dismissing the bills of complaint and assessing the costs on the defendant company, \$439.05 in one suit and \$370.95 in the other.

W. J. Wolf, of the Fulton Phonograph Co., 283 Fulton street, Brooklyn, has recently disposed of his outside interests and is now throwing himself heart and soul into his talking machine business. The Fulton Phonograph Co. are laying in a large supply of Edison and Victor machines and records, and they are now enlarging their sales-rooms in order to better handle their growing trade. Both Mr. Wolf and his partner, Mr. Lind, are of a mechanical bent, and have added quite a number of valuable attachments for use on all machines.

When Wm. Toennies, of the Eclipse Phonograph Co., Hoboken, N. J., moved into his new and spacious quarters at 203 Washington street, he thought he had made ample allowances for business expansion for a year or so. But so phenomenal has been the inrush of new business that

J. NEWCOMB BLACKMAN, Prop.  
"The White Blackman."

## 97 Chambers St., New York

he finds himself overcrowded with orders. In a chat with *The World*, Mr. Toennies said: "Instead of the general slack after the holidays, our business has been steadily on the increase, although we have been handicapped by the inability of manufacturers to make shipments with anything like promptness. Meanwhile we are holding all our old trade and are steadily adding new, which is a pleasing condition."

E. B. Connell, manager of the talking machine department of M. Steinert & Sons Co., the widely known piano dealers, was in New York within the past fortnight arranging to put stocks in their branches in Brockton, Fall River, Fitchburg, Holyoke, Lawrence, Lowell, Marlboro, New Bedford, Northampton, Pittsfield, Springfield and Worcester, Mass.; Bridgeport, New Haven and Stamford, Conn.; Portland, Me.; Dover and Manchester, N. H., and Providence, R. I.

J. H. Robusto, Croton Falls, N. Y., besides carrying the Edison and Victor goods, also handles a choice line of musical merchandise, which he finds harmonizes splendidly with talking machines, as it brings him a superior and profitable class of trade.

Dr. E. F. O'Neill, the star of the Universal Talking Machine Mfg. Co.'s traveling staff, after landing a juicy order in Cincinnati and sending in a bunch of cash subscribers for *The World*, writes: "I will do all that comes in my way to get those who are not taking the paper to subscribe regularly, as *The World* is apparently an educator and a material assistance in the enlightenment of the talking machine dealers and jobbers."

Writing from the Virginia Hospital, Richmond, Va., on February 10, B. Feinberg, representing the Universal Talking Machine Co. in the Northwest, says: "I recently met with an accident while traveling through Maine. I sprained my knee, but I continued on my trip, so I started West January 29, making Baltimore my first stop, where I was successful in starting two new zon-

ophone jobbers. Arrived in Richmond Va., February 3, I was unable to walk, as my knee was badly inflamed and swollen. The doctor said I must have absolute rest, so I went to the Virginia Hospital on the 4th, and am getting along fine now. I expect to leave the hospital in a few days, when I will again be ready to write 'Zono.' orders. From here I go to Louisville, Ky., then Chicago, from where I go to the Northwest, my regular territory."

The Victor Co. recently sent out an inquiry to their distributors, asking their opinions regarding the advisability of referring in their magazine advertising to the fact that their distributors would be pleased to sell the Victors on the instalment plan. Almost without exception, the distributors replied that they were agreeable to the idea, and thought it an excellent one; but what the letter brought out in the replies, unsolicited, was the excellent opinions which the distributors held of the advisability of selling Victor goods on the instalment plan.

"Wait 'Till the Sun Shines, Nellie," 10-inch, No. 031,299, is a record that is attracting much favorable comment from the trade this month. It is a quartette selection made by the American Record Co. From the character and size of the orders that they have received for this selection it bids fair to outlive the success of the "Shade of The Old Apple Tree."

The officers of the Musical Echo Co., Philadelphia, Pa., are: F. W. Woolworth, president; E. J. Hogan, vice-president; H. T. Parsons, secretary and treasurer; D. V. W. Bentley, manager. This company state that they are in no way connected with the Victor Talking Machine Co., except as buyers and sellers of the Victor machines.

Victor H. Rapke, 1661 Second avenue, New York, is furnishing the trade with labels and trays for the new Edison grand opera records. They are the same size and style as the regular stock, which is known all over the country.

One of the live jobbers of Nashville, Tenn., are Magruder & Co., now in their new premises, 27 Arcade, a recent change of address. The O. K. Houck Piano Co., with a branch in the same place, have devoted a whole floor to their jobbing trade. They carry 20,000 Edison gold moulded records in stock. The company's main place is at Memphis, where they carry also a great line of talking machine goods.

A ruling of the Treasury Department made January 31, on the exportation of music sheets used for diaphragms in sound boxes, manufactured in part of imported material, a drawback will be allowed equal in amount to the foreign music so used, less the legal deductions of 1 per cent.

The Blackman Talking Machine Co., 97 Chambers street, New York, now have ready for delivery the new style Place Automatic Record brushes, which will fit either old or new style Edison phonographs. This brush has proven one of the most useful articles, and as they are giving dealers and jobbers a good margin of profit it is a profitable article to handle. The new brushes are illustrated in their advertisement in this issue.

The attention of dealers in Edison phonographs is called to the line of horn cranes manufactured by the Hawthorne & Sheble Manufacturing Co., of Philadelphia. These cranes are very substantial in construction, attractive in appearance, and are meeting with unprecedented sale on the market.

Saturday (17th) A. P. Petit, manager of sales of the Douglas Phonograph Co., New York, one of the cleverest men in the line, will become a benedict, the young lady in the case being Miss Lila M. Wagar, of Brooklyn, N. Y. The wedding will be private. Their honeymoon will be deferred until the spring, when Mr. and Mrs. Petit sail for Europe April 25, for which arrangements have already been completed. *The World* congratulates the happy pair in advance.

## NOTES FROM THE EMERALD ISLE.

The Mme. Patti Records Destined to Create Quite a Furore—Modern Talking Machine as Compared With the Early Creations—Arrival of Edison Machines Welcome—Zonophone Co.'s Goods—Some Worthy Publications—The Talking Machine as an Educational Factor—A Demonstration by T. Edens Osborne—The Russell Hunting Record Co.—Other News of Interest.

(Special to The Talking Machine World.)

Belfast, Ireland, Feb. 5, 1906.

Quite a furore has been created by a recent announcement of the Gramophone Co. that the celebrated cantatrice, Madame Adelina Patti—otherwise the Baroness Cederstrom—had made fourteen records for them, a large percentage of which are selections of the most popular songs in the world. Under same cover I hand you list of the titles, which you will observe include "Home, Sweet Home," "Old Folks at Home," "Kathleen Mavourneen," etc., the singing of which by the great prima donna has invariably touched the hearts of all English-speaking people, and has endeared her to everyone whose heart is—to quote Shakespeare—"made of penetrable stuff."

Her letter, of which I enclose copy, "speaks volumes" for the acknowledged perfection of the modern gramophone. In contemplating the wonderful evolution of this marvelous instrument, my mind reverts to the first gramophone ever offered in Belfast for sale—in September, 1898—by T. Edens Osborne, which, as compared with the "Taper-Arm Monarch" of to-day, was but a primitive device. The same line of reasoning equally applies when contrasting the present Edison "Triumph" with the first Edison electrically-driven phonograph he fetched to Belfast, and which cost him about \$300 in New York, on his return from the World's Fair at Chicago in 1893.

The shipment of Edison "Gems" and "Standards," which should have reached Belfast before Christmas, only arrived by the largest turbine steamer afloat, the "Carmania," at end of January, much business having been lost in the interim. The gigantic output of the Edison factory having proved insufficient to cope with orders is rightly construed here as an indication that Edison products still stand unrivaled in public favor.

The British Zonophone Co.'s goods continue their onward march; indeed, it can be safely stated that no disc records have—within such a short time—acquired such an enviable popularity or phenomenal sale. The February samples which the general manager, Mr. Mellerio, fetched to Belfast to exhibit to his factor (Mr. Osborne) were of excellent quality.

The February issue of the Edison Phonograph Monthly, published by the National Phonograph Co., Ltd., London, is a most interesting trade brochure, printed on superior paper, and replete with most useful information for both dealers and jobbers, who congratulate themselves that they are now kept *au courant* with all matters connected with the talking machine industry through the medium of the periodical referred to; also the Gramophone News, concerning which no encomium could be considered exaggerative, and the two journals now published in London, Talking Machine News and Phono Trader.

On evening of Feb. 9 an important function will take place at the Belfast Municipal Technical Institute which serves to indicate the interest which the principal of that important educational establishment, Francis C. Forth, A.R.C. Sc.I., is manifesting in the "talker" as a language teacher. He has arranged that T. Edens Osborne will demonstrate to all the pupils of the institute who are studying French and German the efficacy of the genuine Edison phonograph, the gramophone and the "Twentieth Century Columbia Graphophone" as teachers of said languages. The records to be used are the celebrated I. C. S. French records of the International Correspondence Schools of Scranton, Pa., the German records of the Modern Language Press, Ltd., of London, and the

Zonophone French records (discs) of the Bizeray system of teaching French largely adopted in London. Typewritten copies of the lessons to be rendered will be placed in the hands of all the assembled students. The principal, Mr. Forth, is to be congratulated on his enterprise, and Mr. Osborne for having been entrusted with the arrangements.

Last month was voted a record one by all North of Ireland traders in cylinder and disc machines, etc., and stocks of instruments have never been so low after the holiday output.

The demand for a phonograph record to sell at one shilling has been well supplied by the Russell Hunting Record Co., Ltd., of London, whose "Sterling" record stands very high in public favor. This record derives its name from that of the managing director of the company, Louis S. Sterling, a gentleman well known and respected among all our jobbers and dealers.

Zonophones and records are "booming," and a big crop of new dealers has been recruited from the cycle traders of Ireland, who have found the sale of talking machines a remunerative "side-line" during the "off" or winter season. T. Malyn, who formerly represented the Gramophone Co., London, has recently accepted an important appointment with the British Zonophone Co., London, and carries with him into his new sphere of labor the sincere good wishes of the trade with whom he is so deservedly popular.

## BUSINESS INCREASE OF 300 PER CENT.

Trade conditions still continue exceptionally good. There is not a manufacturer of records, either cylinder or disc, that is not being pushed to their utmost capacity. In a recent interview with E. A. Hawthorne, general manager of the American Record Co., he states that their business for January, 1906, has increased 300 per cent. over business in January, 1905. This company has done a phenomenal business, considering they have been on the market a little less than a year. They attribute their success to the quality of their records and to their offering only the best selling selections.

\* \* \*

We have recently been shown some very interesting advertising matter and drawings which the American Record Co. are having prepared for a campaign of advertising. One of the designs appears in their advertisement this month. The advertising pages of the leading magazines of the day indicate that experts are devoting their attention to pictorial and attractive methods of bringing their wares before the public.

## EDISON JOBBERS ENTERTAINED

At Banquet at the Hotel Martin—A Most Enjoyable Affair in Every Way.

In honor of a number of out-of-town Edison jobbers attending the automobile exhibitions, the National Phonograph Co. tendered them a dinner at the Hotel Martin, New York, during the evening of January 18. It was an enjoyable affair throughout, the menu and et ceteras delightful, the speeches brief, witty and to the point. The company were represented by William Pelzer, of the legal department; F. K. Dolbeer, chief of credits; C. H. Wilson, general manager of sales; C. E. Stevens, of the foreign department; L. C. McChesney, advertising manager, and A. C. Iretton, assistant sales manager.

The guests of the company were the following: W. D. Andrews, Syracuse, N. Y.; S. K. Hamburger, Harrisburg, Pa.; W. C. Finch, of Finch & Hahn, Schenectady, N. Y.; John N. Willys and W. O. Crew, of the Elmira Arms Co.; W. H. Hug, of Klein & Heffelman Co., Canton, O.; N. D. Griffin, of the American Phonograph Co., Gloversville, N. Y.; Messrs. Pardee, Ellenberger & Silliman, of the Pardee-Allenberger Co., New Haven, Conn.; W. F. Carroll, of the Utica Cycle Co., Utica, N. Y.; P. A. Powers, Buffalo, N. Y., and C. V. Henkel, of the Douglas Phonograph Co., New York City.

## NATIONAL PHONOGRAPH CO. CHANGES.

A number of changes have taken place in the National Phonograph Co.'s force of salesmen during the past two months, namely: C. S. Gardner, who traveled in Pennsylvania and Ohio, resigned in December and his territory is now being covered by F. J. Smith, of Newark, N. J. Frank E. Madison, who represented the company in Delaware, District of Columbia, Maryland, Virginia, West Virginia, North Carolina, Tennessee and Kentucky, has been transferred to the New York office and placed in charge of the agreement department; a new man will shortly be placed in his territory. H. K. Miller, formerly an Edison dealer at Lacona, N. Y., has been assigned to the Pacific Coast States, under the direction of the Chicago office. H. A. Turner, at one time manager of the Ray Co. branches, will cover Texas, Louisiana and Arkansas. J. W. Scott, their New England traveler, has had Connecticut added to his territory.

Ackerman & Co., Scranton, Pa., have removed their store from 33 Coal Exchange to 217 Wyoming avenue, where they have larger quarters.

## THE PLEASED CUSTOMERS HOLD THE BUSINESS.

Will F. Hull's Excellent Paper on Victor Selling, Which Carries Off the First of Ten Capital Prizes of Fifty Dollars Each.

For some time past the Victor Talking Machine Co. have been conducting a series of prize competitions for the purpose of drawing out from the dealers and salesmen, ideas and experiences which will be of use to everybody handling the Victor goods. The winner of the \$50 cash prize in competition No. 1, just announced, was Will F. Hull, of 2317 Winter street, Ft. Wayne, Ind., whose contribution read as follows:

"Every pleased customer you make is like putting money in the bank."

This is one of the surest laws of business and doubly true in the talking machine business.

First—Because the satisfied customer buys more records, and

Second—Because the satisfied customer brings you more customers.

In connection with this it must be remembered that the boy who keeps most persistently in the foreground is the one who sells the most papers, and when the inevitable "fake" concern strikes your town, giving away machines with a certain number of records, the man who advertises and keeps his business prominently before the public is the one who will retain the most business—the holding of that business depending on the number of pleased customers he makes. The man who is nearly as energetic will get the business that is left, and the one who stands around on the edge and handles talking machines just because a person now and then calls for one will get just what he is looking for—some one to call for one every few months. His stock stays on hand until it is shopworn and ill-appearing, and the records receive all kinds of careless handling, putting them into a condition next to impossible to sell.

### SLOW DEALER; QUICK STOCK.

An old man, a music dealer in this town, ordered a Victor talking machine a year ago in October. He never unpacked it until two months after, trying to get some other dealer to take it off his hands. Finally his daughter prevailed on him to unpack it and set it up. During the day some of the "Old Guard" dropped in, and at 3 p. m. the Victor was carried out of his store—sold!

The old man got partly awake then, and since that time has ordered a machine as fast as the last one was sold, never having samples of different styles nor over twenty records at one time, and while that old man now considers the talking machine a great money-making branch of his business, I am selling every one of his customers their records, because they want a stock to select from. In this connection I will say that every live dealer will find record selling the great and profit-making end of the business.

I have among my record customers the owners of every other make of disc machines, and I have found that in Toledo, Ohio, a great many people have a talking machine of local manufacture, but without exception, so far as I know, they are all using Victor records on them, outside of the few they buy with the machine.

It is true that the Victor talks for itself, but while it talks it does not think, and in every sale you must do the thinking for it.

The first principle of pleasing the customer in every line is to convince him that he is getting something superior for his money, and then have an article that will prove that superiority the more he uses it. For this purpose there is nothing so safe to sell as Victor goods. Every Victor dealer has people come in who argue that some other machine talks just as loud and just as distinctly, but if he makes a sale the person invariably returns in a little while and tells how mistaken he was and how glad he is that he has a Victor.

### "GRAFT MACHINES."

During the past year a number of people have called on me who have been visited by agents that were giving away talking machines, the customer agreeing to take a certain number of ten-inch records at \$1 each. In such a case I find out

what records have been supplied with the "given away" machine, and play the same music on the Victor. Then I play some of the specially magnificent Victor records, calling attention to the range in pitch and the perfect regulation of speed possible in the Victor, and that the machine needs no starting by hand, and only a small part of the winding that the cheap machine needs. Then I make my second argument, which is that the incomparable superiority of Victor products keeps the Victor plant running night and day to all orders at Victor prices, while the cheap concern has to give the greater part of its stuff away.

If I should really attack the cheap machine and tell the truth about it, pointing out what an entirely disordered, weak-springed and altogether "rotten" thing it actually is, I would antagonize six out of ten average buyers, but after hearing and seeing the Victor work, you can make comparisons without offending. When the customer again meets the man who wants to give him a machine free, he feels an antagonism toward him, and in almost every case tells the "give-away" agent that he would not have his cheap outfit if he could give him the records for twenty-five cents apiece.

Of course I am making mighty good use of the people who have bought these "graft" machines, and am selling stacks of Victor records to them every month. People used to talk about being tired of the phonograph, and I know of dozens of old-style machines laying away in garrets and closets, where they have been, some for months, some for ages. Do you know where there is a Victor machine laid away anywhere? No! nor does anybody else.

Whenever a person finds that you have a good stock of records and a proper way of showing them (the best is in a separate, sound-proof room, set apart for this purpose), that person is from that time on your pleased customer; far better pleased than if you had won him by "throwing in" a horse and buggy, or something else, because he is legitimately pleased, and not so likely to come back in the fall to ask for a lap-robe also. A pleased customer expects to come back and get the same satisfaction in dealing with you that he had before. I have sold people seventy-five records the second year, who thought it was an extravagance to buy fifteen the first year.

### "FROM \$40 TO \$50, A DOLLAR AT A TIME."

There is one important feature I wish to mention, because it has a psychological connection with the subject, regarding quoting prices. If I am selling a \$40 style Victor, I tell the customer that the machine, with a dozen records, will cost him \$50. This is different from quoting the bare machine at \$40 and then giving him to understand that each record will cost him extra besides. Fifty dollars at first blush really looks no larger to him, as a rule, than \$40, but if he stops

to count his way from forty to fifty, \$1 at a time, it seems a great deal more. Do not confuse this with the idea that I make him think I am giving him a dozen records, I simply quote the price of all machines, including one dozen records.

### THE GAME WON'T WAIT.

From my own experience and observations I have made in other houses, I consider the first and greatest point in satisfying customers and making money out of doing so, the keeping of just as large a stock as is possible to handle, of both machines and records. You will sell a great many times the amount you otherwise would by having the stock to show and tempt people with.

Why, I would as soon be caught trout fishing without the proper fly as to be without certain records that I know in many and many a case have sold a machine; and I would as soon go hunting without a gun, and tell Mr. Squirrel, or Mr. Rabbit, or Mr. Mink that I would be back in a few days with my gun as to tell a customer who comes in to see my stock that I have no machines of a certain style just now, but there are some on the road, so please call next week and I will have them to show.

Mr. Squirrel or Mr. Mink might wait for me to come with a gun, and the customer might come in next week instead of going to some more wide-awake dealer, but it would be better to be prepared to make the "killing" when everything is ready, than to put your chances back in a box and try to shake the same thing over again.

Let me add, that by pleasing the customers I have been able to build up a business which makes it necessary for me to get into larger and better quarters the first part of the year, so that I can take care of orders by the hundreds instead of by the dozens.

On the 10th of the month the United Hebrew Disc and Cylinder Co. removed their laboratory from 261 to 414 Grand street, New York, where larger quarters have been leased to accommodate their increasing business. A list of about ten additional titles will be issued within the next few weeks. B. Dronsick is the manager, vice P. Long resigned. The concern will be conducted by Perlman & Rosansky, the owners of the company, who are the largest piano dealers in that part of the city. They are handling the Victor goods.

The Leeds & Catlin Co. advise The World that they have received an export order for 1,000,000 of their Imperial records. The company are developing a slot machine department, in charge of George W. Blake, who will also look after their advertising and correspondence.

C. G. Andrews, of the Boston Cycle & Sundry Co., Boston, Mass., who was in New York on Lincoln's Birthday, left for home the following day. As elsewhere stated, the company have stocked up with an entirely new and fresh line of Edison and Zonophone goods, besides supplies and general essentials and specialties.

## The One Thing

required to make the phonograph a perfect instrument is a

### PHONO CONSONATOR.

Removes all harshness, rattles and metallic vibration, and regulates the sound while the machine is in motion.

Sold by all wide-awake dealers.

Price \$3.50.

379 6th Avenue, NEW YORK CITY

## PRACTICAL SUGGESTIONS AND COMMENTS.

Wm. F. Hunt, of Wanatah, Ind., writes: "I will kindly ask you to answer the following question in your valued paper: Why is it that the disc record first shows wear at the outer edge or beginning of the record? I have two theories on the question, but am at a loss to know which is correct. In the first place, owing to the fact that the needle is here at its sharpest, it may cut the record, or it may be due to the universal habit of first starting the disc and then letting the needle down on the record, and in this operation the walls of the recording lines are destroyed by the needle not being permitted to immediately settle into the groove. I have seen many disc records which are worn out at the outer edge and show practically no wear on any other part of the record."

Our correspondent's first surmise is correct, as the needle is sharpest on the edge; and again the habit of carelessly dropping the needle, or rather not placing it properly at first, breaks the lines.

### THE SPRING AND ITS CARE.

Emanuel Feuille, of Zapata, Zapata County, Texas, in enclosing a renewal of his subscription to The Talking Machine World, writes: "Will you be kind enough to tell me why does the spring in my gramophone slip after playing awhile, causing a jerking sound? It seems that the spring sticks together, and after running awhile it snaps apart. Please also let me know for customer's information if I can grease the machine with graphite myself. Any information given will be highly appreciated."

Ans.—The trouble is due to the fact that when the spring is tightly wound all its coils touch each other and one or two of them will stick together until the tension becomes great enough to pull them apart, then they separate very suddenly, causing the "explosion" mentioned above. The best method to remedy this is to take the machine out of the cabinet, stand it on one end and squirt benzine in the spring barrel through the opening in the side of the barrel. (For squirting the benzine nothing is better than an oil can.) This washes out any gummed oil that may cause the sticking of the spring coils. After this washing, let it stand for half an hour, to allow the benzine to evaporate. Then wind up the machine about half, stand it on end again and put about three tablespoonfuls of best powdered graphite on the spring coils, allowing the machine to unwind while so doing. We do not advocate the use of oil in the spring barrel, as this tends to gum up, and causes the very difficulty we are trying to avoid. The graphite may be put in with a small, flat stick, but the nicest method is to use an insect-powder blower, which seems to send it in the smallest cracks.

### MATTER OF SPEED REGULATION.

In reply to an inquiry the National Phonograph Co., of London, gives the following excellent advice: "If phonograph owners would get

their machines adjusted to the right speed at the start, they would find it advisable not to make any change in it. Our records are made at a uniform speed of 160 revolutions per minute, and there is no occasion for running a phonograph at any other speed, notwithstanding the views of those individuals who think they can improve the records by increasing or decreasing the speed."

### SILENCING NOISY MOTORS.

An English writer suggests the following method of silencing noisy motors, which refers especially to machines of the Edison Gem, Standard, and similar types wherein the cogged wheel which immediately engages with the steel pinion of the governor shaft is made of brass. "Here," he says, "we find the trouble. Though not always visible, considerable wear has taken place and the cogs do not mesh properly. Take a tallow candle and proceed in the following manner: Run the machine very slowly and press a portion of this tallow against the cogs of the revolving brass wheel in such a manner that the interstices between the cogs become filled with the tallow. Now run the machine at the usual reproducing speed and nothing further will be heard than the not unpleasant humming of the governor balls, and not even this, if the machine body-box is of metal. The above treatment will ensure steady running, give better results, and last for a long period. My remarks do not, of course, apply where the component parts of the motor are worn out."

### PIANO RECORDS DEMANDED.

J. F. Stillwell, of Waco, Tex., writes The World as follows: "Why is it that the manufacturers of records do not include in their list a greater number of piano solos? There is no reason why they should not be as effective and as popular as those of the harjo or other stringed instruments. I have only heard one or two, and these were most delightful. With the great improvements recently made in the methods of sound reproduction, as well as in the matter of tone quantity and quality, piano records should find a large market. I wish the makers of records would 'get wise' to this proposition."

### SURPLUS VIBRATIONS IN REPRODUCING.

Writing to a London paper on this subject, G. C. Weston says: "There are many sources of extraneous vibrations connected with sound reproduction which have a detrimental effect upon the purity of the tones and which one should endeavor to eliminate. Taking the horn, it will be found with the usual pattern that vibrations emanate with certain notes and passages during the reproduction of a record. These vibrations can be distinctly felt by lightly touching the outside of the horn with the backs of the fingers. Coating the interior of the horn will tend to reduce these, and the best material I have found for this purpose is velvet: the whole of the interior, or only the smaller section, can be lined, but it will

be found that this has a softening effect on the general quality of the sounds reproduced. The way to eliminate vibrations proceeding from the horn itself is to firmly fix a thin partition down the center, dividing the horn into two equal halves. Another point that requires attention will be found in those horns that are constructed with seamed joints. Usually these seams are not tight, and consequently rattle or produce a noise of some description. The only way to overcome this is to thoroughly fill up each seam with solder, or, as a poor substitute, seccotine may be used. A rubber connection between the horn and the phonograph should always be employed. Certain noises must arise from the mechanism of the machine, which may be transmitted via the horn or otherwise, and independently of mechanical adjustment and careful oiling, which should have one's first attention, several little improvements can be made with the object of reducing these noises. To effect this I have altered my own phonograph as follows:

The motor is entirely insulated from the rest of the machine, the only connection between the two being the leather belt. The carrier arm is insulated from the feed screw and the reproducer tube is insulated in its clamp. The insulation employed is rubber in the form of bushes and washers, and where this was found unsuitable leather has been substituted. In machines of the graphophone type, where the reproducer is connected by means of a movable knuckle joint, the necessary looseness of this joint gives rise to an unpleasant rattle; this can be stopped, and the sound wave leakage which always occurs at this point be prevented by well lubricating the moving joint with a thick oil, such as castor or vaseline. Unpleasant vibrations and noises that arise from different reproducers open up a large question, but that is another story. Finally, the chief destructive vibrations that interfere with reproduction are inherent in the records themselves, and are due to blast, side blast, varying friction and several other causes.

### THE SPEED-ADJUSTING SCREW.

Replying to a dealer who questioned the propriety of placing the speed regulating screw on the under side of the machine instead of the top, the National Phonograph Co. said: "Instead of thinking it a mistake, we still strongly claim that the change is a marked improvement. The speed-adjusting screw when on top of the machine was constantly being turned by inexperienced players, changing the speed of the machine and causing an unsatisfactory playing of records. With the speed-adjusting screw on the underside, it is quite accessible when it is desired to change the speed for some good reason, and it is out of the way of idle or mischievous hands. As a matter of fact, if phonograph owners would get their machines adjusted to the right speed at the start, they would find it much more advisable not to make any change in it. Our records are made at a uniform speed of 160 revolutions per minute, and there is no occasion for running a phonograph at any other speed, notwithstanding the views of those individuals

# THE TEA TRAY COMPANY OF NEWARK, N. J.

**Amplifying Horns**

Mulberry and Murray Streets,

NEWARK, N. J.

*Clear Musical Tone, and None of That Awful Grinding Sound, Is  
Reproduced Only by the New Mechanical Feed*

## TAPER ARM TALK-O-PHONE

This wonderful "clearing up" of reproduced sound is due entirely to an ingenious mechanical feed device which propels the reproducer entirely independent of the scratching of the needle. The effect is little short of marvelous, so much so, that no dealer can possibly induce a customer to buy any other machine after he has once heard a Talk-O-Phone. In addition to this mechanical feed, note from cut that there is no sharp angle from the needle to the horn. Note the sharp angles on all other machines. You may just as well recognize the fact now that the Talk-O-Phone leads and all other makes must follow.

### NOTE

It will be observed that the new Talk-O-Phone operated on this principle gets entirely away from the old fundamental principle of reproducing machines, namely, the needle feed. Our patents on this new device are very broad, and this arrangement cannot be used on any other machine. We do not operate under any shop right or license from any one.

who think they can improve the records by increasing or decreasing the speed. Those who once get their machines running at the right speed and give it no further thought will get the best and most satisfactory results from their records."

#### A TRIPLE SOUND BOX.

German inventors of specialties in talking machines and supplies are evidently as tireless in their endeavors as are our native workers. One of the latest improvements announced in the fatherland is a triple sound-box, all actuated by one and the same needle. Although much is made of the idea, it is not termed a success by practical men on this side of the "big pond," on the grounds that too great a load is put on the needle and the record, so that both of them are worn out almost immediately.

Theoretically, the idea of joining the several reproducers for the purpose of augmenting the tone is permissible, but it is not easily worked out, in a practical way. The same results have been actually achieved by methods entirely different from the multiplication of diaphragms, such as, for instance, Daniel Higham's invention embodied in the Twentieth Century graphophone, which successfully produces volume without any serious impairment of the quality or naturalness of the tone. Meanwhile we welcome all improvements put forth by our German friends, as it is this keen interest by talking machine enthusiasts the world over that will make the machine a still greater factor than it is to-day.

#### DIAPHRAGM OF ANIMAL TISSUE.

Our esteemed London contemporary, The Talking Machine News, very properly takes no stock in the invention of a reproducer by a Dr. Outten, who resides "in the west end of St. Louis, on the banks of the Mississippi." The chief constituent of this diaphragm is an animal tissue treated with chlorides of barium and gold. It is stated that the doctor is a talking machine lover and something of a scientist and theorist. His pet hobby for a decade has been to construct a diaphragm of gold-beater's skin that would astonish the talking machine world. He has again and again proclaimed that he was on the very eve of the successful achievement of his labors, but an impartial listener to the specimen reproducers so highly praised by their maker seldom shared the doctor's belief in their superiority, notwithstanding the statement that "this diaphragm is shortly to be placed on the market by a manufacturer of disc machines," and "that it is a great improvement over all present forms of sound boxes." We have occasionally to go abroad to get the news, but fortunately our esteemed contemporary places no more reliance upon the practicability of this device than we do ourselves.

#### SOME SUGGESTIONS FOR RECORDS.

A talking machine enthusiast makes the suggestion in an English paper that "makers of phonographs should, when they have made a master record, before altering the speed of the machine, run the record over again, at the same

time also taking a watch and taking particular notice what time the first note in the accompaniment is played, the last note to be timed to a half-second. Then when reproduced there will be a good guide to go by, if the record is accompanied with a slip of paper stating exactly the time it is recorded at, and it will be a much better reproduction of the singer's voice. I am aware of speed indicators for machines, but every working man cannot afford to buy one, and I think this an excellent way of doing without one. I should also suggest that the slip of paper might have the singer's portrait and the words of the song printed on. I think that to have a ledge on both ends of the record would be an improvement. It would prevent the reproducer from slipping off the end, as it does sometimes if you are not there to stop it as soon as the tune is done. It should cause the phonograph to be better to listen to, as it would do away with flat tunes and galloping tunes, which one often hears when out walking. This is one great objection by some people to the phonograph. This refers also to all phonograph records besides songs."

#### C. V. HENKEL ELECTED PRESIDENT.

At the annual meeting of directors last month, C. V. Henkel was elected president and general manager of the Douglas Phonograph Co., New York, and John E. Helm, secretary and treasurer, formerly secretary only. Mr. Henkel, who had previously been treasurer and manager, deserves his promotion to the presidency of this very successful jobbing house, claiming to be the largest strictly in its line in the country, for it has been through his acumen and excellent business judgment that the firm occupies its present commanding position in the trade.

#### HANDSOME COLUMBIA POSTER.

One of the most artistic effects in poster work which we have seen in many a day is that issued by the Columbia Phonograph Co. for the purpose of advertising the Columbia records. The central design is a magnificent figure of Miss Columbia, with her liberty cap, as well as national flag and eagle. She is pointing at a Columbia talking machine, which rests on a pedestal. The color effects of the poster are most artistic, and the entire forms a very notable contribution to the publicity associated with the talking machine industry.

The attention of those of our readers who are interested in band or orchestra music is directed to the new advertisement of The House of York, which appears in another column. While this house is perhaps not as well known to our readers as many others, it must not be inferred that this is a reason for passing by its ads. without noticing what they contain. Sometimes, you know, we find valuable gems amid ordinary surroundings; and possibly this may be one of those instances, so nothing will be lost, at any rate, by following our suggestions as above indicated.

A notice has recently been issued to the trade by the American Record Co. that they will allow dealers in "Indian Records" to sell the 10-inch record at 50 cents and one old 10-inch record of any make, or two 7-inch records of any make; the 7-inch record for 30 cents and one old 7-inch record of any make.

The report circulated by some Toledo papers that the Talk-o-Phone Co. had sold out to the Columbia Phonograph Co. seems to be unfounded, as it is denied by both parties concerned. The Talk-o-Phone Co. claim that the common stock is now earning ten per cent., and that its holders are not anxious to let go of it.

The Denman phonograph store in Piqua, O., has removed to larger quarters on North Wayne street, that city.

The old establishment of Thos. Goggan & Bro., Galveston, Tex., has been incorporated under the old name. They are having quite a success in the talking machine field.

## THE TALKING MACHINE IN CHURCH.

Should be no More Objection to Its Use Than There would be to the Employment of an Organ, Piano, or Other Musical Instrument—Some Excellent Suggestions in This Connection That Will Prove Interesting.

The question as to whether talking machines are permissible in churches has come up for discussion in this country recently, and many arguments, pro and con, have been adduced. In this connection the remarks of a correspondent of the London Tablet are very pertinent and we are sure our readers will echo them unanimously:

"Every one who has any sort of an ear for music must have been shocked at the awful sounds and discords so often to be heard in our churches. Now, surely the music from a good machine with records by singers such as Patti, Albani, etc., would be infinitely more devotional. Again, any one who has had to conduct services without an organized choir must know the difficulty of finding a good leader, even for our simplest hymns. Most men and women will sing if they only have some one to lead, but the difficulty is to find that some one. Now here it is ready to hand in the talking machine. What possible objection in reason could there be to its introduction? I can conceive that it might possibly be urged by the tribe of 'the unco guid' that the talking machine is a means of disseminating the latest music hall ditties and so unsuitable for choirs and places where they sing. But, quite apart from the question of whether the public has the right to choose what form its amusements should take, it appears to me that a similar objection might be urged against an organ, a piano, or a harmonium: that is, that it could be used for the reproduction of secular music. It may further be pleaded that the Bishop of London interdicted the talking machine in the churches of his diocese some time ago—at the same time permitting the cinematograph! I take it, however, that there are quite a few people who don't care a rap if he did."

#### NOT DELAYED BY FIRE.

The Boston Cycle & Supply Co.'s Record Stock Destroyed—New and Larger Stock Now on Hand and Orders Being Filled.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 10, 1906.

The Boston Cycle and Sundry Co., 48 Hanover street, had a very unwelcome visitor, Feb. 3, in the form of a fire which occurred in the phonograph department. The entire record stock, comprising over 75,000 Edison records, was totally destroyed. With their usual enterprise, however, the company at once telegraphed for a new stock and were able to fill all orders the following week. The insurance has now been adjusted, and the premises are about out of the hands of the renovators, so that the company are in a position to fill orders promptly. The fact that they have started in with a complete, fresh stock of records, machines and supplies is something that will interest dealers. The supply carried is larger than ever, and they are splendidly equipped to meet all demands.

The Blackmau Talking Machine Co., 97 Chambers street, New York, are offering the trade a very handsome line of flower horns, which are the same as their regular black and gold striped styles, except are decorated inside with roses or pansies. The decoration is all hand painted, and they report a very large demand. Dealers are referred to their advertisement in this issue.

James Landay, of Landay Bros., New York, sailed for Europe Jan. 27, via the steamship "Umbria," of the Cunard line. The trip of five weeks is taken for his health. This firm, although dealers, not infrequently place \$20,000 orders, their business being gilt-edge and the swellest in the city.

## AN ATTRACTIVE HANGER

Just Gotten Out by the National Phonograph Co. Has an Historical Value.

The National Phonograph Co. have just gotten out an interesting and attractive hanger illustrating "the evolution of the Edison phonograph from a crude talking machine to a delightful musical instrument." It shows pictures of the original phonograph made in 1877, the phonograph of 1887 and the present Triumph phonograph, with a photograph of Mr. Edison in the horn of the latter. It is 17x24 inches in size, is printed in several colors and is mounted with metal strips for hanging. A supply of these hangers are being shipped to all jobbers for the purpose of supplying their dealers. It is not being mailed. The company have also issued their new numerical catalogue, form No. 820. It is expected to issue a new edition of the numerical catalogue every six months. A calendar issued by the commercial phonograph department has an interesting picture of Thos. A. Edison in his laboratory outfit.

## TALKING MACHINE MEN ORGANIZE.

Form Permanent Organization of Jobbers—  
Next Meeting in Pittsburg—Entertained at  
Banquet—Some of Those Present.

(Special to The Talking Machine World.)  
Cincinnati, O., Feb. 5, 1906.

At a meeting of the Central States Talking Machine Jobbers' Association held in this city last week, the temporary organization was made permanent, Mr. Isen of Cincinnati being elected president, E. T. Ashton, of Detroit, vice-president, and P. B. Whitsit, of Columbus, secretary and treasurer. A set of by-laws were framed and adopted, and a general discussion of trade conditions was participated in by the sixteen jobbers in attendance. It was decided to hold the next meeting in Pittsburg within sixty days. A vote of thanks was extended the Hawthorne & Sheble Mfg. Co. for the courtesy shown the association, and also to Isen & Co. and the Rudolph Wurlitzer Co., of this city, for the elegant banquet given those present.

The following well-known jobbers of the Middle West were present: Theo. F. Bentel, of the Theo. F. Bentel Co., Pittsburg, Pa., and L. M. Weller; Perry B. Whitsit, Columbus, O.; J. M. Hayes, of Hayes Music Co., Toledo, O.; E. Percy Ashton, of the American Phonograph Co., Detroit, Mich.; Max Strassberg, of Grinnell Bros., Detroit, Mich.; Walter Kipp, of Kipp Bros., Indianapolis, Ind.; Geo. Isen, of Isen & Co., Cincinnati, O.; M. V. De Forest, and W. D. De Forest, of De Forest & Son, Sharon and New Castle, Pa.; Mr. Ball and Mr. Fintze, of Ball-

Fintze Co., Newark, O.; Edw. F. Dohse, of Niehant & Dohse, Dayton, O.; Geo. R. Howard, of J. C. Groene & Co., Cincinnati, O., and Ed. Poorman, of Cincinnati, O.

## AMERICAN GRAPHOPHONE CO.

Increase Dividend to a Five Per Cent. Basis  
Annually—Splendid Business Report.

Jan. 29 a directors' meeting of the American Graphophone Co. was held at their offices, 90 West Broadway, New York. The annual financial statement of the company was submitted and ordered issued to the stockholders. This interesting document showed a surplus of \$1,500,000, and detailed the improvements and enlargements made in the plant at Bridgeport, Conn., together with the unprecedented expansion of the business. The plan for the new issue of debenture bonds was indorsed and promulgated. A quarterly dividend (No. 33) of one and one-quarter per cent. on the common capital stock was authorized to be paid March 15, 1906, to stockholders of record March 1. This is an increase of one-quarter per cent. over the previous payment, and places the stock on a 5 per cent. annual basis.

## A PROSPEROUS INDICATION.

The Hawthorne & Sheble Manufacturing Co. have recently secured another mill in Philadelphia, which mill is very much larger than their present plant, and has every modern equipment for manufacturing purposes. The new mill is being fitted throughout with improved machinery and with the additional facilities acquired will enable them to take care of several times as much product as is possible under their present conditions.

## LATEST COLUMBIA JOBBER.

Under the able and clever management of Walter L. Eckhardt, the wholesale department of the Columbia Phonograph Co., General, is making a record. Although Mr. Eckhardt has been in charge of this branch of the company's business only since September last, the list of jobbers he has created contains many of the best firms in the trade, as the subjoined list shows: Henry Braun, Allegheny, Pa.; Finch & Hahn, Albany, N. Y.; Fred Kramer, Allentown, Pa.; H. R. Bonfoey, Binghamton, N. Y.; P. A. Powers, Buffalo, N. Y.; Langley & Winchell, Boston,

Mass.; L. Fish Furniture Co., Jas. I. Lyon, Lyon Bros., Hibbard, Spencer, Bartlett & Co., O'Neil, James & Co., and Otto Young & Co., Chicago, Ill.; Robt. R. Smallfield, Davenport, Ia.; M. M. Martin & Co., Grand Rapids, Mich.; S. A. Floyd, Harrisburg, Pa.; Seavey Bros., Haverhill, Mass.; H. B. Claflin Co., New York City; Arnold Jewelry & Music Co., Ottumwa, Ia.; Lewis Talking Machine Co., Philadelphia, Pa.; Powers & Henry and Theo. F. Bentel Co., Pittsburg, Pa.; O. F. Kaufman, Reading, Pa.; W. D. Andrews and Spalding & Co., Syracuse, N. Y.; Finch & Hahn, Schenectady, N. Y.; W. A. Dean Co., Sionx City, Ia.; Clark-Horrocks & Co., Utica, N. Y.; E. H. Towle, Waterbury, Conn.; Chas. Girvin & Co., Williamport, Pa.; Denholm & McKay Co., Worcester, Mass.; W. C. DeForest Co., Sharon, Pa.; Ohio Phonograph Co., Youngstown, O.

## NEW RECORD LABORATORY OPENED.

A new record laboratory was opened Thursday in the Knickerbocker building, Fifth avenue and 16th street, New York, by the National Phonograph Co. It occupies 4,000 square feet of space in a special structure built on the roof, atop of the sixteenth story, and is fitted up with every known modern appliance and a number of the company's own inventions, for the reproduction of sound and the making of masters. The room acquired is about double of that in the old place, 64 Fourth avenue, which will be vacated. Walter H. Miller will continue as manager, with W. H. A. Cronkhite, his old-time assistant, in the same position.

## INCORPORATED.

The Talking Machine Co., of Rochester, N. Y., was incorporated with the Secretary of State at Albany last week with a capital of \$50,000, for the purpose of dealing in talking machines. Those interested are Arthur A. Schmidt, Wm. J. Smith and James M. Monaghan. The first two are residents of Rochester and the latter of Buffalo.

Miss Bella Greenbaum, for many years in charge of the record department of the Universal Talking Machine Mfg. Co., was married to her assistant, Charles Adelman, January 7. Mrs. Adelman has been in the business about nine years, being with the old National Gramophone Co., now defunct.

## REVIEW OF GENERAL TRADE CONDITIONS.

Manufacturers and Jobbers Much Encouraged Over the Situation Present and Prospective—Cost of Raw Material Steadily Rising—Music Trade Waking Up and Falling in Line—C. H. Wilson, of the National Phonograph Co., Most Optimistic—Grand Opera Records Every Three Months—Conditions Are Sound and Outlook Is Good.

Contrary to expectations, business is almost as active and brisk with manufacturers and jobbers everywhere as in December. The demand for machines and records at this time is going far beyond calculations, and the manufacturers are finding it no easy task to supply the goods. The capacity of the plants would doubtless satisfy the call, but the difficulty of obtaining raw material—principally iron and steel—is the obstacle bothering the manufacturers. Possibly the trade, outside of manufacturing circles, pay little if any attention to the condition of the material market, and therefore wonder why machines should not be turned out more rapidly. They ought to know that the activity in the general machinery and other trades utilizing iron and steel are consuming deliveries about as fast as the furnaces can make shipments. The markets are bare of a score or more of famous brands of fine castings. Prices are steady on general lines, but for several sorts, for which the demand is far ahead of the supply, buyers are paying advances over the rates that ruled until a few days ago. Consequently, unless talking machine manufacturers are covered, they are in a predicament for the basic goods almost at any price.

Several deals of magnitude and importance are pending, the closing of which is being watched with interest by the sections directly affected. A feature that is becoming more pronounced is the final awakening of the music trade to the profitable possibilities of talking machines. Houses which have regarded the proposition with indifference, if not positive antagonism, are seeing the matter in a new and illuminating light. The World has urged the trade to set aside prejudices, which are truly harmful, and consider the handling of a line which is not only creditable from every point of view, but a paying investment. Talking machines have been so vastly improved, with marvelous enhancements in their musical aspects pending, that their juxtaposition to pianos, organs and the string instruments are far from incongruous, as biased dealers are inclined to believe. At any rate, what objections have been held by the regular music trade against adding these goods are rapidly and happily disappearing, and to their credit be it said. Since the opening of the new year the number of fresh recruits among music dealers and jobbers has been increasing at so fast a rate as to be looked upon in the light of a market condition, and are most welcome to manufacturing firms, besides jobbing houses carrying sufficient stock to be ranked as an adequate supply.

Echoing the reports concerning the development of business since the first of the year, C. H. Wilson, manager of sales, National Phonograph Co., said: "The demand is stronger than ever for machines. We had caught up slightly with records, but the orders pouring in are putting us

behind again. Our grand opera records are taking, but, being practically a new line, must take some time to introduce properly, as lovers of high class music are not so numerous as those preferring the popular product. We will issue fresh grand opera record lists every three months, the next one in May."

Other manufacturers and a number of prominent jobbers expressed like opinions as to the trend of trade.

### HOLIDAY PUBLICITY HAS HELPED

The Talking Machine Men of Wheeling—Unusual Showing for January—Some Grumbling About Price Maintenance and Contracts—News in Detail.

(Special to The Talking Machine World.)

Wheeling, W. Va., Feb. 10, 1906.

The new year has brought with it additional prosperity for the talking machine dealers of this city. It would seem as though the advertising done locally during the holidays is having a very beneficial after effect.

The various dealers report that the volume of sales are far in excess of any preceding January and that February to date causes all to predict that the short month of the year will be long—when figuring the profits.

There seems to be a slight undercurrent of feeling that the vigorous efforts being made for business is causing some slight misunderstandings relative to price maintenance and contracts.

The C. A. House Music Store continually calls attention to their talking machine department by using a great portion of their large show window. Their showings of Edison and Victor goods are always made in a tasty manner and never fails to attract attention.

F. W. Baumer & Co. are particularly pleased with the number of high-class outfits they are selling. The 60-cent price on 10-inch disc records has increased the volume of their business very materially.

Hoehl & Gieseler Piano Co. say that business is "the best ever." They have a newspaper premium deal on in connection with one of the local dailies. A phonograph is given with a year's subscription, with the condition that fifteen Edison records are purchased at the regular price.

Bard Bros., proprietors of the Exclusive Talking Machine Store, are using half-page spaces in the local Sunday papers. The copy used by them is along the line of the different styles of entertaining made possible by the talking machine, and the reasons why it is to the user's advantage to deal with the people who have made a study of this particular line. They expect to install a language department in the near future. They report good sales on the Edison grand

opera records. These were featured in their monthly letter to their customers.

The Palace Furniture Co. and House and Herrmann, the two big instalment houses of this city, report gratifying business in their talking machine departments.

### JENKINS SONS CO.'S LATEST MOVE.

Have Put in the Victor Line and Have Secured Adjoining Building to Exploit These Goods.

(Special to The Talking Machine World.)

Kansas City, Mo., Feb. 10, 1906.

A very important addition to the houses handling talking machines in this city is the J. W. Jenkins' Sons Music Co., who have leased the building next door to their present handsome warerooms, which they will devote entirely to the sale of talking machines. They will handle the Victor line, carrying a large stock of the various styles of these machines, as well as the Victor grand opera and popular line of records. Mr. Jenkins, during his recent trip East, closed a large deal with the Victor Talking Machine Co. and was much interested in this company's magnificent factory at Camden, N. J. He will, of course, in addition, carry a full line of supplies in the way of cabinets, horns, and the various other specialties which are included in an up-to-date talking machine store.

### HOW HE SAVED FORTY DOLLARS

By Subscribing for The World—Found His Invention Anticipated.

Last month a dealer in talking machines in this city requested that he have sent him a sample copy of the Talking Machine World. Such requests are so frequent that no particular attention was paid to this special one, but in this case it was fraught with the most unlooked for results. The dealer was likewise an inventor, and had just completed a model of an attachment that he considered of great value to the trade. On looking over the copy of The World sent him, he was surprised to see that a gentleman in the West had just taken out a patent for the same invention, and a careful comparison of the drawing published in The World coincided line for line with the drawings that he had prepared. As he had never let any one see his model, and the patentee lives many hundred miles away, there was no possible chance of his having stolen the idea, and the whole matter was simply a remarkable coincidence. He figured out that if he had not received a copy of The World he would have spent at least \$40 in attorney's fees, drawings, etc. It is needless to say that he could not enroll himself as a subscriber any too quickly, and considers it as essential to his business as the records in his stock.

The Portland Phonograph Agency, of Portland, Ore., having outgrown their old quarters, have moved into their new store at 128 Seventh street, between Washington and Alder, where they have a very handsome establishment with an exceedingly large stock, suitable to the pockets and tastes of the general public.

## THE PROPOSED COPYRIGHT BILL.

Manufacturers of Records Will Doubtless be  
 Interested in the Remarks of Mr. Putnam,  
 the Librarian of Congress, on This Subject.

In view of the fact that the proposed copyright  
 bill is in the process of incubation, and that the  
 tentative copy proposed by the music publishers  
 is of direct interest to the talking machine trade,  
 the remarks of Herbert Putnam, Librarian of  
 Congress, who presided at the conferences of  
 the people and business lines in interest, when  
 held in New York, the first in May and the sec-  
 ond in November last, may be of value to the  
 manufacturers of records at least. The sugges-  
 tions (for that is the full extent of their worth)  
 of the music publishers are drastic, inasmuch as  
 they relate to the reproduction of copyright com-  
 positions, whether of music or the drama, and  
 therefore the appended excerpts, from Mr. Put-  
 nam's official report, are to be gauged accordingly:

"At the second session in November a repre-  
 sentative of the Solicitor-General's office was  
 present to observe and report the discussions, in  
 the expectation that the Department of Justice  
 would later be called upon for criticism of the  
 proposed bill. The conference accepted the  
 theory of its functions thus indicated. It avoided  
 the profession of an authority which it could not  
 claim by avoiding either formal organization or

formal 'decision.' The delegates submitted sug-  
 gestions, expressed views, and discussed them,  
 but they brought none of them to a formal vote.

"The second session, also held at New York,  
 lasted four days, and included detailed discus-  
 sions of every proposed provision, with argu-  
 ments for both additions and eliminations. A  
 third, to be held at Washington after the open-  
 ing of Congress, will consider a new draft, tak-  
 ing account of these and of specific criticism,  
 legal and practical, from various sources. The  
 result may be a measure which Congress can  
 adopt without demur. [Not yet called.—Ed.]

"There have been many endeavors to perfect  
 our copyright laws; but they have been sporadic,  
 as a rule directed to one particular defect, and  
 generally undertaken by the single interest hav-  
 ing a grievance; or, perhaps even less fortu-  
 nately, by advocates of an abstract justice which  
 ran counter to a particular interest. The pro-  
 posed measure will represent a very different  
 purpose, method and authority. Its purpose is,  
 indeed, justice, but a justice within the general  
 intent of the existing law. It recognizes certain  
 definite defects which entail certain substantial  
 hardships. It summons to conference the inter-  
 ests which in a substantial—not merely theo-  
 retic—way are the actual sufferers. And these  
 agree upon the remedies to be recommended.

"But on considering these remedies they have  
 at hand, prepared by the Copyright Office, in

anticipation of this very exigency, careful  
 analyses not merely of the existing copyright  
 laws of the United States and of foreign coun-  
 tries, but of the past statutes, showing the de-  
 velopment of the domestic law and even of every  
 bill ever introduced into Congress proposing  
 amendment to it. They have at their service  
 without cost sound legal counsel from the repre-  
 sentatives of the American Bar Association, itself  
 a participant; the criticisms of other experts on  
 copyright law, and of the legal advisers of the  
 government. And, furthermore, they have  
 throughout the sympathy and the co-operation,  
 the active aid and the conservative experience  
 of the Copyright Office, with its precise knowl-  
 edge of existing procedure, which in this case  
 is also a knowledge of the substantive right."

## AN INGENIOUS SUGGESTION.

A very ingenious suggestion has been made by  
 a comic paper to the effect that the manufac-  
 turers of talking machines should be permitted  
 to place these entertaining devices in the statues  
 of great men with a penny in the slot arrange-  
 ment. In this way public men, although dead,  
 would still be able to address the people. A Ger-  
 man paper suggests in this connection that the  
 experiment should first be tried on the statue of  
 William of Orange, called "the Silent," which is  
 in course of erection opposite to the German em-  
 peror's palace in Berlin.

# RECORD BULLETINS FOR MARCH, 1906.

## TALKING MACHINE IN THE CONGO.

Their Civilizing Influence Permeates Every  
 Section of the Globe—Interesting Story Told  
 by Col. Macpherson of a Trip Made Last  
 May—Here's an Enthusiast.

Lieut.-Col. William Grant Macpherson, C. M. G., of the Royal Medical Corps, British Army, while in New York last week, en route to New Orleans, told an interesting story of a trip he made with a small party into the heart of the Congo Free State last May, and of meeting with an American exile there who is the "boss" of a small Congo settlement. After describing a visit to Boma, the capital of the Congo Free State, Colonel Macpherson continued:

"We then took the steamer and started up the Congo river toward the center of Africa. The scenery was never monotonous. Now we came to high, white cliffs, now to low, sandy shore. Here we found heavy forests, whose edges ended apparently in midstream, and there the low bush, which only half hid treacherous swampland. Soon we reached a station on the French shore of the Congo, and landed by way of a giant trunk in the midst of a fairy settlement. The first thing to welcome us was a gorilla, who turned three somersaults, and then extended a hairy, long-nailed paw. At a swinging gait the well-trained ape led us over a barren hillock to a little settlement called Maar.

"The sight of the place I shall never forget. We walked beneath an avenue of carefully planted trees, and around us we saw signs of civilization not to be witnessed in any other corner of the world. Neither America nor Europe can ever hope to produce such a settlement. Orange trees, heavy with fruit, scented the cool air, a great white fountain, half hidden by clouds of fluttering doves, splashed lazily in an open square. All around were aviaries, walled with wide meshed wire, and filled with fluttering, chirping birds. Occasionally, instead of birds, we found monkeys, apes, a leopard, or a snake. The settlement had a population of some 400 Congolese, and you can judge of my surprise when I found that a Yankee was the 'king' of the settlement. He said his name was Alexander Fisher. With the usual enterprise of his countrymen he had made a collection of the country's bird and animal life, so that we could see them without troubling to hunt.

"The bungalow in which he lived was clean, roomy, and well furnished. The well-upholstered furniture was comfortable, and dull moments were enlivened by a first-rate talking machine, with hundreds of records of the world's best music, both classical and popular, as well as music boxes, and, by the way, some excellent lager beer and wine. He also had many bad records of animals and birds which he made himself, and which will prove valuable some day.

"Mr. Fisher beamed with hospitable joy; he dined and wined us and showed us all over his settlement. The place is a trading store. Fisher said that business was dull; but he did not sigh from his luxurious exile. He loved his birds and apes and live stock more than he loved Yankee-land, and his wish was to be buried beneath the shadow of an orange tree, facing the river, in the center of the open square of his little kingdom.

"He told me he was born in Texas fifty-two years ago. By a few remarks which he dropped I imagined he had got into some serious trouble in Texas and fled the country. It's not likely that Fisher is his real name. He was a man of fine physique and appeared to be well educated. He had complete control over his half-naked black subjects, and could speak their language perfectly."

On board the Cherokee, the liner which was recently wrecked on the Jersey coast, the talking machine was made use of to cheer the spirits of the men after almost all hope had been given up. For some time these instruments have been included in the outfit of our coastwise steamers, but this is perhaps the severest test its entertainment feature has been put to.

## With the Makers, Sellers and Users of Automatic Specialties

The estimate that over a million pennies find their way every day into the slot machines of New York City alone, gives an added respect for these devices that catch stray pennies when time hangs idle on one's hands in an elevated, subway, or ferry station.

Those idle minutes of waiting net the owners of slot machines a rich profit, as something like one million bits of chewing gum and chocolate are drawn from those machines in a day by the persuasive pressure of coppers. These vending machines have increased in favor so much in the past few years that there is one to be seen at every drug store, news stand, on the street corners, several in every elevated and subway station; in fact in every conspicuous place where people are likely to gather. These automatic contrivances used to be looked upon by the American public as a catch-penny scheme to part them from their small coins and give nothing in return, but as the machines have improved, the confidence of the public has increased, though as yet they are not used to anything like the extent in this country that they are in England and Germany.

\* \* \* \*

The slot machine is an old story abroad. In England they have been in general use for more than a hundred years, while in America the industry is of comparative recent growth. In the former country they are regarded as great public conveniences. There they have few penny machines, but for coins the same value as our nickel, one can get postage stamps, a sandwich, all sorts of confectionery in various sized packages, towel and soap, a glass of water, soda or lemonade.

\* \* \* \*

For general use the chocolate and chewing gum machines, and those of the weighing type, have the widest interest for the American people. A nickel machine has not as much fascination for them. When they expend as large an amount as five cents, they want the returns to be something that comes across the counter from the hand of a clerk. What they get for pennies seems so much for nothing, and that sensation tickles their fancy as much as the bit of chocolate or the piece of chewing gum does their palate.

The firm that has the concession for the elevated and subway station slot machines in New York City operates four or five thousand of them, and in order to keep these supplied, it has twenty-five enormous machines going all the time, which wrap from fifteen to eighteen thousand pieces of gum and chocolate a day. A corps of men is kept constantly at work filling the machines. Every day they are refilled and examined to see that they are in working order; for when a penny gets lodged in a machine and refuses to bring forth the desired piece of gum, the owner of the penny begins to have a feeling against slot machines in general as snares and delusions. The companies know this, and on that account look out carefully for disorders in their instruments. The newest improvement in these machines provides that the penny will drop right through if the wares have given out.

\* \* \* \*

The weighing machine, a little less popular than the vending machines, because it brings only a mental satisfaction instead of a material return for the penny, is perhaps the most paying of all slot controlled devices, inasmuch as the cost of the machine and an occasional repairing is the only expense attached. The water machines are also coming into popularity and are to be found in many of the ferry houses in and about New York City, but have never been generally introduced in the streets and in public places, as they probably will be at no distant time, to fill a decided want. At the St. Louis exposition they were the most popular penny devices on the grounds. The tired sightseers knew they were getting a glass of pure, filtered, carbonated water, and that satisfaction in itself is well worth a penny. The devices for holding opera glasses and packages of candy, which are to be found in most of the theatres now, are forms of the slot machine that are growing in favor.

\* \* \* \*

The automatic restaurants, of which New York has two, have not proved the popular successes here they have abroad. There they are in general use. Americans, in spite of the many accusations against their ways of eating, have not quite accustomed themselves to coffee and sandwiches that shoot out of a tube from some mysterious unseen realm. If their confidence in slot machines continues to increase as it has in the past few years, they may, however, come to accept this manner of restaurant with better grace.

The penny arcades are developments of the slot machine business that have sprung into great demand in the past five years. They are dotted all over Brooklyn and Manhattan with their blaze of electric lights and their tempting array of penny attractions; starting in this metropolis, they are spreading all over the country, as men of means, realizing the immense profit to be derived, jump at the opportunity. As competition increases, the necessity for a large expenditure on showy attractions and princely decorations has grown, and notwithstanding the steady inflow of money one cannot help but wonder how the managers can afford such expense.

\* \* \* \*

The largest of these institutions in this city, and one of the largest in the country, is the establishment on Fourteenth street, owned by the Automatic Vaudeville Co. Here one can get anything by dropping a penny in the slot, from a love letter to the hanging of Mrs. Rogers. A continuous vaudeville goes on all the time, in which the automatic piano plays an important and conspicuous part, to a crowd ever changing but seldom decreasing. Along the walls and in two rows down the center of the large hall are crowded hundreds of machines, with a curious assortment of attractions advertised in glaring pink and green signs overhead. The talking machines offer a wide selection of music, almost anything from the overture to "William Tell" to the latest coon song. The mutoscopes show every variety of picture, some ghastly and weird, like the hangings and electrocutions, which, by the way, seem to have a morbid sort of fascination, from the amount of pennies they register; others frankly absurd or merely picturesque. One of the newer instruments is the illustrated song machine. There are all sorts of weighing and measuring machines, contrivances to test the lungs, grip and strength, vibrators and electric shock batteries, name plate and fortune telling devices. In the basement are found the magic mirrors and shooting galleries. These and many other attractions form the general make-up of

# The TONOPHONE Automatic PIANO

With Nickel-in-Slot Attachment

## GREATEST MONEY-MAKER ON EARTH

For Hotels, Cafes, Drug Stores and Resorts of all kinds, its earning capacity having no Equal. It is also a great attraction and business stimulator. Dealers will find it very profitable to handle the TONOPHONE.

**THE "TONOPHONE"** has stood the test of time and is to-day acknowledged by all (even our competitors) **THE KING OF ELECTRIC PIANOS.**

*The*  
**Tonophone**

*Has many points  
of superiority.*

By our Exchange  
Plan you can ex-  
change Cylinders  
for

**\$5.00**

10 tunes, 50c. each

This gives you an op-  
portunity to have the  
latest music at a  
small cost.

*The*  
**Tonophone**

is an entirely new instru-  
ment, and has only lately  
been perfected. It plays  
ten tunes automatically  
with expression. Any num-  
ber of new tunes can be  
produced at small cost.  
The cases are finely fin-  
ished. Mahogany or Oak  
veneered. In ordering, al-  
ways state what kind of  
electric current you have;  
if it is direct current, state  
the number of volts, if it  
is alternating current state  
volts, number of cycles and  
number of alternations.

*Complete list of  
Tunes mailed  
upon request.*

**T**HE "TONOPHONE" is the only Automatic Piano which has an almost indestructible cylinder with 10 tunes. This cylinder gives the "Tonophone" many advantages over all other Automatic Pianos, most important of which are the following:

**Any One of the 10 Tunes can be Played at Any Time**

**Any Tune can be Repeated as Often as Desired**

There is on the outside of the case a dial, with arrow and handle attached, numbered from 1 to 10, representing the number of tunes on cylinder. By turning handle you set cylinder to play tune the arrow may point to. The "Tonophone" is the only Automatic Piano where any one of the tunes can be played at any time. It is fitted with device whereby each tune is played twice for one nickel.

An important and invaluable point of advantage about the "Tonophone" is that it is so constructed that the cylinders are interchangeable, permitting, where it can be agreeably arranged, for an exchange of cylinders.

The "Tonophone" is operated by an electric motor which is set in motion by a nickel, which is received by nickel-in-slot attachment. This attachment is covered by "Letters Patent," and is designed and so constructed that it throws out and refuses to take and keep any spurious coins, in this way giving absolute protection against iron washers, etc.

The earning capacity of the "Tonophone" has no equal and no limit. It has taken in as much as \$50.00 per week. It requires no attention, consequently is *par excellence* a money-maker of the best kind. For public and private places, and resorts of every description, there is at this time nothing better on the market. It is attractive and a novelty; the music being perfect piano music, makes it captivating and fascinating.

CINCINNATI

CHICAGO

these palaces of amusement—the crowning feature of this broad and thriving industry.

\* \* \* \*

Messrs. Wells, Dunne and Harlan, well known in the automatic world, are opening parlors on a large scale throughout the South, among which the largest and most elaborate are at Richmond, Norfolk and Nashville. The mutoscopes, of which there were ordered 150, were furnished by the American Mutoscope & Biograph Co., of this city.

The latest feature of these new arcades seems to be outside decorations, on which large sums are expended, the white plastic formations being set off by artistic arrangement of electric lights. The effect at night is beautiful, and proves to be a great crowd drawer.

\* \* \* \*

It is rumored that the largest arcade in the world will shortly be opened on Park Row, near the City Hall, New York, by a well-known company. More people pass this spot in one day than any other in greater New York. No more need be said in recognition of the wise move on the part of this company.

One of the largest parlors opened in the past year is that of Harry Davis at 347 Fifth avenue, Pittsburg. Mr. Davis is well known in theatrical circles, being owner of three of the largest theatres in that city, among which is the Grand Opera House. The establishment is fitted up in lavish style, and occupies a floor space of 10,000 square feet. The talking machines were furnished by the Rosenfield Mfg. Co., 150 in all. Fifty of these were of their new style illustrated song type. Mr. Davis is reported as doing an immense business.

\* \* \* \*

An undertaking by no means small is that of collecting the pennies from 4,600 machines which comprise the outfit of one of our modern arcades. So thought Morris Kohn, the treasurer of the Automatic Vaudeville Co., of this city, and being of a mechanical turn of mind he forthwith set out to solve the difficulty. The invention consists of a series of tracks (boxed in) running beneath all machines, each instrument being connected by a steel pipe running from the slot into which the pennies are deposited to the roof of this boxed passage. The base of the pipe is closed with an arrangement of drop doors, which the car in passing beneath automatically opens, receiving the coins, and in going on to the next closes. There are eight cars in all. Each is fastened to a motor carriage. The tracks are wired and charged by electric (city) current. After having gone the rounds the car goes down an incline to the office, where it passes over a catch which releases the bottom and allows the pennies to pour down a chute into the safe. The same operation is then repeated. The benefit of this modern system is not only time saved, but there are numerous other advantages. For instance: having each machine numbered, you place a slug bearing the same corresponding figure in each in the morning. Send your car around; if it fails to collect, say No. 25, then you know without further investigation that the machine is out of gear. It eliminates any loss by dishonest employees, and makes impossible the clogging of the machine by too many pennies.

\* \* \* \*

Talking machines recently played a prominent part in Buffalo, where Samuel L. Robertson in almost a single day cleared up \$5,000 at the expense of R. Wagner. Both men are Buffalonians. Wagner has charge of a brilliantly lighted establishment in Main street, where penny in the slot machines are featured. He succeeded Mark Bros., who made a fortune there. A few days ago the lease of the store next door to Wagner's place ran out, and Robertson secured it for a long term at a good price. Then he started to fit the place out with a line of talking machines and other devices that catch pennies. He also started to promote a company. First thing he did was to hire an electrician to put in three times as many incandescent lights as Wagner's place boasts. When Robertson's talking machine emporium was about half finished Wagner wanted it. He dis-

liked opposition, and bought out Robertson. It is said Robertson realized \$5,000 on the transaction. "Robertson made money on the deal," said Wagner to-day, "but I thought it a profitable venture to buy the place."

\* \* \* \*

The following taken from the current issue of Munsey's Magazine is an interesting contribution to this department:

If chance ever finds you alone on Broadway—  
Within a few blocks of the Opera House, say—  
Defile, if you can, from the endless parade  
And linger awhile in the Penny Arcade.  
Suburban and Urban, 'tis here that they meet—  
The lad from the country, the man from the street.  
The pretty young girl, the timid old maid,  
They hear the same airs in the Penny Arcade.  
In London aforetime a penny would bring  
A broadside of ballads, which you'd have to sing;  
But here, drop your cent, and the song will be played.  
And sung, in a way, in the Penny Arcade.  
Here's a gay tune or sad tune to answer your whim—  
A dance or a dirge, an old-fashioned hymn,  
An Irish "Come-all-ye," a "coon" serenade,  
Or a spellbinder's speech in the Penny Arcade.  
Let's see, here's a new song by Miss Edna May:  
And what's that—"Jim Bludso," a poem by Hay?  
Yes, listen: 'Tis strange, but your heart-strings are  
frayed,  
And your eyelids grow moist in the Penny Arcade.  
How the mass was intoned by the late Pope at Rome.  
How Jeff as young Rip went away from his home.  
When Teddy went West, how the cowboys hurried—  
You'll find them all here in the Penny Arcade.  
So, if chance ever finds you alone on Broadway,  
Just step in and hear what the records may say:  
For life in epitome, sunshine and shade,  
You'll find it set forth in the Penny Arcade!  
ROBERT GILBERT WELSH, in Munsey's Magazine.

\* \* \* \*

If praise from pleased customers can cause an increase of sales, then, judging from the many testimonials received at the offices of Roth & Engelhardt, the manufacturers of the Peerless and Harmonist players, they should be continually rushed with business, which, in fact, they are. One of the many in their possession concerns a Peerless that they sold through their New Orleans representatives, L. Grunewald Co., to the Nelson Bros.' Cafe, of the same city, in June, 1904. It reads as follows:

Jan. 31, 1906.

Messrs. L. Grunewald Co., Ltd.:

Gentlemen:—We have one of your Peerleiss

electric pianos in operation in our picture arcade and also in our saloon. The one in the arcade has been in operation for eight months. We kept it playing constantly from 8 a. m. to 10 p. m. every day during this period without once getting out of order, and we firmly believe that the Peerless piano has no equal.

The one we have in our saloon is a money-getter and a great drawing card for the bar. Very respectfully yours,

(Signed) Jno. J. and Jas. E. NELSON.

\* \* \* \*

The Regina Music Box Co., of 11 East 22d street and Rahway, N. J., has found the coin-operated Reginaphone, described in The World a short time ago, to be a splendid seller, and at the present time they are not able to keep pace with the orders they are daily receiving. It has proved to be just the thing for all places where a coin-operated phonograph is needed, and its advantage over the one in common use is that it plays six records, and will give a different selection for every coin dropped in. They say that dealers will find it one of the most profitable propositions that has been offered in that line.

### TRAVELING SHOWMAN HANDLING

Twentieth Century Graphophone in His Business With Great Success.

The introduction of the "Twentieth Century" graphophone has doubled the sale of cylinder records out on the Pacific Coast, says the Columbia Record. In the village of Cornelius, Oregon, recently a traveling showman reported that he was making \$15 to \$20 per day, and said his business was being very materially assisted by having a "Twentieth Century" graphophone as a part of his outfit. He has the machine at the end of his wagon, and whenever he plays it, a crowd quickly gathers. Sometimes he plays the graphophone in passing through small villages, and this is the signal for people to gather from far and near and follow behind the wagon as if it were a real brass band that was dispensing the music.

The Rudolph Wurlitzer Co., Cincinnati, O., are building up an immense trade in their extensive line of automatic musical instruments.

# Everybody wants them!

# SOFTERTONE

# Needles & attachments

FOR VICTOR EXHIBITION AND CONCERT,  
COLUMBIA, AND ZONOPHONE SOUND BOXES

SOFTERTONE NEEDLES reduce the volume and bring  
out every detail and shade of tone in the Record

# Play Six Records

SOFTERTONE NEEDLES may be played on the same or different Records at least six times without injury to the Record—in fact, a Record will last three times as long when a Softertone Needle is used.

**IMPORTANT:** When ordering mention Name and Style of your Sound Box

The attachment for the Victor Exhibition Sound-Box also fits the Columbia and Zonophone Sound-Boxes. Price, Softertone Needles, in packages of 200, 25 cents. Price, Softertone Attachments, each 25 cents. Dealers' discount same as they are receiving on Victor machines.

# Keep Your Stock of EDISON GOODS Complete

**This Dealer Carries the Goods the People Want. He Carries Enough of Them. He Loses No Sales.**

Gentlemen:—I carry every domestic record in stock, besides a large surplus stock, and a fair assortment of French and British band records. I started in three years ago with three machines and 200 records and have sold over 3,000 records this year. I have sold some of the "other kind," but have dropped them as the Edison records have them beat more than *one mile*.

Name and address will be furnished upon application.

I beg to remain,  
Very truly yours,

\* \* \* \* \*

The thousands of dollars we spend each month in advertising interests hosts of people in the Edison goods. We tell them of the high qualities of Edison Phonographs and Records. We show the many ways in which the phonograph can be used. We create the desire. Then, it's up to you, Mr. Dealer. Your part is to supply the needs of the customers we send you. Show them a complete stock. Make your salesrooms attractive. Every customer you turn away because you cannot supply him with the goods he wants means lost trade and profits.

Read the above letter again. This dealer's policy is to increase his sales by the efficiency of his service. Is that your policy? If not, think it over. Every customer you satisfy forges a link in the chain that holds your trade.

## NEWS FROM THE EMERALD ISLE.

**Talking Machines as Language Teachers Demonstrated Before the Pupils of the Municipal Technical Institute—The Systems and Machines Used—Highly Important Occasion—T. Edens Osborne Off on Holiday.**

(Special to The Talking Machine World.)

Belfast, Ireland, Feb. 10, 1906.

The demonstration of talking machines as language teachers to the pupils of the French and German classes of the Belfast Municipal Technical Institute, which took place yesterday, was of a most successful character, a large audience of students being present, who were not only very enthusiastic in praise of both the phonograph and graphophone, but were deeply interested in the records. And it was quite obvious that each of the pupils as well as the teachers present were quite agreed that the "talker" as an aid to language study was an invaluable auxiliary to home work. The instruments used were the Edison Standard, the 20th Century Sound Magnifying Columbia Graphophone, and the triple-spring Monarch Gramophone. The records used were the French lessons of the I. C. S. of Scranton, Pa. (gold-moulded Edison), the German lesson phonograph records supplied by the Modern Language Press, Ltd., of London, and the French lesson disc records of the British Zonophone Company, London (the Bizeray system of teaching French).

The principal of the Institute, Francis C. Forth, A.R., C.Sc.I., made a record in German, and the French master, Mr. Arnold, made a record in French, both of which were reproduced before the students and excited considerable interest.

T. Edens Osborne's blushes were not spared when Mr. Forth showered compliments on "the demonstrator," and he felt quite embarrassed when he was expressing his gratitude for a vote of thanks proposed by the German master and seconded by the French master. As Mr. Osborne puts it: "Before yesterday evening I thought I occupied a place on the right hand side of a decimal point. Now I feel as though I am on the other side, but I don't know how far!"

Mr. Osborne, by the way, leaves Belfast on Monday for a holiday of a few weeks, visiting London, Paris, Marseilles, Palma (Majorca, Boleraric Isles), Algiers, Tunis and ruins of Carthage, Malta (Valetta and some land excursions), Sicily (Palermo, Satania, Taormina, etc.), Corsica, including Ajaccio, the birthplace of the great Napoleon; Villefranche or the French Riviera, and some excursions on the Riviera to Monte Carlo, Nice, etc.

The gramophone records of Patti's songs have come to hand and are being bought freely by the best section of the Belfast public.

## PIANO DEALER GETS WISE.

**Gives World Credit for Conversion to Talking Machine Idea—Now Opening Large Department.**

A dealer in pianos from a prosperous manufacturing center in New England said to The World in a recent chat: "When talking machines first were introduced, as a commercial proposition, I paid no attention to them, as I considered them beneath my dignity. That was several years ago, and I have grown older and wiser, thanks to the educational work of your paper. I am now giving them my careful attention, and one of my objects in visiting New York at this time is to examine into the merits of the various instruments with a view to opening a large department for their sale. I believe they are cultivating a latent love for music among the masses, which in time will create a

demand for musical instruments of every description. You can set me down as a convert to the talking machine trade, and I have no doubt but that in time I will become an enthusiast."

## CARUSO THE FAMOUS

**Sings Duets With the Talking Machine Reproducing His Own Voice—An Intimate View of the Artist.**

The New York Sunday Herald of recent date contained a full page devoted to Caruso, the distinguished tenor, whose voice is well and favorably known through the medium of the talking machine records he has made, as well as in the operatic field. The story was copiously illustrated in colors accompanied by some cartoons for which the well-known singer is famous, and after describing a visit to his home we read:

"But the funniest sight is when they begin playing the talking machine, which gives, among others, Caruso's own voice and songs from the different operas. Then Caruso tries to accompany in his own voice and with the same song. It is quite startling and novel in conception. But when the music lasts too long our friend Rossi, the great comic basso, joins in with his capers and puts a very effective stop to all serious efforts. Then friends drop in to chat and laugh and gossip. When there are not too many Caruso's large working room upstairs is used as a smoker. There you find the walls covered with posters, sketches, caricatures, newspapers and albums all over the place, to the great despair of Martino.

"Besides caricaturing, Caruso models in his hours of leisure. He has made some very good bas-relief portraits in bronze of Giraltoni, Scotti, his physician, Dr. Curtis; Conried, his child and himself.

"I was fortunate enough one evening to be present at one of his rehearsals previous to his going to a concert. His accompanist, Brizzi-Peccia, was at the piano. Several of the songs Caruso had never seen before; others were familiar Neapolitan songs. But those familiar Neapolitan songs sung by him sounded like new creations. He has mastered his technique so completely and he sang the new songs so easily that you would have believed he knew them as well as he knows 'Santa Lucia.' He stood there smiling and the song came out of his throat with the same facility with which I blow the cigar smoke out of my mouth. And I was thinking of my good fortune compared to that of the man who in the next hour was going to pay a check of four figures to hear the same songs. The reason for Caruso's great success lies not only in the wonderful voice he possesses, but the splendid use he makes of it; also in his keen intelligence and his tireless energy."

Mme. Caruso, like her husband, is a clever musician, her specialty being the piano. Caruso's favorite American number, by the way, is a little piece of music by Victor Herbert, whom he greatly admires.

## TALKING AFTER DEATH.

A feature of a funeral service recently held over in Laporte County was a phonograph selection. When the religious ceremony was over a phonograph was placed on the casket and the assembled mourners listened to the dead man singing one of his favorite hymns. It is believed to have been the second case on record where the paradox of a man singing at his own funeral was witnessed. The first case occurred in Cork, Ireland, and was recorded in The World at the time.

Greenwood & Sons Music Co., 7 West Federal street, Youngstown, O., have remodeled their piano parlors, erecting booths to cater to the talking machine business which they established.

## TALKING MACHINE MEN FORM CLUB.

**Boston Salesmen Get Together for This Purpose—Blakeboro Succeeds Ormsby Who Goes South—Business Conditions Excellent in All Branches and the Year So Far Is Breaking Records.**

(Special to The Talking Machine World.)

Boston, Mass., March 8, 1906.

A club composed of talking machine men is about to be formed in Boston, with every prospect of success. It cannot help but be a good thing for all concerned, as it will bring the men closer together, will give to each new ideas about their trade, and show to each what a good fellow the other man is. S. J. Freeman and J. L. Gately, of the Eastern Talking Machine Co., are among the leading spirits in forming the club, and they are ably assisted by H. R. Skelton, of the Winchell Co., and by F. E. Lane of the Columbia Phonograph Co.

It is planned to hold monthly meetings, at which there will be some form of entertainment, and to make the entire organization one that will be of real benefit to the men in the trade. Above all things, it is intended that the club shall act as a means of killing out the desire to "knock" every other person. It will have a broad scope, and its membership will not be confined to Boston men alone. The name will be The New England Talking Machine Salesmen's Club, and its next meeting will be at the Winchell Co.'s store, 95 Summer street.

Retail Manager J. H. Ormsby, of the Columbia Phonograph Co., who was mentioned in the last issue as desirous of getting to the Pacific coast on account of his health, has left Boston for the South, and will in all probability find himself soon in charge of one of the company's stores on the Pacific coast. His position has been given to H. M. Blakeboro, who has been in the employ of the Columbia Co. for the past eight years, coming recently from Milwaukee. He has seen service in Detroit and Pittsburg also. Mr. Blakeboro is a young man of the "hustler" type and has become very popular with the boys here. An additional department has been created at this store to take care of outside business.

Business is very brisk at the Eastern Talking Machine Co. Wholesale Manager Chamberlain says that the results for January and February are the greatest in the history of the house. This company is pushing the Edison machines, the full line, with much vigor.

At the Winchell Co. the manager and all his salesmen were too busy every day this week to see any trade paper men. This is the best kind of news in reality, for it shows that "something is doing." A novelty is in operation here in the form of a girl who plays the violin while another plays the piano, and thus they show off the sheet music which is a feature at this store. Otis A. Rowell, formerly assistant manager of the commercial department at the Columbia Phonograph Co., has joined the forces here. This will prove a good move for the Winchell Co., because Mr. Rowell is an inventor of considerable merit. He is about to put on the market a new needle that will not wear off and that will do away with scratching entirely.

The Pike Talking Machine Co. is certainly out for the goods. They have worked up an excellent trade at a slight cost by advertising to give away 28,000 disc records to customers who purchase 300 Victor needles.

Dr. E. W. Scripture, who has been making researches in phonetics under a Smithsonian Institution grant, has secured a gramophone record of the voice of Emperor William of Germany. It will be preserved by the National Museum at Washington, and, of course, will not be used in any public way in the Kaiser's lifetime.

## ST. LOUIS IS SATISFIED

With the Volume of Business Transacted in February—Talking Machines and Records Are Growing in Demand in This Territory.

(Special to The Talking Machine World.)

St. Louis, Mo., March 10, 1906.

The consensus of reports from all of the talking machine dealers on business for the month of February indicate that trade during that period has been fully up to expectations, and in some cases far better than expected. The demand for this kind of entertainment is growing very rapidly here, and the finest machines are selling the best.

W. C. Fuhri, manager of the Columbia Phonograph Co., made a visit to their local branch at Memphis, Tenn., recently, and announces that they are negotiating for a much larger and more attractive location. He states that reports from their branches on February business are very favorable; that their new goods and six-inch records are going fast, and the outlook for the future is very bright.

D. S. Ramsdell, vice-president and manager of the St. Louis Talking Machine Co., makes very favorable reports and states that their large machines are in good demand.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., reports trade in a very healthy condition, and that their February business was quite satisfactory.

E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., states that trade has been very good with them during February, and that their business is rapidly increasing. They have just added a large increase in their shelving by which they will be able to carry 40,000 records in connection with their present stock.

E. L. Garvin, manager of the Western Talking Machine Co., is spending several weeks in Louisville, Ky., recuperating.

M. Silverstone, manager of the Talking Machine Co., announces that this concern will alter

their display windows at an early date. He also reports trade good.

Geo. M. Nishett, manager of the National Phonograph Co., Chicago, has spent several days here. A. H. Kloeher, representative of the same concern, has also been here.

## BIG TALKING MACHINE DEAL.

Harger & Blish Purchase Entire Stock of Premium Machines from the Victor Talking Machine Co. Who Discontinue This Branch of the Business.

One of the biggest talking machine deals yet recorded was that made recently when L. F. Geissler, General Manager of the Victor Talking Machine Co., sold to Harger & Blish, Victor distributors at Dubuque, Ia., their entire stock of Premium machines, aggregating some ten thousand outfits. Some idea of the size of the deal may be gained when it is understood that if delivery was made in a single shipment a full train of twenty cars would be required to transport them.

With reference to the deal, the Victor Co. are sending out the following letter to their Premium trade:

"The Victor Talking Machine Co. have decided to discontinue the Premium Machine Department. The enormous growth of the business in our regular line is overtaking our factory capacity and precludes our giving proper attention to our Premium Machine Department. In this emergency we have just concluded a deal with Messrs. Harger & Blish, of Dubuque, Ia., our largest premium jobbers—to purchase, and have sold to them our entire stock of Premium machines, both styles 1 and 2—all that are at present made up, as well as those in the process of manufacture in our factory.

"This sale was probably the largest single and outright sale of talking machines that one person ever consumed. Harger & Blish are in a position to extend you exactly the same service and prices as we have in the past, and in all

probability will offer you other inducements that will be very attractive.

"Shipments will be made either from Dubuque or Camden, N. J., whichever preferred by the dealer. We have taken the liberty of referring your correspondence to Messrs. Harger & Blish, assuring you for them their prompt and courteous attention. Yours very truly,

"LOUIS F. GEISSLER, Gen. Mgr."

On commenting on the above we wish to say that Harger & Blish have the distinction of concluding the largest single purchase of talking machines on record.

The deal places the above firm in complete control of the entire Victor Premium business throughout the whole United States, and they are to be congratulated for their enterprise in securing for themselves so important a contract. The deal will enable them to get into closer touch with the premium using trade and no one values its great possibilities more than they.

The present Victor contract together with several exceptionally strong, attractive Premium propositions, that they are at present exploiting, should develop all kinds of business for them during 1906.

George M. Pitot, formerly manager of the phonograph department of the A. B. Clinton Company, has accepted the position of manager of the Victor talking machine department of the M. Steinert & Sons Co., of New Haven, Conn. Mr. Pitot has had many years' experience in the talking machine line and we feel sure that he will get a big share of the Victor business in his territory, as he is working several new schemes to let the people of New Haven know that they can always find everything in the Victor line at "Steinert's."

One of the enterprising talking machine establishments of the West is the Enz Phonograph store, of Red Wing, Minn. The advertising which they are carrying in the local papers is exceedingly effective.

LARGEST TALKING MACHINE HOUSE IN THE CITY.

## JUDGE HAZEL'S DECISION IN JONES PATENT SUIT.

Court Declares This Process of Duplicating Records Anticipated—Case Appealed to Higher Court—J. O. Prescott Chats Interestingly of the History of the Case—The Suit at Issue One of Great Importance to the Talking Machine Industry.

Feb. 19, Judge Hazel, in the United States Circuit Court, New York, handed down a decision in the Jones patent suit brought by the American Graphophone Co. against the Universal Talking Machine Manufacturing Co. and the American Record Co., declaring the patent invalid, inasmuch as the process of duplicating records claimed by the inventor had been anticipated by the prior state of the art.

J. O. Prescott, of Hawthorne, Sheble & Prescott, sales managers American Record Co., referring to the opinion, spoke as follows to The World:

"This is one of the most important suits on talking machine patents that has come before the court in recent years. Particular interest attaches to this patent and the decision because of the prominent position in the trade occupied both by the complainant and the defendants, and the varying effect on the trade in general by a decision favorable to either of the parties in the action. The so-called Jones patent covers many essential features of the process used in the manufacture of discs by all of the prominent manufacturers in flat records in the business to-day. Had the patent been sustained it is believed the American Graphophone Co. could have forced the various companies to discontinue the process. But since, in Judge Hazel's opinion, the patent is invalid, it doubtless opens the field of manufacture to all comers, and will probably result in inducing other concerns to take up the manufacture of discs.

"From the early days of the talking machine industry down to 1903, the cylindrical record was most widely known and used, because the well-known Bell and Taintor patent, covering recording and engraving sound waves on wax-like material, was so broad in its scope as to effectually discourage attempts to manufacture by this or any other method necessitating the use of a cutting stylus. This latter patent was controlled by the American Graphophone Co. A few years prior to the expiration of the Bell and Taintor patent, Joseph W. Jones applied for a patent covering a process for the manufacture of discs of the type at present so well known on the market. It is alleged that the claims in this patent were as broad in their scope as the Bell and Taintor invention, and that had the Jones patent been sustained it would have given the monopoly of the disc business to the American Graphophone Co., to whom this patent was assigned, or to its licensees, as the Bell and Taintor patent enabled them to control the cylinder business.

"Among the manufacturers there was much scepticism as to the validity of the Jones patent, and their opinions were backed by large amounts of capital invested by several companies to manufacture discs by processes similar to those claimed in the patent. The first action on this patent was brought in 1901, in the name of the patentee, and was directed against the Universal Talking Machine Manufacturing Co. Later on the American Graphophone Co. acquired title to the patent, and was substituted as complainant. From time to time during the following four years testimony was taken at intervals by both parties.

"In May, 1905, the suit was brought for hearing before Judge Platt. About five months previous, suit had also been commenced by the American Graphophone Co. against the American Record Co., the latter ignorant of the suit against the Universal Talking Machine Manufacturing Co., supposed it had been selected as a defendant of a test case, until it learned in May, 1905, that the test case was about to be tried against the Universal Co. They investigated the defenses opposed by the Universal Co., finding several which the American Record Co. had uncovered, but which had not been put in shape for presentation to the court. They prevailed upon Judge Platt to postpone the trial of the case against the Universal Talking Machine Manufacturing Co. in order that their own case might be proceeded with and their additional defenses de-

veloped, when both cases should be brought on simultaneously for hearing.

"The entire summer of 1905 was spent in the active taking of testimony, both by the American Graphophone Co., and the American Record Co., and all defenses known to the latter concern, including several not interposed by the Universal Co., were set forth at length in the defendant's record, when the cases were finally reached for hearing before Judge Hazel in December last. Judge Hazel's opinion, in surveying the situation, deals with the salient points, as follows:

"This invention has for its particular object a method of duplicating or producing copies of an original sound record of the zig-zag type, which was specially adapted for use on a talking machine known as the gramophone, invented by Emile Berliner. At the date of the patent in suit the phonograph, the invention of Edison; the graphophone, the invention of Bell and Taintor; and the gramophone, the invention of Emile Berliner, were known to the art and their distinguishing characteristics well understood. Sound records of the Berliner patent consisted of flat zinc records, having etched on their surface a number of infinitely small undulatory grooves of uniform depth representing sound waves. The sound record of the invention adapted for use on talking machines of which Edison and Bell and Taintor were the inventors, consists of cylindrical tablets, having cut or engraved on their surface vertical undulations or irregularities of varying depth. The distinctive proposition of the patentee (Jones), as stated by him, was the process or method of duplicating or multiplying a sound record having lateral undulations of even depth. This object involved the method already known of producing the original or master record, the subsequent steps of making a metallic matrix by electrolysis, separating the same from the original record and thereupon repeatedly pressing the matrix into a suitable yielding material so as to produce a vendable article.

"The defenses interposed are anticipation, non-infringement, want of patent ability in that the process described in the specifications is for a mode of operation in which no elemental change is accomplished or chemical action effected. That a sound record of the type in question and the materials by which the result is obtained (except the graving element) separately considered, were familiarly known, is not seriously disputed. Nor was it contended that the patentee was a pioneer in making sound records. Whether the different steps of the process in suit were old must be ascertained by an examination of the antecedent art. Such art as understood by the patentee is stated in the specification. The elicited facts show that the departure of the patentee from the process of Berliner consisted of abandoning the etching feature and

adopting in its stead a method of cutting or engraving in a substance of less resistance.

"The question is whether Jones discovered a radically different method of duplicating sound methods of zig-zag type. . . . I am unable to agree with the complainant that cutting or engraving on a cylindrical or wax record, as stated in the Edison and Gouraud patents (though it may not have been in hard wax) followed by electroplating and using the matrix to duplicate vertical undulations did not suggest the Jones process. . . . The skilled artisan doubtless would have had little difficulty in adjusting the various elements so that a flat sound record of the type in question could have been produced without experimentation or the trials of an inventor. I think it not only indicates that the process described might substantially be used by the way pointed out by Jones, but also that they contemplated the application of his invention to the disk record.

"Moreover, that it was old, at the date of the Jones invention, to engrave or cut a sound record of uniform depth directly upon a so-called master matrix, finds support in the testimony of Berliner, Sanders and Levy, witnesses for the American Record Co. . . . Referring again to the evidence in the suit against the American Record Co., the document filed in October, 1881, by Bell and Taintor, in the Smithsonian Institute at Washington, specifically refers to the feature of cutting or engraving both the vertically undulating and zig-zag processes and to the duplication of phonograms.

"The file wrapper and contents shows that the patent in controversy was rejected about eight times on the ground of want of patentability, in view of the prior patents to Edison, Berliner, Young, Rosenthal and Frank, Bell and Taintor and Gouraud. Subsequently, however, the patent was granted by the Commissioner of Patents, owing doubtless to the earnest and skillful arguments of the counsel.

"What the patentee accomplished is thought to fall within the rule laid down in the following cases: Locomotive Works against Medart, 158 U. S. 68; Smith against Nicholls, 88 U. S. 112; Pennsylvania Co. against Locomotive Co., 110 U. S. 490. Inasmuch as the proofs satisfy me that the patent in suit is anticipated by the prior art, it follows that the bill must be dismissed with costs."

The Universal Talking Machine Manufacturing Co. was represented by Horace Pettit, and the American Record Co. by Edmond Wetmore, president of the American Bar Association, and Samuel Owen Edmonds. The defense was looked after by E. K. Camp, Philip Mauro and C. A. L. Massie. The American Graphophone Co. will appeal the case.

### RECENT INCORPORATIONS.

The Strong & Williams Co., of East Orange, is a corporation which filed a certificate in New Jersey last week for the purpose of manufacturing phonographs and graphophones. Capital, \$500,000. Incorporators: James Strong, W. R. Williams, E. Williams, all of East Orange.

## PROOF That Double Service Will Increase YOUR Business

E. R. GUTHRIE

BICYCLES, PHONOGRAPHS

1540 O STREET

International Correspondence Schools,  
Scranton, Pa.

Gentlemen:

Replying to yours of 5th inst. regarding my success in selling the I. C. S. Language Outfits will say, there is no other phase of the Phonograph business that has appealed to me as this language system does. The sales are naturally with the more well-to-do people and there is no question of installments to contend with. One can approach the most exclusive people with this language proposition and be sure of a respectful and interested hearing. By exercising a little judgment in selecting the people to be approached with it the dealer will find almost half of them will become good "prospects." The super-sensitive people who have always said they would not have a phonograph in the house fall right into line and enlarge the field for phonograph sales by a large proportion. A "demonstration" for a prospective customer usually consists in playing one record and having a quiet chat. Occasionally one who has already acquired a literary knowledge of a language asks for one of the advanced lessons to be run. Contrast this with playing "rag-time" for an hour for a lot of gigglers who buy one or two records and the dealer who tries it will surely become a devotee to the Language Outfit sales. Nearly every one he shows it to can tell him of some friend who will be interested also.

Yours truly,

*E. R. Guthrie.*

It has increased other dealers' business from 10 to 30 per cent. } Box 918  
To find out what it will do for your business, write to-day to } Scranton, Pa.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### EVILS OF BAD HORN ADJUSTMENT.

Wm. F. Hunt, of Wanatah, Ind., to whom we are indebted for many valuable suggestions, writes: "A matter of much importance which is given little consideration by the average phonograph user and which is often the cause of bad reproductions is the carelessness in the selection and adjustment of amplifying horns. A horn should always be thoroughly tested as to whether it has any loose seams. A horn with this defect will cause rattling in the reproduction and this fault is in many cases mistakenly attributed to the reproducer. No matter how little rattle there may be in the horn it will do much toward making the reproduction unnatural and unmusical, especially so in the more delicate selections. Furthermore, a horn should never be used on a phonograph without a rubber connection, as this acts as an insulator for the sounds arising from the motor part of the machine. Even with the improved suspended motors there is a noticeable hum from the mechanism and this noise is in turn conducted to the horn and there amplified in the same manner as the reproduction itself. You have, perhaps, never given this matter any thought. Put a horn, without the rubber connection on your machine, let it run without a record on it and listen. You will be surprised at the amount of hum that will issue from the horn. Metal connections should never be used no matter how much you may think they improve the tone. The phonograph has passed the age of a noice producer. In its present state and under proper conditions it is a musical instrument in the highest terms and should be treated as such. Furthermore, I wish to say that in order to get the best results from a phonograph it should be selected with the same care as a violin. I believe that the difference in tone quality in reproducers is equally as varied as that of the violin. Volume should be only a secondary consideration. It is quality of tone that is most essential."

### BEST MATERIAL FOR DIAPHRAGMS.

Writing to our esteemed London contemporary—The Talking Machine News—Mr. Seymour says: "I should like to say a few words with regard to the opinion expressed by The Talking Machine World correspondent quoted in your issue for February 1. This gentleman says that 'something besides mica, glass or metal, a substance more porous, will have to be used before perfection of tone is reached, especially in vocal reproductions.' As an experimentalist who never rests, and who has multiplied variations and modifications of every imaginable material in diaphragm work. I am very decided in the opinion that glass stands high above any other material for the best results, both in recording and in reproducing. The objection that 'the present diaphragms produce a sharpness of tone which is quite the most unnatural part of a reproduction' is true of many reproducers, but the objection holds good mainly with regard to the small-sized diaphragms, and with badly constructed sound-boxes. It is much more a question of size and construction than of material, although more porous materials such as celluloid, cardboard, wood pulp, gelatine and wood (especially aspen), give excellent natural reproductions, though the volume is always weak. I have found perforated carbon to possess all the advantages of the foregoing without diminution of power; in fact, it yields more power than glass, but few records on the market are good enough for a sensitive material of this description. The glass form, however, is preferable for vocal, and the carbon for instrumental, reproductions."

### FAULTY RECORDING.

"The same correspondent thinks that 'the art of recording has reached a higher point of perfection than the reproducing,' because 'many reproducers work quite well on a certain few records, but give bad results from most.' By

what process of logic does he reach the conclusion that the reproducers, and not most of the records, are at fault? The art of recording is the art which lags behind, and as improvements are effected in the records, reproducers will easily be increased in efficiency to be equal to the occasion. The chief defect in the average record is that characteristic harshness which is technically known as 'blast.' The greater the efficiency of a reproducing diaphragm on records of this class, the worse the result, because all the demerits, as well as the merits, are more perfectly brought out. It is quite a common thing to hear persons condemn a reproducer on the ground that it blasts. To the uninitiated I may say that blast is always a defect in the record, for which the reproducer, of whatever make, is not in the least responsible.

### CAUSES OF BLAST.

"Blast is due to a broken track in the process of recording, and is a symptom of bad workmanship. There are two leading causes of this trouble, one that the recording diaphragm has been given more work than it is capable of doing, causing it to jump the blank surface and thus break the track; the other, recording has been done on soft blanks and the sapphire has cut too deeply, so that one line of track partially intersects another, breaking the upper edges thereof. It is easy to obviate the first cause by good judgment, and the second cause is a good sign that finality has been reached in the tendency of deep cutting on machines that have the present standard traverse movement of 100 threads to the inch."

### WHO CAN ANSWER THESE QUERIES?

M. A. Grant, of the Unique Talking Machine Co., Houston, Tex., writes The Talking Machine World as follows: "Gentlemen, can you put us in touch with the printer or publisher of the list that was gotten up to include all records up to June, 1905? The list is arranged according to the alphabet, but shows all records, like this:

Disc				Cylinder		
A	V	Z	C	E	L	xp
	2683so	5931so	1827so	8626so		32471so
32610	For sale a Baby					

"We have a copy and note the subscription price, but there is no designation of publisher, etc. It is a most useful book to a dealer, and if we could get a copy that was arranged so that we could fill in the new ones monthly—or if there was a new one printed monthly we would be more than glad to subscribe for it.

"Can you tell us whether the Lambert records are made now and where?"

We can't just place the printer or publisher of the list Mr. Grant refers to, and will ask the aid of our readers in this matter.

The Lambert records are not made by the Lambert people at the present time, but we understand that records similar to them are made by Leeds & Catlin, of New York.

### THE "ANNOUNCEMENT" ON RECORDS.

T. Willson, of York, England, referring to the announcement on records, and its effect on the length of the records, says: "I think the announcement answers a good purpose, because it is in the first few lines that a record first shows signs of wear, and becomes scratchy, and by the time the announcement is made the needle, or sapphire, and record have adapted themselves to each other, and the record runs smooth; but if there is no announcement, the record proper must suffer for the first few lines. Anyone can prove this by trying a record with an announcement and one without. Now, I suggest that in order to make the record longer the sound waves should be of the same length in a large (disc) record as they are in a 7-inch record. A large record travels faster than a smaller one, and, therefore, the sound waves must be longer to obtain the true sound. Now if the sound waves are made shorter on the large

record it could be run slower, so in two ways the record would be lengthened, because more could be got on the record in the same space, and the machine could be run slower. Take an illustration. A 7-inch record is roughly 21 inches in circumference, and if the announcement takes up six revolutions it would travel 126 inches. A 10-inch record is 30 inches in circumference, and to run the six revolutions it would travel 180 inches, a difference of 54 inches. Now, whatever is recorded on the 126 inches of the 7-inch record is recorded on the 180 inches of the 10-inch record; but the sound waves are stretched out 54 inches in the six revolutions—I do not give the exact result, but it is very near and will illustrate my meaning. This gain in 10-inch records would, I think, meet the desire expressed for longer records. I also think there is too large a circle left inside the larger discs. They could be run as near the centre as a 7-inch, and with as good results."

### PHONOGRAPHIC TUNING FORKS.

In the patent department of The Talking Machine World some months ago an invention was recorded which contemplates the use of phonographs in tuning musical instruments. With a phonograph record it is said a tone can be produced and sustained at an even pitch as long as desired. The record is in the form of a disc, although the well-known cylindrical form is also applicable. This record consists of a series of concentric tone circles, each circle being made by a single or sustained tone. There are thirteen of these tone circles, representing what is known to musicians as the equal temperament—thirteen notes within the scope of one octave. The whole temperament is so equalized as to give the operator an absolute guide. By placing the phonographic reproducer in the proper tone circle any tone can be sustained for an indefinite period, so that the user can give his attention to the proper adjustment of the instrument which is being tuned. It will be evident that the number of tone circles could be increased, but for the purpose of a guide in tuning instruments the number indicated is said to be sufficient.

### COLLAPSABLE HORN OF MERIT.

A collapsible horn has at last been perfected in this city, which in every way "fills the bill," and is already creating a commotion in manufacturing circles. The horn is made from various materials—one resembling tortoise shell being very beautiful, while those of "Leatherite" possess a wonderful softening effect on the music. The ribs are flexible, and are made of spring steel nickel plated, with folding supports or braces, controlled by an automatic draw frame. When folded the horn measures about 24 inches by four inches and is made to fit both disc and cylinder machines.

### EDISON GRAND OPERA RECORDS.

A subscriber of The World in Los Angeles writes to inquire if the National Phonograph Co. intend to include in their list of grand opera records some songs in English. We may say that elsewhere in this issue reference is made to the fact that a number of new artists have been engaged to make grand opera records for this company, and it is not at all improbable that a number of records in English will be made in due course. This is a new departure, and the company must be given fair time to develop their plans.

### CHANGING NEEDLE FOR EACH RECORD.

A correspondent to the Talking Machine News writes to that paper to know if it is really necessary to use a new needle for each record, as the makers advise, and points out that some time back the rule was to change the needle after every third record. "I have been advised to turn the needle round after using," he says. "What is your opinion about this? Of course, one does not want to injure the record, on the other hand one does not want to use more needles than are absolutely necessary, for even if they are cheap, the price soon mounts up." He further points out that the cost is not of so great account as the annoyance of changing the needle after each

## When you sell

a customer a *Victor Talking Machine* you aren't through with him by any means. You're just getting started. Think of the sales of *Victor Records* that are sure to follow!

If a customer buys a \$50 *Victor* you can count on him to be good for at least \$250 worth of records—experience has proved it.

Keep right after every purchaser of a *Victor*. Get a complete line of the new *Victor Records* every month as they are issued and let your customers know you have them.

Get these customers in the habit of coming to your store regularly and have your salesmen play the newest records for them. That will get them buying and you'll round up a nice share of *Victor Record* business and run your profits 'way up.

There's no end to the money you can make on *Victor Talking Machines and Records*.

**Victor Talking Machine Company**  
Camden, N. J.

 P. S —A host of other dealers find this plan profitable and it should also be a good thing for you: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.)

Artistic Monthly Supplements furnished free for this purpose.

record. All disc machine users will agree with him on that point, but inconvenience is unavoidable at present. It is obvious, and I have pointed it out before, that a needle which will play through a 10-inch record should last out two 7-inch discs, but I doubt the wisdom of using it longer than that. The makers of the records are in the best position to judge the wearing effect of the needle, and it would be courting disaster to ignore their advice to use each needle once only. As to turning the needle, I have never experimented, but though one might be enabled in this way to use the same needle for two records with no deterioration in reproduction, the trouble of turning the needle would be just as great as that of changing it. The cost would be halved, of course, but, I take it, the average user is concerned more about the inconvenience than about the cost.

#### A STANDARD SPEED TEST.

Some valuable pointers on the matter of speed are given by the Edison Phonograph Co. (London), as follows: "On the back rod of every Edison phonograph now being sent out from the factory, two circular marks have been placed at a distance of  $1\frac{6}{10}$  of an inch apart. With the phonograph fully wound and running at full speed, and with reproducer arm down as for reproducing, the reproducer arm should travel from one mark to the other in exactly one minute, which indicates that the cylinder makes 160 revolutions in one minute. These marks may easily be made on any phonograph, but care must be exercised to make them exactly the right distance apart. Even a slight variation will affect this speed.

#### WANTS ACCOMPANIMENTS OF SONGS.

J. S. Simpson, of Cleveland, in a letter to The World, expresses a desire that the manufacturers of records should include in their lists the accompaniments of songs without the words. He says: "This is now done by the manufacturers of perforated music for use in piano players, and has proven a great success. A great many users of talking machines, particularly those

gifted with a voice, would like to be able to have an accompanying medium. I am in this class myself, having a tenor voice of excellent range and quality, but am unable to play the piano. I believe that if the manufacturers of records included a half dozen accompaniments of first-class songs in their next list, they would find a splendid demand for them if brought to the notice of users in the proper manner.

#### RECORD OF A CANARY'S SONG.

One of our subscribers, a talking machine dealer in the South, tells us of the great success he has had in making a record of the song of his canary bird. When he first attempted the operation, the noise of the machine frightened the bird, and it was impossible to get results. It took him almost a month to get the bird and the machine acquainted. Even after that time he made several attempts to secure a good record, but without avail. His effort on the "fifth round" was successful, and he claims to have secured a most marvelously true reproduction of the canary's voice. He would like to know if readers of The World have ever made such an attempt and if they have been successful.

#### SOUTH AMERICAN TRADE.

Some Remarks by the New York Commercial Show That the Importance of the Industry Is Being Recognized by the Daily Papers.

Like some of the trade papers our brethren of the daily press are now actually waking up to the value of the talking machine and the growth of the industry in this country as well as its ramifications throughout the entire world. The New York Commercial, for instance, a week or so ago, contained a lengthy story regarding the growth of the trade in talking machines and records as well as its future possibilities.

The writer, emphasizing that the industry is peculiarly American, referred at length to the educational work which is being accomplished through the study of foreign languages by means

of the correspondence method. The amusement features of the machine were also referred to, and the vast amount of money paid vocalists and bands for making records. At the close the writer says:

"As originally conducted, the export trade in American talking machines was handled exclusively in the United States, and practically all of the export departments of the various leading manufacturers were located at New York City, chiefly in the downtown section. In recent years, however, it has been found necessary to establish large central headquarters abroad, and the principal manufacturers now have extensive offices at London or on the continent from which both machines and records are distributed promptly upon receipt of order.

"Large stocks are kept constantly on hand at these points, so that buyers can avoid the delay incident to sending their orders across the Atlantic and awaiting shipment from the other side. This is obviously a marked improvement, and has done much to greatly extend the trade in European countries. At these headquarters, moreover, it is now possible to manufacture records in the language of the various countries served so that for records designed principally for local use such branches carry practically all that are made and are able to manufacture new and up-to-date records as they are required.

"In Mexico and throughout Spanish America an enormous business is now done in records prepared expressly for those countries. The list of Mexican records available, for example, comprises hundreds of selections. Practically all of the leading manufacturers, however, are still on the lookout for wideawake and energetic local agents, and any reader of this paper who perceives the great money-making opportunities that exist in this line will do well to at once place himself in communication with one or more of the leading manufacturers."

Bell Bros. Piano Co., Lawrence, Kan., have added a talking machine department, putting in the Universal line, via Doc. O'Neill.

## LIKE THE PHENIX, ARISEN FROM OUR ASHES!

On the night of February 3, our ware-rooms were gutted by fire, smoke and water, completely destroying or rendering useless a stock of over 80,000 records.

Nothing daunted, however, an order for an entire new stock was immediately wired to the factory.

The insurance was then adjusted, and every record in the bins, whether or not touched by fire, was taken out and destroyed. With an entirely new stock, we are now prepared to fill all orders for talking machines, records and supplies.

Our Flower Horn proposition is interesting dealers all over the country. Why not you?

## TIMELY TALKS ON TIMELY TOPICS.

When it comes to discussing current business manufacturers look worried and jobbers inclined to say things because they are unable to obtain all the goods they could easily swing and place to advantage. Manufacturers of machines, records, horns, cranes, cabinets and other essentials declare their plants are being run to capacity, and which, with the advancing price and scarcity of certain material, their business lot is not altogether a happy one. Advices from every section of the country are of the same tenor, jobbers taking on new lines and arranging their immediate trade on a basis which anticipates the largest spring buying by the dealer in the history of the business. From the action of a prominent manufacturer the wisecracks say a new product in the disc line, said to be superior, if not radically new, may be looked for later on, as preparations to that end are under way.

A special circular sent the music trade by the Victor Talking Machine Co., Camden, N. J., bearing date of February 12, says: "Wouldn't it be nice if your 'leader' in the piano line made styles that sold at \$100, \$200, \$300, \$400 and up to \$1,000—to suit any purse—all of one and the best quality, and prices were absolutely fixed by the maker all over the United States? You'd only need to carry one make and the millennium would have arrived in the piano trade.

"We have done and are doing these very things in the talking machine trade: (1) a comprehensive line of styles, (2) one quality throughout—'Victor quality,' (3) prices fixed—profits guaranteed, (4) percentage of profits more liberally arranged for dealers than those of any other line. Is it any wonder that so many piano houses have awakened to this unique situation, thrust upon them by what some of them considered an 'alien line,' and are now most enthusiastic exploiters of the 'Victor'?"

Manufacturers of the talking machines are elaborating their enterprises to an extent never dreamed of before. It will not be long before an entire opera cast will be heard on one of these machines. Formerly a tenor or a prima donna was enough. Now the costly artists from the opera house sing duets, trios and quartettes. The services of such performers are made possible, says our illuminating contemporary, *The Sun*, by the fact that all of these celebrities are now content to take a royalty on the sale of their songs rather than a fixed price. It was formerly customary to pay a certain sum, but the singers now clamor for a percentage, since there is such a great demand to hear them in this way.

A novel electrical instrument to transmit music and which is one of the two in existence in the world was exhibited recently at the semi-annual banquet of the Magnetic Club in Philadelphia. The transmitter, equipped with a three-volt dry battery, was placed in one part of the hotel,

while the enunciator was rigged up in the banquet room. A voice speaking into the transmitter, was heard in all parts of the banquet room, the enunciator, with a megaphone attachment, carrying the sound wave to all quarters. The instrument was also held near a piano, and the music was carried along the wire and enjoyed by the banqueters. Patents for the device are now pending, and until their issuance only two instruments have been made. One is in New York.

Mme. Yvette Guilbert, who is now delighting New Yorkers with her old chansons, collects talking machine records as a hobby. She has had Miss Ethel Barrymore make a record of her "locking up time" speech in "Alice Sit-by-the-Fire," and she will take back to Paris numerous other records of American players in their popular parts. This is very pleasant, no doubt, for Mme. Guilbert, but it would be more pleasant for us if she would leave behind records of her own wonderful enunciation for the admonishment, not only of our actors, but of most of our singers. Mme. Guilbert, wonderful in all branches of her art, is in nothing more remarkable than her power of distinct and lovely enunciation. Speaking or singing, not a syllable is lost, not a vowel misses its true value. For this alone she is a perpetual delight.

There are few phonograph stores in this city that can boast of the novel window displays constantly seen at the retail department of the Columbia Phonograph Co., at 872 Broadway, and to the manager of this store, Hayward Cleveland, belongs the credit of originating the many devices that constantly attract the passerby. His latest is a large picture of the Columbia factory at Bridgeport, Conn., which every evening is illuminated so as to present the appearance of the factory being lighted up, and even the passenger train and locomotive headlight glow in a most realistic manner. Mr. Cleveland is a great believer in artistic window displays and frequent changes. He also believes in having the public come in and inspect the stock, even if they have no idea of buying. A good salesman will soon put that idea into their heads, and then the rest is easy.

It is worth emphasizing that *The Talking Machine World* is the only publication devoting its space and efforts toward the advancement of the automatic business. This is done largely because of the close relationship that exists between talking machines and users of automatic contrivances which are so largely used nowadays in the arcades, some of them palatially equipped, which are to be found in every city throughout the country.

Many of the manufacturers of automatic contrivances have already recognized the advertising value of *The World*, and are represented in its columns, and we shall be glad to have more

fall in line. In the meantime from all interested in this department—which now may be termed an auxiliary of the talking machine industry—we invite co-operation. We will gladly open our columns to such communications as will be helpful to the interests of the automatic and specialty people as well as to the talking machine trade in general.

The Poulsen Telegraphone, which was illustrated and referred to at some length in *The Talking Machine World* some six months ago, is being displayed in the principal hotels throughout the country, and as a result the local papers where exhibited have devoted much space to it. The technical descriptions as well as the possibilities of the machine as recorded by the gentlemen of the local press contain such a number of inaccuracies as to easily lead the reader into wrong ideas of what it aims to accomplish. In this instance success can better be achieved in the laboratory than in the columns of the papers.

Epoch-making court decisions have been handed down since the previous issue of *The World*, all of which have been given the prominence elsewhere they deserve in the current number. A couple of the decrees are final, thus disposing of questions and matters affecting the trade. The most important in the latter category is that known as the Berliner patent No. 534,543, covering the free-moving stylus or recording point. The Jones process of disc record duplication is still to reach the United States Court of Appeals before the patent is adjudicated.

A traveling salesman known for his cleverness has a neat scheme of apparently running a needle over the face of records he is selling to demonstrate the hardness of the material. As a matter of fact, this feat is one of sleight of hand only, but it is effective in closing a deal.

George Maxwell, manager of Boosey & Co.'s American branch music publishing house, is a firm believer in the feasibility of publishers making their own records, and in this way control their copyrights absolutely. He has shown, as samples of what may be done in this line, a number of very fine duplex discs, including grand opera selections of famous singers made in Paris. The Kubelik violin solos are especially excellent, the tone effects being wonderfully preserved. The gentleman is an enthusiast on the subject, and unless something unforeseen should happen, as, for instance, those annoyances termed patent infringements, the American market may know more of these records.

Dealers, possibly thoughtlessly, get themselves in trouble with the manufacturers by trading in pianos, organs or other musical instruments for talking machines. This species of merchandizing is absolutely prohibited under the signed agreement, and when it is disregarded trouble will invariably ensue.

They were talking of the improvements in the trade when the chief of a prominent company's wholesale department remarked: "What would you think of a five-inch record with as much on

## A Perfect Repeating Attachment for Standard and Home Phonographs

AUTOMATIC

INSTANTANEOUS

This clever little device can be placed on the phonograph and adjusted with the fingers in a moment—without drilling holes or disfiguring the machine in any way.

The ingenious and simple yet absolutely perfect mechanism insures instantaneous action. It repeats automatically until the machine runs down or is stopped.

Sample, prepaid to dealers anywhere, \$1.50 (Standard or Home). Retail price, \$2.25. Usual discount to the trade. *Positively Guaranteed or Money Refunded.*

THE EDISONIA COMPANY

as a seven-inch, and a seven-inch running as long as the present 14-inch record? Both are in hand, and we will show the trade a few new things before long that will make you all sit up and take notice."

Quality is the supreme attribute, after all, of talking machine goods. A gentleman who had been abroad for several years said this fact was becoming more emphatic every season. As an instance of this, he cited that the cheap German record had flooded entire Europe, and in consequence the public is demanding a better grade and are willing to pay a higher price. "And," continued the speaker, "the same is true here. For example, of conditions in Europe I might say that two years ago there were only three Edison dealers in the German empire. Now there are 5,000, all under signed agreement. The machines are imitated, of course, but they resemble the genuine goods in appearance only, for they do not 'test out.' Our German friends take everything but Edison's name."

Speaking of appropriating Mr. Edison's name, in South and Central American countries every talking machine store is designated "Edison" stores, whether or no. The National Phonograph Co. have discussed means for putting a stop to the misleading practice.

Talent is being tied up, not only here but in Europe. Those in a position to know, believe record making of the real kind will be restricted to comparatively a few firms, and they will command the best in singers, talkers and general entertainers.

One of the striking things in the charming reception room of Fritz Scheff, the comic opera prima donna, is a large-size disc talking machine, and when she was asked why is that, replied: "Oh, that is for me when I am lazy. Everyone gets lazy now and then, and I get there oftener. When I am too tired to do my real half hour's work at the piano I just turn the crank on that and let Caruso stir me up to the right pitch. And when I have gathered the enthusiasm of his voice I get to work myself and come back to duty."

While strolling down Broadway the other day The World came across two of the old-time talking machine men in the persons of L. Kaiser,

who is known to dealers not only in Greater New York, but throughout the country, and Mr. Lewis who holds forth for the Columbia. Evidently the talking machine business has the happy knack of making the talking machine men seem younger every time you meet them. They apparently take life easy, although there are no harder working men in any industry in this country.

"While our foreign trade is increasing amazingly it is evident that our methods of doing business could be improved greatly to our advantage," remarked the head of the export department. "In a way we make records which we believe should sell in the Latin-American countries, and have a list which is recorded on the spot, but much more could be done were we to take a leaf out of the book of our European compeers. They work the export trade for all it is worth in every way, shape and form. We Americans are prone to having things our own way—wait for people to come to us. This policy is all right in some instances, but not for talking machines, etc. Our prices are stiff, our selling terms far from conciliatory, and our eagerness to do business, excepting as suits us, only too apparent. Perhaps these tactics may be changed, but not so long as the domestic trade is in its present attractive condition."

Dealers who are reproducing the words of copyrighted songs should know they invite a lawsuit for infringement. The lyric is acquired by the publisher at the same time the melody is assigned, the two going together. Publishers whose rights are invaded by the thoughtless or poorly informed in the talking machine trade in this regard may commence proceedings against violators that may prove anything but comfortable. Record manufacturers have been urged to print the words of songs reproduced, but have peremptorily declined on the ground of possible legal complications. Therefore dealers would be wise to bear this in mind.

#### DEATH OF MRS. L. F. GEISSLER.

The Talking Machine World regrets to learn of the unexpected and sudden death on the 2d inst. of Mrs. L. F. Geissler, the beloved and estimable wife of L. F. Geissler, general sales manager of the Victor Talking Machine Co., Camden, N. J. Mr. Geissler was in New York City on special business when the sad event occurred, and was apprised of the fact by wire. Their son, Fred, manager of the Talking Machine Co., of Chicago, started East immediately to attend the funeral of his mother. The World extends its heartfelt sympathy to the Messrs. Geissler in this their hour of bereavement.

Additions to the factory facilities and record making department of the National Phonograph Co. at Orange, N. J., are now finished and being fitted up with the required machinery. The two buildings, one of which is three stories, 125 feet front, 350 feet long, and the other one story, covering about the same area, are of solid cement. When in full operation they will double the company's capacity.

March business has started off with a swing, and the Eclipse Phonograph Co., of Hoboken, N. J., are certainly making the most of this improved state of affairs. They are having an enormous demand for their new style Morning Glory horns, and aver that the new Edison Grand Opera records have boosted this end of the business wonderfully.

Leeds & Catlin Co. will put out about 200 titles in their first list of cylinder records which the company was expecting to have ready about March 1, the masters being completed some time since. The numbers will include popular selections, serious, classic and sacred music and "talkers."

The Magnum Novelty Co., horn manufacturers in a small way at 1848 Lexington avenue, New York, have closed out at that address.

#### VERIFYING CONSULAR INVOICES.

(Special to the Talking Machine World.)

Washington, D. C., March 10, 1906.

Importers of talking machines, specialties, supplies, etc., will be interested in the amendment of consular regulations promulgated by the Treasury Department under date of March 5, 1906, as follows:

"678. Purchased Goods, Where Certified.—Invoices of merchandise purchased for export to the United States must be produced for certification to the consul of the district at which the merchandise was purchased, or in the district in which it was manufactured, but as a rule consular officers shall not require the personal attendance at his office of the shipper, purchaser, manufacturer, owner, or his agent, for the purpose of making declarations to invoices, but he shall certify invoices sent to him through the mails or by messenger. To conform to the statute which requires that merchandise shall be invoiced at the market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation to the United States, in the principal markets of the country whence imported, consuls will certify to invoices, the additional cost of transportation from the place of manufacture to the place of shipment whenever the invoice is presented to be consulated in a country other than the one from which the merchandise is being directly exported to the United States.

"680. Invoice and Declaration to be Verified.—When the invoice and declaration are received by the consul, it is his duty to examine carefully each item and satisfy himself that it is true and correct. In aid of this examination it shall be the duty of such consular officer to confer with official chambers of commerce and other trade organizations in his district, and he shall report any and all written communications from such commercial bodies and trade organizations that may be submitted to him in writing, together with all schedules of prices furnished him officially for that purpose; and the consul is authorized, in his discretion, to call for the bills of sale of merchandise purchased for export to the United States; to inquire into the cost of production of merchandise not obtained by purchase; to demand samples; and, if the conditions require it, to examine the entire consignment. Whenever an invoice is offered for certification which covers consolidated shipments consisting of the productions of different manufacturers, the consul may demand the submission of the manufacturer's bills relating thereto. Even when the merchandise has been purchased for export and the invoice sets out truly the price paid, the consul should ascertain whether the price represents the market value of the goods."

## TRADE NOTES FROM THE WEST.

**Healy Music Co. Expansion—Herriman With Columbia Co.—Cable Company to Handle Talking Machines—G. W. Nisbett Still Fighting for Lower Freight Rates.**

(Special to The Review.)

World Office, 195 Wabash avenue,  
Chicago, Ill., March 10, 1906.

The announcement that the Victor Talking Machine Co. had retired from the premium machine business is causing real rejoicing among many of the friends of the company and its product here, as they feel that it simply furnishes renewed evidence of the chronic high-gradism of the great corporation in every respect.

The Healy Music Co. have not only added a full line of American records but will also exploit the new Hawthorne-Sheble specialties as well.

One of the most perfect and delightful violin records on the market, according to one of our local dealers, is the Traumerei record of the American Record Co.

Hillman's department store will shortly have a greatly increased talking machine department, and moreover will go into the instalment plan of selling goods which they have not attempted before. Moreover they are going to handle the Columbia graphophones and records very extensively and will job them as well.

A. R. Tearney, the manager of the department, is an experienced, capable talking machine man, and people in the trade predict great things for Hillman's as soon as the larger plans are placed fully into effect.

A. D. Herriman, formerly with Siegel, Cooper & Co., and Rothschilds, is now in charge of the retail department at the Columbia main office here, which is a distinct step up for the handsome young talking machine man. O. J. Junge, whom Mr. Herriman succeeds, has returned to his old home, Omaha, to take charge of the business of his father, who is in ill health.

J. W. Bentley, a young man of wide business experience, is now assistant to O. W. Eckland, manager of the Columbia's Chicago instalment department.

G. S. Hobb, 11033 Michigan avenue, which is in Roseland, one of Chicago's southern suburbs, is doing a wonderfully successful talking machine business, handling all machines and constantly carrying a stock of 10,000 or 12,000 records.

John H. Dorian, assistant general manager of the Columbia Phonograph Co., and E. C. Plume, who manages their wholesale depart-

ment here in Chicago, are both Nobles of the Mystic Shrine and will join the pilgrimage of that organization to Los Angeles, Cal., in May. They will also take advantage of the opportunity to visit the company's Pacific Coast branches.

R. M. Townsend, manager of the order department of the Columbia's branch here, has returned from a visit to Texas, where he acted as best man at his brother's wedding.

W. W. Parsons is arranging for an especially fine display of Columbia Commercial dictation graphophones at the Office Appliance and Business System Show which opens at the Coliseum on March 17.

C. W. Noyes, secretary of the Hawthorne & Sheble Mfg. Co., and western representative of the American Record Co., has returned from a visit to the factories at Philadelphia and Springfield, and is again greeting his friends at his office and salesrooms at 205-207 American Express building, 185 Dearborn street.

By the way, the Hawthorne & Sheble Mfg. Co. have made arrangements for a factory within a block of the American Graphophone Co., at Bridgeport, Conn. In this factory they will make horns and accessories for the American Graphophone Co. only. It is a four-story building and equipped in a modern manner throughout.

The news of the month in talking machine circles is that the Cable Company have definitely decided to embark in the talking machine business. This is the most important step of this kind that has been announced for a long while, inasmuch as the prestige enjoyed in the music trade by the Cable Company, and their remarkably well organized distributive system, as well as their perfectly managed retail department, will serve to make them a power in the trade. It is a little early to talk about the lines to be handled, although it is believed that on his recent visit to the East, Retail Manager Joseph T. Leimert arranged for the Victor and Edison machines and records. The American records will also be handled.

The talking machine department will occupy handsomely fitted up quarters, with special record rooms, etc., on the third floor of the great Cable building at the southeast corner of Jackson boulevard and Wabash avenue, and will be in the immediate charge of J. W. Harrison, a well known and experienced talking machine man, formerly manager of the Columbia Phonograph Co.'s branch at Indianapolis, and for the past year in charge of the Cable Company's electric piano department. The new department will open in something like sixty days, and from the fact that Mr. Leimert is reported to have just placed or-

ders for a couple of commercial automobiles, which will not be of a character adapted to pianos, it may be predicted that a special delivery service which will be an eye-opener to the talking machine business will be inaugurated.

Arthur D. Geissler, manager of the Talking Machine Co., has been suddenly called to New York on account of the death of his mother, the wife of Louis F. Geissler, manager of the Victor Co.

G. W. Nisbett, manager of the National Phonograph Co., is now in St. Louis attending the meeting of one of the freight classifying committees arguing in the interests of reduced freight rates for the entire talking machine industry.

C. L. Hibbard, general superintendent of the commercial department of the Edison National Phonograph Co., in New York, has come to Chicago to exploit the Edison commercial dictation machine at this end.

This has been a wonderful year with the Edison machines, and the inventory just completed by the Chicago office of the National Phonograph Co. shows the biggest business in the history of the company.

Lyon & Healy are having a remarkable business in their talking machine department, and also on their now famous "Softertone" needles.

## JAMES F. COX'S INVENTION.

**A Talking Machine That Will Work in Unison With a Moving Picture Machine—His Description of the Device.**

James Fillimore Cox recently gave an exhibition at the Hotel Hudson, Nyack, N. Y., of a recent invention of his—a talking machine which is so arranged that it can work in unison with a moving picture machine and run without attention on the part of the operators. After producing a print on which was a plan of his machine in actual size, the inventor described it in a comprehensive manner. To his machine there is attached what Mr. Cox calls a repeater, so that one can hear the same selection played as often as the request is made to the operator, while trying to entertain a house party, only in this case there is no operator, as a baby may start it and the machine will continue to play and change the time and speed to suit the selection being played. This Mr. Cox accomplishes by means of a magazine on which a dozen standard records are placed. Any ordinary Columbia or Edison record will fit this machine, as it is made standard, and therefore avoiding any trouble whatever in securing new selections at any time and place.

The magazine is so arranged as to have only one record revolve at once, and immediately after this selection has been finished the machine can very easily make an electrical contact at this point and cause an instantaneous change of selection without the machine even stopping.

The question was put to Mr. Cox as to whether there was a similar machine on the market, to which he answered in the affirmative, but said that they have met with no success. The reason for this is that they possess such intricate parts and are so complicated that they have lacked in merit, and this has naturally brought the price very high.

"I would like to have it understood," said he, "that my machine is the result of a second attempt, as I first built what I term an automatic electric phonograph, which was also too complicated and too near like my predecessor's. I quickly convinced myself that I would have to advance on new and different lines of construction, which I immediately did."

In last month's issue of The World reference was made to the dismissal by Judge Platt of the suit of the National Phonograph Co. against the American Gramophone Co., in which it was stated that the costs of the suit were assessed on the defendant company. This is an error, for as a matter of fact the costs were taxed against and paid by the National Phonograph Co.

The Healy Music Co., Chicago, have put in a talking machine department. They are handling the Zon-o-phone.

## TALKING MACHINE DEALERS!

## STOCK - INCREASED - FACILITIES

The rapid growth of our business made these improvements absolutely necessary.

**Our Increased Facilities** permit the carrying of

### One-Quarter of a Million Edison Records alone,

as well as enabling us to carry a larger stock of Cabinets, Carrying Cases, Horns, Supplies and Accessories for the Phonograph.

**Our Increased Stock** will make it possible to fill orders completely and promptly, and overcoming the annoyance of short shipments due to the present shortage of stock, over which we have had no control.

Our absolute confidence in the future of the Talking Machine Business is demonstrated by these improvements and the additional capital investment necessary.

The present enormous demands upon the manufacturers for goods, and their inability to cope with the situation indicates that the business is on a permanent basis, and we predict it to be only in its infancy.

We urge dealers to follow our example—A larger stock means more sales.

The most comprehensive stock of Edison and Victor Machines and Records in the world.

Our display of Record Cabinets is absolutely unequalled—A visit to our salesroom will more than verify the above statements.

**N. B.—Douglas Scratchless Needles reduced to 5 cents each—50 cents per Dozen.**

**IMPORTANT DECISION HANDED DOWN.**

**United States Circuit Court of Appeals Hands Down Decision Restraining the National Phonograph Co. from Selling Instruments Within the State of New York.**

The United States Circuit Court of Appeals on Thursday last affirmed the decision of the United States Circuit Court granting to the New York Phonograph Co. an injunction restraining the National Phonograph Co. from selling phonographs and supplies within the State of New York. The decision, which is very brief, also calls for an accounting. The particulars of this litigation, which go back to 1901, appeared at the time of the suit in the lower courts, in *The World*, and is the common property of the trade. The decision follows:

"United States Circuit Court of Appeals for the Second Circuit, before Townsend and Coxe, Circuit Judges, and Holt, District Judge. Appeal from decree of the United States Circuit Court for the Southern District of New York granting an injunction and accounting.

"Per Curiam.—The court below, in its opinions, has clearly and exhaustively discussed all the questions which appear to be material to the disposition of this case. The arguments advanced on this appeal have received the consideration demanded by the importance of the case and the magnitude of the issues involved. We fail to find, however, any error in the reasoning or the conclusions on which the decree is founded, and we, therefore, deem it unnecessary to add anything to the opinion of the court below, in which we concur, and on which the decree should be affirmed with costs."

The business of the National Phonograph Co. will in no way be curtailed or interfered with by the above decision.

**THE O. K. HOUCK CO. CONCERT.**

**The Victor Appears as Soloist in Second Part of Programme With Great Success.**

At the first anniversary concert given by the O. K. Houck Piano Co., of Nashville, Tenn., at the Ryman Auditorium, that city, March 5, a number of notable artists appeared and interpreted a programme of rare interest. The second section of the well-arranged programme consisted of selections from leading vocal artists of the world, given on the Victor machine, which was controlled for the evening by David C. Erskine, who gave evidence of thorough acquaintance with the mechanism of the Victor. The records used

were clear and strong and the selections given were remarkably fine reproductions of the tones of the human voice, the numbers being clearly heard in all portions of the large auditorium. About 3,500 people were present at the concert, which was one of the social events of the season.

**TALKING MACHINE SUPERSEDES**

**Many Other Musical Instruments in the Affections of the People—Some Interesting Facts in This Connection from New Haven.**

Commenting upon the enormous increase in the talking machine business in New Haven, Conn., and vicinity, the Saturday Chronicle says: "The universal use of the phonograph has had a result that was foreseen by some people, and that is the abandonment of the smaller instruments of music to the professionals alone. There is a certain musically-inclined family in New Haven who used to, among themselves, play the violin, mandolin, piccolo and guitar, simply for their own amusement, and all furnished some excellent amusement. Now the instruments lie unheeded and untouched. One of the boys told me why. He played the banjo very well, and when a new piece of music came out he would get it and practice it until perfect. Now they have a phonograph, and when he wants music he purchases the record and enjoys it immediately, with all the rest of the family. It is due to the graphophone and kindred instruments that many private music teachers have seen their pupils disappear, who formerly made a very acceptable addition to their income. Down at the railroad building is a young clerk getting eight dollars a week, who has had as high as 35 pupils on stringed instruments, netting him a handsome income, evenings, who now doesn't have pupils enough to keep him in cigarettes."

**THE PHONOGRAPH AS COMPOSER.**

Many and varied are the uses to which the phonograph has been put. We read that a Mr. Howard, although a composer, is unable to read a note. So when he has an inspiration, musically, he gets out his phonograph, which he always carries in his trunk, and records the music from the piano. The cylinder is then given to a transcriber and the music written. He then has it played by a note reader, and any correction made if necessary. The music is then ready for the words. In this way Mr. Howard has given to the public "Hello, My Baby," "Good-bye, My Lady Love," and other songs which have struck the public's fancy with equal force. While on the

road this season Mr. Howard has found time to compose nineteen selections, including sixteen songs, with the aid of the phonograph.

**HEARING THE "TALKER" BY WIRE.**

**How Friends in Minnesota Entertained Each Other by a Long Distance Telephone.**

Wonderful things nowadays are so plentiful that they seem almost common. It is only when we stop to think and to make comparisons with the past that we realize in what a wizard age we live. The other evening one of our well-known citizens, who has, in common with many others, become a devotee of the perfected phonograph, and who has a very well selected collection of records, entertained some relatives in another town with phonograph selections, says the Red Wing (Minn.) Republican. The long distance telephone was called into service, and the sweet music was transmitted over the wire much to the delight of the distant listeners.

**PETITION DISMISSED.**

**Writ Denied in Case of Mrs. Lander vs. A. C. Stilphen, of Gardiner.**

(Special to The Talking Machine World.)  
Augusta, Me., March 10, 1906.

Justice A. M. Spear, of the Supreme Court, handed down a decision Friday in the case of Mrs. Edna Lander, of Gardiner, versus A. C. Stilphen, a Gardiner attorney, as clerk of the New England Phonograph Co., a Maine corporation.

The plaintiff, through her attorney, Hon. Geo. W. Heselton, of Gardiner, applied for a writ of mandamus to compel the clerk of the corporation to permit the plaintiff, a stockholder in the corporation, to examine the books and records of the corporation, for the purpose of learning the number of shares of stock held by various persons, and such other information regarding the operation of the company's business as she might see fit. A hearing was held before Judge Spear January 28 last, and at the conclusion of the testimony Mr. Stilphen filed a writ to dismiss the petition of the plaintiff.

**A VALUABLE ACQUISITION.**

The Columbia Phonograph Co. have secured a valuable acquisition to their list of singers in Miss Ruth Vincent, who is termed the leading star of English light opera. She made her debut in "The Yeomen of the Guard" in London, and afterward spent considerable time studying with Klein and Bouhy. She made her debut in New York in "The Medal and the Maid" in 1903, and returned to a greater triumph in "Veronique," in which she is now touring. Her voice is a pure soprano of great range and beautiful quality. Her method is notable for its ease, and her style for its refinement, brilliancy and charm. Her intonation is faultless, and she is in every respect an artist in the truest sense of the word. Her contract with the Columbia Co. is exclusive.

**ANNOUNCEMENT EXTRAORDINARY!**

I have secured the entire three-story building, located at 1622 First Avenue, near 84th Street, in order to accommodate my rapidly growing jobbing business. The entire building will be devoted to the Talking Machine industry. A Complete Stock will be carried of

## WRITES PHONOGRAPHICALLY.

The Latest Fad of Yvette Guilbert Is Destined to be Copied by the Leaders in the Musical and Dramatic Worlds.

Yvette Guilbert, she of the old-time naughty Boulevard chansons, who has recently returned to show New Yorkers that the chanson is not always naughty, hates pen and ink. Their use tires her and soils her pink fingers. She has disclosed her secret method of correspondence. The phonograph does it all. Every day she ships to her mother in Paris three records full of her day's observations. And similarly when the expressman comes with three records from her parent, she inserts them in her phonograph, sets it whirring, and sits by while she hears from that "dear old Paris." She has enlarged her plan to take in bright bits from the plays of her friends among the stage-folk. So now she can entertain a party with an afternoon of Barrymore, Leslie Carter, Dave Warfield and others, with tea and biscuits on the side.

## PHONOGRAPHS NOT TOYS.

A Recent Ruling by the Board of General Appraisers That Is of Interest.

(Special to the Talking Machine World.)  
Washington, D. C., March 10, 1906.

Marshall Field & Co. protested against the assessment of duty by the Chicago Collector of Customs, contending that certain phonographs were dutiable as toys under paragraph 418 of the tariff act. The Board of General Appraisers in a decision handed down Feb. 27, 1906, refused to allow the claim, by saying: "No evidence was offered by the importers. The sample forwarded by the collector, while of cheap construction, is apparently not a mere toy, and the records which are used in it are of the ordinary size and character. In the absence of any evidence showing that the articles are commer-

cially bought, sold and known as toys, we hold that the assessment of duty complained of was correct."

### RULING ON NEEDLES.

A protest by William Tonk & Bro. Co., Chicago, against an assessment on an importation of talking machine needles, was overruled by the Board of General Appraisers Feb. 27. In their decision, No. 6,215, the Board held that needles of the kind were dutiable at 40 per cent. ad valorem plus one quarter of a cent a pound, as manufactures of steel not specially provided for under paragraph 165.

## COPYRIGHT CONFERENCE THIS WEEK.

Nathan Burkan, attorney for the Special Committee of prominent New York publishers who attended the copyright conference in Washington, D. C., which opened in the Congressional Library Tuesday, the 14th, had prepared additional suggestions to be considered in connection with the protection of music, not only in sheet and book form, but also from a reproductive point of view. On the broad question of a new bill, the counsellor said: "Should this bill become a law, of which I have not the slightest doubt, the music publishing business will be in a better condition than ever before. This measure will be the means of running out the irresponsible concerns, and when it comes to negotiating with the manufacturers of perforated music rolls and talking machine records the composer of real merit and standing will find their position greatly improved. It is impossible to say whether Congress will reach the bill, should it be whipped into shape in time, which is also problematical. The conference in Washington this week has a lot of work before it. Should a proper revision of the present copyright statute be agreed upon it may be considered no small accomplishment, both from a legal as well as a lay standpoint." R. L. Thomae, with the Victor Talking Machine Co., was also present.

The title of the official bulletin (No. 10, "second print"), relating to the bill, is "Memorandum Draft of a Bill to Amend and Consolidate the Laws Respecting Copyright." It is dated March 2, and covers 48 printed pages, brief size.

Among those who will be heard by the House Committee on Patents will be Mark Twain. Chairman Carrier says no day has been fixed for his appearance, but he expects that it will be a gala occasion. Recently he appeared before a committee of the House of Commons on the same subject and proved so entertaining a witness that the committee kept him on the stand the entire day.

## DENHAM CO.'S BIG LINE.

The line of disc machines shown by the Edwin A. Denham Co., 31 Barclay street, New York, comprise about a hundred of all sizes, which they desire to close out at practically cost. The goods are of foreign manufacture and very attractive. The company claim they are in a position to import cylinder machines for the trade at a low price, and carry a heavy stock for quick shipment. They also have on hand a large quantity of pure aluminum horns, spun in one piece, that are especially adapted for low-price cylinder machines of any make. Another specialty is a cylinder phonograph with the tone arm. Something new and novel is a combination recording and reproducing machine, with cabinet and a pretty wooden base, the metal parts being substantially made and neatly nickel-plated.

J. Chas. Groshut, general manager of the company, returned recently from a very successful western trip, booking a number of big orders from the regular talking machine and music trades.

Herr Loewe, of the Bera Co., Berlin, Germany, who has been in this country for several months endeavoring to market the records of his concern and also a composition for making the same, sailed for Europe last week. His fondness for oysters occasioned no little fun for the trade when in New York.

# A MARCH TIP!

## DO YOU WANT TO MAKE MONEY?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

## An Orchestra In Itself

Here's what LEW DOCKSTADER, the Famous Minstrel Man,  
has to say concerning it

Columbia Phonograph Co.,  
New York.

My Dear Sirs:-

I have used your "Twentieth Century" graphophone continuously since July 14 last and have found it to meet every requirement. In tone quality, volume and clearness it is not surpassed or even equalled by any machine I have ever seen.

Anyone who thinks your machine is not a marvel should come to see Dockstader's minstrels and the graphophone will speak for itself.

Very truly yours,

*Lew Dockstader*

DEALERS who command a trade with proprietors of dance halls and other places of public amusement are assured of an immediate demand for the machine. Dealers report that the Twentieth Century increases their cylinder record sales 50 to 75 per cent. There's no "ifs," "buts" or "ands" about it. It's an established fact. That coupon, mailed, will bring you complete information and the interesting discounts we are now offering the trade. It will pay you to send it now lest you forget and miss the greatest talking machine money-making opportunity yet offered to dealers.

### DEVICE TO AUGMENT SOUND.

John Swem Inventor of Attachment for Which Remarkable Things Are Claimed in the Way of Sound as Applied to Talking Machines.

(Special to The Talking Machine World.)

Colorado City, Col., March 8, 1906.

John Swem, of this city, has perfected a device which increases the volume of sound of the ordinary record considerably more than double. "The volume of sound," said Mr. Swem, "can be increased so that the human voice can be heard more than a mile away. A record no larger than those in use on an Edison phonograph can be made to give forth every note of music played by a brass band as much louder than the band played the piece, as may be desired. A speaker's voice can be heard clearly and distinctly in the largest auditorium."

In support of his claims, Mr. Swem produced a record upon which he had been experimenting, and placed it in an Edison phonograph. When the machine was set in motion the words, "Modern inventions have revolutionized the world," came out clearly and distinctly in an ordinary tone, but when he applied his device to the instrument, the sound came forth as if uttered by a giant, so that in the small room it was almost deafening.

Mr. Swem will immediately apply for a patent, as he feels assured it will meet with a ready sale to the manufacturers of phonographs, as it will be in public demand.

### EDISON GRAND OPERA RECORDS.

The grand opera records issued by the National Phonograph Co. are in great demand, and reports from dealers everywhere state that they are an immense success. Dealers at first were a little careful in ordering, but the demand is now increased to such proportions that there is no question but a big business will be transacted with these latest products of the National Phonograph

Co. The second issue of the ten Edison grand opera records will be in April, and will be by the same artists as sang the first list. It has been decided not to issue these records more frequently than once every three months, the dates for 1906 being as follows: May 1, August 1 and November 1. Steps are now being taken toward having Edison grand opera records made by other noted singers.

### VICTOR CO. EXPLAIN DELAY

In Shipments of Records—Demand Exceeded the Most Sanguine Expectations—Working Day and Night—Erecting New Plant That Will Insure All Demands Being Met.

Leon F. Douglass, vice-president of the Victor Talking Machine Co., Camden, N. J., has just sent out the following communication to Victor dealers:

"We believe an explanation of our inability to supply the demand for records is due to our distributors and dealers. Before reducing the price on records, we took precautions to work up to a capacity double the demand for records. You will recall we estimated that the reduction would double the demand; instead of only doubling it, it has increased it four times. Notwithstanding we had double the capacity when we made the change, we had previously ordered—at an expense of \$100,000—sufficient machinery to enable us to turn out four times the quantity of records for which there was a demand last fall. This machinery has just commenced coming in, and in the near future, our capacity will be above the present demand.

"We just completed a power plant last fall which we thought would take care of our increase for the next two years. We have already been obliged to abandon this plant—which cost us \$50,000—tear down four buildings and have started up a new plant far beyond what we thought we would need in the next five years so that we can surely promise you full relief in

the near future. Temporarily, we are working night and day with our present plant, though under some difficulties, as a great many girls are employed in this work who object to going home late at night. To overcome this, we have been obliged to get carriages to take them home. I only speak of this small incident to show you that everything is being done that can possibly be done—regardless of expense—to take care of this enormous unlooked for increase, and we trust that distributors and dealers will be as patient as possible under the circumstances."

### PRICES REDUCED.

The reduction of prices on Leather Post Cards from \$3.70 to \$3.10 per hundred, announced by The Risley-Bird Mfg. Co., will enable dealers to make a profit of \$6.90 per hundred. On trial orders an assortment of 67 styles is sent with each hundred, and the name of the dealer's town stamped on each card without any extra charge. These leather cards are quick sellers and since sofa pillow covers made with them have become a fad they are moving much more rapidly.

Any further information will be sent on request by The Risley-Bird Mfg. Co., 94 Fifth avenue, New York.

### HAWTHORNE & SHEBLE VERY BUSY.

Hawthorne & Sheble Manufacturing Co. report the sales of their talking machine cranes as steadily increasing, and as the United States Patent Office have allowed them very broad claims for letters patent they are largely increasing their facilities to manufacture so as to be able to supply the growing market. These cranes are now on sale in every large city in the United States, as well as in foreign countries.

John Rose, who purchased the talking machine business of Harry Jackson at 219 Bowery, New York, with various branch stores, has removed the jobbing business to Astoria.

**D**EALERS are beginning to learn that it is to their advantage to purchase the best records, and because the record quality is being scanned more closely than ever before is one of the reasons why the demand for the **ZONOPHONE RECORDS** continues to increase so rapidly.

We invite the most critical examination of our product, because we are convinced the closer the dealer goes into the subject the more he will become captivated by the results obtained from the

# Zonophone Records

They sound different than other records, and they sound better. We might add that our list for April surpasses any previous list that we have put forth. There are included in it a larger number of vocal records than has appeared in some of our previous lists, and they are all good. They are bound to be big sellers, particularly when the Ten Inch Zonophone Records sell for **Fifty Cents**.

28 WARREN STREET, NEW YORK

## TRADE NOTES FROM CINCINNATI.

An Interesting Chat With Rudolph Wurlitzer, Jr., Who Speaks of the Educational and Enjoyable Features of the Talking Machine—New Department at Wurlitzer's—The Value of Association.

(Special to The Talking Machine World.)

Cincinnati, O., March 10, 1906.

Rudolph Wurlitzer, Jr., of the firm of Rudolph Wurlitzer Co., agents for the Victor and Edison talking machines in Cincinnati and vicinity, spoke very interestingly on the general scope, usefulness and future of those instruments, when seen by the World representative the other day. From an educational standpoint the talking machine will, in the estimation of Mr. Wurlitzer, assume a distinct stand. It offers to persons who have neither means to attend concerts of good music, nor ability to play upon an instrument, the opportunity to become familiarized with high-class selections and the personal interpretations of the best instrumental and vocal artists. The advance of the Victor talking machine in the way of producing high-class records, Mr. Wurlitzer considered remarkable and praiseworthy. The Edison machines move along more utilitarian lines. Within the next few weeks the Wurlitzer Company will establish an exhibit of the Edison machines, giving language lessons on a graded scale. These machines have, as is well known, already been established at West Point and Annapolis.

The talking machine business is increasing at such a pace that the Wurlitzer firm will establish a new department entirely separating wholesale from retail. The third floor of the new store will be given over to the wholesale line of the talking machines under the direction of Mr. Dietrich, while Mr. Strief will attend to the retail in the basement of the store, which is fitted up with a series of sound proof booths. The purely commercial advantages of the phonographs and talking machines obtain but slow recognition in this vicinity.

Speaking of the advantages expected to accrue from the newly formed association of talking machine jobbers, Mr. Wurlitzer said in substance, that each member of the association was bonded in the sum of \$500 to maintain the agreements decided on. These mainly concern uniform rates to jobbers and dealers, matters concerning the delivery of records to the public on a certain specified day, irrespective of actual date of reception, and an effort to obtain the records at stated periods from the original companies, in such fashion that the express charges, which are enormous on records, would not absorb all the profits thereof. Mr. Wurlitzer did not detail the manner of this arrangement, but stated the amount of express charges paid monthly by his company in an effort to obtain records in time to offer to the public. The sum thus disbursed amounted to a handsome figure.

## PLATING DISC RECORDS.

Some Suggestions in This Connection from a Man Who Has Been Through the Mill.

The probable cause of metal disc records not being on the market is the great expense of material, according to an English talking machine man, who suggests that with little trouble it will be easy to copper-plate composition records, and so make them practically everlasting. It seems almost impossible to wear them out. The only drawback is the needle requires changing every time instead of every two or three times. "I suggest," he said, "a smooth 7-inch first, and choose a record with a deep wide cut. If instructions below are followed, any one can do them successfully, as I have done."

See that face of record is free from grease, sprinkle face with powdered plumbago, polish with a very soft camel's-hair brush till a bright polish is obtained all over face. Great care must be taken not to scratch record. Make a saturated solution of pure copper sulphate

(free from iron sulphate), add a little sulphuric acid, bring a length of wire from carbon of battery, join to a copper plate; suspend in sulphate solution; bring another wire from zinc of battery. Make a loop thus \_\_\_\_\_, join through center hole of record; bring wire out at back of record; suspend it in solution, facing copper plate, about two inches apart.

An electrical deposit of copper is thus obtained, which in no way interferes with reproducing qualities of record. If desired a deposit can be obtained all over by polishing all over with plumbago or block black-lead. In this case it is best to bring two wires from carbon of battery and suspend record between two copper plates. A bright deposit is thus obtained all over record, and deposit of copper is less likely to chip off, as copper is practically all one piece if done correctly. This method is similar to that by which the original matrices are made.

## CLUB SCHEME FOR SELLING

Seems to Have Had Its Origin in England—What J. F. Greenwood, of Manchester, Says in This Connection.

In a recent issue of The World reference was made to one of our subscribers, a dealer, having adopted a club scheme for selling talking machines. While the idea is not entirely universal in this country, it seems to have had its origin in England, for J. T. Greenwood, of Bacup, Manchester, writes: "I have had similar clubs in operation for nearly three years, and they have been a great success. I run them on the forty weeks' system. If a subscriber requires a £2 (\$10) machine he pays 1s. (25c.) per week; if he requires a £4 (\$20) machine, 2s. (50c.) per week; a £5 (\$25) machine, 2s. 6d. (72c.) per week, and so on, at the rate of 1s. (25c.) per week for every £2 (\$10). If there were twenty members in the club a draw would take place every two weeks, and the subscriber whose name was drawn would get his machine even if it were a £5 (\$25) one and he had only paid twice. So you see the English club goes one better than the American."

## TAKES PLACE OF "SUPERS."

Beerbohm Tree Gives "Richard III." With Disc Records of Armies in Fierce Fight.

A dispatch from London, England, says that the disc talking machine as a substitute for "supers" is the latest device which Beerbohm

Tree has introduced into his theater. By the use of the machine Mr. Tree now supplies his sound effects.

In "Richard III." he had his entire company rattle swords and chains before the instrument, and then used the discs in the theater. The advantage of this method is that he always gets precisely the same effect. The talking machine company grasping at once this new field for the use of their instruments have secured records of chimes, organs, pianos and violins to be used in theatrical productions.

The manufacturers have progressed so far that in case of labor troubles with stage hands they can supply a machine of immense size that will furnish a complete selection of the music of the Coldstream Guards Band almost as well as if the band itself were playing.

## SPEECH IN A PHONOGRAPH.

President Underwood Talks by Proxy at Erie Association Dinner.

The Erie Railroad Association had its eleventh annual family dinner at the Hotel Savoy recently, and 250 officers and men, ranging from vice-presidents to chief clerks, attended. They came from all over the United States to attend the dinner, some from San Francisco, some from Boston and others were represented from Portland, Me., and New Orleans. The representatives from New York filled the foreground.

F. D. Underwood, president of the road, was on his way to California, but that his voice might be heard he had a little speech carefully preserved in a phonographic record which was let loose at the right moment.

The programme for the entertainment was full of surprises. An orchestra, for once clad in modern clothes, rendered the Erie anthem to the tune of "John Brown's Body." It was full of local hits and was heartily applauded.

A moving picture machine added to the amusement. Pictures of the robbery of an express train were displayed. To those not initiated, the comments of the railroaders were not to be understood. But it was very realistic and impressed everybody. One old man was observed to reach for his revolver when the robbers boarded the car.

Langley & Winchell, one of Boston's big jobbers of talking machines, have opened an attractive establishment at 35-37 Aborn street, Providence, R. I., which is under the management of J. H. Magner.

Long Distance Telephone—Number 1745 Gramercy.

NEW YORK, MARCH 15, 1906.

**D**EALERS and jobbers who are complaining about the inability of manufacturers to fill their orders more promptly should be fair in their criticism. In the first place this industry has shown a phenomenal increase. It has gone ahead at a pace never equaled or approached in any other trade, and when the manufacturers made what they supposed were ample preparations to take care of a reasonable amount of trade, by making substantial additions to their productive capacity they felt that they had gone far enough—at least as far as good judgment and conservatism should permit them to go. They did not dream of such a marvelous expansion, such an unceasing demand for products from all quarters of the globe in such an uninterrupted manner.

**T**HEREFORE, it could not be reasonably expected that they could meet all of the demands made upon them with just the same degree of promptitude which they would like. The dealers should understand that it is not the desire of manufacturers in the slightest to hold back orders. On the contrary they are working day and night to take care of their trade, and if they are compelled, as they are in some cases, to parcel out their product here and there by the partial filling of orders, they are doing the best they can under the circumstances. They are, however, making preparations for an augmentation of output, but it takes time to enlarge factory facilities. All of these projected moves may be made on paper in a very limited time, but to erect factory buildings and install therein special machinery requires something more than a few sketches from the architects, particularly in these days when we are confronted with labor problems in various forms. The question of supplies is not an easy one, and patience should be exercised by the dealers, some of whom have written us expressing bitter disappointment regarding the failure of manufacturers and jobbers to promptly fill their orders. They are utilizing all the means at their command to consistently take care of their trade.

**T**HERE are no more progressive or energetic men to be found in any industry than the one in which The World plays an important part, and our readers should rest assured that there is no time or energy lost by the manufacturers in trying to meet the situation squarely, but it is beyond the power of most of us to do just what we most desire at all times. There seems to be a steadily rising tide for talking machines and supplies from everywhere on earth, and in another year the makers will be better prepared to meet the growing demand, for growing it will be, for we belong to the optimistic class, who believe that the talking machine industry is only in the first stages of its development. The business will change. New features will be introduced, but it will not halt. It has far outgrown all predictions made for it years ago, and it has done even more. It has overcome public prejudices, and has now reached the dignity of an industry, and as will be shown by consulting our special reports, it is not only in America, but in all foreign countries that the talking machine exerts a powerful influence.

**T**RADE in all lines continues excellent, and the business man who does not show material advance this year with favorable conditions all around must at once figure that his policy is a wrong one, and he had better relegate it to the scrap heap of an unhappy past, and dig up some new theories as a substitute for the old. Business is good, and every dealer in this industry should score excellent results. We have noticed in our travels some attractive lines of advertising prepared by local talking machine dealers, and we would suggest that all of our readers forward to The World marked copies of their advertisements which appear from time to time, as it might prove an interesting feature to reproduce some of these with comments. Do not fail to send us marked papers containing your advertisement. We should like to know what all of the people in this line are doing to win their share of trade.

**T**HE window features should not be overlooked in the talking machine business and right here we wish to say that window space in many instances is not used to the best advantage. We have seen the windows of numbers of talking machine people filled with an unattractive assortment of machines poorly displayed, the whole scene presenting an uninviting appearance which naturally has the tendency to repel rather than to attract trade. What a refreshing contrast to step from such a store into one where every square foot of window space is used to the best possible advantage to attract trade. We have in mind, as such an illustration, one of the largest music trade houses in the West, whose display we recently inspected. Instead of their windows being filled with pianos, the proprietors had given the talking machines and accessories the premier position as nothing appeared in the window but talkers, horns and records. The whole window scheme was developed in an attractive manner, and thousands of people would stop to admire the show, and at the same time the impression was left upon their minds that talking machines have grown to be important factors in our modern life.

**W**E saw another window wherein was worked out a pretty home scene by having figures seated in a room wherein a huge

talking machine was doing the entertaining. This was one of the cleverest forms of advertising and it attracted a vast deal of attention. The proprietor informed us that he considered that his investment in window space was worth thousands of dollars to him. We mention these facts because it is constantly shown to us that all of the dealers do not appreciate fully the advantages which may accrue to them through excellent use of their window space.

**A**ND while upon the subject it might not be amiss to say a few words regarding the qualities of salesmanship. The business is so new that we have thus far developed a limited number only, of what we may term expert talking machine salesmen, and yet the trade affords great opportunities for bright, energetic young men who will make a study of the selling end of the business, and who will treat it as a profession. Superficiality never counts for long in any line. It might be expected by those uninformed that the talking machine would tell its own story, so it does, but the story should be supplemented and reinforced by good, clever, convincing work on the part of the salesman.

**T**HE salesman should learn something of the possibilities of the talking machine, and if he devotes his energies to the business in a conscientious manner, he will at once understand the necessity of acquiring a knowledge of the talking machine and its capabilities, for when we figure that to-day one hundred dollar outfits are frequently sold it must at once be seen that it requires a good salesman to impress upon customers the excellence of those goods. He can best handle the situation by thoroughly posting himself as to what the machines will do. Learn the business thoroughly and then success will be nearer, and most of us like to be as close to success as possible.

**T**HERE is no section of the civilized world that The Talking Machine World does not reach. The list of our foreign subscribers is steadily growing, particularly throughout South American countries, Australia, Africa, India, Great Britain, France, Germany—in fact wherever talking machines are sold. Our advertisers are constantly sending in such letters as the following, which we have just received from the Star Novelty Co., of Grand Rapids, Mich., in which they state: "Through our advertising in The Talking Machine World we have received orders from England and continental countries, one coming from Paree, Java, Dutch Indies."

**W**E cannot give the space to the reproduction of the many kind things said by advertisers and subscribers anent The World, but it is most gratifying to find that its army of readers is steadily increasing throughout the globe. The World has fairly demonstrated its ability to pose as a helpful adjunct to the industry, and we ask the co-operation of our readers to make it better and broader by sending to us at any time matters which they desire discussed in our columns. This publication is intended to be, in the truest sense, the forum of the talking machine industry, and there are no interests which should be neglected in the slightest, as a united industry means progress in every department. Let us all stand together for the best interests of the talking machine trade. It is worthy of splendid support on the part of those interested in its promotion.

## "TALKER" SUPPLANTING ORGAN

In the Homes of the People, Says J. H. Estey, of Organ and Piano Fame—Improvements in Machines and Discs Responsible.

The popularity of the talking machine in the United States is simply phenomenal, and business for the opening months of the present year affords further evidence that our dealers are waking up to the great trade which may be done in these goods when properly demonstrated and pushed. According to J. Harry Estey, head of the famous Estey Co., manufacturers of pianos and organs, the talking machine is seriously affecting the popularity of the reed organ. Talking on this subject some time ago he said: "You ask, what are some of the things that have lately hurt the trade in reed organs? Well, I think the talking machine is a large rival. I do not care to assume too positive a position on this point, but I believe my theory will prove correct. I have been doing considerable automobiling this summer through the open section of this part of the country, and my attention was attracted by the fact that in many instances the talking machine supplied the musical wants of the farmers' homes. Now, take into consideration the tremendous strides that are evident in the talking machine field, and you will see that this instrument is appealing to something more than the mere passing fancy of the people. The new disc records with their superior tonal accomplishments are responsible for this in the largest measure. Mind you, I by no means believe that the talking machine is going to make good for a great length of time as the supplier of family music, and yet I believe that it is doing so at present in a much larger degree than we imagine. How the organ dealer is allowing this machine to be substituted where he could make reed organ sales is a matter I believe for his serious consideration."

## HER VOICE SAVED FOR POSTERITY.

The voice of the dead was heard at the funeral of Miss Minnie Nelson, 1711 Kenmore avenue, says the Chicago American. Three weeks ago she sang "Nearer, My God, to Thee," into a phonograph, and every tone of her beautiful soprano voice was reproduced by the phonograph at her funeral, causing her friends to comment on the strange experience.

"Miss Nelson, who was a music teacher, was possessed of a voice of unusual range. At a party she was induced to sing into a phonograph—a song, a pathetic ballad and finally the famous

hymn. The three songs were reproduced at once, and all present were amazed at the fidelity of the reproduction of every tone in the singer's voice.

"She was taken ill, and expired suddenly, and her funeral services were held yesterday. After the funeral address, the phonograph softly reproduced the song the girl had sung before the shadow of death fell upon her. All present who knew of the circumstances were deeply affected."

## A CAL. STEWART STORY

Brought to Light by Howard Taylor, Middleton—A Pleasing Reminder of the Dean of Talking Machine Talent.

Howard Taylor Middleton, whose phonographic stories are well known to readers of The World, in a recent communication, writes:

"Searching among a pile of old letters the other day, I came across one from 'the grand old man' of the talking machine talent, Cal. Stewart, which I think will prove interesting to the readers of The World. There is probably no one man in the business to-day who has created more good wholesome laughs than this gentleman, and while his field at the present time is restricted to one company, his records are still greatly sought after. I was quite a youngster at the time this letter was received, and, boylike, developed the hobby of collecting autograph-photographs of my favorites among the talking machine stars. Mr. Stewart was one to whom I wrote in this regard, and his kind answer to my request follows. It contains a clever little story, which I believe was never published before:

"New York, Nov. 5, 189—

"Dear Sir—I am in receipt of your favor of the 2d, dated at Philadelphia, and I am very much pleased to know that my phonograph stories have pleased yourself and friends. Still, at the same time, I am not egotistical enough to think that I am such a famous personage that my autograph would be any great treasure. But as you have asked for it, you shall have it. I am also sending you by this mail my photo in character and out of it, which I hope will reach you in good condition and find you in the best of health and able to stand up to the rack and eat your fodder. And now I want to tell you something:

"When I came down here to New York City I allowed that while I was here I would get a tooth pulled that was growling around for a spell back, so I went in to one of them tooth destructin' parlors and told the feller in there that I had been waitin' a long time to get that old tooth

out, for there had been times when it was pretty hard to have that tooth and be a Christian.

"Well, he pried open my mouth and put a patent derrick into it, and then he done some drillin' that made me think he had worked in a stone quarry at some time in his life. Well, after he had prospected around for a while, he told me that it was a pretty bad tooth and would cause me considerable pain, and asked me if I would take gas. I told him that down in Punkin Centre where I lived we didn't know much about gas, and if it was all the same to him he could give me kerosene. I remain, sincerely yours,

"(Signed) CAL. STEWART."

## HELPED TO FORGE WILL.

Peculiar Use of the Talking Machine Comes to Light in Hungary.

The talking machine has certainly been used for many strange purposes, but some recent facts which came out in a will contest in Hungary afford further proof of its growing use in the courts of law. It seems that Alois Szabo, the son of a wealthy peasant of Szegedin, Hungary, who died recently, was arrested on the charge of forging a will by means of a talking machine. Shortly before the death of the father the servants were called into his room and heard a voice proceeding from the bed say: "I leave all my property to my eldest son, Alois, and my other children are to get nothing." As a verbal statement made by a testator, when on the point of death, in the presence of witnesses, constitutes a valid will in Hungary, this disposition of the peasant's property was upheld in the courts.

A few days ago, however, Alois' mistress, with whom he had quarreled, alleged in a talk with the police that the voice the servants heard was not that of his father, but that Alois had spoken the words into a phonograph. According to her he had placed the instrument under the father's bed, and when the old man had lost consciousness called the servants in and set it going.

## AN EXCHANGE FOR RECORDS

On the Tabard Inn Plan Opened by an Enterprising Talking Machine Man in New York.

An enterprising retailer of talking machines on the west side of this city has opened an exchange for records. Since the withdrawal of the exchange system by the leading companies he found that his sales were gradually falling off, due in a measure to the exchanging of records by his customers among themselves. He at once applied the Tabard Inn system to his business, securing a quantity of used records for a base of supplies. By the purchase of a new record at least once a week, his patrons upon the payment of five cents could secure the use of a used record for one week. He finds that his sales have increased, and that he has more than made himself good on the records that he had regarded as dead stock.

## MARIE HALL'S GOOD WORK.

The Great Artiste Says Many Things in Favor of the Talking Machine, of Which We Are Most Appreciative.

Marie Hall, the distinguished violiniste, who has just returned to Europe after a successful tour of the United States, is an ardent admirer of the talking machine, and had good words to say for it, no matter where she appeared throughout the country. As Marie Hall is an artist to her finger tips this commendation has helped in no small way to emphasize the artistic merits of the "talker." For instance, in several Western papers we notice that in the interviews she gave the reporters she made the point that she has a talking machine in her home in London which plays many American airs, and plays them well enough to please her. She has also paid tribute to the possibilities of the machine in most pleasing way, for all of which many thanks.

## PHILADELPHIA'S BUDGET OF NEWS.

Trade Conditions Favorable—Fascination of the "Talker"—Additions to Victor Plant—Johnson's Enterprise—Magnetic Club's Experiment—Lewis Talking Machine Co.—The Phonograph in Melodrama—Metropolitan Amusement Co. Organized—The News of the Month in Detail—Strawbridge & Clothiers' Clever Talking Point—It Sells Machines.

(Special to the Talking Machine World.)

Philadelphia, March 12, 1906.

Trade conditions are reported favorable by local dealers, there being no question that trade this spring is far better than a year ago; again there are more people in the business and more talking machines in use, thus stimulating the demand for records and other accessories.

The Musical Echo Co., with well furnished parlors at 1339 Chestnut street, are carrying a full stock of Victor machines and records. Manager Bentley and his assistants are successfully reaching out for high grade business.

"I think much of the success attending the talking machine business can be attributed to the fascination it exerts over almost everyone having to do with the business," said a Chestnut street jobber, to The World's representative. "Music we know is pleasing to all and downright fascinating to many; and, outside of its musical feature the talking machine is interesting and instructive as well as useful and valuable, because of the many uses to which it can be put. As an invention it seems to me that it is entirely in its infancy, wonderful as it is how far it has already advanced as a scientific, commercial and mere toy instrument, and what the future of it will be time alone can tell. As a jobber I have the greatest faith in the machine as a commercial commodity. The business of selling them is a clean, pleasant one—quite in a class by itself so far as respectability and agreeableness is concerned and it does not surprise me to see so many going into it and meeting with excellent success."

Leon T. Carpenter, R. B. M. McIntyre and Geo. W. Booth, Philadelphians, together with Wm. L. Casselman, Jr., of Camden, N. J., have organized the Metropolitan Amusement Co., and secured incorporation papers the past month. The main object of the company is to open amuse-

ment parlors, where phonograph, moving picture, etc., machines will be the attraction. It is said the company will ultimately invest \$20,000 in the business. Its office is at 111 Market street, Camden.

John A. Smith, one of Camden, N. J.'s, leading phonograph and musical instrument dealers, journeyed to Albany the past month, where, as a Hearst lieutenant he looked after several political matters. Incidentally he looked over the talking machine field in New York and laid in a number of up-to-date purchases. Mr. Smith is enjoying a very good run of trade, and reports large Victor sales.

The "always busy factory" would be a descriptive title for the large plant of the Victor Talking Machine Co., of Camden, N. J. In all departments work is being vigorously pushed and efforts to "catch up" with orders are being made. Construction work on the large new addition to the Victor plant is being prosecuted. The addition to be erected will form a portion of a future six-story building extending eastward on Cooper street—and will harmonize with the present handsome main structure. The addition will be 40 by 89 feet, one story in height and absolutely fireproof. As soon as completed there will be installed in the new addition a 300 h. p. Corliss engine, of most approved type; one 150 and one 100 k. w. generator, directly connected to engine; a large air compressor, pump and minor equipment—all of which machinery has been ordered. It is stated that when completed this power plant will be one of the most efficient of its kind in the State.

Eldridge R. Johnson, of the Victor Co., is among the organizers of the new West Jersey Trust Co., of Camden, which will have a capital stock of \$100,000 and do a general trust and banking business—probably at Third and Market streets. Under General Manager L. F. Geis-

ser's care business at the Victor works is running smoothly and well, while George Ornstein, manager of the salesmen's department, has the happy faculty of inducing the "travelers" to send in large orders right along.

The Magnetic Club, of Philadelphia, a semi-social scientific organization, at its recent banquet, placed an instrument called a telegraphone in operation between the banquet room and another part of the hotel. The instrument, with megaphone attachment, transmitted speeches made to the distant part of the hotel and did a number of interesting things. A talking machine dealer here said of the telegraphone: "It is an instrument which phonograph dealers could handle to advantage, it seems to me. For instance, a No. 1 phonograph when playing could, via the new instrument, send its sound waves all over a house, or, say in the country, to many farmhouses when not a few but really hundreds of people could enjoy the latest songs, music, speeches, etc."

C. J. Heppe & Son, who operate three large music, etc., stores in advantageous sections of the city, have for some time been selling talking machines on the weekly instalment plan and find that it is highly successful.

The Lewis Talking Machine Co., whose headquarters are at 15 South Ninth street, this city, may be counted among the progressive concerns in the talking machine business. Mr. Lewis is an enthusiastic worker and has built up a fine jobbing trade. He carries at all times a large stock of the Columbia disc and cylinder graphophones, which are growing in popularity in this section. The 20th Century is certainly a wonder.

"Our machines are adjusted by experts" is a telling point Strawbridge & Clothier make in asking buyers to look into the merits of Edison and Victor talking machines. Notwithstanding the fact that talking machines have been on the market a comparatively long time, there are many, many people, especially those from small towns and villages, who know absolutely nothing of the mechanism, etc., of talking machines, and Strawbridge & Clothier's policy of "educating" them is a wise one as increased sales prove. The firm's talking machine department on the third floor is in charge of expert managers, and a stock of everything "phony" is carried.

"The phonograph will yet play a most important part in a melodrama," commented a South Eighth street dealer. "You remember in the play of 'The Octoroon' that just as the heavy villain, Simon Scudder, gives sweet little Paul his death blow with the Indian's club, a camera snapshots the villain's act and finally the Indian, from the photo tracks down and makes mince meat of the villain. Note the connection between camera and phonograph. In the coming phonograph-drama an instrument, set for recording, overhears two villains plotting the death of Reginald Goodheart, affianced husband of beautiful heroine. Ere the weighty scoundrels can accomplish their wicked design records are put on another machine—owned by the heroine, of course—and burr—buzz—great heavens! she hears the machine tell of the plot between the villains to kill Reginald. She flies to him! Warns him! The villains skedaddle and all ends happily. Innocent phonograph is put in glass case and is chief ornament of happy married couple's home. Oh! I tell you, the phonograph has hardly been heard from."

The Santa Fe Watch Co., Topeka, Kan., are building up quite a business in talking machines in their territory. An attractive feature of their publicity was the public concerts which they have been giving, in which the Twentieth Century graphophone has proven a great feature of attraction.

The Columbia Phonograph Co.'s new store at 636 Penn avenue, Pittsburg, Pa., was formally opened to the public on Feb. 24. In this connection some very excellent advertisements were carried in the local papers in which a number of attractive efforts were made that must have interested the thousands of visitors.

## "THE WHITE BLACKMAN"

WILL GIVE YOU THE GOODS

AN  
**Edison**  
Jobber

Give me a chance to show you the prompt and careful attention I give EDISON and VICTOR orders. You lose the PROFIT and perhaps the CUSTOMER if you can't get goods quickly. I keep getting NEW CUSTOMERS and HOLD the OLD CUSTOMERS. You will know the reason if you send a few trial orders.

"IF BLACKMAN GETS THE ORDER, YOU GET THE GOODS."

J. NEWCOMB BLACKMAN, Prop.  
"The White Blackman."

97 Chambers St., New York

(Special to The Talking Machine World.)

London, Eng., March 5, 1906.

The readers of The Talking Machine World in the Colonies, as well as in South America, will be much interested in the complete list of Sterling records recently issued by the Russell Hunting Co. They are among the most comprehensive in their line, and include all the latest successes in both instrumental and vocal fields. The success of this house has simply been phenomenal, and it is due unquestionably to the production of a value which at once appeals to both dealer and purchaser.

\* \* \* \*

The Gramophone Co., in reply to requests, have made up the following phonetic spelling of some foreign names for one of our most energetic provincial dealers, who complained that his assistants, while anxious to do a Red Label business, were often nonplussed in the matter of pronunciation. We venture to reproduce his efforts herewith. Singers: Tamagno (Tamarino), Caruso (Caruzo), Plancon (Plonson), Michallowa (Mick-i-low-ver). Composers: Tchaikowsky (Chicoughs-kie), Tannhäuser (Tan-hoy-ser), Waldteufel (Val-toy-fell), Wagner (Vargner), Gounod (Goo-no). Titles of operas: Pagliacci (Pal-e-archie).

\* \* \* \*

The expansion of the talking machine business on this side of the water is well illustrated in the growth of the Neophone, Ltd., whose new headquarters are now located at No. 1 Worship street. The building is an imposing one, admirably fitted up in every respect for their growing business. The ground floor is devoted to the

show room, assistant manager's offices, book-keeping and correspondence departments, in which latter more than a dozen typists are employed. The assistant managers, E. J. Sabine and H. Hinks Martin, are possessed of unbounded enthusiasm and untiring energy. The show room is one of the finest in the trade, and among the models displayed is the Neophone Grand, which retails at \$100, being especially built for playing 20-inch discs. These records, which play for about 10 minutes, will certainly be in great demand, as they are a distinct novelty. Their great advantage is that long selections can be reproduced without omissions, and the volume, tone and quality are excellent. But it is the unbreakable disc records, at 12c. and 25c., which are making the Neophone so widely popular. On the lower ground floor are the printing presses, which are capable of turning out 10,000 discs per day. The Phono Trader reports that just now they are working night and day to keep pace with the demand. The shipping department is also situated on this floor. The board room, secretary's office and experimenting department are all on the first floor; stock room and mechanics' department on the second floor, and on the top floor are the recording and testing rooms.

\* \* \* \*

The employees of the Columbia Co.'s branch in Glasgow held their second annual reunion recently when about fifty sat down to tea at their large premises on Union street. There was music, singing and dancing. Mr. Shearer, the local manager, presided over the festivities. A very interesting and welcome feature of the program was a speech delivered by Frank Dorian, the company's European general manager, which was spoken in London and reproduced on the graphophone. His message included an appreciation of the work accomplished by the staff and included a message of encouragement and good wishes for the future.

\* \* \* \*

The local papers continue to devote considerable space to the use of the talking machine by

candidates in the recent general election. One of the leading papers in Glasgow utilized one of the Columbia's sound magnifying graphophones on election night, and during the time the returns were being received the machine played and sang, and in the chorus of popular songs the immense crowd joined in with hearty good will. In one of the cities in the north of Ireland the Edison phonograph and gramophone were also employed to entertain the crowds. It kept them in splendid good humor, and instead of the usual acrimony and bitter feeling which prevails around election time the talking machines kept the crowd in best of spirits. There is no mistaking the fact that the talking machine has played quite a part during the election, and it has been impartial, too, featuring neither the liberal, conservative, nor labor parties.

\* \* \* \*

An important suit has been up before Justice Farwell in the Chancery Division, the plaintiffs being the Gramophone and Typewriter, Limited, and Ch. and H. Ullmann, defendants. The charge was an alleged infringement of patents controlled by the plaintiffs on the tapered arm, especially that granted July 1, 1903, and which is described as "a curved, tapered, amplifying horn, with joints such that the larger portion thereof may be adjustable on a fixed support, while the small end thereof, or that on which the sound-box is mounted is pivoted so as to swing, horizontally, and also has a secondary joint, which allows the soundbox to move vertically to follow the irregularities of the record, and also of the needles being inserted or removed." A number of witnesses, including patent experts, were heard for the plaintiffs and the defendants in their pleadings claimed that the patent was anticipated by Jensen and Grivolos. The plaintiffs, however, in rebuttal, denied that these inventors covered the patent at issue on which the suit was instituted. Judgment was not rendered at time of writing.

## THE EDWIN A. DENHAM COMPANY, Inc.

31 Barclay Street, NEW YORK, U. S. A.

LONDON

BERLIN

WASHINGTON

terests, has, previous to his present appointment, been making his headquarters at Berlin, attending to the company's business in Germany, Austria, Hungary and Russia from that point. He has had a world-wide experience, having been, during his American experience, in charge of the Columbia Company's business in Pennsylvania, and a number of southern States. He reports the talking machine business in Germany as unusually good, but feels that there is a tendency to overproduction in the disc field. In other words there are too many of them in the business. Mr. Bradt feels delighted at his appointment to London and he can feel assured that he is heartily welcomed.

\* \* \* \*

J. A. Sabine has joined the forces of the Neophone, Ltd., taking over the duties of his brother, E. J. Sabine, who will have charge of the French branch of the Neophone Co., with headquarters in Paris. J. A. Sabine, previous to his present appointment, was with the Columbia Co.'s branch in Berlin.

\* \* \* \*

The Russell Hunting Record Co. have inaugurated an exchange plan whereby they will accept broken or unsalable records of their own make only, in exchange for new ones on conditions that an order be given for at least twice the quantity returned; that no worn-out records be sent as they will not be accepted; that returns be made to the factories and that the carriage on returns be prepaid. April 30th next is the last day in which records will be accepted. Records must be returned in the original boxes. This company have just placed a new horn on the market which, it is claimed, gives a wonderfully fine tone reproduction.

\* \* \* \*

Barnett, Samuel & Sons, Ltd., of this city are among the biggest jobbers in the trade, and apart from the sale of machines have an immense demand for Columbia, Edison, Sterling, Pathe and other specialties which they handle.

\* \* \* \*

Miss Morreson, secretary of the Manx Language Society, has been using the talking machine with great success for the purpose of making records of the fast-disappearing Manx tongue. She recently related the following amusing experience: "On our travels we found the old man on the top of a barn mending the roof. After a little persuasion he was induced to come down into the barn and to sing two old songs

into the talking machine. His amazement was extreme when he heard the songs repeated. His face was a study of critical enjoyment. 'Well,' he said with a sigh of content, 'I thought I was about the bes' that's going at the Manx, but that fella' bates me clane altogether.' In the middle of the song he had broken off to ask for a rest, and when he heard this request also repeated he was a little annoyed. 'I'll give in: he is better at the Manx till me,' he said, 'but he needn't mock me for all; he might have lef' that out.'

\* \* \* \*

A rather odd happening in which the talking machine played an important part occurred recently in Paris at a soiree held in honor of his friends by a man named Partant living in the Rue Juliet Lambert, among the guests being a certain M. Paul Carmin.

Mme. Partant, who has a magnificent voice, sang for the guests, and her husband then brought out a box of talking machine cylinders. He took one labeled "Comic Song," and started the instrument, but instead of a comic song the machine began to grind out the famous duet from "Romeo and Juliet," sung by Mme. Partant and M. Paul Carmin. The duet was interlarded by such remarks as: "Oh, you little darling!" "Yes, dear!" "Yes, Paul, my precious!" And the voice of Paul was heard replying "Dearest Amelie"—the wife's name—"you are a love-bird!"

A painful scene ensued, and, as the guests left hurriedly, M. Partant sent for the police, and went with his wife, Carmin, and the talking machine to the office of the nearest magistrate, where he registered a prosecution against the "singers," and left the machine as proof.

It is said that Mme. Partant and M. Paul Carmin had been in the habit of singing duets and of taking records on phonograph cylinders, which Carmin took away with him. He had left one by mistake, and the husband used it by accident.

\* \* \* \*

A Hamburg manufacturer is distributing some very interesting circulars among the British ship masters at Hamburg. They are printed in both German and English, and are particularly felicitous in the English version. The writer says: "Hereby I respectfully beg to call the attention of captains, officers and sailors to the old-established and well-recommended musical manufactory of ———. I can recommend my music warehouse for goods of the best and most excellent qualities. Respectable captains and officers also receive cheaper prices, in order that a greater and more durable business may be done.

"Prized medals 1889-91. The greatest, Columbia graphophone, and cheapest gramophone, phonographe house of Hamburg, gramophone, modernist, disk works, phonographe, do. disks, veritable Edison. Gramophone talking machines, do. disks and records and first quality. I recommend you also my youngest and newest talking machine 'Gloriosa.' The 'Gloriosa' is for his strong and fine execution, his beauty and resistance, his beautiful music the best most interesting and wonder cheapest family and other people speech work. Therefore not tarry, but convict yourselves. The Beca-Disks are not alone the prettiest and sonourest but the cheapest to, while the rates are still been diminished. American accord-harmonium can play everybody."

\* \* \* \*

The Columbia Co. report an unusually good business for the opening months of the new year which affords satisfaction in view of their December sales, which were the greatest in their history by over seventy thousand dollars.

#### WHOLESALE QUARTERS IN SHARON.

W. C. De Forest & Son have just completed moving their wholesale talking machine business to Sharon, Pa., where they have five times the room formerly occupied. They have an unusually complete stock consisting of Edison, Victor, Columbia (disc and cylinder) talkophones, American records in fact as well as supplies of all kinds. This department is under the management of G. L. Bassett, who is a gentleman of decided ability.

## Take care of your customers

You not only want to do everything you can for them, but you want to see that your dealer does his part by you.

If he doesn't send goods to you promptly and makes you keep your customers waiting, he is working against you, and all your efforts to please your customers and build up a larger and more profitable business will count for nothing.

You want your customers to depend on you to have what they want or to get it for them quickly. You ought to have the same kind of a jobber that you can depend on. If he values your trade, he will show it by taking care of you.

Nothing slow about us in filling orders. We have Victor machines, records and accessories, trumpet horns, English needles, fibre cases and other specialties right in stock, and as fast as the orders come in the goods are packed and shipped.

We help you best by helping you to please your customers. We know that means more money and increased trade for you—and we'll get our share of the business from you.

Good idea to give us a trial order for the things you generally have the most trouble to get. That will be a pretty good test of what you can expect from us.

Write to-day for a copy of our latest catalogue.

## CRESCENT TONE Regulator

FOR

### TAPER ARM TALKING MACHINES

This is the Tone Regulator that has been such a wonderful success from the very start. Live dealers are selling it everywhere because

**It enables you to obtain instantly any volume of sound desired from a whisper to the loudest tone,**

**It is very simple in construction, easily attached to the sound box and produces a pure, musical and distinct tone,**

**It is the ONLY Tone Regulator that does NOT wear the records. Write for circular and special discounts to dealers.**

**CRESCENT TALKING MACHINE COMPANY**  
3749 Cottage Grove Ave., CHICAGO, ILL.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)  
Washington, D. C., March 7, 1906.

PHONOGRAPH. Eugene M. Robinson, Chicago, Ill. Patent No. 813,670.

This invention relates to phonographs, and particularly to means for reducing the volume of sound-waves passing through the horn of the phonograph, whereby a phonograph designed for outdoor work or for a large auditorium may be used in a small room without discomfort to the auditors. This invention is in some respects an improvement upon patent No. 778,271, for phonograph, issued to same party December 27, 1904.

The object of this invention is to provide modified forms of structure for use in place of those shown in prior patent. One of these forms is especially designed for use in a well known com-

mercial type of phonograph-horn, whereby great accuracy of regulation of the volume of sound-waves passing through the horn is obtained.

This invention consists in this particular detail in the use of a horn having a substantially right-angled joint therein, there being in one of the angular portions of this horn a rotatable valve adapted to be rotated from without to regulate the volume of sound-waves passing from one of the angular portions of the horn to the other.

The invention also consists in the novel form of mounting for a sound-restricting mechanism, so that it can be detachably placed in the horn at some suitable point between the reproducer and the end of the horn.

In the drawings, Fig. 1 is a side elevation of one of the commercial forms of phonograph hav-

ing preferred form of the invention applied thereto. Fig. 2 is a plan view of the same, a portion of the horn being removed. Fig. 3 is a sectional detail view showing the preferred form of invention in assembled position. Fig. 3a shows an alternative form of valve. Figs. 4, 5 and 6 are sectional detail views of different parts of the structure of Fig. 3. Fig. 7 is a plan detail view showing means for restricting at two different points the volume of sound passing through the horn. Fig. 8 is a sectional detail view of the left-hand arm of Fig. 7, showing in detail a mounting for the restricting mechanism, which mounting can on a proper proportioning of the parts be applied to the horn at any desired point in its length. Fig. 9 is a detail plan view of the exterior of the mounting just referred to. Fig. 10 is a rear view of a reproducer, showing the method of attaching the mounting of Fig. 9 thereto. Fig. 11 is a plan detail view showing two means for restricting the volume of sound passing through the horn at different points, one of said means being practically within the reproducer itself. Fig. 12 is a detail sectional view on line 12 of Fig. 11. Fig. 13 is a sectional plan view taken on line 13 of Fig. 12. Fig. 14 is a sectional detail view taken on line 14 of Fig. 12.

GRAMOPHONE. Herbert S. Mills, Chicago, Ill. Patent No. 812,512.

This invention relates to an improvement in the means for supporting the stylus in the form of an attenuate length of wire on the reproducer of the instrument to co-operate with the rotary record-disc, the degree of attenuateness of the wire, which is of uniform or substantially uniform thinness throughout, being such as to cause it to present always to the record-grooves an adequately fine point as it wears away with use by fric-

tional contact with the grooves. This fine wire is too yielding for use without support, since by undue bending in traversing the disc it wears the record and renders it indistinct.

The object of this invention is to provide a novel construction of rigid clamp on the reproducer which shall serve to hold the wire in a manner to permit one end to protrude to the desired short distance beyond the clamp for engagement with the record and to confine the wire throughout the remainder thereof contained in the clamp, so firmly and uniformly as to render it practically an integral part of the rigid clamp, and thus prevent any independent vibration or movement of the wire therein which would tend to mar or destroy the stylus action.

In the accompanying drawings, Fig. 1 is a broken view showing in side elevation the reproducer equipped with the improvement and in operative position relative to the record-disc, Fig. 2 is a view of the reproducer in front elevation, shown broken and provided with the improvement. Fig. 3 is a section taken at the line 3 on Fig. 1 viewed in the direction of the arrow

and enlarged; and Fig. 4 shows the parts of the improved clamp separated and ready to be assembled, the removable jaw being in section and the other parts in elevation.

GRAPHOPHONE-REPRODUCER. Geo. A. Mainwaring, Bayonne, N. J., assignor to American Graphophone Co., Washington, D. C. Patent No. 811,568.

This invention relates to means for securing in place the needle of a reproducer, and its purpose is to permit the needle to be readily inserted in place and to expedite the substitution of a fresh needle for an old one. At the present time these needles are held in the needle receiving barrel by a set-screw, and to put in a fresh needle the

screw has to be turned several revolutions, and then after the old needle is removed and the new needle put in place the screw has to be turned back several revolutions, all of which calls for considerable time and trouble. By means of this invention most of this is avoided. The use of a split spring-socket for holding the needle has also been proposed; but no means (such as a lever) have been provided for releasing the pressure upon the needle to permit ready removal of the same and substitution of a fresh needle.

This invention will best be understood by reference to the accompanying drawings, showing the preferred embodiment thereof, in which Fig. 1 is a face view, and Fig. 2 is a side view, partly broken away, of a reproducer equipped with this novel means for holding the needle in place. Fig. 3 is a sectional view through the barrel of the stylus-bar on line 3, Fig. 4, the stylus-clamping lever being shown in elevation. Fig. 4 is a longitudinal sectional view at right angles to Fig. 3.

ATTACHMENT FOR PHONOGRAPHS. Zenas Tarble Grover, South New Berlin, New York. Patent No. 811,633.

This invention relates to certain improvements in phonographs, graphophones and similar sound-producing machines, and more particularly to a

## One Thousand CYLINDER RECORDS

That's the Capacity of

**Syracuse Wire Works**  
SYRACUSE, N. Y.

novel form of mechanism for automatically operating the motor-brake after the sound-box has entirely completed the reproduction of the record.

The object of the invention is to provide a simple, inexpensive and efficient device of this

character which will automatically apply the brake to the motor, and thereby positively stop the latter when the machine has finished playing a record.

A further object of the invention is to provide a trip-lever adapted to be engaged by the reproducer arm to automatically apply the brake, said trip-lever being provided with a longitudinally-adjustable pin or screw whereby the device may be set for stopping the actuating motor at any predetermined time.

In the accompanying drawings, forming a part of this specification, Fig. 1 is a perspective view of a phonograph, showing this improved brake-applying device applied thereto. Fig. 2 is a longitudinal sectional view of the device detached. Fig. 3 is a transverse sectional view of the same, and Fig. 4 is a detail perspective view of the connecting-link and a portion of the rod detached.

FOLDING PHONOGRAPH HORN. Martin L. Munson, New York, N. Y. Patent No. 813,814.

This invention relates to horns such as are attached to phonographs or similar instruments for intensifying sound and throwing it in any desired direction. The object of the invention is to produce a horn of simple construction which may be folded so as to occupy a small space, enabling the

horn to be conveniently carried or packed for transportation.

Figure 1 is a perspective view of the horn, representing the same in its open or expanded condition. Fig. 2 is a longitudinal vertical section of the horn when expanded as in Fig. 1, and Fig. 3 is a side elevation showing the horn in a folded or collapsed condition.

FOLDING PHONOGRAPH HORN. James T. Brown, New York, N. Y. Patent No. 811,900.

This invention relates to a horn especially adapted for use with phonographs or similar devices; and the objects are to provide a simple and durable form of collapsible horn which can be conveniently adjusted and which will be held rigidly in its expanded position.

Referring to the accompanying drawings, forming a part of this application, and in which similar reference symbols indicate corresponding parts in the several views, Figure 1 is a side elevation illustrating one embodiment of my invention in its expanded position. Fig. 2 is a side elevation, partly in section, showing the collapsible portion of the horn in folded position. Fig. 3 is a sectional view on the line 3 3 of Fig. 1. Fig. 4 is a detail sectional view illustrating a pre-

ferred form of latch for locking the two portions of the horn together.

PHONOGRAPH-HORN. James T. Brown, New York, N. Y. Patent No. 813,999.

This invention relates to an improved horn especially adapted for use with phonographs or similar devices; and relates especially to the type of collapsible horn described in pending appli-

cation, Serial No. 239,241, filed December 24, 1904, of which this is a divisional application.

An object of the invention is to provide a horn which will eliminate the harsh and metallic sounds occurring with existing types of horns when applied to sound-reproducing devices. A further object is to provide a simple and compact form of collapsible horn which will be more durable than existing constructions and which can be conveniently adjusted and rigidly held in its expanded position.

Referring to the accompanying drawings, Figure 1 is a side elevation illustrating one embodiment of the invention in its expanded position.

Fig. 2 is a sectional view on the line 2 2 of Fig. 1. Fig. 3 is a sectional view, on a larger scale, taken on a line 3 3 of Fig. 2. Fig. 4 is a detail sectional view, on a larger scale, illustrating a modification in which the collapsible portion is provided with interior guard-rails. Fig. 5 is a detail sectional view, on a large scale, taken on the line of 5 5 of Fig. 4. Fig. 6 is a detail sectional view, on an enlarged scale, showing one

form of latch for locking together the mouthpiece and collapsible trumpet portion of the horn. Fig. 7 is a side elevation partly in section, showing the collapsible trumpet portion of the horn in folded position. Fig. 8 is a sectional view illustrating a modification in which the mouthpiece is formed of leather. Fig. 9 is a side elevation of the mouthpiece shown in Fig. 8; and Fig. 10 is a sectional view on the line 10 10 of Fig. 9, illustrating the manner of joining the leather blank of the mouthpiece.

HORN FOR PHONOGRAPHS, EAR-TRUMPETS, ETC. Gustave H. Villy, Manchester, Eng., assignor to United States Horn Co., New York, N. Y. Patent No. 12,442.

This invention relates to improvements in connection with horns or trumpet-like sound distributors or collectors for use upon phonographs, gramophones, and other like instruments, and also for ear-trumpets, fog-horns, and other sound distributing and collecting devices, the object being to provide a horn or trumpet-like device which can be folded when not in use, so as to be capable of ready transportation and for placing within the case of the phonograph or in the pocket of the user when it is to be applied to an ear instrument or the like.

Another important patent for phonograph horn (No. 811,877) has been granted to C. A. Senne, of New York, which we are unable to illustrate in this issue. We understand that he is prepared to receive offers for this patent.

## FINAL DECREE IN PERLINER SUIT.

Free Swinging Stylus Patent Claims Affirmed.

The Berliner patent on the free-swinging stylus mechanism for the reproduction of sound in the manufacture of disc talking machine records and used generally, was affirmed by a unanimous decision of the United States Circuit Court of Appeals, New York, the opinion being filed March 2. This sustains the decree of Judge Hazel, in the lower court, and is a final adjudication of the case, with the Victor Talking Machine Co., Camden, N. J., the owners of the patent, coming off victorious. The complete text of the decision follows:

"United States Circuit Court of Appeals, Second Circuit, before Lacombe, Townsend and Coxe, Circuit Judges. Victor Talking Machine Co. and another, complainants, appellees, against American Graphophone Co., defendant, appellant. This cause comes here upon appeal from a decree of the Circuit Court, Southern District of New York, sustaining the validity (and finding infringement) of United States letters patent 534,543 granted February 19, 1895, to Emile Berliner for the 'Gramophone.'

"Per Curiam.—In affirming this decree we do not find it necessary to add anything to the careful and exhaustive discussion of the issues which will be found in Judge Hazel's opinion, with one single exception. In disposing of the defense of prior public use based upon the lecture and exhibition before the Franklin Institute, the Circuit Court apparently relied mainly upon the proposition that what took place there was not a public use, but rather an experimental one. Without discussing the questions thus raised or expressing any definite opinion either way, we prefer to dispose of the alleged prior public use by means of the application of Berliner, which was filed six months prior to the Franklin Institute lecture, and which eventuated in patent 564,586, issued subsequent to the patent in suit. The specifications in that application (for 564,586) were full enough to warrant the making of the claims here in controversy (5 and 35); at any time the application might have been amended by adding such claims, and in our opinion it is immaterial that instead of thus amending it, he took the broader claims on another application filed while the first was pending. The second may fairly be considered a continuation of the first, and thus Berliner's application antedates the public use, and the facts will not sustain the contention that he abandoned his invention here in suit. The decree is affirmed."

The case was argued January 17 by Horace Pettit, Philadelphia, for the Victor Co., and by Philip Mauro for the American Graphophone Co. VICTOR TALKING MACHINE CO. TO ENFORCE RIGHTS.

March 6 the Victor Talking Machine Co. notified the trade as follows: "As the decision of this court is final, we expect to at once proceed to enforce our rights by preliminary injunction against all infringers, including all manufactur-

ers of infringing machines and records, who have not taken a license from us, and dealers in such infringing goods. We would call attention to the fact that the American Graphophone Co. have already taken a license, as also the Universal Talking Machine Manufacturing Co."

## BIG ORDERS AND DEPLETED STOCKS

Is the Rule With the Dealers of Wheeling, W. Va.—Bard Bros. May be Compelled to Secure Larger Quarters.

(Special to the Talking Machine World.)

Wheeling, W. Va., March 10, 1906.

Possibly there are some dealers who cannot understand the stories handed out by the various talking machine manufacturers relative to the great volume of unfilled orders they have on file—not so with the dealers in this city. Each one visited had a most interesting tale to tell of unfilled orders and depleted stocks.

Business is great—great when volume and receipts are considered, but the thought of the dollars lost through lack of goods will be an ever-present source of worry for the thought of "what might have been."

When your correspondent called on F. W. Baumer & Co., their talking machine force was seriously considering the rearrangement of their department, so as to be able to increase their stock of records. Their growing trade for Edison goods makes this necessary.

The C. A. House talking machine department report big sales and lots of them. Their Victor business has been especially brisk during the past month.

Bard Bros.' exclusive talking machine store is proving to be a favorite meeting place for music-loving people. During the past week they have doubled their shelf capacity for cylinder records. Now have sufficient room to carry a stock of 10,000. They say that September 1 will find them installed in quarters several times larger than those occupied at present.

Their disc department is doing a particularly good business in the higher priced outfits. Hoehl & Giessler Piano Co. are pushing their talking machine business to the front. They are installing the tray system for their Edison record stock, and will carry the complete American list. The newspaper premium business is booming. This canvass will in all probability make 2,000 new users.

The talking machine department of the two big instalment houses, The Palace Furniture Co. and House & Herrmann, report excellent business during the past month.

The Edison Co., of Newark, N. J., have just been allowed twenty-four claims on their new home repeating attachment (recently patented) for standard and home phonographs, and a new application has been made for some further improvements all of which are embodied in the repeater which they are now putting forth. Dealers will be glad to know that this company are

now making shipments of the "S" repeaters and will start to make shipments of the "Home" on March 22. In a chat recently with the Edison Co. they stated that they feel grateful for having received such splendid response to their advertisement in The World regarding their repeaters as well as for the patience of those who have placed orders with them, and who have been somewhat delayed in having them filled.

## HANDSOME DISC RECORD CABINET.

The above is a sample of one of the Douglas Phonograph Co.'s (New York) new line of disc record cabinets with machine combined. The superb design and finish of this elegant piece of furniture places it in a class by itself, the panels following the Louis XVI. school of decoration. The company are undoubtedly leaders in these goods, as they show more and handsomer styles than any other jobbing house in the country.

The second meeting of the Phono Club, Thursday evening of last week, wound up with a dinner at Moquin's restaurant on Sixth avenue, New York. Among those present were C. V. Henkel, president, and John Kaiser, with the Douglas Phonograph Co.; Victor H. Rapke; R. B. Caldwell, with the Blackman Talking Machine Co., and Fritz H. Grawert-Zellin, an inventor of a sound-box.

The Santa Fe Watch Co., Topeka, Kan., and the Clinton Music Co., Toledo, O., have added the Zonophone line.

At the meeting of jobbers in Pittsburg, Pa., yesterday (14th), about 25 or 30 of the leading concerns of the Middle West were present.

# STANDARD METAL MFG. CO.

MANUFACTURERS OF

## PHONOGRAPH HORNS AND SUPPLIES

Our Horns, as our name implies, are "Standard" in every respect. We make all the different styles and sizes in any metals or colors, including the new Morning Glory Horn, which is cut on a new plan to distribute sound more evenly.

VICTOR CO. ANNOUNCE CUT

In the Prices of Certain American Red Seal  
Records from \$2 and \$2.50 to \$1 and \$1.50  
Respectively on May 1st.

Under date of Feb. 15, the Victor Talking Ma-  
chine Co., of Camden, N. J., announce that May  
1 a reduction will be made in the retail price to  
\$1.00 each for ten and \$1.50 each for twelve-inch  
records (now \$2 and \$2.50, respectively), on the  
following American "red seal" records: Blass,  
Blauvelt, Crossley, De Lussan, Homer, Journet,  
Juch, Nuibo, Powell and Van Hoose. They will  
be called "red seals," but all records listing at  
more than \$1.50, "Victrola" red seal records. At  
that time the company will discontinue the re-  
tail "dozen prices" on all red seal and foreign  
black label records; also the present 40 per cent.  
discount to dealers will apply on the new prices.

On and after May 1, the company on account  
of new arrangements with Tamagno's heirs, will  
sell Tamagno records at Melba discounts, namely  
30 per cent. to dealers. On their April "advance  
list order blank" the Victor Co. will present the  
first of their new 8-inch records, twelve numbers  
of popular selections which will be supplemented  
monthly in like manner, and the price will be  
35 cents, the same as the 7-inch records that will  
not be increased in the catalogue.

The Douglas Phonograph Co., New York, have  
enlarged their record storage room so as to  
carry 200,000 Edison records hereafter.

*Sinenoid* Horns  
27 Styles 15 to 56 in. \$2 to \$15  
Manufactured by  
CRANE BROS., Westfield, Mass.  
Discount to Dealers

The Imperial Record  
which, as everybody knows, is the best made,  
is now retailed at  
Sixty Cents

JAMES I. LYONS  
Wholesale Only  
194 E. VAN BUREN ST.  
CHICAGO, ILL.

SHERMAN, CLAY IN LOS ANGELES.

Open Wholesale Talking Machine Depot in the  
Angel City—Clark Wise Finds That His Talk-  
ing Machine Trade Exceeds That of Sheet  
Music—Coast Business Growing.

(Special to the Talking Machine World.)  
San Francisco, Cal., March 5, 1906.

L. S. Sherman and Andrew McCarthy, of Sher-  
man, Clay & Co., were in Los Angeles the begin-  
ning of last week to look for convenient head-  
quarters for a depot for talking machines. They  
found very handsome rooms in the Parmelee  
Dohrman Building on Broadway, near Fifth  
street, and secured a lease. This depot will only  
be used for wholesale purposes. This gives  
Sherman, Clay & Co. a fine distributing center in  
Southern California, and as the talking machine  
business was quite extensive during the last six  
months and gives promise of great future de-  
velopment, the firm has reason to expect a great  
deal of its Los Angeles depot. Not long ago  
Sherman, Clay & Co. opened a talking machine  
depot in Seattle to supply the Northwest, and  
these two branches, together with the San Fran-  
cisco house, give Sherman, Clay & Co. distribut-  
ing facilities of a magnitude and convenience  
hardly to be appreciated by any one not inti-  
mately acquainted with Pacific Coast conditions.

Clark Wise, of Clark Wise & Co., is traveling  
in the interests of his talking machine depart-  
ment establishing sub-agencies and introducing  
the Talk-o-phone in the interior cities. Mr. Wise  
reports excellent success since leaving here, and  
orders come in daily by the bundle. R. A. Wise  
is quite enthusiastic when he talks about the  
splendid talking machine business the firm is  
doing, and he is surprised to find that it exceeds  
often the sheet music business which the firm of  
Clark Wise & Co. has so carefully nursed during  
the many years of its existence.

## MATERIAL USED IN DISC RECORDS.

Important Decision Handed Down Feb. 19 by Judge Hazel in Favor of the American Graphophone Co. Who Dismissed Complaint of Victor Talking Machine Co.—Strict Construction of Part of Berliner Patent.

Under the ruling of Judge Hazel, United States Circuit Court, New York, a strict interpretation or construction is placed on that part of the Berliner patent relating to the material used in the manufacture of disc records, and the complaint of infringement is dismissed. The decision was handed down Feb. 19, in the equity suit of the Victor Talking Machine Co. and the United States Gramophone Co. against the American Graphophone Co., Horace Pettit, of Philadelphia, appearing for the complainants, and Elisha Keller Camp and Philip Mauro for the defendants. The patent which the defendants were charged with infringing, is No. 548,623, issued October 29, 1895, to Emil Berliner, who assigned it to the complainants, "for sounds records and methods for making same." The decision goes into the construing of the meaning and intent of patents, and how broad they should be treated in their practical application. In reference to the process employed the court cited one of Berliner's claims, in which the following positive statement was made: "A sheet of hard rubber and celluloid to be excellent material from which to make such duplicates." Judge Hazel then declared the patentee should be held down to his claims of invention, no more, no less, under the rulings of the courts in parallel cases, in finality saying: "My conclusion is that in the manufacture of said records the defendant does not embrace the material specified in claims 3, 4 and 5 of the patent in suit, and therefore is not an infringer of such claims. It follows that the complaint must be dismissed with costs." The case will probably be carried up for review to the United States Circuit Court of Appeals, which will be final.

The contention over the validity of the Berliner patent relative to the use of the free swinging stylus in reproducing sound, sustained in the lower court, is now pending on appeal, argument having been heard January 17.

## THOS. A. EDISON VISITING FLORIDA.

Thomas A. Edison, the eminent scientist, whose connection with talking machines and sound reproduction is world famous, left his home in Orange, N. J., on Feb. 24, for a trip to Florida, accompanied by his family. He is enjoying the balmy climate of that country at Fort Myers, and will be away about six weeks. The "wizard's" general health is excellent, his mental vigor and physical energy is a marvel to his associates and assistants in the great experimental and manufacturing plant of which he is the active head and presiding genius. While the phonograph department is only a section of the works bearing Mr. Edison's name, its development, improvement and progress still holds his personal interest.

## CERTAIN TO BECOME A FAD

At Banquets Is the Napkin Ring Record Which Holds Response to Toast and Is Carefully Preserved by Diners.

The latest novel use ascribed to the talking machine is as a post-prandial entertainer. At a dinner recently given in this city the host provided a number of Columbia "napkin ring" records and as each guest arrived, they were invited into a small room and requested to respond to a toast into the graphophone. When

THE NAPKIN RING RECORD.

the dinner had ended, and the toastmaster began his duties, the machine was brought into the room, and as the name of each guest was called, and the toast announced, the record made by the guest was slipped on the machine, which made the response. At the conclusion of the banquet the records were distributed among the guests as souvenirs. The records were packed in neat boxes, on one side of which is a space for the picture of the maker and a place for the inscription of their name, while on the obverse is a space for the date, autograph and address. These cylinders are made by the Columbia Phonograph Co., and will soon become a popular fad, as they are of a size adapted for a short message, greeting or speech, and can be easily mailed. The Columbia Phonograph Co. report the sales of these records as greatly increasing in all of their stores.

## PRICES IN LONDON AND HERE COMPARED.

George F. Chippendale, of Bradford, Yorkshire, England, writes as follows: "I notice in your issue of December, 1905, that it is stated on page 30 the English prices for disc records are much lower than in the States, and in some instances much too low. I give below comparisons of prices here and new and old prices in the States:

	English prices.	American prices	
		New.	Old.
7-in. disc .....	2s. 6/-	1s. 6/-	2s.
10-in. disc .....	5s. 0/-	2s. 6/-	4s.
12-in. disc .....	7s. 6/-	4s. 0/-	6s.

"I am sure a reduction in price of disc records on this side of the water would mean a much greater sale of this class of records."

## AN EDISONIA CO. SPECIALTY.

The clever repeating attachment for Standard and Home phonographs manufactured by the Edisonia Co., of Newark, N. J., is winning for itself an enviable position with the trade, and the above company can well congratulate them-

selves on the buying of the sole rights of this clever invention. During the past two months they have been overwhelmed with orders for this device, which they have been delayed in filling on account of the congestion in the metal market and the difficulty in getting supplies fast enough. They are now prepared, however, to make shipments promptly and will be glad to mail sample, prepaid, to dealers or jobbers for Standard or Home machines on receipt of \$1.50. Their advertisement in another part of this paper is worth reading. It was omitted from last month's World through an error in make-up.

## TALKER ENTERTAINS SOCIALISTS

At Reunion in Newark, N. J.—Speeches and Songs by Noted People Heard.

(Special to the Talking Machine World.)

Newark, N. J., March 7, 1906.

Talking machines have been used on many occasions for many purposes, but at Harmony Hall recently, Branch 7 of the Socialist party, utilized a phonograph, operated by William H. Leffingwell, to supply an entire evening's "enlightenment, entertainment and recreation." The many records heard included songs, instrumental music and reproductions of speeches by Joseph Wanhope, Eugene V. Debs and Gaylord Wilshire. The records were distinct and sufficiently effective, holding the attention almost as well as flesh and blood oratory, living, present, musical, gymnastics.

Gaylord Wilshire's speech gripped more tightly than any of the other members. Mr. Wilshire is the publisher of a socialist magazine, and those present for the most part had read it. He argued against throat-cutting competition, advising solidarity, organization and mutual aggrandizement. Mr. Debs also spoke against the theory that "competition is the life of trade," which he said was instilled into children when at school writing in their copy books.

## NEW COLUMBIA JOBBERS.

Walter L. Eckhardt, manager of the Columbia Phonograph Co.'s wholesale department, returned quite recently from a two weeks' run through the middle west, giving the most of his time to Ohio, where he has accepted the following jobbers additional to those already announced: Eclipse Musical Co., Cleveland; Ball-Fintze Co., Newark; Perry B. Whitsett Co., Columbus, and Hayes Music Co. Others are under consideration. It is Mr. Eckhardt's purpose to establish five jobbing houses in Greater New York, whose names will be made public early next month. C. S. Gardiner is doing great business for the department, his sales reaching surprising figures as per official statement.

The Saunders Music Co., of Minneapolis, Minn., has a window display made up for a contest given by the Victor Talking Machine Co. A picture of the window was taken recently and sent to the company for advertising purposes.

## BUSINESS CONTINUES BRISK.

Every Branch Is Overwhelmed With Orders and  
 the Manufacturers Are Exhausting Every  
 Resource to Meet Demands.

As the year grows apace the development of the  
 talking machine business is causing manufactur-  
 ers to marvel. The principal jobbers throughout  
 the country are enlarging their stocks in a man-  
 ner quite unexpected, and it is to meet this de-  
 mand for records and machines that factories  
 have not only increased their output and facili-  
 ties, but are being operated continuously, night  
 and day. Traveling salesmen are turning in or-  
 ders from entirely new sources, not to mention  
 duplicates from regular customers. Jobbers in  
 turn are arranging their business on a larger  
 scale than ever before, securing more commo-  
 dious quarters so as to store and handle stock  
 of the general line to better advantage. In brief,  
 the entire trade only since the opening of the year  
 seems to have broadened out in obedience to cur-  
 rent selling conditions and is occupying a new  
 high level. Dealers are imbued with the same  
 spirit, and especially is this apparent in the mu-  
 sic trade. Recognizing the peculiar fitness of  
 thus having a talking machine department, they  
 are now going ahead with commendable enter-  
 prise in order to make up for lost time and to  
 regain what they have missed by an opportunity  
 too long neglected.

## ALFRED WEISS IN NEW QUARTERS.

Secures Lease of Building at 1622 Second  
 Avenue, Which He Will Occupy for His  
 Talking Machine Business.

Alfred Weiss, the youngest and not by any  
 means the smallest jobber in the Metropolitan  
 district, has outgrown his present quarters which  
 were ample one year ago, and has secured the  
 entire building located at 1622 First avenue,  
 and will devote every one of the three floors to  
 the talking machine industry.

Extensive alterations have been made in order  
 to facilitate shipping and the receiving of mer-  
 chandise; also a complete repair department  
 presided over by an expert. Mr. Weiss em-  
 phasizes the fact that only genuine Edison  
 repair parts will be used and the same policy  
 will be adhered to in repairing of all types of  
 machines. Every detail is looked after with  
 care and precision, which tells better than words  
 the result of a large and valuable business in  
 a very short period.

## MME. EAMES AS A RECORD MAKER.

The favorite soprano recently made some re-  
 cords, including "Who is Sylvia?" and after lis-  
 tening to the reproductions a smile illumined  
 her handsome face. She confessed it was a novel

sensation, as she had never heard the records.  
 She then told how she made the record of "Who  
 is Sylvia?"—how when she sang a very high  
 note she was pulled back from the horn of the  
 machine, and when she was singing medium  
 notes at moderate power she was almost pre-  
 cipitated into the horn of the machine by her  
 instructor. Mme. Eames was delighted with  
 the record of Mme. Melba in Bemberg's "Nymphs  
 and Fawns," declaring that it gave an absolute-  
 ly correct idea of the diva's beautiful singing.

## PRICE CO. IN NEW QUARTERS.

The Price Phonograph Co., of Poughkeepsie,  
 N. Y., removed on March 1 to larger quarters at  
 233 Main street, that city. They now have a  
 very handsome establishment, containing a large  
 exhibition room and five new specially equipped  
 record rooms. Their wholesale department and  
 stock have been enlarged. C. G. Price is in  
 charge of the new store.

The "scheme goods" turned out in the talking  
 machine line cover a tremendous quantity as well  
 as a multitude of sins, according to strict trade  
 ethics. However that may be, the premium ma-  
 chines cut considerable of a figure, but most of  
 the manufacturers stipulate that the goods must  
 be given away and not sold. Their use usually  
 leads up to the purchase of a standard outfit,  
 and in that way they serve a purpose.

## IT PAYS TO BE ATTENTIVE.

Salesman Closes Big Order for Machine and Records by Trying Over Records for a Visitor—When an Annoyance.

"A fat old gentlemau w.th a prosperous look about him recently came into my store, sat down and took a well-filled wallet out of his pocket, and extracted therefrom a list of records," said a downtown retailer to 'The World' recently. "Scenting a good sale, I played record after record for him, laying them in a heap as he gave an approving smile after each one was reuderred. When he got to the end of the list he gave me a particularly sweet smile, arose and left without a word of explanation. I was rather chagrined and made up my mind that he had played me for all I was worth. To my great surprise, a day or two later he walked in again, accompanied by a footmau in livery, and said, 'You can wrap up those records that I selected the other day, also the machiue you played them upon,' aud laid down a bill of three figures. His footman removed them to the carriage in perfect silence, and after receiving his change, walked out without even taking a receipt. The whole transaction so paralyzed me that I never got his name, and up to the present time I have been unable to learn the identity of my mysterious customer. You would be surprised to see the number of people, particularly of the gentler sex, who come in and request to hear records they have not the slightest idea of purchasing, even when they do not own a machine. They are tired of tramping about the stores, and in order to be amused while they take a rest, pay me a call, and then, after taking up an hour of time, go out without even as much as a word of thanks. If I suggest that they purchase some of the records they either have so many bundles that they cannot carry them, or they have run short of change. This class of shoppers is becoming a nuisance, and I hope some dealer similarly afflicted will suggest a remedy."

## NEW CATALOGUE OF WIRE RACKS.

The Syracuse Wire Works, of Syracuse, N. Y., will have ready for distribution this week their latest catalogue No. 111, devoted to "The Heise System" of wire racks for all styles of talking machine records. This catalogue illustrates all the various styles and will give net prices to all except talking machine jobbers. Like all the literature issued by this house the catalogue will be handsomely gotten up and carefully edited, and will prove of great interest to dealers desirous of adding to the equipment of their stores.

The Siegel-Cooper Co., one of the largest department stores in this city, have opened an automatic department in connection with the talking machines. They are for the use of their patrons. Here is a hint to dealers and manufacturers of these devices.

## SOME RECENT MUSIC.

## New List of Perforated Rolls for Peerless Coin-Operated Pianos.

- For March-April, 1906.  
For Style "D" (Full Sized Piano).
- 5192—1. Collisenn Grand March....Chas. Balmer.

4. Blood Lilies—A Japanese Two-step....Arthur Pryor.  
5. The Land of Romance—Serenato....Karl Hoschna. 3.75

## "CLEAPOL" JUST THE THING.

The trade will be interested in the announcement of the Cleapol Co., Newark, N. J., which appears elsewhere in The World. Their specialty is absolutely unequalled for keeping talking machine stock in a bright, salable condition, and, moreover, will be found most profitable to handle by reason of the satisfaction which it will give patrons. This article, which was recently perfected by T. L. Gooday, the well-known talking machine man, is a chamois skin which has been put through several processes, making it an ideal metal and glass cleaner and polisher. It has been appropriately named. The Cleapol Co. are prepared to mail samples to dealers and jobbers who will find it a money maker.

The capital stock of the Talkophone Co. is to be increased from \$500,000 to \$1,000,000, \$250,000 of the increase to be used in enlarging the plant now located on Central avenue.

## "POINTERS" ON TRADE BUILDING.

Show Windows Are Money Makers When Utilized by Brainy Men—How New Records Are Made—Familiarity With Stock Another Essential—Suggestion as to Line That Will Prove Popular.

A successful talking machine dealer in New York preaches for the benefit of the trade who complain of dull business and small sales in the following manner: "Next to having a good stock of machines and records is the proper display of them. I make it a rule to entirely change my show windows at least once a week, and usually twice. In arranging a display, I make it a point to have a central feature which will always attract attention, and am always on the lookout for any novel attraction. A short time ago I secured a hen with a determination to hatch out doorknobs, and place her in a nest made in a flower horn, and underneath placed the inscription, "Making a new record." She stood the gaze of a curious public for a day or two, but that was sufficient—the public looked at everything in the window. The window trimmed with a sylvan effect, and two white rabbits moving among the talking machines, was also productive of a crowd. Well-worded signs, pertinent to some particular feature, are also invaluable. No man can succeed in selling talking machines who is not familiar with his stock. I play for my own benefit every record I receive at least twice, and note down those that I consider likely to be the best sellers, and which have the greatest artistic merit. I advise dealers who are just starting in to carry both cylinder and disc machines. You can never tell from the neighborhood what you will sell. My best customers for Red Seal records are Italian laborers, who save and deprive themselves of pleasures in order that they may hear the best music in their native tongue."

Learnard & Lindemann, the well-known piano dealers of Albuquerque, N. M., report an increasing trade in Victor talking machines.

# Everybody wants them!

# SOFTERTONE

# Needles & attachments

FOR VICTOR EXHIBITION AND CONCERT,  
COLUMBIA, AND ZONOPHONE SOUND BOXES

SOFTERTONE NEEDLES reduce the volume and bring out every detail and shade of tone in the Record

## Play Six Records

SOFTERTONE NEEDLES may be played on the same or different Records at least six times without injury to the Record—in fact, a Record will last three times as long when a Softertone Needle is used.

**IMPORTANT:** When ordering mention Name and Style of your Sound Box

The attachment for the Victor Exhibition Sound-Box also fits the Columbia and Zonophone Sound-Boxes. Price, Softertone Needles, in packages of 200, 25 cents. Price, Softertone Attachments, each 25 cents. Dealers' discount same as they are receiving on Victor machines.

With the Makers, Sellers and Users of Automatic Specialties

A retrospective glance over the past year's business brings forcibly to light the marvelous advance in the slot machine industry. Everywhere is manifested this healthful condition of affairs and manufacturers and consumers are justified in their optimistic outlook for the coming year. Just at present, however, it is a case of "hands up" all round on account of the congested condition of the raw material market. Metal seems to be the leader in this general tie up, as the foundries, though working night and day, are fully six months behindhand in the delivery of orders, and new machines, many of them marvels of mechanical construction, due long since on the market, are still unfinished in the factories.

One of the largest manufacturers, while discussing trade conditions with The World recently, predicted an unprecedentedly brilliant business for 1906. "Never before," said the gentleman, "has this business been on so firm a basis as at the present day. The incessant demand for machines of all types keeps the office and factory force constantly on the jump in an almost futile effort to keep pace with the orders. The general trend of this demand seems to veer toward higher class productions, which, of course, means more money for all parties concerned."

For some time past—in fact, since the early days of the automatic business in this country—it has been the custom of many companies to sell outright certain specified territories, many of these contracts being made with such ironbound restrictions as to absolutely subjugate these companies to such an extent that they were forced, after a short time, to desist operations. In this industry few machines, excepting the piano, harp, music box, talking machine, mutoscope and

weighing devices, can be operated on one section for more than a year at a time, as there is no changing feature, hence the novelty for the public wears off, and with it profit disappears. Not only does a company limit itself to restricted territory under such conditions, but each organization which has bought agencies, is more or less antagonistic toward its neighbor, and concerted action by the whole, to push the machines into popularity is next to impossible, as the contracts prohibit advertising in such trade journals as would reach their trade and advance their interests, with the prospect of snits being brought on grounds of encroachment.

Many of the largest corporations that fell under this bane, from one cause or another, are at present putting forth all their energies toward regaining absolute control of the situation. This difficulty overcome, manufacturers will have a clear and broad field before them, with assured progress, such as now is not dreamed of.

The automatic parlor business is taking on broad proportions, as men of means are taking hold of the tiller, realizing the immense profit derived from the operating of these emporiums of music. While it must be admitted that the newest of these arcades are everything that brains and a lavish expenditure of money can accomplish, there are many in the business who pay too little attention to small details. And after all these are the things, which taken as a whole, give a general harmonious and inviting effect to an establishment or the reverse. Managers should always keep before them the necessity of having things in shipshape condition. The automatic piano which appears in most of the arcades as a center of attraction and crowd

drawer, should not be neglected and left to get out of tune, as many are. It is true these instruments are put through a terrible grind, being kept busy pounding away day and night, but a little care will eliminate most of this trouble, and what a difference!

Floors should be kept clean, and it is well to see that too many machines do not bear the little card, "Out of order." A sheet music department is fast becoming recognized as one of the paying branches of this business, and proprietors will find that a small space allotted to this line will not be unprofitable, a pianist and if possible a salesman with a good voice, will do much toward pushing things along.

SOME NEW ATTRACTIONS.

To the Caille Bros., of Detroit, Mich., falls the credit of placing on the market many of the best money-makers now in use. One of the newest is the "Bird-o-Phone." By dropping a coin in the machine a most beautiful woodland scene is shown, with natural vines and shrubbery, the early morning sunlight making the dew on the rocks and leaves glisten like diamonds. Two beautiful birds appear and give their early morning greeting by warbling the popular airs of the day, moving their heads, tails and bodies in the most natural manner. This scene is most pleasing to the eye, and the music of the birds is harmonious enough to suit the most critical. Their post card and "Auto Muto," or picture machines, are also great attractions.

Target shooting has and always will possess a strong attraction for all ages and both sexes. The crack shot pistol, a new coin-controlled de-

The AUTOMATIC MARVEL OF THE AGE!

THE ROSENFIELD ILLUSTRATED SONG MACHINE, COIN OPERATED (for Arcades, Cafes and all Public Places)

¶ No storage Battery Necessary; operated by simply connecting them to any Electric Lighting Circuit, direct or alternating. ¶ Fluctuations in voltage positively do not affect the speed, as in other direct current machines. ¶ Over 2,000 of our talking machines now in use. ¶ Here are a few of the Penny Arcades or parlors entirely equipped with them. Drop into the nearest and satisfy yourself that our machines do the business.

**\$5.00**

10 tunes, 50c. each

This gives you an op-  
portunity to have the  
latest music at a  
small cost.

*The*  
**Tonophone**

is an entirely new instru-  
ment, and has only lately  
been perfected. It plays  
ten tunes automatically  
with expression. Any num-  
ber of new tunes can be  
produced at small cost.  
The cases are finely fin-  
ished. Mahogany or Oak  
veneered. In ordering, al-  
ways state what kind of  
electric current you have;  
if it is direct current, state  
the number of volts, if it  
is alternating current state  
volts, number of cycles and  
number of alternations.

*Complete list of  
Tunes mailed  
upon request.*

**T**HE "TONOPHONE" is the only Automatic Piano which has an almost indestructible cylinder with 10 tunes. This cylinder gives the "Tonophone" many advantages over all other Automatic Pianos, most important of which are the following:

**Any One of the 10 Tunes can be Played at Any Time**

**Any Tune can be Repeated as Often as Desired**

There is on the outside of the case a dial, with arrow and handle attached, numbered from 1 to 10, representing the number of tunes on cylinder. By turning handle you set cylinder to play tune the arrow may point to. The "Tonophone" is the only Automatic Piano where any one of the tunes can be played at any time. It is fitted with device whereby each tune is played twice for one nickel.

An important and invaluable point of advantage about the "Tonophone" is that it is so constructed that the cylinders are interchangeable, permitting, where it can be agreeably arranged, for an exchange of cylinders.

The "Tonophone" is operated by an electric motor which is set in motion by a nickel, which is received by nickel-in-slot attachment. This attachment is covered by "Letters Patent," and is designed and so constructed that it throws out and refuses to take and keep any spurious coins, in this way giving absolute protection against iron washers, etc.

The earning capacity of the "Tonophone" has no equal and no limit. It has taken in as much as \$50.00 per week. It requires no attention, consequently is *par excellence* a money-maker of the best kind. For public and private places, and resorts of every description, there is at this time nothing better on the market. It is attractive and a novelty; the music being perfect piano music, makes it captivating and fascinating.

# THE PUBLIC WANT EDISON GOODS

We hear nothing but praise of Edison goods from dealers. We receive complimentary letters from them daily. Here is one of them:

Gentlemen:—"We never took hold of a new line that took with the public like Edison goods. Our business is top-notch, taking orders every day.  
Very truly yours,  
\*\*\*\*\*"

Name and address will be furnished upon application.

Edison goods are far superior in clearness and quality of tone to other makes and invariably win approval. Then again, our extensive advertising throughout the year tells the public of the fine qualities and latest improvements in Edison goods. Mr. Edison is continually giving his attention to the Edison Phonograph and improving it. Why not handle a popular line? There is money in Edison goods. You make 66  $\frac{2}{3}$  % profit on every dollar invested in Edison goods. Prices are strictly maintained. Write to-day to your nearest Jobber or to us for full information.

**REGAL PIANO and PLAYER CO.**

**889-893 SOUTHERN BOULEVARD, - NEW YORK CITY**

## —Worth While— Old Meeting House Days

Catalogue Number 031312.

**A**N orchestra selection of peculiar attraction, consisting of a medley of old-fashioned hymns of one hundred years ago. Reminiscent of a New England Sabbath morning in the old white meeting house when Phœbe and Hester, in poke bonnets and crinoline, sang in the choir beside Jonathan and Joel, with the old school-master leading the orchestra, and Ezekiel Adams, the village blacksmith, playing the bass viol.

How little we know in these modern times of the old New England Sabbath, beginning at sundown Saturday night, when all play ceased, and no work was done except such as was preparatory to getting ready to go to the meeting house in the morning! The best clothes were laid out, and, before putting the children to bed, the mother called the family together to drill them in the shorter catechism. And when Sunday morning came, how quiet it was! The clear sun and blue sky made the dew on the great green elms seem to sparkle brighter than ever. The hammer and anvil were still, and the mill was silent. Only the bees were at work as usual.

In listening to this record it takes but little imagination to see the old sexton tugging at the bell rope, the family groups coming up the village street to the old white meeting house, the high pews with their little doors, the hard wooden seats, the parson in the pulpit under the sounding board, the choir loft, and the young

singers with the orchestra leading the congregation in singing these old hymns.

Musically, this record revives the past like a historical novel. The arrangement of the music is particularly sweet and harmonious, and in one section the bass clarinet, bassoon and flute produce tones like those of the celestial stop on an organ.

### The quality of the **INDIAN RECORD** is the best argument why you should sell it.

10-inch Disc Records	-	60 cents.

## TRADE NOTES FROM BRAZIL.

**Good Opportunities for American Talking Machine Manufacturers in Brazil Provided the Needs and Tastes of the People Are Respected—Something of the Leading Dealers and Trade Prospects Generally.**

(Special to The Talking Machine World.)

Rio De Janeiro, Brazil, March 15, 1906.

The talking machine business in this city and locality is not as well developed as it might be, and affords great opportunities for enterprising Americans. While dealers throughout Brazil are very fond of using the name of "Edison" as a drawing card, they chiefly exploit the German machines instead of the American. Dealers with whom I have talked in this city complain that American manufacturers of machines and records are not paying particular attention to their trade, and are not supplying the records of songs in the languages desired. For instance, Spanish songs will take well, and so will those of notable singers in Italian, Portuguese and Brazilian. The German manufacturers, notably the makers of the Odeon, have captured a large share of trade by reason of their putting out a strong catalogue of songs in the foregoing languages.

At the present time the disc machine is largely favored in preference to the cylinder on account of its richer and louder tone. Moreover it is claimed by the dealers here that it wears better and gives more general satisfaction.

Fred Figner, who trades under the title of the "Casa Edison," is one of the most important dealers in talking machines in the city. He says there is a big call for handsome cases and that he has sent an American to Germany for the special purpose of having made to his order a number of machines in ornamental designs. This case question seems to be quite a talking point, and it is claimed that American manufacturers can enlarge their market here by having not only the talking machine handled in an enterprising way, but by making it more attractive than the German machines.

One of Fred Figner's best sellers is the Odeon, which he puts out at from \$43 to \$120 in American money. One of the leading dealers here says that the American manufacturers can easily compete with the Germans, and excel them, provided they give attention to this territory. The duty is only 25 per cent.

There are really only three large dealers here; Joao Augusto de Oliveira, who handles the discs of the Victor Talking Machine Co., of Philadelphia, and a large line of German and French machines and records. He has a very attractive store and makes a specialty of Portuguese records.

The Victor talking machines are sold by Guinle & Co., who handle a big line of American specialties.

In addition to his large German line, Fred Figner is the agent in Brazil for the International Talking machine Co., the International Zonophone, of London, and the Universal Talking Machine Co., of New York. He also shows in his catalogue cuts of the Columbia Graphophone, the Edison phonograph in various styles, and a full line of talking machine supplies.

## PHOTOS OF LEADING RECORD SINGERS.

Dealers in talking machines and supplies will be much interested in the advertisement of the Channell Studio of Photography, which appears elsewhere in this issue. There are few dealers who have not demands from their customers for some facts regarding the personalities of the different singers with whom they have become acquainted through the talking machine record. The fact that this concern supplies the trade with photographs of all the noted singers, handsomely and artistically finished, and bearing the singer's autograph, should make these photo-

graphs a decided feature of interest in every store throughout the land. We have had the privilege of inspecting these photographs, and must say that they are certainly most artistic and cannot fail to win a large measure of popularity wherever introduced.

## STEADY INCREASE IN ST. LOUIS.

**Trade Report for the First Three Months Shows Trade Growth of 25 Per Cent.—Columbia Activity—Ramsdell's Report—Other Items.**

(Special to The Talking Machine World.)

St. Louis, Mo., April 9, 1906.

The talking machine trade here during the month of March has been surprisingly good, and these reports are made in the face of the fact that the government weather report for that period shows the month to have been the most severe March we have ever had in this territory. Trade reports for the first quarter in the year show an increase of about 25 per cent. for that period over the same last year, and reports for the surrounding territory are considerably better than this. It can be said without any exaggeration that the talking machine business is booming here, with a very bright future before it.

The Columbia Phonograph Co. is moving this week from its present quarters to 908 Olive street, where they have fitted up a very handsome store, which includes handsome private rooms for customers, where exhibitions will be given. The new store has been arranged in a manner that makes it one of the most complete and attractive in the country. Manager W. C. Fuhri, of this concern, returned from a short trip to New York on Saturday. In a conversation with your correspondent he reported trade for the month of March to have been very good both here and throughout this territory. This company have just opened up a fine new store at 315 Main street, Dallas, Tex., with Robert R. Souders as manager. Mr. Souders has been connected with the St. Louis office for the past nine years. Wm. F. Standke, formerly connected with the St. Louis office of the same concern, has been appointed manager of the Memphis, Tenn., office, succeeding R. P. Bartlett, who goes to Dallas, Tex., as assistant manager.

D. S. Ramsdell, vice-president and general manager of the St. Louis Talking Machine Co., makes very favorable reports on the volume of business transacted by his concern during March and for the first quarter of the year. Mr. Ramsdell has been giving a season of grand opera exhibitions at their store during the past week, and has sent out a number of invitations in this connection. In view of the fact that we have had a season of grand opera here, the time was very opportune for these exhibitions. They have been very much appreciated by the callers at the store, and Mr. Ramsdell feels positive that it will result in creating quite a demand for his machines. Mr. Ramsdell reports the sale of one of his finest machines to the O'Fallon Cuivre Club, of O'Fallon, Ill., composed of prominent citizens of this city.

J. Frank Mahret, sales manager of the St. Louis Talking Machine Co., who was taken sick while on a trip early in the month of March, and confined at a hospital here for several weeks, is out of the hospital and slowly recuperating.

The Talking Machine Co., 923 Olive street, and the Western Talking Machine Co., 925 Olive street, have both received notice to vacate their respective locations within the next sixty days, as their stores are to be torn down to make room for a new skyscraper. Manager Max Silverstone, of the Talking Machine Co., has secured a fine location at 1010 Olive street, which he will occupy within the next six weeks. The Western Talking Machine Co. have made no announcement as yet regarding their future plans.

T. P. Clancy, manager of the talking machine

department of the Conroy Piano Co., reports a very active trade during March, and that the public is buying the better class of machines. He states that their trade is steadily increasing, and feels very optimistic regarding the future.

The Val A. Reis Music Co., the Thiebes-Stierlin Music Co., and E. B. Walthall, manager of the talking machine department of the O. K. Houck Piano Co., all report trade good with them on talking machines.

## VIRTUES OF THE PRICE AGREEMENT.

**Seen in an Entirely Different and More Favorable Light—Protection to Dealer as Well as Manufacturer Is Insured.**

New or ill-informed talking machine dealers, and even jobbers are wont to question the utility of the agreement exacted by the manufacturing companies owning basic inventions and process patents; in fact, a large percentage do not thoroughly understand the price agreement. Many look upon it as being somewhat dictatorial or as a scheme of the strong manufacturer to coerce the dealer into doing something for the sole gain of the former. This feeling has now almost entirely disappeared, and the reputable dealer now sees the price agreement in an entirely different light and knows by practical demonstration that it is an instrument designed primarily for the good of the dealer, and that he is the greater gainer by its protection. As a matter of fact the manufacturer gets comparatively little benefit, except in so far as it prevents the wholesale cutting of prices which ultimately would destroy the reputation of his product that would otherwise be maintained.

Where is there a person who doubts that a manufacturer now selling his wares under price agreement principles could sell more goods (and get just as much for them wholesale) if he should lay aside the price agreement? And who is the real beneficiary under such a scheme? It must necessarily be the one who sells the article to the retail customer and gets the fair profit that the price agreement guarantees. Where there is no price maintaining agreement covering an article it is most often, if not always, sold by the stores at a reduction in price that the dealer cannot meet. History proves that the price agreement has done more good for the legitimate talking machine dealer than anything else that has ever been discovered since price cutting became popular. Of course the benefit derived from such a measure depends largely, if not wholly, on its rigid maintenance, and it is the wise dealer who sticks to the manufacturer whose agreement affords him the greatest protection.

## RECENT INCORPORATIONS.

The Canadian Multiphone Co., of Hamilton, has received a charter entitling it to manufacture and deal in phonograph multiphones and musical instruments. It is capitalized at \$200,000. The incorporators are: Ebenezer Marshall, John Thomson, Alexander Fraser, Thomas Stewart, marble dealer, and John Mack, druggist, all of Hamilton, Ont.

\* \* \* \*

The United Multiphone Co., of Philadelphia, has been incorporated with the Secretary of the State of Delaware for the purpose of manufacturing, selling and dealing in all kinds of talking machines and supplies with a capital of one million dollars. The parties interested are: Ralph C. Lupton, C. A. Darby and W. L. Missimer.

Wilksburg Phonograph Co., No. 738 Penn avenue, Wilksburg, Pa., wholesale and retail dealers in talking machines, recently moved into a new building especially adapted to their business, carrying a full line of Edison, Columbia and Victor machines, records and supplies.

## Just What All Your Customers Are Looking For!

Sells at once on being heard, with BIG PROFIT TO YOU. Will help you sell more Disc Talking Machines and Records. It will revive the interest of thousands who have given up using them on account of the nuisance of changing the needle after each playing. Reduces the wear on the record and will play at least 500 times without changing.

Made in various tones, to suit all tastes: No. 1, Soft Tone; No. 2, Medium Tone; No. 3, Loud Tone. Retail Price, \$1.00 each. Net Price to Dealers, 50c. each

No. 4, Concert Tone. Retail Price, \$5.00; Net Price to the Dealer, \$2.50.

Send us \$1.00 and we will mail you, postpaid, one sample each of Nos. 1, 2 and 3.

*We furnish Artistic Signs and Literature to all Customers*

### THE SYMPHONIC PHONE-NEEDLE CO.

1907 PARK AVENUE. NEW YORK CITY

## HE DID SOMETHING.

How the Wise Young College Graduate Came to Win Success in the Talking Machine Business—A Story Worth Reading.

Jones and I were sitting at the window of our club one evening, gazing down at the passing throng, when Jack Raymond entered.

"Hello, Taylor; this is a surprise!" he cried. "I really believe I have not set eyes on you since our college days. How are you?" He came forward smiling, with gloved hand outstretched.

I introduced him to my friend Jones, and we were all soon chatting gayly. When men come together they invariably talk shop, and we were no exception to the rule.

"By the way, Jack," I asked during a lull in our conversation, "what are you doing now?"

"My dear boy, I'm in the talking-machine business, and, what's more, I'm making money. Pass one of those cigars this way, will you? Thanks."

He lit the fragrant weed, puffed silently for a moment, then began:

"The governor informed me one morning about a year ago that it was time I was getting busy. 'You are through with college now,' he said, 'and I want you to do something. I don't give a damn

chain. The young lady who has just left, for instance, will, in all probability, give a violet or pink tea this very evening, and while her girl chums are munching Nabisco wafers and drinking Ceylon tea, their charming hostess will play the selections from 'The Sultan of Sulu' on her talking machine for their amusement. Let me picture the scene to you:

"'Oh, that is too perfectly lovely for anything!' exclaims one divine creature between munches 'Why, it sounds better on the machine than it did at the theatre. Where in the world did you get it, Gertrude, dear?'"

"'Why, down at Raymond's, of course.'"

"A dainty pencil is poised gracefully between pink and white fingers, and a note is made of the name and address. I expect that whole tea party down here to-morrow, bent on the elimination of my stock of 'Sulus.'"

Then there is the grand opera. When the famous Caruso or any of the operatic stars are in town I make a window display advertising the fact, using photographs in costume, and stating upon a neatly printed card that the songs rendered by the artists whose pictures appear in the window are in stock. I also send a typewritten letter, carefully worded, to each of the opera-goers—the people who have boxes, you know—and by this method I sell as many as one hundred grand opera records a week. When their price is from two to five dollars each, you can easily see that their sale is profitable."

As he finished speaking a carriage drawn by two high-headed and glossy-coated bays swung up to the curb in front of the store, and a footman descended from the box and assisted a lady to alight. She entered and asked for a record of "Vi ravviso o luoghi ameni," "La Somnambula," by Antonio Scotti.

"Heavens! Taylor," cried Jones, in an awe-struck voice, "that selection must be worth a mint, judging from the name. Let's get out of here and give your friend a chance to do the lady justice."

I took the hint, and with a hurried good-bye

and a "come again soon" from Raymond, we departed.

"Say," said my companion as we reached the street, "I'm going into the talking-machine business."

"I'll think about it myself," I answered.

## TRADE NOTES FROM CINCINNATI, O.

Talking Machine to Accompany Party to the Polar Regions.

(Special to The Talking Machine World.)

Cincinnati, O., April 9, 1906.

The Columbia Talking Machine Co. are showing a fine line of instruments in highly decorated cases.

Ilsen & Co. are also displaying a line of cabinet instruments in gilded and inlaid cases. April records for all phonographs and talking machines are displayed and on sale.

The R. Wurlitzer Co. has assumed the agency for the Zonophone. Raymond Strief, manager of the talking machine department, finds wholesale demand for Victor and Edison machines and records on the increase. The latest records were a feature of last week's popular concerts and drew an immense crowd.

A high-class Victor instrument was sold to a wealthy Cincinnati man for use on his yacht during a recent bridal trip and will accompany him and his bride to the polar regions this summer on a hunting tour. A number of Victor machines are being sold through the plan known as the "One Man Band," which is the addition of a drum to be used with the machine, and records for dancing and rag time music. Twenty-five of these combinations have been sold locally since they were introduced at a recent concert in the Wurlitzer store.

P. Long, who opened the record making department for the United Hebrew Disc & Cylinder Co., being recognized as an expert in the line, is now in charge of the "masters" at the plant of the Leeds & Catlin Co., Middletown, Conn.

"SHE WAS LISTENING INTENTLY."

what you do, but do something.' Well, I *did* something. I rented a little store down on Baltic avenue in a good residential district, and just around the corner from the Elite Theatre, fitted it up attractively, and made money. Why, gentlemen, actually sometimes I'm *too* busy! I don't keep open nights, either."

"Did you hear that 'too busy,' Jones?" I laughed a little sarcastically. My friend smiled back in polite scepticism.

"That's right, boys, laugh all you want to; you will both be the better for it. It will help digest that lobster cutlet you've eaten. All I ask is that you will honor me with a call in the near future, at which time I will be glad to show you how this apparently impossible thing is accomplished."

He gave us each his card, spoke of an important engagement already overdue, and with a parting handclasp was gone.

The next afternoon found Jones and I entering Jack Raymond's place of business as per his kind invitation of the night before. We found him in earnest conversation with a very stunning young lady.

"I have just been to the matinee performance of 'The Sultan of Sulu,'" we heard her say, "and, seeing your announcement in the window in reference to records of this comic opera, I could not resist coming in. May I hear them, please?"

"Certainly; it will be a pleasure, I assure you," he answered; and soon she was listening intently to a sweet barytone voice rendering with great expression "Since I First Met You."

After she had gone our host informed us that she had purchased several records, and had promised to bring some of her friends down soon for the same purpose.

"I'll tell you," he said, "it works out like this: If you establish yourself in a good neighborhood, make a specialty of keeping in stock the leading selections from the attraction at the nearest theatre, advertise them judiciously, the result will be a great success. It is simply an endless

## PROOF That Double Service Will Increase YOUR Business

E. R. GUTHRIE  
BICYCLES, PHONOGRAPHS

1540 O STREET

International Correspondence Schools,  
Scranton, Pa.

LINCOLN, NEB., Jan. 9, 1906.

Gentlemen:

Replying to yours of 5th inst. regarding my success in selling the I. C. S. Language Outfits will say, there is no other phase of the Phonograph business that has appealed to me as this language system does. The sales are naturally with the more well-to-do people and there is no question of installments to contend with. One can approach the most exclusive people with this language proposition and be sure of a respectful and interested hearing. By exercising a little judgment in selecting the people to be approached with it the dealer will find almost half of them will become good "prospects." The super-sensitive people who have always said they would not have a phonograph in the house fall right into line and enlarge the field for phonograph sales by a large proportion. A "demonstration" for a prospective customer usually consists in playing one record and having a quiet chat. Occasionally one who has already acquired a literary knowledge of a language asks for one of the advanced lessons to be run. Contrast this with playing "rag-time" for an hour for a lot of gigglers who buy one or two records and the dealer who tries it will surely become a devotee to the Language Outfit sales. Nearly every one he shows it to can tell him of some friend who will be interested also.

Yours truly,

E. R. Guthrie.

It has increased other dealers' business from 10 to 30 per cent. } Box 918  
To find out what it will do for your business, write to-day to } Scranton, Pa.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### REGARDING INTRODUCTORY SPEECH.

J. H. Lepper, talking machine dealer of Mason City, Ia., writes as follows: "I would like to hear from talking machine dealers of the United States, through The Talking Machine World, if they favor having the announcements on the records as now used on the Edison and other records? For my part I would much prefer that they cast them out. I always set the reproducer down on the record as nearly the beginning of the record proper as possible, but I am not always able to strike it right, and then it sounds worse than if I had let it play the introduction speech. It seems to me as long as the record has the label on the end, or as, with the disc records, printed in the center, it is sufficient. Let us hear from you and settle this matter."

### ABOUT SPEECH REGULATION.

F. M. Barney, of Elm Creek, Neb., writes The World as follows: "It may be of interest to your readers to learn of my speed method. I have long asked the Edison people to put out a record with a given note on same that might be used in unison to a key pipe to obtain correct speed, and in record No. 9241, 'Dixie Rube,' they have given a standard tone A. I have a tuning reed A. I put said record on my machines (am a dealer) and note difference in tone on record and reed. If the tone A on record is high I lower speed of machine till in unison. This is but an instant's work, and the speed is correct. This gives the natural tone of voices, etc. I do not think much of Edison marks on back of machine for speed regulation; it takes forever, and is not perfect."

### TO MAKE MACHINES LOUDER.

"To your readers who would like to make their machines louder, I give the following method, which gives perfect results: Remove vibrating arm (in which jewel is set) and take it to your jeweler and have another hole drilled in same as near the former hole (in center of arm) as possible on the side in which the jewel is set. Put screw through this hole after replacing link. This causes the amplitude of vibration of diaphragm to be increased, thereby increasing loudness of tone. I have heated the arm and pushed jewel closer to the old hole with equally good results, but like former method better, as it can be changed back readily."

### THE CAUSE OF THE "BLAST."

"I disagree with Mr. Seymour, London, Eng., to the statement he makes that blast is always a defect of the record for which the reproducer is not in the least responsible. I have found that where a diaphragm is too slow, it will cause the jewel to leave the track of the record and produce a blast also. This is the case when the speed of the return vibration of the diaphragm is not sufficient to hold jewel to the record; in effect it's the same as the track broken in the record."

### TONE QUALITY IN DISC RECORDS.

Wm. F. Hunt, the progressive dealer, and always interesting writer, of Wanatah, Ind., says: "In the 'Practical Suggestions and Comments' column of the March issue of The World, T. Willson, of York, England, gives it as his opinion that the announcement in disc records answers a very good purpose owing to the record first wearing out and becoming scratchy at that point. Otherwise the selection proper would suffer, he claims. I fail to understand why it should be necessary to use an announcement to overcome this evil. Why not, in recording, permit the recording stylus to make a few circles on the record before the selection is started, and then in reproducing utilize these unrecorded lines for the purpose of getting the needle and record adapted to each other, or, for the wearing out purpose, as our friend puts it. It would not be near so disagreeable to hear the scratching alone as to have it intermingled with the voice of the announcer. Furthermore, he suggests

that the larger discs be recorded at a lower rate of speed, so as to permit of a longer selection to be recorded on them. Or, in other words, to equalize the surface speed of the larger records with that of the 7-inch size. Our English friend seems to prefer quantity rather than quality. He does not appear to understand that the greater the surface speed of a record, the fuller and truer the tone quality. The making of the larger discs is not mainly to get a longer selection (although the selection is materially lengthened thereby), but to get better results, which point is, after all, most essential. This same correspondent also wrongfully states that too large a circle is left blank in the center of the large discs, that they could be run equally as near the center as a 7-inch disc and with as good results. Here he again shows lack of knowledge in the principle of sound-recording. He is simply trying to increase a fault in the disc records. And with his idea of recording the larger discs at a lower rate of speed the fault would even be doubly increased. As I have already stated, the greater the surface speed of a record, the fuller the tone of the reproduction. Now, then, to illustrate, when the recording stylus starts in at the outer edge of the record, the surface speed is at its greatest point, but as the circles near the center they gradually grow shorter, and the stylus covers less space in a given time, therefore cutting the sound waves shorter and shorter. Naturally, the selection in the reproducing process deteriorates in tone as the needle nears the center of the record, and the nearer the center the selection is recorded, the greater the deterioration in tone. The difference in tone quality from the outer edge of a 12-inch or even a 10-inch record to a point equal near the center to that of the present 7-inch record would be greater than the difference from the outer edge of a 7-inch disc to its inner circle. In the present average disc record the circles on the inner edge of the record are less than half as long as the outer circle, yet the deterioration is so gradual that it is, if any, but very little noticed. The manufacturers of the disc records are using the very best judgment in the making of them. They are giving the greatest quantity of music on a record consistent with good quality. We have had low-speed records, and from experience it has proven that the general talking machine buying public prefer the better quality of reproduction which can mainly be attained by a high-speed record. Of course people who do not keep their machines running at the proper speed cannot realize the advantage in this method, as they do not get a natural reproduction at any rate. The making of longer selections is a more perplexing problem than the average person can comprehend."

### MATERIAL FOR DIAPHRAGMS.

In regard to Mr. Seymour's article in last month's issue on material for diaphragms, Wm. F. Hunt, of Wanatah, Ind., writes: "I wish to say that some of his arguments appear to be practical as well as logical. He, however, takes the opposite stand to Arthur C. Mestraud as to what causes blasts in a cylinder record. The correspondent to which Mr. Seymour has reference is my humble self, and I must acknowledge that he has quite convinced me that my views on the subject to some extent were wrong, most especially in that a more porous substance would have to be used for diaphragms to secure the mellow effect. In his claiming that this can be brought about by the use of larger diaphragms, I believe to be quite true, as I find that even in the reproducer of the Columbia Co.'s 20th Century graphophone, which has a diaphragm of four inches in diameter, with its tremendous volume, the tone quality is most mellow. It will, however, be found that the smaller diaphragms produce a much sweeter tone. The one is natural in its sweetness, while the other is natural in its mellowness, and the secret lies in combining the two into one reproducer. It will have

to be contended that one effect without the other is unnatural, and I still believe that some new unknown substance will have to be used in diaphragm construction before perfection in tone is reached. It is now being tried to overcome these defects in recording, and while to some extent the method is a success, yet, the tone is deadened to a considerable degree in this process. I do not wish it understood that I do not appreciate the advancements made in the art of sound recording and reproduction, for I think them really marvelous, but it must be admitted that perfection is yet out of the question. Time alone will bring about the desired results."

### TALKING MACHINE NOMENCLATURE.

A subscriber of The Talking Machine World calls our attention to an article which recently appeared in a London paper, called "The Bazaar," and which has been reproduced in some other publications, treating of the nomenclature and early history of the talking machine, and says: "Therein you find mentioned that the United States Patent Office calls all talking machines 'gramophones,' whatever other names makers may give them," and asks for information as to whether this is so. Before going into this matter it will be best to quote the story referred to:

"The gramophone was invented by a Mr. H. E. Berliner, of Washington, to illustrate the practical use of Professor Bell's discovery that the vibrations caused by any series of sounds could be 'written' by a vibrating point on a suitable material, and the same series of sounds reproduced by another point traveling over the inscription so made. It was one step in a long series of investigations resulting from a consideration of the properties of telephone invented by Professor Bell, and this gramophone—so-called from 'gramma,' a letter, and phone, sound—consisted of a flat disc revolving horizontally, and bearing on its surface the inscription impressed by the vibrating point. It had previously been discovered that a cylinder revolving on a spindle could take on the inscriptions, and that from these inscriptions the sounds could be reproduced by causing another point to travel along the engraved cylinder while the latter revolved on its spindle under the point. This primitive form of machine, the notion of Bell and Edison, was called a phonograph, from phone, sound, and graph, I write. But all the machines distinguished in England as graphophones, phonographs and gramophones are called in the United States Patent Office gramophones, whatever other names makers may give them. The difference is not in the principle involved in the reproductions, but in the mechanism employed. In connection with the above the Columbia Phonograph Co. writes to our contemporary to the effect that every talking machine now makes its records by engraving sound waves in a wax composition. This was first made known to the world by the inventors of the gramophone. The phonograph was a machine that indented its records on metal foil. The gramophone etched its records in an acid bath. But the true phonograph or the true gramophone no longer exists, except as a curiosity. Every successful talking machine to-day employs the gramophone process of engraving records, and is therefore, strictly speaking, a graphophone."

### THE EDITOR'S COMMENTS.

Without commenting at length on the above article, which is open to correction in some respects, we are authoritatively informed that the word gramophone first used by Emil Berliner in connection with his patent, is not employed generically by the United States Patent Office as a classifying term for talking or sound reproducing devices. It is specifically applied, however, to describe appliances of a particular type. The practice followed by the patent examiners being to class all apparatus for making records by the indenting method as phonographs, by the cutting or undulating method as graphophones, and by the lateral or zig-zag process for disc records as gramophones. These designations were adopted by the United States Patent Office early in the

## Sell the Victor on easy payments

There's more money for you in selling the *Victor* on instalments than in making cash sales.

Lots of good people, who would be scared off by a cash transaction, are open to an easy-payment plan, and many dealers have already found out that this plan works out to their own advantage and runs up the sales of both

### Victor Talking Machines and Records

They sell more *Victors* to begin with and they have an opportunity to sell *Victor Records* every time their customers come in to pay another instalment. It gives dealers an opening to talk about the new *Victor Records* that are issued every month, results in a large number of additional sales and the dealers are just so much more money in pocket.

The easy-payment plan makes selling easier and keeps the people in touch with your store without the least effort on your part. It gives you a good hold on their entire trade.

It's a great opportunity. All dealers should make use of it.

### Victor Talking Machine Company Camden, N. J.

P. S. You can easily build up a larger business in *Victor Records* by working along this line: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.)

Artistic Monthly Supplements furnished for this purpose.

Full information and prices can be obtained of any of the Victor Distributors as follows:

development of the talking machine art as differential appellations only, and are adhered to at the present time. The word gramophone is seldom heard in the trade here. It is occasionally found in court discussions and lay magazines and newspaper articles in speaking of talking machines in general, but with no special significance.

#### REPRODUCER FOR CYLINDER MACHINES.

Another step toward perfection in sound reproduction will be reached when a new reproducer for cylinder machines will be placed on the market in a few months. This speaker carries a diaphragm two inches in diameter, and by a clever arrangement of very small pulleys and levers the sound from both sides of the diaphragm is collected and sent into the horn.

One who has heard the device says: "It is estimated that the volume given in this way is five times greater than that obtainable from the average good cylinder talking-machine reproducer, while the depth of tone, natural sound and positive clearness is surprising." The base of this reproducer is so arranged as to fit all the leading makes of cylinder machines, and is the invention of Arthur C. Mestraud, who seems bent on keeping pace with "these times of push and progress."

#### THAT RECORD CATALOGUE.

In answer to several inquiries, we may say that James I. Lyons, 194 East Van Buren street, Chicago, is the publisher of a complete alphabetically arranged list of all makes of records. It is something that should be invaluable to every talking-machine dealer.

#### TALKING MACHINES IN HONDURAS.

**Excellent Chances in That Country for an Increased Sale of Talking Machines and Supplies of All Kinds.**

The prosperous state of trade in Honduras has caused an increased demand for talking machines of various kinds. Many of the small

country stores are purchasing talking machines for the amusement of their patrons. Now that talking machines are becoming so well known and liked the demand for first-class high-priced instruments is increasing. Many persons are selling the cheaper machines originally purchased to buy those of a better grade. The outlook in Honduras for an increased sale of talking machines is very encouraging, and for their sale all Spanish-America offers a most attractive market, one that should receive particular attention.

#### AN ANCIENT PHONOGRAPH.

**Invented and Made Some Thirty Years Ago by Stephen G. Cree, of Wheelock, Vt.—Worked in Secret Until He Found He Had Been Anticipated by Edison and Then Placed It on the Shelf—Some Reminiscences.**

Stephen G. Cree, the veteran Town Clerk, of Wheelock, Vt., has a rare curiosity in his possession in the form of a phonograph which he made thirty years ago. That Mr. Cree's talking machine is as old as he claims is evidenced by the fact that there are scores of men in the little town of Wheelock to-day who can place the time they first saw and heard the wonderful machine by the class they were in at the district school when the owner gave them an exhibition which made their eyes stick out in amazement. No one at the school, whether teacher or scholar, could conceive how it was that the machine could record a conversation and then reproduce it.

The natives of the village were equally astonished, and some of the more superstitious were inclined to believe that the voice came from the spirit land. To convince them that the conversation was simply a reproduction of Mr. Cree's voice was impossible until they themselves spoke through the transmitter while Mr. Cree turned the crank and then heard what they had said.

The principle is about the same as Edison's first and crude phonograph, but the cylinder is driven by a hand crank. A regulator, too, is at-

tached to Cree's machine, and when it is screwed tight the sound transmitted becomes louder and clearer.

In making his machine Mr. Cree preserved the greatest secrecy, and continued to adopt this policy until one morning he discovered that Edison had perfected a machine. After this discovery Cree gave up his efforts at talking machine improvement, and the machine has laid for the past twenty years in the attic of his home. It was only the other day when he had purchased a new Edison phonograph that a story of his early attempts came to light. He said:

"Yes, I thought I had something great nearly thirty years ago when I succeeded in perfecting a talking machine; but Tom Edison was ahead of me and I was glad to see him rewarded if he had to work as hard as I did to make his machine," said the old Town Clerk, with a smile. "In making his model he was far more successful than I was, as with my machine, which worked directly by hand, the cylinder would not have been good for anything but recording a conversation directed to it. For a song it would be practically useless, as it would be impossible to turn the handle in accurate time. I have had enough enjoyment out of the old thing, and I think sufficient to pay me for the time I spent in making it. The phonograph, crude as it is, was certainly a wonder, and every Vermonter who ever heard it will readily agree with me. We could not all win, and Edison deserves the credit."

#### THE MUSICAL ECHO CO.

Chas. G. Collier, who has been appointed manager of the Musical Echo Co., of Philadelphia, has had an extended experience in this line of work. The concerts which this company are giving at their display rooms on Wednesday and Saturday afternoons with the Victor have been heard by at least ten thousand people during the last few months. Mr. Collier is placing the Victor machines in the most exclusive musical circles in this city, and reports a rapidly growing business.

## NEOPHONE DIRECTOR IN TOWN.

**A. W. Cameron Is Here to Examine the Trade Situation—Has Opened Temporary Quarters—It Is Said a Company May be Formed Here to Manufacture Neophone Specialties.**

A. W. Cameron, managing director of The Neophone, Limited, London, England, recently arrived in New York, to look over the situation here, owing to the numerous inquiries which have reached them from this country for Neophone specialties. As a result of the inquiries it has been decided to manufacture the Neophone disc phonograph in this country, and a company will probably be organized for the purpose of developing the business within a very short time.

The Neophone is the invention of Dr. Michaelis, and is protected by patents not only in the United States but in every country throughout

A. W. CAMERON.

the world. The present company was organized in London in September, 1905, and has developed to such proportions that larger quarters, at 1 Worship street, Finsbury Square, E. C., became a necessity, and were occupied on January 1. Foreign trade has also grown, and the company now control branches in Paris, Berlin and Milan.

Mr. Cameron said to the World recently:

"One of the special features of the Neophone is that there are no needles to change, a permanent sapphire reproducer being used, with practically indestructible disc, which gives a great volume, purity and quality of tone; in fact, the recent invention of the Neophone home recorder has given our company something entirely individual, inasmuch as it enables users of the disc machine to make records at home.

"Another specialty of our house is their Neophone grand, which is especially built for playing twenty-inch discs. These records play for

about ten minutes, and lengthy selections can be reproduced without omissions."

Mr. Cameron has opened temporary offices at 12 West 28th street, New York, where he is showing a full line of Neophone specialties and visitors have been pleased with the result of their investigations. Callers have not been confined to the trade exclusively, for among them have been some well-known figures in the histrionic and musical world. Marie Dressler and others have been interested to make records for their own amusement. The novelty of being able to make a disc record has created surprise as well as pleasure.

Mr. Cameron, the Neophone ambassador, is a talking machine man "from the ground up," so to speak. He has studied the situation in all the leading countries in the world, and is not only a keen, progressive business man, but a gentleman of pleasing personality, who is destined to make many friends. He is quite enthusiastic over his visit to New York, and is confident that the great success achieved by the Neophone, Ltd., in foreign countries will be duplicated in the United States as soon as the merits of their goods become more widely known.

## ARE "TALKERS" MUSIC?

**Judge Walker Asked to Grant an Injunction Restraining the Talking Machine Used in Public Parlors.**

(Special to The Talking Machine World.)

Chicago, Ill., April 6, 1906.

In a bill presented to Judge Walker, one phonograph owner admitted it was beyond the ability of the layman to tell whether phonographic reproductions were music or just a general disturbance. This is not the first admission of the kind.

The statement was made when Carl Leammle, president of the Nickel Amusement Co., petitioned for an injunction restraining the city. The contention was that if the reproductions were a nuisance—and in this case a public one—the city might have power to suppress the concern operating at 909 Milwaukee avenue.

Judge Walker, after hearing the representation, said he would hear both sides before granting an injunction.

The attorneys made the mild request that until the question is determined, the mayor, chief of police, and all the residents along Milwaukee avenue, near North Ashland avenue, be restrained from closing or interfering with the theater, which is daily surrounded by hundreds of residents of the northwest side.

## DEPENDS ON THE RECORD.

It is a moot point whether the talking machine vulgarizes or helps to popularize a song or piece, says Music. It is probably due to the apparatus when a good singer's voice is reproduced gracefully, and due to a bad machine when the singer's voice is unsatisfactory. Our own opinion is that the talking machine is a distinctly valuable invention with infinite potentialities. We have heard the rendering of certain songs by certain

singers, by means of a reproducing instrument which opportunities have not been afforded us to hear at first hand.

## BLUFFED THE BURGLARS.

**How a Self-Confident Young Lady Utilized the Talking Machine to Scare Burglars in a Most Effective Fashion.**

The latest utilization of the talking machine is certainly novel and shows its possibilities in an entirely new light. For instance, the mistress of a home was alone in her parlor when she was startled into that sort of stillness through which the sound of one's heart beats assails one's ear with the deafening effect of drum beats. She heard soft footfalls on the floor above, and knew that she was at the mercy of burglars. She heard one of them descending the stairs and she was almost paralyzed with terror.

Out of her feminine consciousness came an inspiration. She knew the record of an aria from a grand opera was ready to burst into song. She turned on the vocal calisthenics, and after a piercing preliminary shriek or two the voice of a Nordica or Fremstad or Scalchi bounded from its lowest depths to its highest altitude and couruscated joyously around a dizzy sound height that assailed the high ceiling of the parlor and spouted the heel wings of Hermes from burglarious feet.

No husky "Who's there?" No quavering scream for help would have operated to scare a few burglars out of a house occupied by one woman, the talking machine did for their nerves, however. The unexpected happened to them; they took refuge in flight and were well down the back alley before they realized that they had been bluffed by the imitation of a prima donna's vocal athletics.

It is well that the greatest stars in the musical firmament do not disdain the phonograph. It is well that the song of a Calve or a Caruso can be carried into the mountain hut of a dweller far away from the noise of a railroad or the possibility of grand opera in town. The talking machine brings pleasure with it, and it has been shown that it has safety in its records.

It was much more effective, in this case, than many a policeman has been in like instances.

## THE EDISON LIKED IN IRELAND.

The Belfast Evening Telegraph of recent date, under the caption, "A Score for Belfast," said: "From last copy of an important American trade journal (The Talking Machine World), we observe that during the four weeks ending January 22, Belfast stood second to London as regards quantity of Edison phonographs shipped from New York to the British Isles, and 20 packages beyond the aggregate shipments to all other ports in the British Isles (exclusive of London). Mr. T. Edens Osborne, of 4 Donegall Square, West, to whom the Belfast shipments were exclusively made, may be accordingly congratulated."

**EDISON BUSINESS PHONOGRAPH.**

Displayed With Great Success at the Office Appliance Show in Chicago—Some Special Features of Excellence That Commanded Attention—Those in Attendance.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,

Chicago, Ill., April 9, 1906.

The office appliance show held in this city marked the first public demonstration in Chicago of the business phonograph of the National Phonograph Co. It was coincident with the formal opening of the business phonograph depart-

interested and delighted many hundreds of visitors. The instrument is electrically driven from the regular lighting circuit. By means of simple attachments the dictator may pause, be interrupted for hours, instantly repeat any of the words previously spoken, make corrections, give instructions, and all with the certainty that an accurate letter will be written.

The feature by which mistakes are caught is very ingenious. There is a scale similar to that on a typewriter on the phonograph. A reproduction of this scale appears on the leaves of a pad furnished with the machine. If under the old regime the dictator made a mistake the typewriter operator would get the error down, no matter how hard her employer might correct it in the next breath. Now, with this scale arrangement, when the dictator finds he has made a mistake he stops the machine, notes at what point on the scale the error commences, and then on a similar point on the scale on the pad marks "M" for mistake. The operator has the memorandum before her, and when she reaches the point indicated stops until she has heard the error, omits it and commences with the correction. Another feature of the Edison machine is the new combination reproducer and recorder.

In charge of the exhibit was C. L. Hibbard, manager of the Chicago branch of the Edison business

phonograph, assisted by Geo. B. Walker and a competent staff. Nelson C. Durand, who is the general manager of the Edison business phonograph, who has been getting the new branch in full working order, was also in attendance.

**NEVER PAWN "TALKERS."**

We Find Everything Else in the Pawn Shops in New York—Too Valuable as Entertainers.

A casual glance in the windows of any of the innumerable pawnshops in this city will reveal the fact that it is an unusual thing to see a talking machine of any kind displayed for sale. In making an investigation as to why so few of them were found among the unredeemed pledges, an inquiry from one of the largest pawnbrokers in the city elicited the following information: "As a rule, the class of people who buy phonographs are not the best patrons of the money lender, and when necessity drives them to seek temporary aid they always bring something that they can well do without. The phonograph is in constant use, and I have found that they hold back on that until every other resource is exhausted, and then it is about the first thing redeemed. I think it is natural love of music in man among all classes, and often, I have been told, they have been kept to the last because they cheer up the heart saddened by adversity. I have also noticed that the possession of a phonograph has strengthened the home ties, particularly in the poorer quarters of the city. The entertainment afforded at home has offset, in a certain degree, that of the saloon and street, and to my positive knowledge the money that is paid for thousands of records weekly sold in the slums formerly went into the saloon till 'around the corner.'"

A Socialist publication is giving away phonographs with records as premiums. The records are made by prominent Socialist speakers and writers, who record their best speeches or passages from their writings. The believers in the country districts use these records to spread the propaganda.

The Automatic Amusement Co., of Wilmington, has been incorporated with the secretary of the State of Delaware for the purpose of manufacturing talking machines of all kinds.

DISPLAY OF NATIONAL PHONOGRAPH CO. AT CHICAGO.

ment, advance information of which has already been given in these columns. In a large space in the south end of the Coliseum the Edison commercial system, conducted with the business phonograph, was exploited in a manner which

# THE THOMPSON MODIFIER

## PERFECTION AT LAST A Modifier That Really Modifies

Softens the tone, eliminates the metallic sound, takes all the "scratch" out and makes the reproduction of voice or instrument as soft, smooth and harmonious as the original.

THE THOMPSON MODIFIER is entirely new and different from anything on the market. The best machine in the world is improved by its use—the poorest sounds well with its help. Made pear shape, it fits any size or shaped horn and can be used with any machine on the market.

MADE OF BRASS, NICKEL PLATED, PRICE, \$1.00

## THE MONTHS HAPPENINGS IN PHILADELPHIA.

Large Demand for Machines by Secret Societies, Sunday Schools, Etc.—Proofs of "Talker" Popularity—Well Known Dealer Describes How Success Is Achieved—Lewis Talking Machine Co.'s Increasing Trade—Victor Co. Still Expanding—Recent Visitors—Chat With T. R. Goodwin—Penn Phonograph Co.'s Publicity Plans—The Hutchinson Acoustic Co.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 10, 1906.

In the face of inclement weather good business was the rule for the month of March in local talking-machine circles, according to reports of dealers and others. So far April promises to outdo March, and beyond doubt the trade is sure of excellent spring business. Sales of complete outfits are the rule rather than sales of single articles, and as the sale of a machine means good future sales of records, dealers have been pushing machine sales first and last. The giving of "benefit" entertainments by secret societies, Sunday-school classes, etc., is another thing which tends to make trade good. In some cases dealers loan outfits; in others they send an expert operator and charge a small fee. And here is a hint, perhaps new: One of the local dealers who sends out machines to entertainments has an advertising disc; it loudly proclaims the merit of the blank machine, gives the dealer's business address, etc.

Sunday, commonly called the first day of the week, is the day above all others which clearly proves how firm a hold the talking machine has on the people generally. The writer, in rambles about the staid old Quaker City on Sunday, has been surprised at the remarkably large number of machines he has heard talking, singing and doing pretty much everything else but praying—and usually to a large, impromptu or family gathering of delighted auditors. "The box what sasses back to you," as one darkey put it, is particularly a favorite in the several negro sections of the city, and a "coon" rich enough to own a good "jaw box" is entertained and feted whenever he chooses to call—with the "box." The spectacle of several really excellent negro singers joining in when a good quartette record is run off is a good sight to see and good music to hear.

A South Ninth street dealer in talking machines, etc., who has been noticeably successful in business, was frankly asked by the writer: "To what do you ascribe your success?" After a moment's serious reflection, he said: "I ascribe my success not to one, but a number of things. Of course, I have kept an up-to-date stock, have made show windows and storeroom as attractive as possible, and given courteous attention to customers. Perhaps my willingness to oblige patrons has had much to do with my success—at least, I think so. For instance, I have had entertainment committees from secret societies, Sunday-schools, clubs, etc., call and ask for the loan of certain popular records; they could hardly afford to buy them, yet they wanted tunes suitable for the occasion. Well, I loaned the records, thus aiding worthy causes, and I have never regretted it, for such little courtesies, I know, have brought me hundreds of dollars' worth of

business. I have used printers' ink successfully; have advertised in only such mediums as I thought would reach people likely to buy talking machines. Upon request I have called at customers' homes and let them hear all the latest records out. This plan is a good one; I never fail to sell a good many records. Last, but not least, I have given close attention to business and have worked hard." Perhaps other dealers may gather an idea or two from the foregoing.

Jonas Shaw, 2611 Westfield avenue, Camden, N. J., handles Edison and Victor goods, and is doing a good business "over the creek," known as East Camden.

Herbert T. Lewis, head of the Lewis Talking Machine Co., 15 South Ninth street, is having an increasing trade, due greatly to his aggressive business methods. He is especially pushing sales of the Twentieth Century Graphophones and Columbia disc and cylinder records, and is meeting with every success. His jobbing trade has grown to large proportions, and will require more and more attention from now on. March business was good with him and April trade promises to be large.

Huge piles of building materials in Cooper street in front of the main building of the Victor Talking Machine Co., Camden, N. J., attest the fact that "there's something doing." East of the main building foundations for the large new brick addition, which is to be similar to the main building, are partially laid. While this large undertaking is going on, the Victor company has just announced plans for a still greater development of their large plant. From John Starr, Jr., the company purchased valuable Delaware river front property—a good-sized plot—and upon it they will erect one if not several more large buildings. One of them will be given over to printing. The company's present printing plant on Federal street is considered a good one, but it is, of course, inadequate to the company's fast-increasing business. As is perhaps known, the Victor company's various catalogues, price-lists, circulars, etc., are printed in many languages, and when the new printing plant is up it is possible several good union Chinamen "jobbers" will appear on the scene. As the property acquired has valuable riparian rights, it may be that the Victor Co. will have its own wharves for receiving supplies and shipping goods via water. And if a Victor freighter ties up at the Victor dock, so much the better.

The largest single contributor to a fund raised in Camden for the aid of families of three firemen killed while fire fighting, was the Victor Co., which promptly sent in to a relief committee three hundred dollars. Such deeds make the company "stand mighty good" with Camdenians.

As to business conditions, it is the old but wel-

come fact—all hands are very busy, the plant being operated both day and night, the Sabbath day excepted. And according to an official's statement the outlook is for very busy times for an indefinite time to come. The remarkable growth of the talking-machine business as exemplified by the Victor Co., has been a wonder and "eye-opener" to everyone. The solidarity and permanency of the talking-machine industry is now unquestioned. All the world loves music, and upon this solid rock the business is sure to increase and prosper. All of which must be pleasing to those who went in "on the ground floor." Among prominent visitors at the Victor Co.'s establishment the past month were Signor Alfred Musso and Dr. Antonio Ciaramelli, of Musso & Co., large exporters in the Mediterranean trade, with headquarters at Naples, Italy. They were duly entertained and expressed appreciation of the commercial pushitiveness of the Victor Co.

In a trade chat, T. R. Goodwin, manager of the Columbia Phonograph Co.'s Camden, N. J., branch, said: "We carry here everything the Columbia people make—have a full catalogue. It is a regular Columbia store, and we carry only the company's products. We are doing a tremendous instalment business; week before last on two successive days we put out outfits worth \$250 apiece. Yes, we advertise in the local newspapers, and have received good returns. We run a special sale ad., and it makes a hit. Our business is increasing every month. Outside of December, March was one of the best business months we have had, and April is most satisfactory. This office has jurisdiction over New Jersey south of Riverside. We employ canvassers, give demonstrations, mail our patrons latest lists of records, and in every way are pushing sales." So fast has the Camden business increased that Mr. Goodwin hired another large adjoining storeroom, which is now stocked with cylinder records. The disc records and machines occupy the main store.

Mr. E. D. Easton, president of the Columbia Co., and Mr. George Lyle, general manager, were in Camden a few weeks ago to see "how things were moving," and the past week Walter P. Eckhardt, wholesale manager, was a caller.

C. H. Rogers, representative of the Columbia Phonograph Co. at Riverside, N. J., reports having put out a large number of Columbia outfits.

C. W. Callaghan is the hustling representative of the Columbia Co. at Gloucester City, N. J., and reports trade to be satisfactory.

Justice of Peace Philip Schmitz, of Camden, N. J., recently appointed Dog Catcher, says: "When I get the dog pound full of canines I intend to take my phonograph and a record and catch all the snarls, barking and growls. Then I'll sell it to one of the talking-machine concerns and we'll both make some money."

The Musical Echo Co., 1339 Chestnut street, are using two-inch ads. in the dailies to exploit April records for the Victor, and report a growing and increasing trade. Their patrons are bon-ton.

There has been a "hi-le hi-lo" time at the pleasant parlors of the Penn Phonograph Co., Edison and Victor jobbers, 17 South Ninth street,

# FLOWER HORNS.

We manufacture the only complete line of Flower Horns. Our horns are exclusive in design and decoration, and in their general attractiveness are considered standard on the market to-day.

We have just issued a handsomely printed pamphlet, illustrating our Flower Horns in their natural colors, and will be pleased to mail a copy free on application.

See that the trade mark is on all the Flower Horns you handle. It is a guarantee of quality.

---

## Hawthorne & Sheble Mfg. Co.

PHILADELPHIA, PENNA.

this month. As an attraction the company engaged George P. Watson, the yodler, to yodle, and, with piano accompaniment, to demonstrate how talking-machine records are made. The large crowd which daily thronged the storerooms attested the success of the "demonstration" and the popularity of Mr. Watson's voice. Naturally business was stimulated, and the Penn Co.'s April business will doubtless be one of the best months yet recorded. Their store is a marvel of beauty and convenience; they have four large booths for retail department, and a large show room in which they display among other things in the talking-machine line the most complete assortment of cabinets in the State.

The Hutchinson Acoustic Co., 1008 Commonwealth Building, are pushing sales of their sound-conveying instrument, the Acousticon. Along commercial lines this instrument will prove a competitor to the phonograph. Place an acousticon in a theatre, and hundreds of persons miles away, via telephone, can hear all that is going on in the theatre. The past month people at Reading, Pa., 58 miles away, listened to Evangelist Torrey here, preaching in the Armory.

Brief notes of some of the local dealers are: Harry H. Henrici, at 1127 South Broad street, is giving patrons of his district every service in records demanded, with success. C. J. Heppe & Son have continued their special phonograph outfit sales mentioned last month. April records have sold fast at the handsome storeroom of the Automatic Graphophone Co., 1731 Columbia avenue. It is quite certain another talking-machine store will be opened in Kensington, the "mill district," where the working folks almost naturally turn to the talking machine for amusement and dancing. The Hoffmann Cycle Co., 3036 Kensington avenue, does an excellent business in machines and records. Out Lancaster avenue way Charles E. Robertson has a fine store, big stock and lots of "push," and so he has no "kick" coming. One Ridge avenue dealer calls his place a "Phonography," and defines it as meaning a place where everything in the phonograph line can be found.

## AN INJURIOUS BILL

**Before the Legislature at Albany—Would Kill  
Instalment Business in Talking Machines—  
Fortunately Doomed to Defeat.**

The talking-machine trade has been greatly interested in a bill recently introduced into the Assembly in Albany which provides that when the vendor desires to repossess himself of goods purchased on the instalment plan they must give the vendee thirty days' notice in writing, and then, if the goods are seized, pay back to the buyer fifty per cent. of the amount paid in. In event of this bill becoming a law, the dollar-down and dollar-a-week plan of payment would quickly go out of vogue, and a much larger deposit and payment would be exacted. At the present time it would appear that the measure is doomed to defeat, but in the meantime the trade are appealing to their local assemblymen to prevent its passage.

## THE SYMPHONIC PHONE-NEEDLE.

**For Disc Talking Machines—Will Last from  
500 to 800 Playings—Something That Is  
Destined to Interest the Trade.**

The Symphonic Phone-Needle Co., at 1907 Park avenue, New York, have recently perfected a disc talking machine needle whose life lasts from five hundred to eight hundred playings. In placing this needle on the market they are supplying a want long and urgently felt by the talking-machine public, and it will certainly boom the sale of disc machines and records. They have aptly named their needle "Symphonic," as it stands for all that can be desired in an article of this kind. It renders a natural and sweet reproduction, and is made in various grades to suit all tastes. It reduces the wear on the record, plays without changing, and is inexpensive.

The Symphonic needles are constructed to play five hundred times before wearing out, which is sufficient under ordinary circumstances to last the average user a full year, but, according to the manufacturers, the needle will often overrun this number by several hundred playings if the conditions are favorable. It is further claimed that uniformity of tone throughout its whole life is one of the many winning points of this needle.

The Symphonic needles are put up in four grades of tones—No. 1 soft, No. 2 medium, No. 3 loud and No. 4 concert tone. For further particulars see their announcement in this issue.

## CALL FOR SCANDINAVIAN RECORDS

**On the East Side—A Valuable Suggestion to  
Manufacturers—Italians and Chinese Big  
Buyers of Records.**

A large East Side dealer says that the manufacturers of records are neglecting a very important branch when they ignore the constantly growing demand for Scandinavian records. This nation is forming a very important colony in this city, as well as scattering about the country, and have developed a great fondness for talking machines of all makes, particularly the disc variety. Many of them have requested records made in their native language, and several times he has been on the point of having one of the record companies make up some to his order. He suggests that some of the companies make up a limited number, comprising the national and popular folk songs of Scandinavia, and they will be surprised at the rapidity with which they will sell. In speaking of the class of records most sold in his district, he said: "You would be surprised to know how many Red Seal records have a home in Mulberry and adjacent streets. The Italians in that quarter are just crazy about them, and will deprive themselves of all kinds of pleasures to possess those that are national in character. The Chinese are also good patrons of that class of records, and are always ready to purchase anything written in their native language."

**Don't keep  
your customers  
waiting**

When a customer comes to your store for anything, you ought to have it on hand or be able to get it quickly and tell him just when you will have it.

Maybe you can't do this with your regular jobber, but if you give us your order you can easily figure almost down to the very day when you will get your goods.

We keep our supply of Victor machines, records, trumpet horns, fibre cases, English needles and all other accessories right up to the minute and send you the goods without delay. All orders are shipped the same day they are received.

We don't keep you waiting and you don't need to keep your customers waiting. You won't need to put them off from day to day with the excuse that you expect the goods almost any hour. Customers won't stand that sort of thing very long—they want what they order and they ought to get it quickly.

It's our part of the job to see that you get your goods quickly and if you send us your next rush order, you'll find out that we know our business.

Just because there is nothing you want at the present time, don't put off sending for our latest catalogue. Send for a copy to-day so that you'll have it when you need it.

We have a complete stock of these handsome, genuine Carbonette Photographs. Every Dealer should have a complete set for Display and Advertising purposes.

Your Customers are anxious to obtain a good likeness of their favorite performer. We can furnish these, handsomely framed in genuine weathered oak, with glass and backed, ready for hanging.

Retail Price, Unframed, 35c.; Framed, 50c.

## TALKING MACHINE JOBBERS TO FORM EASTERN ASSOCIATION.

C. V. Henkel, of the Douglas Phonograph Co., Has Consulted With a Number of Prominent Jobbers in the East, Who Approve of Such an Organization.

Following the meeting of the jobbers of the Central States, including Pennsylvania, at Pittsburgh, March 14, Perry B. Whitsit, secretary of the Central States Talking Machine Jobbers' Association, addressed the following letter to the leading jobbing houses east, and which sets forth cogent reasons for the latter to organize on a similar basis and affiliate for the general welfare of all concerned:

"Columbus, O., March 31, 1906.

"Gentlemen: Under the direction of the Central States Talking Machine Jobbers' Association, conveyed to me at its meeting at Pittsburgh, Pa., on the 14th inst., I beg to bring to your attention the present status of the organization and its immediate plans for the general betterment of trade conditions, and to invite your active interest in its promotion.

"In order that you may be fully conversant with the progress of the association, permit me to briefly detail its inception and its achievements to date. On October 16 last invitations were issued by two Ohio jobbers to twenty jobbers in cities within an accessible radius of Columbus to assemble in this city on the 20th for a general discussion of the talking-machine business. Fourteen of the twenty were present, and a temporary organization was formed, with George Ilsen, of Ilsen & Co., Cincinnati, as president, and Perry B. Whitsit, of the Perry B. Whitsit Co., Columbus, secretary. The enthusiasm manifested at this preliminary meeting was so manifest that it was decided to form a permanent organization at a meeting to be held at Cincinnati, January 22, 1906. The attendance at the Cincinnati meeting was sufficient to insure the success of the movement, and the organization was christened the Central States Talking Machine Jobbers' Association.

"A constitution and by-laws was adopted, and the following permanent officers were chosen: President, George Ilsen; vice-president, E. P. Ashton, Detroit, Mich.; secretary, Perry B. Whitsit. The secretary was instructed to communicate with every jobber in the United States, requesting their co-operation in prevailing upon the National Phonograph Co. to install some plan by which the expense of express shipments of monthly records might be obviated. Of the 158 jobbers who were addressed on this subject 110 heartily pledged their support, 6 objected, and 9 asked for more mature deliberation.

"The replies of these gentlemen were read before the meeting held at Pittsburgh, C. H. Wilson, of the National Phonograph Co., and E. A. Hawthorne, of the Hawthorne & Sheble Mfg. Co., of Philadelphia, being present by invitation. Mr. Wilson assured the association that the National Phonograph Co. would do its utmost to bring about the desired change, but expressed the belief that its complete installation could not be accomplished satisfactorily within less than six months, for the reason that the manufacture of 750,000 new monthly records would have to be advanced at least fifteen days in order to enable the company to place them in the hands of dealers on distribution day. Mr. Wilson also addressed the association at length upon the past and present conditions of the Edison phonograph, and outlined as far as possible that company's future policy. He strongly commended the purpose of the association, and urged that its membership be so extended as to make its operation an influence of national scope. His suggestion was heartily approved, and the secretary was instructed to invite all jobbers not now identified with the work of the association to become members. This invitation is now officially and respectfully tendered to you, and the secretary trusts that he shall be honored with your favorable response.

"The potency and utility of the association, as you will readily understand, depend largely, if not wholly, upon the range of its membership and the fidelity with which its constitution, by-laws and rules and orders are obeyed. It cannot

but be distiuctively beneficial universally among the jobbers of the country, for the reason that its fundamental mission is the betterment of conditions surrounding credit, transportation charges and all other matters of material interest to the trade. The secretary will forward you a copy of the constitution and by-laws of the association upon request, and meanwhile hopes for your cordial interest and co-operation.

"Very truly yours,

"CENTRAL STATES TALKING MACHINE ASS'N.

"By P. B. Whitsit, Sec'y and Treas."

\* \* \* \*

On the receipt of the above communication, C. V. Henkel, president and general manager of the Douglas Phonograph Co., New York, was so impressed with its importance that he consulted with a number of other leading jobbers. They urged upon him the advisability of taking hold of the matter, authorizing him to request the Eastern jobbers to co-operate with the association of the Central States, and also make clear to them the potency of an organization among themselves on the same lines. This is Mr. Henkel's letter, sent on the 3d inst. to about sixty jobbers in New England, New York and New Jersey:

"Gentlemen: You have no doubt received a letter from Mr. Perry B. Whitsit, secretary of the Central States Talking Machine Jobbers' Association. It occurs to me that a similar organization, composed of Eastern jobbers, would be of general benefit to the trade, and I take this opportunity of suggesting an expression of your opinion. If sufficient encouragement is received to warrant such a move, it strikes me that immediate steps should be taken to bring about this result—at least, before next July.

"My idea is that if the proposed organization is in existence at that time a joint meeting could be convened subsequent to the last day of the Edison entertainment. This will be an excellent opportunity for a general meeting, as jobbers from all over the country will undoubtedly accept the invitation of the National Phonograph Co., and be in New York on that occasion. Kindly let me hear from you at an early date."

Replies warmly indorsing the project and pledging their support and co-operation were received from the following representative houses: Blackman Talking Machine Co. (J. Newcomb Blackman), New York City; Flint & Burkett Co., Springfield; Thos. Wardell, Lowell; and Eastern

Talking Machine Co., Boston, Mass.; Pardee-El-lenberger Co., New Haven, Conn.; Elmira Arms Co., Elmira; American Phonograph Co., Gloversville, and Forsyth & Davis, Kingston, N. Y.

Subsequently Mr. Henkel said to The World: "As I have remarked, the jobbers I talked the matter over with asked me to take the initiative, and I am pleased with the returns so far (on the 6th only). I believe in a national association ultimately, but first let us form our associations for the different sections, and the other will follow. Many questions are constantly coming up that are only understood and are of interest first locally and then sectionally, and can be disposed of or settled by those in touch with prevailing or common conditions. A good, strong association should be organized, and, so far as I can ascertain, we will be only too pleased to act in harmony with similarly associated jobbers elsewhere."

## EVERY DEPARTMENT INCREASED.

The National Phonograph Co. Are Doubling Their Manufacturing Capacity to Meet the Marvelous Growth of Their Business.

Plans for an extensive increase in every department of the Edison factory facilities have been approved, and are now in the hands of the builders. When completed the plant will have double its present capacity and will be of tremendous size. The addition made to the machine shop, now fully occupied, is 40x180 feet, three stories, built of reinforced cement. In the new power house, 50x80 feet, 25 feet high, a 750 horse-power Allis-Chalmers vertical engine, direct connected with 250-kilowatt generators, has been installed. Adjoining machine shop No. 1 a one-story concrete structure, 70x100 ft. in size, is now nearing completion. This will be used for the polishing department.

This month the work was begun of increasing the height of building No. 2 from one story to four stories. The present building is 60x275 feet in size and built of brick. This structure will be occupied by the departments now inadequately housed elsewhere. When this building is completed another railroad siding will be laid on the west side and the lower floor will be used for packing and shipping phonographs. This will provide two sidings, about 300 feet long, between buildings 2 and 17, which buildings will be connected by a roof over the tracks so that the cars can be loaded entirely under cover. The first floor of building No. 17, now used by the ship-

ping department, will be used for record shipments only. These arrangements will permit the loading of cars with phonographs on one track and other cars with records on the west track.

A little later an entirely new record moulding building will be erected. This will be 200 feet long by 75 feet deep. All of these improvements have been definitely decided upon and will be completed within a year. With the construction of the buildings now going up or decided upon every department throughout the factory will have double its present facilities, and they will make it possible to manufacture twice as many phonographs and records as at present. Early last month ground was broken for a new office building, an improvement that has been sorely needed for a long time, but which has had to await the completion of buildings and additions needed to meet the demand for goods. This building will also be of reinforced concrete, four stories high, with an ample and light basement for files. It will be 137 feet long on Lakeside avenue and 50 feet deep. This building will provide ample room for the office force for years to come.

### REUNION OF EDISON JOBBERS.

Will be the Guests of the National Phonograph Co. for the Week Commencing July 16—Splendid Programme Arranged.

After being under consideration for two years, the National Phonograph Co., Orange, N. J., have invited all Edison jobbers to come to New York during the week of July 16 as their guests, say "howdy," and enjoy themselves at the company's expense. The official programme—a dainty brochure, printed on creamy, deckle-edge paper and bound with silk cord—has been sent the jobbers, and when the acceptances are received, formal invitations will be issued in a specially handsome form. The programme is appended:

Complimentary entertainment to Edison jobbers by the National Phonograph Co., July 17, 18, 19, 20, 1906.

TUESDAY, JULY 17.

Registry of Guests.—Headquarters, in charge of our own officials, will be opened at the Waldorf-Astoria Hotel, Fifth avenue and 34th street, New York City, at 2 p. m. Out-of-town visitors are urged to reach New York on this day and first report to our headquarters. Detailed information concerning arrangements will be furnished later. This hotel will be the home of visiting jobbers from the time of their arrival until Saturday morning, July 21. Local jobbers are also requested to register at headquarters either Tuesday p. m., or Wednesday, July 18, before 9 a. m.

WEDNESDAY, JULY 18.

Visit to Edison Laboratory and Factories at Orange, N. J.—Automobiles will leave the hotel at 9.30 a. m. for the Erie Railroad ferry, foot of West 23d street, connecting with special train for the Edison Laboratory and factories at Orange, where a tour of inspection will be made under escort. Luncheon will be served on the grounds. The return to the city will be by special train, leaving at 4 p. m., arriving at hotel in time for dinner. The evening entertainment will include the Hippodrome (if open) or some other theatre or roof garden.

THURSDAY, JULY 19.

Seeing New York by Water and Visit to West Point.—Automobiles will leave the hotel 9.30 sharp for the foot of East 31st street. The Iron Steamboat "Cepheus" has been chartered, and will leave the pier at 10 a. m., sailing around Blackwell's Island, thence down the bay and up the Hudson to West Point, where a landing will be made (through the courtesy of Col. Mills), and our party will have an opportunity of inspecting the U. S. Military Academy. The daily dress parade will take place at about 6.30 p. m., and immediately after we will re-embark for the return to the city, which will be reached at about 10 p. m. Luncheon, dinner and other refreshments will be served on the boat, and suitable music will be provided by the Edison Concert Band.

FRIDAY, JULY 20.

Seeing New York by Land, and Banquet.—Arrangements have been made for an automobile sight-seeing trip, including Fifth avenue, Central Park, Grant's Tomb, and Riverside Drive, leaving the hotel at 2 p. m., returning about 4 o'clock. The entertainment will conclude with a dinner, to be served in the Astor Gallery at the Waldorf-Astoria at 7 p. m., at which Thomas Alva Edison will be present. During the banquet an interesting musical programme will be rendered by the Edison Symphony Orchestra, and a short entertainment will be furnished by Edison artists.

"STAG."

F. K. Dolbeer, chairman of entertainment, has been authorized to spare no expense in making the visit of the Edison jobbers a memorable occasion, and as he is an adept in the gentle art of generous hospitality, its success is assured as a foregone conclusion.

### TRANSCRIBING ON A TRAIN.

Traveling Officials Now Use Commercial Talking Machines for This Purpose.

Since the man who is at the head of the Columbia Phonograph Co.'s commercial graphophone department, J. W. Binder, proved that it was possible to dictate and transcribe from a graphophone on a rapidly moving train, a number of traveling railroad officials have taken advantage of the use of the machine in this direction, says the Columbia Record. The traveling auditor of one of the largest roads running out of Cleveland has one of the machines with him constantly. His schedule is mapped out a week ahead, and his mail reached him every morning at the place appointed on the schedule. He dictates his replies and sends the cylinders to Cleveland by express. They are transcribed, shaved, and a fresh lot await him next morning at the scheduled place. For this man there is no "stacked-up" desk when he returns from his trip.

# The Syracuse "Multo-Record" Rack

## Is the Latest Result of Racking Our Brains for New Rack Ideas.

HIS latest addition to the Wire Record Rack family is sure to meet with the favor of those dealers who carry a number of each popular record. The illustration shows the regular stock size of this new style rack, 7 feet high, 4 feet 6 inches wide.

This Rack has a capacity of 240 Trays, each tray containing three Records. The Racks can be set against the wall, fastened back to back or set here and there in the store or department. No shelving is necessary; the Rapke label system can be used in connection with it; its extreme lightness renders it portable at all times; in short, it is a Practical Combination of "The Heise System" of Racks with the Rapke Label and the Tray System.

Size illustrated is ready to ship. The Racks can be made to order, however, to accommodate any number of records to a tray and any number of trays to a rack. Price on needed sizes sent promptly. Send for estimates and ask for a catalogue of all Syracuse Wire Record Racks. "The Heise system" means economy in space, saving of time and the eliminating of damage.

NEW YORK OFFICE  
"ROTHSCHILD BUILDING"  
LEAHurst & West Broadway

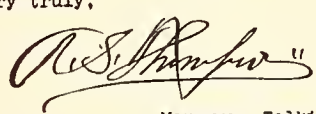

Columbia Phonograph Co.,  
90 & 92 West Broadway,  
New York.

Gentlemen:

I am handing you to-day an order for May records. I wish to congratulate your Company on the excellent selections and high quality of the May list. In all my Graphophone experience for the past seven years I am free to say that in my opinion, the May records are the finest that have ever been put out by any company, and I predict a very large sale on the majority of them.

Yesterday, while listening to the new records, I played "Home, Sweet Home," a \$5.00 Melba record; then I played your "Home, Sweet Home" by Miss Vincent before a critical audience of possibly 50 people. They were unable to tell which was the \$5.00 and which the Columbia record. All agreed that one was as good as the other. Hoping to see more of her records on the June list, with kindest regards, I am

Yours very truly,

Manager, Talking Machine Dep't

**Columbia Disc  
Graphophone**  
Champion (B.H.)  
**\$30**

The above letter from one of the largest retail talking machine dealers in the United States, echoes the opinion of thousands of delighted customers.

We assure the trade that the June list will be favored with even greater praises.

**Miss Vincent** appears again with the famous Irish Air, "Killarney," (12-in. disc).

**Lew Dockstader**, the Greatest American Minstrel, sings his latest success, "Uncle Quit Work, Too."

**Mr. David Bispham** will be heard for the first time, beginning in June, with a series of disc records. Songs from this famous Grand Opera Barytone will be in very great demand.

Remember, Mr. Dealer, that the truly successful dealer of to-day is getting into the "Columbia Band Wagon." The whole procession is moving Columbia-ward. Will *you* join it?

## TALKING MACHINE SALESMEN FORM ASSOCIATION.

Elect H. R. Skelton, President—Business in Excellent Shape—Columbia Co. Establish New Department—Eastern Talking Machine Co.'s Cheering Report—Winchell Co.'s Publicity Plans—Boston Cycle Co.'s Great Business—International Phonograph Co. Open Up—Other Items.

(Special to The Talking Machine World.)

Boston, Mass., April 7, 1906.

This has been a busy month among the talking-machine dealers in Boston and vicinity. In fact, many of the dealers, both wholesale and retail, report that it has shown the largest volume of business in their history. All report that it is absolutely impossible to get machines and records enough to fill their orders. As one man said today: "If we fill fifty per cent. of our orders, we consider ourselves lucky."

The inability of the big retail stores in Boston to supply their customers has made business with the smaller dealers in the suburbs particularly good. When a customer finds that he cannot

committees were appointed: Entertainment—W. J. Fitzgerald, Henry Winkelman, W. L. Veale, H. L. Rayer, Kenneth Campbell.

A constitution and by-laws were adopted, and the members are well pleased with the excellent prospects. The principles of the organization are such as will promote the best of feeling between employe and employer, the jobber, manufacturer and retailer. It is hoped at an early date to have a banquet and jollification to celebrate the birth of the organization. It is expected that the association will accomplish much toward bettering the condition of the talking-machine business in the East. It is hoped, before long, to have a club room whose doors shall be open at all times to men directly interested in the talking-machine business. There is to be no discrimination between the various makes of machines. All look alike to the association.

Harry R. Skelton, the first president of the New England Talking Machine Salesmen's Association, is a young man who has won success by his own efforts. He started in the business five years ago with the Columbia Phonograph Co. as salesman, and remained with them four years. When Mr. Ormsby organized the Boston Talking Machine Exchange, Mr. Skelton went with him and remained when the Winchell Co. bought out its business. He is now secretary of the Winchell Co., a corporation, and retail manager of the big store. Mr. Skelton is a hustler, and very popular among the boys.

A new department has been established at the Columbia Phonograph Co.'s store. It is in charge of Mr. Dinsmore, who comes from the Baltimore office of the company to look after it. He takes charge of all the outside business of the concern, particularly the instalment part, which he is systematizing and building up to great advantage. A new room has been constructed at the rear of the store for the high-class trade, and business is booming, particularly on the six-inch mandril machine. Retail Manager H. B. Blakeborough is responsible this week for a novelty in window decoration. He has arranged records, horns and boxes in such a way as to very faithfully counterfeit an automobile, and thousands of persons daily stop to look at it. Their smiles of interest and amusement at the clever conceit are an unconscious reward of merit to its originator.

As to the Eastern Talking Machine Co., the demand for machines and records is reported as twenty per cent. greater than the supply. It has reached the point where Wholesale Manager Chamberlain is paying heavy express charges on shipments in order to get them for the customers. Salesman Gateley said to the writer to-day: "I have learned more in regard to scientific apologizing in the last three months than I ever knew before. Customers come in with the money sticking out of their fists, anxious to have us take it away from them, and we can't do it. It

gets us discouraged, but we can't help it when we haven't got the goods. The Edison Co. are behind on their orders, but the Victor Co. are meeting the demand fairly well." The Eastern Talking Machine Co. make it a practice to have an Edison display in one window and a Victor display in the other at all times. They are among our most enterprising jobbers.

At the Winchell Co. the new record rooms are proving of great benefit, especially the room which has been set aside for the use of men who wish to smoke while hearing the record. This firm is the only one in the city which makes use of the opportunity to sell sheet music, and it does a large volume of business in this branch. Retail Manager Skelton has recently taken it in charge. Two young ladies, one of whom plays the piano and the other the violin, go over the music for the benefit of customers. A feature of this week's business is the fine exhibit of Columbia machines and records which has been made in the window. A figure of Columbia, dressed in white, occupied a prominent position,

PRESIDENT HARRY R. SKELTON.

get the records he wants from the big retailer, he goes to the small retailer and makes him do the hustling to get the records. The disc business is increasing by leaps and bounds, while the cylinder record business is phenomenal.

The chief item of interest in the city at present is the formation of the New England Talking Machine Salesmen's Association. This healthy young organization was brought into the world on March 30, at the store of the Eastern Talking Machine Co. Mother and child are doing well. The following gentlemen were elected to fill the various offices: President, H. R. Skelton, retail manager of the Langley & Winchell Co.; vice-president, W. F. Hawes, department manager, Houghton & Dutton; secretary, S. J. Freeman, Eastern Talking Machine Co.; treasurer, F. E. Lane, Columbia Phonograph Co. The following

WINCHELL CO.'S HANDSOME SHOW WINDOW.

and the display of machines and records is very fine indeed. It is the work of Mr. Skelton.

"Our March and February business was larger than ever before in the history of the firm," said Manager Andrews of the Boston Cycle Co., one of the largest jobbers of Edison goods in the city. "We ordered more goods than we had ever ordered, but our supply was exhausted before we had filled two-thirds of our own orders." The Boston Cycle Co. have recently enlarged their already large plant, thereby developing their manufacturing business greatly. Their patented box for carrying records is a great hit. Mr. Andrews is now developing a horn stand that he says will be the best thing on the market, and the cheapest. The new tray system is catching on with the dealers in remarkable shape, and orders for the complete outfit are in every mail. They are excellent for displaying Edison records.

The International Phonograph Co., corner Cornhill and Washington streets, have recently opened a branch store in Bowdoin Square, called the Bowdoin Square Phonograph Co. B. M.

## The Most Complete Line of Flower Horns on the Market.

Write for Catalogue and Price List.

**New Jersey Sheet Metal Co.,**  
Manufacturers,  
**NEWARK, N. J.**

Sharfman is in charge there, while M. Wolf remains at the main store. They carry the Edison, Victor and Zonophone, and Mr. Wolf declares that he has the smartest record salesman in the country in little Miss Marion Silva.

"Don't talk to us about supply and demand," is the word from Iver Johnson Co., where Mr. Boyd is getting gray in trying to fill orders. "If we fill half of the orders we receive we call it well done."

E. A. Hawthorne and William McArdle, of the American Record Co., were visitors to the trade this week.

At the wholesale office of M. Steinert & Sons Co., Victor jobbers, Manager Cornell reports an exceedingly good business. The list of branch stores is increasing each month, and there are still more to follow. The list is intended to total 36 before it is finished.

A decided increase in the demand for high-grade instruments is noticed in all the stores, and the month of April is looked upon as sure to be a record breaker.

## BENTEL GETS BEST OF FIRE.

Cleaned Out of Old Quarters—Damage of \$25,000 With Ample Insurance—In New Store at 435 Wood Street.

(Special to The Talking Machine World.)

Pittsburg, Pa., April 9, 1906.

The Theo. F. Bentel Co., the well-known dealers in talking machines and supplies, who were in process of moving to their new quarters at 435-437 Wood street, suffered a loss of \$25,000 by fire on Saturday of last week, with ample insurance to cover loss. The fire started on the second floor and was caused by crossed electric wires. About 35,000 records, comprising Edison, Victor and American goods, were destroyed. They had just received \$5,000 worth of grand opera records, which were also lost. Fortunately before the fire occurred a great deal of stock had been removed from the old to the new quarters. There will be no delay in business, as stock was at once ordered by wire, and is reaching them this week. So they will be in full swing without any great delay and able to cater to all orders as of old for machines, records and supplies.

## TALKING MACHINE JOBBERS MEET

In Pittsburg and Transact Much Important Business.

(Special to The Talking Machine World.)

Pittsburg, Pa., March 30, 1906.

The Central States Talking Machine Jobbers' Association held a meeting at the Fort Pitt Hotel during the closing days of last week, and transacted much important business relating to their interests. The last meeting of the Association was held at Cincinnati. The officers of the Association are: George Ilsen, Cincinnati, president; E. T. Ashton, Detroit, vice-president, and P. B. Whitsit, Columbus, secretary and treasurer. Following the meeting there was a banquet which was attended by about twenty jobbers. According to the officers there is a growing interest in the Association and the membership is steadily increasing. They expect to accomplish much not only for their own interests but for the betterment of the industry, which is rapidly becoming an important one.

C. H. Wilson, of the National Phonograph Co., and Mr. Hawthorne, of the Hawthorne & Sheble Co., were present, and the former entertained the assemblage with a long talk on the past and present conditions of the talking machine business, and outlined as far as possible the possibilities for the future.

The association decided to invite every talking machine jobber throughout the United States to join, as they figure that the object of the association could be better achieved by a larger membership. The meeting throughout was a very enthusiastic one, and those present felt they had a great deal to be proud of in having secured the twenty jobbers they first started out to get for members.

At the close of the meeting Mr. Wilson enter-

tained all present, ladies as well as gentlemen, at a splendid banquet, which was a most delightful affair in every respect.

The next meeting of the association will be held in Cleveland, O., on May 22, when a large attendance of jobbers from all parts of the United States are expected to attend.

## VIM COMPANY FOUND GUILTY

Of Violations of Injunctions Against Price Cutting Brought Against Them by the Victor Company—Punishment to be Fixed.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,

Chicago, April 10, 1906.

Master in Chancery Sherman of the United States Circuit Court has filed his report in the contempt proceedings instituted by the Victor Talking Machine Co. against the Vim Co. and L. A. Olmstead, of Chicago. The master finds the Vim Co. guilty of all three violations of the injunction against price cutting, as charged by the complainant.

The hearing was begun last October, and the matter has been bitterly contested by the defendants, who had tried, it is claimed by the complainants, to cover up violations of the injunction. This was done, it is alleged, by the Vim Co. selling an old record for eight cents and then immediately receiving it in exchange and allowing 35 cents on it.

The Victor Co. has given proof that it intends to continue its policy of protecting its dealers and patrons against price cutting regardless of cost. The policy of maintaining prices has worked out to the advantage of the public as well as the dealers, as it has permitted a constant improvement in records and appliances and has given the whole public the benefit of a forty per cent. reduction in the price of records.

The punishment of the Vim Co. will be fixed by one of the United States Circuit Court judges. The Victor Talking Machine Co. was represented by its general counsel, Horace Pettit, of Philadelphia, and by Attorney C. N. Goodwin, of Chicago.

## PRIZES FOR EASTER WINDOWS.

Victor Talking Machine Co. Offer Prizes Running from \$10 to \$50—Competition Closing April 20th.

The Victor Talking Machine Co. are offering prizes for the best dressed Easter windows—\$50 for the first award and \$10 each for five of the next best. The competition closes Friday, April 20. The following prizes were awarded in the second competition of Victor windows: Fifty dollar prize window, dressed by Ellis Hansen, with Sherman, Clay & Co., San Francisco, Cal.; "Evening Star" window, dressed by F. J. Collingwood, with C. J. Jackson & Co., Findley, O.; "There's Music in the Air," dressed by Geo. J. Mauch, with Saunders Music Co., Ottawa, Kan.; Valentine window, dressed by George C. Silzer, with Harger & Blish, Dubuque, Ia.; "Kubelik" window, dressed by Brown, Page & Hillman, Peoria, Ill.; "The Victor Family," dressed by Antone Heindl, with Powers & Henry, Pittsburg, Pa.

## UNIQUE TALKING MACHINE CO.

On account of increased business, the Unique Talking Machine Co. have closed a lease for the next three years on the three-story brick store building, No. 1016 Prairie avenue, Houston, Tex., and are now doing business there. They have installed the Hawthorne & Sheble unit record system. It is claimed this concern hold the record as "the pioneer talking-machine house in Texas." They became interested in them as far back as 1890, when they used the old-style machines in connection with court reporting work, and from that graduated into the first Houston (if not Texas) dealers. Their present store is 30 feet front by 100 deep, and is devoted exclusively to talking machines. They handle the Victor, Edison and Columbia machines, and the American and Zonophone records,

"It's the Easiest Thing in the World" to Sell

# Hohner Harmonicas and Accordeons

A Good Side-Line for Talking Machine Dealers

Small Stock  
Little Capital Required  
Big Demand  
Big Profits

## Mr. Talking Machine Dealer:

You have the facilities, why not handle Harmonicas and Accordeons and make an extra profit? There's a demand for these goods everywhere and it will require but a small investment to get a share of the business. The Hohner Harmonicas have been on the market for half a century during which time they have satisfied the desires of the most critical. The name "Hohner" is now a household word amongst the harmonica and accordeon playing public, and the mere announcement of the fact that you have these goods for sale will be sufficient to bring you numerous inquiries for them.

the Latest Catalogue

**M. HOHNER**  
475 Broadway, New York

# ZON-O-PHONE

## Records are better

Don't believe us, we might be prejudiced.

### How we will prove it to you:

36 of 'em in your own store and no expense to you (we prepay the express).

We will gladly ship by prepaid express to any dealer, east of the Rockies, 36 Zon-o-phone records to try. Twenty-five of them are the April Supplement and the remaining 11 are selected from former lists. In selecting the 11, we confined ourselves to records made by other Companies in either 10 or 12 inch size so as to aid you in making comparison.

In testing and making comparison, we offer the following suggestions:

First play our entire April Supplement and note the large variety of selections as well as the number of late attractive "hits." Also note the naturalness of tone (not high and pinched or tubby, but soft, mellow and pleasing).

Second, put on several Zon-o-phone Records and listen for the scratch; then put on any record of any other make, note and compare them.

Third, select the same selection in any other make, compare the records carefully, and if there seems to be a question as to which is the better, listen to just one strain of one record, then to the same strain on the other, trying to select each individual instrument, noting the pleasing tone quality of the whole, also the scratch.

Fourth, select a Zon-o-phone Record and a new Record of any other make and play them an equal number of times until one of them wears out, being sure to change the needle each time.

If, after making these tests, you are not satisfied that Zon-o-phone Records are better than any other records on the market, pack them up carefully and return them to us at our expense.

Please bear in mind that we are not sending you the "cream" of our lists, but first selected the April list which is 25 records as they come; we then selected 11 records, confining ourselves to records listed by other Companies.

### Zon-o-phone Records have the following advantages:

- 1st. The record thread is finer, enabling us to get more on a record.
- 2nd. The surface of the record is smoother than any other disk record (less scratch).
- 3rd. Our material is harder and tougher, making it wear longer.
- 4th. Our tone quality is mellow and natural, not high pitched and metallic.
- 5th. We list more new "hits" each month than any other Company.
- 6th. **Zon-o-phone 10-inch Records, only 50 cents.**

OUR LABORATORY is located in the theatrical district of New York, enabling us to get talent impossible to obtain outside of New York City. This also enables us to secure the latest "hits," as practically all popular music originates in New York (the home of the theatrical profession in the United States).

Our system for selecting a monthly supplement list is as follows: We make between 40 and 50 records a week or upwards of 160 a month. We begin by listening to the entire lot and throwing out the worst. We continue repeating this process until we have only 25 left. The balance we destroy. This is very expensive, but we believe it pays, as a good record is an everlasting advertisement.

We should be pleased to have you become one of our Dealers and place your standing order with us for new records each month.

---

## UNIVERSAL TALKING MACHINE MFG. CO.

28 Warren Street, New York

**BUSINESS CONTINUES BRISK.**

**Orders Reaching Manufacturers From Every Part of the World—Jobbers Complain of Shortage, But Manufacturers Are Making All Efforts to Fill Demands.**

One month is like another in the talking machine world, so far as business is concerned now. Manufacturers who were estimating a sufficient quantity of machines, records, horns, cabinets, etc., would be turned out to relieve the pressure, confess their astonishment over the constantly increasing instead of decreasing demand. They have not caught up on orders, and candidly declare their inability to meet the call for goods excepting on the allotment plan, notwithstanding recent and current enlargements of plants and expansion of facilities. Jobbers are very much in the same predicament. While houses of this classification are scattered over the entire country, with the supposition of taking care of their immediate territorial trade, the most conspicuous concerns in the line, no matter what their locality, transact a national business, according to the enterprise, far-sightedness and broad-gauge policy pursued. Establishments of this description have suffered keenly from the shortage in stock, a condition the manufacturers are doing their utmost to mitigate, but so far with no great degree of success. The business is spreading out as never before, and new additions to the line of jobbers and dealers are being made almost daily, the traveling men for the various companies making new high selling records and creating fresh trade in the most unexpected quarters.

Inquiries and orders by mail have never been so many or from points so widely scattered, not only here but from abroad. The same post to one house, for example, will contain letters from dealers or users from Newfoundland to the City of Mexico, and from New York to the Philippine Islands and other countries of the Orient, not to mention Europe and the South American countries. One concern ordered one million needles, others everything imaginable in the line. The most wonderful manifestation, however, in this vast mass of correspondence, covering only a short time, is that not a note of complaint or discouragement was penned. The eagerness for goods—of the best quality, too—was the keynote, and up-to-date articles, whether in this market or forthcoming, were inquired about and discussed. For solid enthusiasm, no line of business in the world approaches that pertaining to talking machines, whether they are in the entertainment class or devoted to commercial purposes.

The Jordan, Marsh Co., of Boston, have greatly enlarged their talking machine department.

**A GOAHEAD TEXAS INSTITUTION.**

The Texas Phonograph Co., of Houston, Tex., was organized only 14 months ago, and in their first year of business purchased \$70,000 worth of talking machine goods. They are jobbing Edison and Zonophone machines and records, and by aggressive advertising and through continued efforts they have become one of the strongest factors in the talking machine business in the Southwest. The company was organized by H. M. Holleman, who, previous to the organization of this company had never handled talking ma-

RETAIL DEPARTMENT, TEXAS PHONOGRAPH CO.

chines. His first purchases in the business were jobbing stocks of the various lines which the company are now handling.

**SOME CHANGES IN THE STAFF.**

With the changes made in the staff of the Victor Distributing and Export Co., 77 Chambers St., New York, Daniel O. Mitchell goes to Camden, N. J., April 1 as manager of the Victor Talking Machine Co.'s export department. Richard S. Pribyl also switches to the parent company, and will travel the middle west and northwest, with headquarters in Chicago. He is expecting to be married June 19. Louis Silverman takes Mr. Pribyl's place with the V. D. & E. Co., and will look after the New England trade, making his first trip Thursday. A. D. Doty continues to acceptably fill his old post as traveler at large, and recently closed a deal with the Hecht chain of department stores, scattered through the south, with the head center in Baltimore, Md. This means Victor goods in all these establishments. The V. D. & E. have rearranged their

wholesale department now that the export section has been eliminated.

**NEW YORK JOBBERS MEET**

**And Will Form an Eastern Organization at Next Meeting.**

Tuesday evening last (April 10) a meeting of the leading New York jobbers was held at the office of the Blackman Talking Machine Co., 97 Chambers St. Matters of general importance were discussed, final action being postponed until the next meeting, which will be held Tuesday, April 24, at the Bettini Phonograph Co.'s warerooms, 156 West 23d Street, New York. J. Newcomb Blackman, of the Blackman Talking Machine Co., acted as chairman, and J. P. Kelcey, manager talking machine department, Matthews Bros., Brooklyn, secretary. Besides these, others present were: A. H. Jacot, of Jacot Music Box Co.; S. B. Davega; John W. Blackman, of Blackman & Son; William Freeland, manager, with I. B. Davega; Victor H. Rapke; Johu Kaiser, with Douglas Phonograph Co.; Bettini Phonograph Co., and Alfred Weiss.

**NEW CANDIDATE FOR FAVOR.**

The new machine of the American Record Co. (Hawthorne, Sheble & Prescott, sales managers), Springfield, Mass., has made its appearance, being shown recently at their New York office, 241 West 23d street. It is of the taper or tone arm type, and with a mechanical feed attachment controlling the reproducing point or needle. The arm is detachable, and a permanently attached receptacle is provided for used needles, a clever idea, and which is also a handy arm rest. The cabinet, of piano-polished mahogany, has a hinge top. Their new sound box, with special diaphragm, contributing materially to soft, smooth tonal effects, completes what is considered a decided acquisition to the line of up-to-date machines, and which will doubtless focus the attention of the trade when the company is ready for the market.

**THE MULTI-RECORD RACK.**

The new style "Multo-Record" rack which is being introduced to the trade by the Syracuse Wire Works, Syracuse, N. Y., is destined to prove a great favorite. This rack appeals to dealers who are desirous of using the pasteboard trays and Rapke labels. The indications are that there will be a heavy demand for this style as soon as it is known that the Syracuse Wire Works have it in their catalogue.

**MADE MANY CUBAN "MASTERS."**

Last month George Werner and Fred. Burt, connected with the recording department of the National Phonograph Co., returned to New York from a three months' visit to Havana, Cuba, where they made over 300 masters of Cuban selections by native artists. Their efforts were directed by Rafael Cabanas, manager of the Mexico office of the company, who made a special trip to Cuba for the purpose. At the conclusion of their work, Messrs. Werner and Bert gave an entertainment and dinner to a party of dealers and newspaper representatives.

The Lowman & Hanford Stationary Co., of Seattle, Wash., report a magnificent trade in talking machine supplies.

# Rapke Horn Crane No. 15

(Patent applied for)

Universally recognized as the "leader" in horn supports. Simplest and best ever produced. Will support any horn up to and including 36 inches. Handsome nickel finish throughout. Fits into small space.

## Order Through Your Jobber

## Neophone Home Recorder

This device is the last step in making the Disc Machine the most popular type—with it records can be made at home on *any disc machine*—records of far greater volume and higher quality than is possible with cylinder machines.

Price, complete with 6 blanks, \$12.50

THE NEOPHONE is a combination of *all* the best features of *all* types of talkers. It gives reproductions as sweet as the best gold moulded cylinders, yet of as great volume and brilliancy as the leading discs—and the prices are 50% less. Neophone Disc Records are unbreakable, light and practically indestructible. They do not grow “grey with age” after being played a few times.

## NEOPHONE BUSINESS IS BIG BUSINESS

In consequence of their great value and general excellence, Neophones and Neophone discs are ready sellers at all seasons. Just think—9 inch Disc Records at 20 cents and 12 inch at 40 cents. This announcement in your show window will attract crowds of customers. Don't you want your share of the business?

NEW YORK, APRIL 15, 1906.

TRADE conditions during the past month have been most satisfactory, and the complaints from talking-machine men have not been based upon a lack of business, but rather through an inability to secure the necessary stocks from the manufacturers. The great concerns, even with night and day shifts, have been unable to keep in sight of the orders which have been pouring in upon them from all parts of the world.

From present indications it would seem as if the summer months, instead of being dull, would be unusually brisk. Talking machines are going to be used more than ever on yachts and in parks, and with attenuated retail stocks on every hand it would seem as if the manufacturers will not be afforded an opportunity to create a surplus during the summer months.

NEW plants are being erected by some of the leading concerns, which within the near future will greatly augment their manufacturing facilities, and everywhere there are obvious proofs of a constant enlargement of the talking-machine industry. The general business of the country continues bright; there is hardly a cloud in the business sky. The coal strike seems to be diminishing, and as many widespread interests will not be affected as seemed apparent when the strike threats were first made.

This opinion concerning business is not only upheld by the correspondents of The Talking Machine World from the many jobbing centers, but is supported by personal observation gained by thousands of miles of travel, and we are inclined to the belief that 1906 will be the banner year not only in the talking machine industry, but in all others.

NATURE and foreign nations seem conspiring to make business good in America. The farmers are becoming plutocrats, and are lending money instead of borrowing. Cash discounts are being taken by many small dealers, who used to ask for credit, and the jobbers everywhere are urging the factories for early

delivery. The creative forces in all lines are consuming endless tons of raw material, and there seems to be money enough for everybody.

The trade prospects of the present season are most flattering. Combinations of capital and brains have blocked the power of competition that causes panics, and if it is possible to restrain the inordinate greed that results from such combinations the needs of the world can be supplied with less friction than ever before.

THE talking-machine industry is particularly fortunate in having at the head of the great institutions keen business men who are progressive, alert, and are ever ready to meet with the requirements of the trade. They are not hampered by trade traditions, either. They bring to bear upon the solution of business problems judgment which is not fettered by some old, moss-grown theories regarding the conduct of trade which is apparent in many industries—particularly the piano industry, where price cutting and slashing has been indulged in for many years. This has resulted in the injury of many personal business reputations, and naturally has injured the reputation of the instruments which have been placed in a position to bear the brunt of many a hard-fought battle.

A GOOD many talking-machine dealers have manifested their objections to The World in various ways anent the system of contracts which are enforced by the leading manufacturers.

We believe they are in error in assuming this position, for there is no system than can be of greater benefit to the talking-machine trade than the rigid enforcement of rules regulating prices, discounts, terms and conditions of sale. It means a co-operation in absolute good faith with the producing forces and the distributing forces, and a strict maintenance of correct business rules can only result in good to the industry.

The talking-machine business has a great future, and far-sighted business men recognize that that future must be seriously impaired for manufacturers, jobbers and dealers if correct rules are not enforced regarding the selling of the various kinds of merchandise.

IT may seem a little difficult at first to the men who have been used to easy, slipshod business methods to be compelled to live up to straight twentieth century business rules. But after they have become a little used to the new conditions they would no more think of going back to the old form than they would of taking the old stage coach instead of the twentieth century express as a means to reach the West.

The enforcements of contracts mean stability all around. It means that the dealer is afforded protection, and he knows that he is having just as square a deal as any other man engaged in the industry.

The maintenance of price is one of the greatest safeguards that can be placed about an industry, and there is no one better fitted to place the retail selling price upon a product than the man who manufactures it. The more one considers an iron-clad business contract in the selling of any line of merchandise, the better it will grow from every viewpoint. It is at once a splendid protection against demoralizing influences. Price stability will always keep the talking-machine trade on a high plane. The entire trade is broadening out in obedience to the higher laws of trade and commerce which regulate the business world.

IT is a mighty easy thing to demolish a business structure, and it is very difficult at times to build it up, and if there is to be no stability in prices in the talking-machine line, it will have a most demoralizing effect upon trade everywhere. Then, too, if the manufacturers create a variety of special brands for every jobber and dealer to exploit, that will mean a disorganization of trade. All of the influences which tend to build the industry up should be encouraged, and the dealers should stand by the manufacturers in all their efforts to assist the trade in every particular. They will all profit by good conditions, and they will all suffer if the industry goes down the hill rather than climbs up.

A SUBSCRIBER says: "Will you be good enough to express in the columns of The World your opinion of the legal controversy between Messrs. — and the — Co.?"

Most certainly we will not. We are not conducting a legal department in connection with this business, and the proper place to settle all of these differences is in a court legally organized for that purpose, and not in the columns of a trade paper.

It is our intention to present news at all times without prejudice, as well as other interesting features which may be of value to our readers; but we must be excused from entering into any expression of opinion concerning any of the many legal battles which are constantly being fought over patent rights in this industry.

We receive from time to time such communications as we have named above, and we wish that our position may be clearly understood. We do not propose to be dragged into any of these legal encounters, nor do we propose to give advice to legal authorities in matters of this kind. The courts seem reasonably competent to attend to legal matters, and we have no desire to invade their province.

THERE is nothing which will give a business dignity and character in the estimation of the public like elegant retail quarters, and the talking-machine dealers show a commendable spirit by good taste in the equipment of their establishment.

It is necessary to spend money to make money, and the man who caters to the public in any line must have some form of attracting the people, either in advertising which convinces, or in warerooms which attract. The day of indifference has gone by, and there is a spirit in this industry, which is manifest in the various departments, that tends towards up-building rather than tearing down.

ONE of the most prominent members of the trade said in a recent communication to The World: "I consider that your publication is to-day the most potent force in this industry, and I have been agreeably surprised to find the many returns which we have received from our representation in your columns. It seems that The World has an extensive following in every land, but what impresses me more than all else is the uniform fairness with which your paper is conducted, and your obvious desire to assist the trade."

Such a communication is indeed encouraging, and it is impossible to convey to all our friends appreciation of their kindly criticism. Sometimes we question whether any other trade publication has ever received the encouragement from so many friends as The World.

## TRADE NOTES FROM THE WEST.

Grand Opera Increases Talker Sales—Cable Co.'s Talking Machine Quarters—Rothschild & Co. a New Enterprise in Chicago—A Modifier on a New Principle—Columbia Graphophone Complimented—Other Items.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,  
Chicago, April 10, 1906.

Trade with the talking-machine dealers is good. No complaints are heard. Everybody handling Victor machines and records are, of course, exploiting the Red Seal records heavily just now, especially those made by the artists singing with the Metropolitan Opera Co. at the Auditorium. The result of this work will, of course, be in greatest evidence when the singers have fled, leaving only their heaven-compelling voices behind them.

The Cable Company have changed their plans about the location of their new talking-machine department. Instead of having it on the third floor of the main building, it will occupy the entire second floor of the annex. This is directly above the beautiful Cable Hall, which will naturally be used hereafter for talking machine as well as piano and vocal recitals. Mr. Harrison, who is to be the manager of the department, has some very unique plans in the recital line, which will insure the department a proper exploitation from the start.

The floor is being splendidly fitted up for the department. The offices and reception room will be in the front, and in the rear will be three handsome disc rooms and one cylinder record room. This will do as a start, but it is quite likely that the third floor will also be utilized in the near future. They will handle the Victor, Edison and Columbia lines; both the cylinder and disc machines of the latter company will be used. Also the American machines of the Hawthorne & Sheble Mfg. Co., and the American records.

One of the largest and best appointed talking-machine departments in Chicago is that of Rothschild & Co., the big State street department store. Mr. Thompson, the manager, is certainly a very ingenious man, and has introduced a number of unique features. They handle the Victor, Edison and Columbia machines. Combination outfits

are his specialty, and some very beautiful Victor machines with cabinets to match are shown, selling at \$150. One in the Vernis-Martin finish, gold, hand painted, has the machine set in the cabinet, the disc holder appearing on the top of the cabinet proper. There are several handsome record rooms, and every Wednesday, following the regular piano recital on the floor above, a "musicphone" recital is given. Last Wednesday, the first of the musicphone recitals, the Victor Red Seal records were used. Mr. Thompson also gives daily in one of the large record rooms downstairs recitals of various popular airs, illustrating them with stereopticon views. More than this, the stereopticons are for sale, including the slides, which are of Mr. Thompson's own devising.

A new enterprise in Chicago is the Chicago Talking Machine Repair Co. (not incorporated), 128 Dearborn street. The members are R. R. Browne and E. J. Ridenour. Mr. Browne is an all-round practical talking-machine man, who, after a couple of years at the bench in the Talk-a-phone Co.'s factory, came to Chicago and introduced their lines here and in adjoining territory. Later he represented James I. Lyons in Iowa and other Western territory. E. J. Ridenour, the other partner, is a thorough mechanic, and has been connected with large Chicago concerns. They not only do all kinds of repairing of talking machines, making a specialty of dealers' work, but also handle a full line of repairs of every talking machine made, and state that they can give especially attractive rates on both repairs and parts to dealers.

E. C. Plume, wholesale manager for the Columbia Phonograph Co., hied himself north last week and captured a big order from the Cable Company, who will handle Columbia machines and records, both disc and cylinder, in addition to their other lines when they get the new department in operation.

A new modifier which is just being introduced works on an entirely different principle from those heretofore manufactured. In form it is similar to a pear, and about the size of a very large one. It is inserted in the horn of the talking machine with the small end, which is open, towards the reproducer. It can be immediately removed or replaced, and thus while softening the tone of the loudest record can be

used within limits as a means of interpretation. This is often desirable, as all the average records have not been made by artists who have the interpretative faculty well developed, no matter how great their technical equipment may be. The modifier is made of brass, nickel-plated, and is hollow. In the "bell" of the pear-shaped device is an inner shell suspended so that its walls are about one-sixteenth of an inch from the outside walls of the device. The sound, traveling in a straight line from the reproducer, strikes the dome of this inner shell, rebounds, and then, passing between the walls of the inner shell and the modifier proper, is delivered through a lip-shaped aperture in the top of the device. A better idea can be obtained from the illustration which appears elsewhere in this issue. Rubber protectors around the mouth and the projecting part of the bell keep the modifier from direct contact with the horn. As a result of the various convolutions which the sound waves are forced to make in the modulating device the metallic sound, scratching, etc., is eliminated, the inventor claims, not only softening but greatly improving the quality of the tone. Owing to the pear shape of the modifier it can be used in any horn on any machine. This modifier is the invention of A. S. Thompson, manager of the talking-machine department of Rothschild & Co., Chicago, and is manufactured and marketed by The Graphophone Modifier Co., 279 State street, Chicago, in which Mr. Thompson owns a controlling interest.

Justice Timothy D. Hurley paid a big compliment to the Columbia Co.'s Twentieth Century Graphophone last week. His court is right over a 5-cent moving-picture show, which uses one of the big volume talkers to attract the attention of by-passers on the street. The Judge likes music, but so do the attorneys and the prisoners and the plaintiffs and the witnesses and the hangers-on. And that has been the trouble. When the full, rich and intensely loud tones of "The Anvil Chorus," or "Uncle Sammy," or "Everybody Works But Father" came surging up from below, the whole court went out of business and lapsed into a dreamy, abstracted, ecstatic sort of condition that did not exactly furnish oil for the wheels of justice. The Judge simply had to sacrifice his own musical taste rather than sacrifice business, and consequently notified the manager of the show that he would have him arrested and fined if he didn't call the graphophone off. Consequently the purveyor of music to the million no longer graces the front of the place of amusement.

Of course Lyon & Healy have taken advantage of the grand opera season to exploit Victor Red Seal records in Victor Hall. Among the stars who have dropped in to hear their own voices so far are Journet, Van Hoose and Chris Chapman, of the Metropolitan Orchestra and the famous maker of bell records.

Lyon & Healy had a big increase in business in March in their talking machine department, but that is nothing new.

The National Phonograph Co. have advised their trade that in order to give themselves a chance to get caught up on their orders, which are way behind, the Edison records for May will not reach the dealers until about May 15.

H. W. Noyes, secretary of Hawthorne, Sheble Mfg. Co., is having excellent trade on both the American machines, which are rapidly getting placed with the best concerns in the country and on the American records, which are steadily increasing in popularity.

The Edison Co., of Newark, N. J., have so improved their "S" repeater that it now has an adjustment at each end to suit any record, and appeals more forcibly than ever to jobbers and dealers. The best proof of the value of this device is the fact that wherever they have placed a sample they have received an order for from one to two dozen of each. In a recent chat with The World, President Petit said that they have had an extended correspondence from abroad asking for sole rights, etc., and desires through this paper to thank these dealers for their inquiries, and says they will hear from him.

## "THE WHITE BLACKMAN"

WILL GIVE YOU THE GOODS

AN  
**Edison**  
Jobber

Give me a chance to show you the prompt and careful attention I give EDISON and VICTOR orders. You lose the PROFIT and perhaps the CUSTOMER if you can't get goods quickly. I keep getting NEW CUSTOMERS and HOLD the OLD CUSTOMERS. You will know the reason if you send a few trial orders.

A  
**Victor**  
Distributor

# STOP!

## A word with you.

**Y**OU would be interested if a man should offer you gold dollars for 50 cents, and you would be interested in a business proposition which would make you a good many dollars on a small investment. Would you not?

Every talking machine dealer knows that the record end of the business is the one that pays, and when you can buy the best records at prices considerably less than is ordinarily charged, it means money for the dealer—does it not?

## INTERNATIONAL 10-Inch Records For Forty Cents

The International 10-inch records are the best on the market to-day. Their reputation has been built up by making **quality** the keynote of the business, and when you consider the price at which they are sold to retail purchasers (**40 cents**) it means at once that they have a big selling power. Then when you go further and investigate what liberal discounts we allow, you will see that our proposition is the best one in the record line for dealers and jobbers.

## WHY?

Because the International affords better profits, and more of our records can be sold on account of the reduced price.

If you have not seen our records, place an order at once for an assorted dozen or a hundred, and it will mean that you will be pushing the International with vigor and vim. Don't delay this matter, for a delay means a loss of dollars to you, and it is dollars that most business men are desirous of gaining.

Where orders warrant, we supply special labels if desired. We carry a large stock, and are prepared to fill orders promptly. Just take the matter up with us and you will not regret it.

---

**International Record Company,** 42 Washington Street,  
AUBURN, N. Y.

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

On the Eckhardt banner of new Columbia jobbers, additions to the long list already published, are The Cable Co., Chicago, a \$2,000,000 piano manufacturing concern, with retail branches in a number of leading cities, east, west and south. This is the company's entrance into the talking-machine business, and from the initial orders it looks as if they propose pushing that department with their customary energy and resourcefulness. The others include the Bowdoin Square Phonograph Co., Boston, Mass.; Seavey Bros., Haverhill, Mass., and the Portland (Me.) Talking Machine Co. Mr. Eckhardt made a quick trip to Buffalo, N. Y., on the 7th, returning to New York a few days later, to inspect the new quarters of the Columbia Phonograph Co.'s branch. The store, a short distance on Main street from the old place, is to be fitted up handsomely, and the stock installed representatively elegant.

The Symphonic Phone-Needle Co., New York, was incorporated with the Secretary of the State at Albany early this month, for the purpose of manufacturing phonographic needles and supplies. Capital, \$5,000. Incorporators: J. Archibald Manahan, A. C. Whitehead and J. W. Conway. Their product is illustrated and described in the company's premiere announcement on another page.

For the annual conclave of the Mystic Shriners, which assembles in Los Angeles, Cal., in May, J. O. Prescott, one of the sales managers of the American Record Co., a member of eminence and long standing, has made a "blue" record of the Shriners' famous Turque march. It is safe to say that in their trip across the continent the New York delegation will be regaled with a vivid continuous entertaining via the talking machine, with the best selections from the famous Indian collection and "J. O." doing the honors.

In the not far distant past John Kaiser, otherwise "Casey," the record talker, and William MacArdle, the entertaining traveling gentleman with a "blue" streak trailing wherever he goes, boldly and jointly remarked they had one of the greatest things that ever happened in talking-machine devices up their sleeves, individually and collectively. At the time of this frank observation the improvement was not quite perfected, but would "be shortly." Perhaps it is ready now, and this inquiry may lead to its uncovering. Speak up, gentlemen!

Having created and established a flourishing wholesale business, the Edwin A. Denham Co., 31 Barclay St., New York, will retire entirely as retailers. For the latter purpose they had fitted

up a commodious store at 50 East 125th street, which they now wish to dispose of to some energetic party desirous of entering the trade fully equipped and in an excellent location. The company's new cylinder cabinet machine is a foreign-made novelty that is attracting a great deal of notice, as is also their line of sample taper-arm disc machines. The latter is offered as a special bargain. J. Charles Groshut, general manager, who returned from a Western trip a short time since, where he bagged a big bag of orders, says the company are 20,000 machines behind on shipments. Of some types he says they cannot get enough. Mr. Groshut may make the European jaunt this summer if Mr. Denham cannot get away.

C. G. Pfeiffer, manager of the musical and talking-machine section of Borgfeldt & Co., the wholesale department store, with headquarters in New York, and branches in Chicago and St. Louis, is looked upon by the sales managers of the manufacturing companies as the coolest proposition they have occasion to see. One of these affable gentlemen, whose line of talk and engaging personality would easily gain him an audience with Kaiser Wilhelm inside of five minutes, says it took him three years before Pfeiffer would even have a look. He was landed finally, but it was the hardest kind of work.

When Pat A. Powers, the jobber of Buffalo and Rochester, N. Y., Pittsburg, Pa., and perhaps other places, was in New York the last time, on his way home he was accompanied to the train by a delegation of trade friends, who gave him a great send-off at the Grand Union Hotel. P. P. makes friends like the rolling snowball gathers the beautiful.

George Maxwell, manager of Boosey & Co.'s American branch music publishing house, who sails for Europe in the fore part of May, says he has a few ideas about record making, of which more will be heard on his return, perhaps. Besides the English firm, he also represents the leading "editors," as publishers are called on the Continent, and they are corraling or have, Mr. Maxwell states, signed the operatic talent for record making. The discs are to be made in "la belle Patee." Will they be imported? Depends on the attitude of the United States Courts on patent matters, a stumbling block which foreign makers animadvert upon in no pleasing frame of mind.

The Douglas Phonograph Co., New York, as an example of the existing shortage in goods, declare they could have sold last month 60,000 more Edison records if they could have got them.

Last month Fred Hager, leader of Hager's Orchestra making Zonophone records, resigned to devote more time to his music publishing business. The name will still be used, but the agreeable Fred ceases to wield the baton.

The American Record Co. have met with a ready response from the dealers and publishers in regard to using the advertising matter and special artistic cuts prepared by the American Record Co. for advertising purposes in magazines, newspapers, etc. They have prepared a series of cuts in keeping with the Indian trademark, all suggestive of Indian life. This trademark lends itself in a pleasing way to a great variety of designs which are artistically attractive, and their new electros are designed with much taste.

During the sojourn of Leon F. Douglas, vice-president of the Victor Talking Machine Co., Camden, N. J., at Miami, Fla., he is proving his prowess as a fisherman. Recently he captured a fine specimen of tarpon near Lemon City. A local print, describing the catch, says: "Not only did Mr. Douglas land one silver beauty, but he had three other trickies, each fish making several jumps before 'shaking' the hook and escaping.

The fish landed measures several feet in length and weighed in the neighborhood of eighty pounds. It is the first tarpon that local boatmen remember being captured in the bay with rod and reel in the past seven years, and Mr. Douglas is naturally very proud of his catch and the record made. It will be remembered that Miss Douglas, a sister, while trolling from the upper deck of the launch 'Lottie W. H.,' a few days ago, hooked an immense tarpon, which jerked her from her seat and threw her to the deck, escaping before she could regain her feet."

In one of our recent issues the American Record Co. gave notice to dealers and jobbers that they would allow them to sell ten-inch American records at 50 cents and one old ten-inch record of any make or two seven-inch records of any make; the seven-inch record for 30 cents and one old-seven inch record of any make. We are advised by the above company that this plan is meeting with great success, and has largely augmented sales for the American product.

A new factory building has been leased at Mulberry and Camp streets, Newark, N. J., for a period of six years, with the privilege of buying, by the Universal Talking Machine Manufacturing Co. The building is 103 by 150, four stories and basement, affording upward of 40,000 square feet of floor space. The company expects to remove their factory, now at 130th street and Park avenue, and probably their general offices at 28 Warren street, New York, into the new premises about May 1. The company has also bought out the concern in Newark where their pressing was done, and will hereafter conduct the establishment under their own management, the plant being in the neighborhood of the new factory.

The Southern Pacific Co. have recently installed on their line a system of communication by means of which the conductors and brakemen on all trains may talk with an operator in a telegraph office along the line from any point on the road.

Mr. W. C. Fuhri, manager of the St. Louis branch of the Columbia Phonograph Co., has received the following letter from C. N. Van Buren, of Kohn & Co., the prominent stock brokers: "The talking machine I purchased from you recently is decidedly satisfactory, and as an entertainer it is absolutely par excellence. I have found it a tonic, and since I became the possessor

### CONSULT

## Dr. ECKLAND

If your talking machine sales seem to be suffering from nervous prostration.

He's not a homeopath and does not furnish medicine himself. He will, however, prescribe big and effective doses of trade invigoration.

He's been doctoring sick talking machine sales for years and has always had remarkable success.

O. W. ECKLAND, D. T. E.,

(Doctor Trade Extension)

128 Dearborn Street, Chicago.

## Repairers to the Trade

We not only have a well equipped repair shop, for dealers' work, but are also jobbers of

### Talking Machine Parts

for every machine made. The only exclusive house in this line in the west.

Send us your order. You will be agreeably surprised when you receive the bill.

Chicago Talking Machine Repair Co.,

(Not Incorporated)

128 Dearborn Street, - Chicago.

of it, I have been appointed chairman of the Anti-Dyspeptic-Pessimist-Melancholy Committee in the neighborhood in which I reside. I have tried it on individuals who have not been known to feel real good for some time, and my missionary work has achieved splendid results in producing an air of extreme good feeling in the deportment of those afflicted. I have two daughters, the oldest being two years old and the other is one year old. They enjoy it hugely, and after supper we have a little concert each evening, which results in getting them in fine humor for their night's rest, and in the saving of a great deal of trouble and worry for their mother and I."

### HARD TO "PICK THE WINNER."

J. O. Prescott Descants on the Difficulty of Selecting Music for Monthly Lists.

It is interesting to study the development of the demand for what is termed a popular song. The public is fickle, and the best music or prettiest lyric is by no means a determining factor as to the reception which a new song will meet when it is first introduced.

John O. Prescott, who has charge of the laboratory of the American Record Co., speaking recently on this subject, said: "There is no accounting for taste, and in selecting new music for the monthly bulletin it requires nice discrimination to 'pick the winners.' The publishers realize that the talking machine is a most valuable assistant in advertising and popularizing new music. I am deluged every week with professional copies of the latest songs and instrumental pieces from publishers in all parts of the country. Even manuscript copies are submitted before they are printed. We advertise only 24 new selections a month, consequently out of so many numbers very much must be rejected. It is our endeavor to anticipate the demand and to try to determine in advance what will be popular. Public interest in a song is created not only by the talking-machine records, but also by local music dealers and vaudeville artists who use the songs on the stage in the continuous performance circuits.

"We do not always hit it right. Sometimes we make mistakes. Take, for instance, the song, 'Wait Till the Sun Shines, Nellie.' This was first offered to me last June. I was sure the music had the right swing to catch the popular ear, but it seemed as if the words were not well suited and I decided against it. For three or four months it was very little heard of, and then, in some unaccountable way it began to be taken up everywhere, and in January I had so many calls for it that we put it in our bulletin. Our record, 'Wait Till the Sun Shines, Nellie,' catalogue No. 031299, by the Male Quartette, has had a most phenomenal sale, and next to 'In the Shade of the Old Apple Tree' and 'Everybody Works But Father' it has been one of our biggest sellers. 'Cheyenne' is another song which looks good. We listed this last month in our bulletin, catalogue No. 031317, by Billy Murray, and already it is going big. This month we are listing two brand-new ones which we predict will be 'top-notchers.' 'The Parson and the Turkey,' catalogue No. 031242, by Arthur Collins, will probably outrival its predecessor, 'The Preacher and the Bear,' by the same composer. The sales of the latter were unusually large. 'The Ghost of the Banjo Coon,' catalogue No. 031341, by Arthur Collins, is also a new one by Williams & Walker. The music is peculiar, and the movement one that, as one singer puts it, 'worries you.' It is not easily forgotten and is most fascinating.

"At times it is very puzzling to determine the fitness of a new publication for a place in our catalogue, and the biggest sellers are not always selections of the highest musical order. I believe, however, that the talking machine is becoming more and more an important factor in educating the public taste, and if the business could be exploited philanthropically instead of commercially its influence would be very much greater in rapidly bringing the people who have lacked oppor-

tunity for musical education to a genuine appreciation of the better class compositions."

### NOVEL FLOWER HORN DISPLAY.

A very novel and pretty flower horn arrangement is that made by Fred Birk, the well-known dealer of 2182 Fulton St., Brooklyn, N. Y. In the flowers surrounding the horn are embedded small incandescent electric lights, which pro-

duce a very beautiful effect at night. The inside of the horn is also illuminated with lights, and the entire presents a very unique display. The cut herewith is made from a photograph, but it hardly does the horn justice.

### STEINERT BUILDS SOUND-PROOF ROOMS.

(Special to The Talking Machine World.)  
Fitchburg, Mass., April 6, 1906.

To meet a growing trade in Victor talking machines and Edison phonographs, M. Steinert & Sons Co. have made a sound-proof music room at their store in the Johnson Building, and it is used exclusively for these machines. Here their customers and prospective ones are invited to sit back in easy chairs and hear the latest records by the greatest singers and musical organizations in the world. Concerts are given every afternoon.

### EXPLOITING COMMERCIAL GRAPHOPHONE

The Columbia Phonograph Co., General, are preparing to develop and exploit their commercial graphophone on a scale and in a manner commensurate with the predicted great future of this valuable device. The American Graphophone Co.'s plant at Bridgeport, Conn., is being enlarged for the same purpose. Their other lines will also be stimulated in a like way, and some great developments in this respect are said to be on the carpet. Regarding this Wholesale Manager Eckhardt looks wise, but is inscrutable, as he always awaits the psychological moment before giving up.

### CARE IN USING WORDS OF SONGS.

Record manufacturers have been notified by the music publishers that hereafter the pirating of the words or part thereof or the chorus in connection with the titles in their regular monthly bulletins or lists will not be allowed without special permission of the copyright owners. The words "copyrighted by ———, 1906," must also accompany the words.

The foreign record catalogue for March, containing Victor selections in Spanish, French, Polish, Italian, Russian, German and Hebrew, has made its appearance. Its eight closely-crowded pages is of uniform size with its predecessors.

### CURTAZ NOW HANDLING "TALKERS."

Kohler & Chase, the Big San Francisco House Are Arranging Special Rooms for Display.

(Special to The Talking Machine World.)

San Francisco, Cal., March 30, 1906.

Benj. Curtaz & Son will add talking machines to their line, and have now a very large stock of records and machines in transit. In order to give the machines a proper display three rooms are now in the course of construction.

Kohler & Chase are making extensive improvements in their talking machine department. A large number of small rooms are being constructed where patrons may listen to new records without being disturbed by any outside noise. The entire upper floor of the building will be devoted to this object.

J. A. Clark, Katonah, N. Y., advises us that he expects soon to be on the market for jobbing discounts of all kinds of talking machines, records and supplies; in fact, everything in the shape of musical instruments and supplies appertaining thereto.

G. Croydon Marks, a member of the board of directors of the National Phonograph Co., Ltd., London, and patent attorney in Great Britain for Thomas A. Edison, has been elected a member of Parliament to represent the Launceston Division of Cornwall.

The Columbia Phonograph Co. have secured large quarters in Easton, Pa., which will be under the management of Mr. Hoffman.

E. A. Hawthorne, general manager of the American Record Co., was recently in Chicago, where he closed large contracts for the product of the American Record Co. as well as some large deals for talking-machine supplies made by the Hawthorne & Sheble Mfg. Co., of Philadelphia, of which Mr. Hawthorne is president.

E. S. Oliver, who formerly managed the Douglas Phonograph Co.'s branch in Newark, N. J., expects to open up for himself at 16 New street early this month. It is said that he intends to manufacture a number of specialties for talking machines.

## THE "PHONO TRADER AND RECORDER"

Editorial, Advertisement and Publishing Offices:—

1 & 2 WHITFIELD STREET, FINSBURY,  
LONDON, E. C., ENGLAND.

The "Phono Trader and Recorder" is published exclusively in the interest of the Talking Machine and Allied Trades. It contains usually from 70 to 80 pages of valuable and interesting matter, comprising list of all records issued monthly by the leading companies, minute descriptions (with drawings) of new patents, together with various special articles, interviews, etc., and items of news from all quarters relating to the Phono industry. Printed on art paper, and splendidly and profusely illustrated.

Annual subscription, post free, three shillings, which includes also the "Pick of the Basket" supplement of Record Reviews, a copy of which is inserted in the "Phono Trader."

We shall be glad to supply a specimen copy.

Do you find it difficult to get a sufficient supply of first class medium priced cylinder machines—the kind in greatest demand? Have you seen the new

## COLUMBIA CYLINDER GRAPHOPHONE

“JEWEL” (BK)

\$ 20

This is a strictly high grade cylinder machine, equipped with tandem spring motor, running three or four records at one winding (the machine can be wound while playing). It is supplied with the new spring contact Lyric Reproducer, same as is used on the \$30, \$40 and \$50 type cylinder graphophones, Oak Cabinet and 14-inch brass horn.

If you do not find it convenient to see samples of this model at any of our stores throughout the country, for a limited period we make the following offer to any responsible dealer:

### Try It—Free of Cost!

We agree to express you, prepaid, a sample of this new machine for one week's trial; and if, at the end of that time, you are not satisfied that it is the best \$20 cylinder machine you have ever seen, you are at liberty to return it, *at our expense*.

We know you will have a big demand for this particular machine, which prompts us to make this offer.

Send us your order now, under the above conditions, and it will be attended to promptly.

## TIMELY TALKS ON TIMELY TOPICS.

"As an educator, I regard the talking machine as a thing that will in a short time be recognized as a necessity," said a school principal of far more than local renown to *The World* in a recent interview. "I have one that every Friday noon I use for a recital of the classical and well-known music of the past; and it has been the means of interesting the pupils in music which otherwise would have remained a sealed book. Instead of singing and whistling the trashy rag-time foisted on us under the name of music, I hear them humming snatches from the great operas that will pass down to the coming ages. A short time ago I arranged to take the older students to hear a production of one of the great operas in a neighboring city, and when the recital came on Friday, the universal request was that I secure and play all the records from the opera possible. We are now raising a fund for the purchase of a complete list of the best operatic records, and I have been surprised at the willingness of all the pupils to contribute. I think in time the talking machine will constitute a part of the equipment of every school."

The American Graphophone Co., complainants against the Universal Talking Machine Co. and the American Record Co., for alleged infringement of the so-called Jones patent, claimed to cover the process of duplicating disc records as now universally practised, and which was decided adversely by Judge Hazel, on March 9 filed their motion for an appeal to the United States Circuit Court of Appeals, Second Circuit. The essential parts of the decision to be reviewed appeared in last month's *World*.

Rumors of some of the big manufacturing companies getting together on a merger basis still persist in coming to the front. What is more, the "insiders" are handing out thinly-veiled information to this effect also, and therefore the

trade's thinkers are getting busy putting two and two together and figuring on results.

While the National Phonograph Co. would doubtless take the greatest pleasure in meeting the dealers as a body, and on the same scale and manner as is proposed in the complimentary entertainment of the Edison jobbers in July, the details of which appear elsewhere, it is manifestly a physical impossibility. Therefore the dealers should take their word for the deed. The company have always striven to maintain the friendliest and closest relations with every branch of the trade, and the programme to be carried out in entertaining the jobbing constituency reflects this spirit. The acceptances to the company's broadcast invitations is practically unanimous, and the fact that Thomas A. Edison will be present at the formal banquet will lend additional interest to an occasion that promises to be not only memorable, but historical as well.

By a decision of the Board of General Appraisers, March 28, cinematographs or moving-picture machines were held to be properly classified as optical instruments. The contention by the importers that they were toys was looked upon as rather a nervy proceeding by the customs officials, considering the complicated nature of this wonderful apparatus.

Following the opinion of Judge Hazel, sustaining that part of the Berliner patent relating to the free-moving stylus or reproducing point for disc records, which was upheld on appeal by the United States Circuit Court of Appeals, the Victor Talking Machine Co., as owners of the invention, formally notified the trade they would enforce their rights. This position was questioned by the Talk-o-phone Co. and the Leeds & Catlin Co., they being charged with infringement, as well as the American Graphophone Co., the defendants

in the suit decided as above. The attorney for the untried cases thereupon insisted, in a letter to the Victor Co.'s counsel, and which was subsequently sent out as an open letter to the trade by the writer, that, in order to have these differences of opinion judicially passed upon, a motion for a preliminary injunction should be made against his clients. Previous to the hearing, set down for the 6th inst., application was made to Judge Lacombe, on behalf of the Victor Co., for an order to show cause why the evidence of the defense, which was claimed to be new and material, should not be submitted for examination. The order was granted, but subsequently vacated, on the plea of hardship in the hurried preparations of such important papers. When argument was to be heard on the date named for the temporary restraining order *pendente lite*, the affidavits containing the so-called fresh facts of the alleged invalidity of the patent were presented. At this point counsel for the complainants requested a week's postponement, and the case went over to the 13th. It may be added, in this connection, that parties undoubtedly close to the facts unhesitatingly predict the entire patent situation will be cleared up inside of six months. How? Ask us something easy.

Only one of many instances is quoted here to prove the efficacy of utilizing the advertising pages of *The World*, namely, that of the American Talking Machine Co. Last month they announced, in an attractive and convincing way, their line of needles. Result, positive sale of 5,000,000 needles. The returns vouchsafed other advertisers have been equally phenomenal. The *World* has put a girdle around the talking-machine earth in the way of paid subscribers, and in that respect has beaten all records of any publication ever issued for the comparatively short time of its existence—just over a year.

Henry Babson, president of the Universal Talking Machine Mfg. Co., who is reticent to the point of taciturnity on the approach of a newspaper inquisitor, made this candid confession,

No. 20  
PATENT CLAMP  
HORN CRANE

Dealers can obtain our goods from the Jobbing Trade. We are constantly improving and adding new goods to our extensive line.

## WARNING TO THE TRADE.

TO ALL WHOM IT MAY CONCERN:

This is to notify the trade that our suit in the United States Circuit Court against Ellis S. Oliver, of this city, for infringement of Patent No. 751,204, covering our No. 20 Clamp Crane, has now been terminated by the issuance of an injunction against Oliver. He will, therefore, no longer make or sell such a Crane, and we wish to say further that we shall similarly enforce our rights against any other persons or companies who infringe either in making, selling or using Cranes of this kind. We are the sole manufacturers of these goods, and all dealers and users are hereby warned to handle, purchase and use only our products.

March 1st, 1906.

THE TEA TRAY COMPANY of Newark, New Jersey

COR. MULBERRY AND MURRAY STS., NEWARK, N. J.

coupled with a prophecy, the other day: "I never have taken much stock in patents, but have changed my mind after studying closely certain claims made by Elbridge R. Johnson in his patents on the tapering arm. This invention has been in the Patent Office two years, and was issued March 13—a month ago—having been subjected to the critical inspection of expert examiners apparently bent on ripping it up the back. But the claims stood the test, were allowed, and I am confident it is the fundamental patent in its scope and application as it possesses the basic principles of the tone or tapering-arm machine now so well known and popular. Our company also have construction patents for such an arm, but they are subordinate to the Johnson invention, from which the trade will hear before long. It is the goods, and no mistake."

Music publishers are evidently resolved to put a stop to the printing of the words of their copy-right melodies, whole or in part, by the record makers in connection with the publication of catalogues or monthly lists, unless full credit is given. Notices to this effect have been served on parties unwittingly transgressing, and if dealers are indulging in the same practice they will also receive due attention, according to the aggravation of the offense. The publishers are entirely within their rights in this regard, and it is a good thing to occasionally remember that the easiest way is the best when one has the short end of the argument.

For the first time a price agreement or contract for handling their product will be required from the distributors or jobbers and dealers by the Victor Talking Machine Co., Camden, N. J. The blanks were placed before the trade the first of the month, and will become effective June 1. The provisions of these documents are elaborate, each section dealing with some specific condition of the business. Paragraph 13 comes in for the hardest knocks at the hands of the jobbers, possibly on account of the hoodoo numeral as well as the wide latitude assigned the company for cutting off people without a hearing. As one caustic chap remarked: "Suppose they don't like me face, or the size or style of me shoes, or the fit of me coat or collar, or the color of me neckwear, and they give me the double cross, where do I get off?" Such objections answer themselves, according to the right-thinking, who believe the company are making an excellent move toward

## CRESCENT TONE Regulator

FOR

### TAPER ARM TALKING MACHINES

This is the Tone Regulator that has been such a wonderful success from the very start. Live dealers are selling it everywhere because

**It enables you to obtain instantly any volume of sound desired from a whisper to the loudest tone,**

**It is very simple in construction, easily attached to the sound box and produces a pure, musical and distinct tone,**

**It is the ONLY Tone Regulator that does NOT wear the records. JUST OUT—No. 2 Regulator for use on CYLINDER MACHINES. Write for circular and special discounts to dealers.**

**CRESCENT TALKING MACHINE COMPANY**

(NOT INC.)

**3749 Cottage Grove Ave., CHICAGO, ILL.**

a price-protected trade that means more than "words, words, words," as Bill says.

Following a plan, put in force west, of advertising stock for sale to dealers and the public at an inducing price, the Talk-o-phone Co., Toledo, O., following their announcement to this effect in the daily papers of Philadelphia, sold certificates to the amount of \$100,000 in a week's time. The applications for stock occasioned wonder among investors, and the upper reaches of the local trade marvelled. After this phenomenal performance the Talk-o-phone people calmly remarked: "Watch us grow." The future career of the company is being followed with absorbing interest by the knowing ones.

The origin of the monthly lists of talking machine records has for a long time been shrouded in mystery, but Hayward Cleveland, who is now manager of the Columbia retail store at 872 Broadway, New York, claims priority of the idea. He has in his possession several postal cards used by him in 1898-1899, which were used as monthly bulletins. The first of these was headed "Columbia Phonograph Co. Gen'l, 1155-1159 Broadway, N. Y., Branch A. We beg to announce that we have added the following popular selections to our stock of Columbia records"

The bottom of the card was left blank, and the date and names of selections were inserted by means of the hektograph process each month, and the cards were mailed to the regular patrons of the company. The card issued the following year was worded the same, but the names and numbers of the records were printed in. It was not until the following year that all companies began the regular publication of the monthly lists.

One of the large department stores has put a talking machine to a very novel use in its sheet music department. So far as possible, records of all of the latest songs have been secured, and instead of keeping a vocalist at hand to sing them for prospective customers, they place a record on the machine, and the buyer hears it rendered by some well-known artist. They say that as soon as possible they will have cylinder records of the popular and new instrumental selections made.

Commenting upon the item which recently appeared in The Talking Machine World that the Imperial Academy of Sciences in Austria has arranged to secure phonograph records of the numerous languages and dialects in Austria-Hungary, which are to be preserved for the enlightenment of future generations, the Cleveland Plain Dealer says: "While the field for this form of collecting is widening it might be pertinently suggested that the American college yell should be included in these interesting archives. To some people the vigorous 'rah-rahs' and other exuberant syllables in use by the young collegians would prove fully as interesting as the heathenish gutturals and tomtomming of the New Guinea savages, or the Sanskrit chants of the Hindustanese. So let the addition be made and made as complete as possible, with due cognizance of the 'Hoo-rah ki-rah!' of our own Case School and the 'O Sketlioi' of our Western Reserve."

Seriously speaking, it may be said, however, that the preservation of the language of the Aborigines is now being taken up by leading scientific societies throughout the world through the medium of the talking machine. Examples of language and music have been secured in New Guinea and in certain sections of India. A party of scientists equipped for this research was sent to Australia last summer and another party is to start for Greenland at an early date. All these records are transferred to special archive phonographs and carefully stored away.

The man who writes that interesting column in the Sun entitled, "Live Topics About Town," has recently been concentrating attention on the talking machine. Sometimes he strikes it right and sometimes the reverse. Here is his latest contribution: "Several of the most popular singers receive the same fee from the companies that

manufacture the talking machines that are so popular nowadays. The highest sum is \$2,000 yearly as a retainer, and a large share of the gross receipts from the sale of the records. This system has been found most profitable, as the singers are then ambitious to have their records as perfect as possible, and will sing until the result is good enough to insure a large sale. All records of the noted singers sell for the same price. But an agent came to the company the other day with a strange request from a prima donna.

"Madame wants to know," he explained, "whether or not you won't raise the price of her records just a little higher than any of the others. You can make it only a quarter more if you like, because it is not on account of the money. She only wants them higher that the public may know they cost more than any other singer's."

"Strangely enough, this appeal was not granted."

"I believe in the practical utility of phonographs," said a large breeder of chickens to a representative of The Talking Machine World, "and I am making some experiments with one of my young broods that promises to be very successful. I have made a record to call the youngsters into the brooder or to their meals, and now when I want them for that purpose I just set it going, and they at once respond to the call. It saves my voice, and at the same time gets them accustomed to going to one place. I will later arrange to have it in one part of the building, and connect the various brooders by means of tubes with a horn at the end. Then I can switch from one to the other, and save a lot of trouble in carrying the machine around. It was funny to see the older chicks that know my voice run as soon as they heard it call them, and then look around for me. They cannot understand the horn, and seem to think it some kind of a drinking cup."

A correspondent of The Sun asked "whether or not Caruso, or any of the other well-known singers of opera, ever sing for talking-machine records, as advertised by some houses." The answer was yes, of course, and for ten times the largest operative fees, provided the exclusive use of the star's name is obtained. The voices, enunciation and personal mannerisms are often so perfectly reproduced as to be of real value for the study of singing as well as for entertainment after the stars themselves are gone.

Latest record cabinets—cylinder and disc—are more elegant in design and finish than ever.

## PHOTOS OF PHONOGRAPH TALENT

Mr. Dealer—Have you not often been asked: "Do you know where I can get a good photograph of Ada Jones, Arthur Collins, Byron G. Harlan or the other popular singers for the Phonograph?"

Undoubtedly you have and you didn't know where to get them or what they cost.

To supply this demand we have induced the artists to pose especially for us, and we are now prepared to furnish handsomely finished, well printed photographs of each of them. Each individual photograph bears a fac-simile of the artist's signature which gives them an added value. We have all the artists, and also have them grouped, as Jones and Spencer, Collins and Harlan, Biehling and MacDonough, etc.

**Retail Price, 35 Cents Each**  
**Sold to the trade through regular jobbers**

A photograph of any artist sent to Dealers on receipt of 21 cents, which is the Dealers' price. Get one and show it to your patrons. They will be glad to know that they can get these photographs, and you can make some money selling them.

**Channell Studio for Photography**

**486-488 Main Street, - ORANGE, N. J.**

### CAUGHT IN THE ACT.

William Carleton, an enterprising Chicago dealer, sends us the above photograph with the following explanation:

"One of the most enthusiastic talking-machine cranks in our neighborhood is William Carleton, Jr., 'the kid' in the photograph. In our store we have a great variety of records, but he has his favorites. He likes the Zonophone machine for its big, bright horn, and the American Indian records for their pretty blue color. If left alone he can put a record on the machine and start it

playing himself, which shows unusual aptitude for a three-year-old youngster.

"One Sunday morning we were changing over the stock in our store, and to keep the boy out of mischief placed him with his toys and the Zonophone to amuse himself. We started the machine going with a record, and he sat in front of it listening intently. My wife was struck with the earnest expression on his face and snapped the camera. He soon recognized the music as one of his favorite pieces, and cried out gleefully, 'It's an Indian!' and we caught him in the pose of the second picture."

### DEVINEAU BIOPHONE ATTACHMENT.

Louis Devineau, of Cleveland, O., has recently perfected an attachment which will enable the owner of any cylinder machine to play disc records of any make. This attachment, which The World had the pleasure of inspecting this week, can be connected without any screw or bolt to mar the cabinet and can be adjusted in a few seconds. It is operated by friction, so that neither gear nor belt is needed in its operation. This does away with all dirt or oil of any kind. Three twelve-inch records can be played at one winding on the Edison standard machine. The Devineau Biophone Co. are already manufactur-

ing these attachments on a large scale, and will shortly be prepared to fill all orders.

Mr. Devineau deserves great credit for perfecting so valuable a contribution to talking machine development. This attachment is bound to boost things in the record line, and will revive interest in thousands of people who have dropped out from among the steady patrons of the talking machine stores.

### HAGEN TO SOUTH AMERICA.

Leaves on a Master Record Making Trip Through the South.

Henry J. Hagen, manager of the Victor Talking Machine Co.'s New York branch laboratory, vice George K. Cheney, who has now resumed his old post, started for a master making trip through South America on April 7. He will be away six or seven months, and may be relied upon to render a good account of himself. Mr. Hagen goes first to Buenos Ayres, Argentine Republic, via Hamburg, taking passage on the S. S. "Amerika," of the Hamburg-American line. He will tarry in the German port several days, to give him a chance to care for his postal-card commissions, numbering nearly 160. A lot of Spanish local melodies and songs will be secured, but the operatic season being on there the Victor repertoire will be enriched by many additional gems in that class of music. For the benefit of a host of friends, who may want more postal cards, or inquire into the state of his health, or about the weather, or comparisons as to the difference between domestic and S. A. female beauty, Henry's address when in Buenos Ayres is at 538 Calle Peru. At the steamer, on the day of sailing, the following were on hand to wish the traveler bon

voyage and a safe return: J. O. Prescott and E. A. Pancoast, of American Record Co.; Fred Bachman and other members of the Victor Co.'s laboratory staff; Arthur Collins, Bryan G. Harlan and Steve Porter, bright and shining lights of the "talent." John Kaiser, with Douglas Phonograph Co., accompanied Mr. Hagen.

### NEW MILL IN OPERATION.

The Hawthorne & Sheble Mfg. Co., of Philadelphia, have their new mill in Philadelphia in active operation, and their increased facilities will undoubtedly enable them to double their output. The new mill is located at Howard and Jefferson streets, within two squares of their other plant, and contains about 75,000 square feet of surface. They are installing very attractive and commodious offices in the new mill, and anticipate moving the clerical department to that plant within the next few weeks.

The Standard Music & Machine Co., 9-11 East Eighth street, Chattanooga, Tenn., are carrying some very excellent advertisements in the local papers and devoted to the Edison and Victor machines.

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

Grand Prix at the Paris Exposition,	1900
Diploma at Pan-American Exposition,	1901
Silver Medal Charleston Exposition,	1902
Gold Medal St. Louis Exposition,	1904
Gold Medal Lewis-Clark Exposition,	1905

Subscription in United States, Canada and Mexico, \$2.00 for 52 weeks. All other countries, \$4.00.

We publish the Tuner's Guide also—a cloth-bound, illustrated work of over one hundred pages. Sent postpaid to any part of the world upon receipt of one dollar.

## THE STAR MODULATOR

Detail finer. Any strength of tone while playing. Records made more distinct. Old records sound like new. Sample on memorandum to any reputable firm. More profit than records. Sell on sight. Hundreds of indorsements from leading houses.

**Star Novelty Co., Grand Rapids, Mich.**

(Special to The Talking Machine World.)

London, Eng., April 5, 1906.

According to accounts received here, the exhibition of talking machines and records at the Leipsic Fair or Frühlingmesse was larger this year than ever before. The showing of disc machines dominated—in fact, the only cylinder machines shown were those of the National Phonograph Co., who also made an exhibit of records. The most notable advance here noted was in the quality of the records, while the sound boxes and machines also show marked improvement in all-round utility. Many manufacturers and dealers were present from practically every part of the world, but the usual orders were not booked this year owing to the uncertainty which has been caused by the reduction in price inaugurated by the Zonophone Co.

The talking-machine men who visited the Messe have held a meeting, it is said, to protest against this reduction in prices, which they deemed entirely unnecessary, in view of the fact that all the orders that can be filled are now being secured. One of the most remarkable features at the fair was the display of flower horns, which were shown in every conceivable style and color, and there can be no question that this is the horn that will be permanently associated with the disc hereafter. Prices were stiff owing to growing cost of raw material entering into the manufacture of specialties in machines.

William Cole, honorary secretary and curator of the Essex (Eng.) Museum of Natural History, is much interested in the literature of talking

machines and their use, and is contemplating compiling a bibliography on the subject.

\* \* \* \*

The Neophone, Limited, have registered a new device called a "Repro-Neo" for use upon any sound arm disc machine. This allows of the playing of their records upon other instruments than the Neophone, thereby effecting users a most important facility and advantage, and a vast saving in the future purchase of records. The price of this special reproducer is five dollars.

\* \* \* \*

Charles J. Hopkins, who was formerly assistant manager of the Columbia Phonograph Co.'s store in Baltimore, and who was also connected with the display made by this company at the expositions in Paris and St. Louis, and later manager at St. Petersburg, is now connected with the sales depot of the Columbia Co. in this city. He is a gentleman of great ability, who understands every phase of the business and is certain to make quite a record here.

\* \* \* \*

In the suit of the Gramophone & Typewriter, Ltd., against C. & J. Ullmann, the proprietors of the Odeon talking machine, alleging infringement of their patents on the tapered arm, and referred to in this letter last month, Justice Farwell in the Chancery Division on February 15, after hearing the evidence, suspended judgment until a later date. The reserved judgment of Justice Farwell was given in the Lord Chancellor's Court on March 5 in favor of the plaintiffs, with costs, the judge directing an inquiry as to damages and granting a certificate that the validity of the patent had come into question in the action, and granting a stay on certain terms.

\* \* \* \*

At the recent international exposition held in Brussels, the grand prize, the highest obtainable, was awarded to the Edison phonographs and records by the jury.

\* \* \* \*

Evan Williams, the celebrated tenor, who is well known in the States, is the latest recruit

to the splendid line of artists engaged by the Graphophone Co.

\* \* \* \*

Some very beautiful records have recently been made for the Neophone, Limited, by Sig. Mario Massa, the well-known operatic singer, who has been often heard at Covent Garden. He has a tenor voice of great power and purity, and the dozen or more records he has made for this company are remarkably effective. Speaking of this company brings to mind that A. W. Cameron, managing director, is now in New York. So great have been the inquiries and demands from the States for Neophone specialties that this step was deemed necessary. Business with this company is exceedingly satisfactory. They are having quite a demand for the records of the Garde Republicaine Band of Paris, which recently played in this city.

\* \* \* \*

There are few busier establishments in London than that of the Russell Hunting Record Co., Ltd., who are constantly adding to their catalogue. Their line now is most extensive, and is in great demand not only in the United Kingdom but throughout the colonies.

\* \* \* \*

Sir Tollemache Sinclair is still presenting Columbia graphophones and records to public institutions throughout the country, and it is probable that before he has finished he will have distributed more than three hundred graphophones and eight thousand ten-inch discs. At first his gifts were confined to hospitals in the metropolitan area, but now they cover all parts of Great Britain and Ireland, and include many of the smaller hospitals, insane asylums, work-houses and homes for the aged. As a writer in the Talking Machine News figures it: "There are about 150 hospitals which have an average of 100 beds occupied daily, aggregating 54,441 beds occupied every day in the year. This means one machine for every 346 beds. A hospital bed changes occupants on an average once every 20 days, or 18¼ changes per year. Since there are 54,441 beds in the hospitals included in the gift,

**PERFECT**

**MEDIUM**

**QUIET**

**THE THREE BEST NEEDLES ON THE MARKET TO-DAY.**

WE SHOULD LIKE TO SEND YOU SAMPLES SO THAT YOU CAN JUDGE FOR YOURSELF AS TO WHETHER OUR STATEMENTS ARE CORRECT. WE SELL MILLIONS OF NEEDLES EVERY MONTH AND EVERY CUSTOMER IS SATISFIED. OUR CUSTOMERS RE-ORDER, THIS SHOWS THAT OUR GOODS ARE GIVING SATISFACTION.

**THE PERFECT.**—This is made in three tapers as shown above— $\frac{3}{16}$  taper is the regular standard size needle.  $\frac{2}{16}$  taper is the same size but louder,  $\frac{1}{16}$  taper is very loud.

**THE MEDIUM.**—This is a first class needle for small apartments, gives a rich mellow tone, not as loud as the perfect.

**THE QUIET.**—Just the thing for anyone wishing a low sweet tone.

The Perfect and Medium packed in boxes of 300 and 1000 and in envelopes of 100. The Quiet needle packed in envelopes of 200 only. We will be pleased to quote you prices in quantity.

## WARNING---INJUNCTION NOTICE

### TO ALL DEALERS IN EDISON PHONOGRAPHS AND PHONOGRAPH SUPPLIES WITHIN THE STATE OF NEW YORK.

Attention is called to the following Decree of the United States Circuit Court for the Southern District of New York, granting an Injunction restraining the National Phonograph Company, and its Agents and Dealers from selling or leasing phonographs and supplies therefor within the State of New York excepting through the New York Phonograph Company :—

CIRCUIT COURT OF THE UNITED STATES,  
Southern District of New York.

<p>New York Phonograph Company, Complainant,</p> <p style="text-align: center;">vs.</p> <p>National Phonograph Company impleaded with Thomas A. Edison, Edison Phonograph Company and the Edison Phonograph Works, Defendant,</p>	}	<p>In Equity. Injunction.</p>
---	---	-----------------------------------

THE PRESIDENT OF THE UNITED STATES :—

To National Phonograph Company, its officers, agents, clerks, servants, employees, attorneys, successors, assigns, associates, dealers, confederates and all persons in privity with said National Phonograph Company; Greeting.

WHEREAS it has been represented to us in our Circuit Court of the United States for the Southern District of New York, that National Phonograph Company has trespassed and infringed upon and wrongfully invaded the rights of complainant, New York Phonograph Company, by selling and by using, and by causing to be sold and by causing to be used by others than complainant, within the State of New York, phonographs and supplies therefor, and by selling for use, and by licensing for use, by others than complainant, within the State of New York, phonographs and supplies therefor in violation of the provisions of and of the rights of the complainant under certain contracts as extended bearing date October 12, 1888, between the North American Phonograph Company and the Metropolitan Phonograph Company and also between Thomas A. Edison, the Edison Phonograph Company, the Edison Phonograph Works, the North American Phonograph Company and Jesse H. Lippincott, and a contract bearing date the 6th day of February, 1889, between the North American Phonograph Company and John P. Haines, and a contract bearing date July 1, 1893, between complainant and the North American Phonograph Company.

AND, WHEREAS, by a certain decree entered herein May 2, 1905, in the office of the clerk of the Circuit Court of the United States for the Southern District of New York, it was, among other things, ordered and decreed that an injunction do issue against you, the said parties above mentioned, restraining you, the said parties, in the manner as hereinafter mentioned; AND WHEREAS said decree entered herein May 2, 1905, has been affirmed on appeal by the United States Circuit Court of Appeals for the Second Circuit, as appears by the mandate of said court filed March 23, 1906, in the office of the clerk of the Circuit Court of the United States for the Southern District of New York:

NOW, THEREFORE, we do strictly command, enjoin and restrain you, the National Phonograph Company, and you, its officers, agents, clerks, servants, employees, attorneys, successors, assigns, associates, dealers, confederates and all persons in privity with the National Phonograph Company, and each and every of you under the penalty that may fall thereon, perpetually from directly or indirectly selling or leasing within the State of New York, phonographs and supplies therefor, to others than complainant, and from using within the State of New York, phonographs and supplies therefor, and from causing to be sold or causing to be leased or causing to be used, within the State of New York, phonographs and supplies therefor, by others than complainant, and from selling for use or licensing for use within the State of New York, phonographs and supplies therefor, by others than complainant, in violation of the provisions of and of the rights of the complainant under certain contracts as extended, bearing date October 12, 1888, between the North American Phonograph Company and the Metropolitan Phonograph Company and also between Thomas A. Edison, the Edison Phonograph Company, the Edison Phonograph Works, the North American Phonograph Company and Jesse H. Lippincott, and a contract bearing date the 6th day of February, 1889, between the North American Phonograph Company and John P. Haines, and a contract bearing date July 1, 1893, between complainant and the North American Phonograph Company.

WITNESS the Honorable Melville W. Fuller, Chief Justice of the United States, at the City, County, and Southern District of New York, this 26th day of March, 1906, A. D.

JOHN A. SHIELDS,  
Clerk.

[Seal of the Circuit Court of the United States for the  
Southern District of New York.]  
LOUIS HICKS,  
Of Counsel.

New York Phonograph Company hereby gives notice to all Agents and Dealers in Edison Phonographs and Supplies within the State of New York, that it will enforce its exclusive rights under the foregoing Injunction, and will also hold them liable for damages and profits for any infringement of its exclusive contracts.

Attest. [SEAL.]  
JAMES L. ANDEM,  
Secretary.

NEW YORK PHONOGRAPH COMPANY,  
By H. M. FUNSTON,  
Vice-President.

18¼ times that number will give the total of persons who will be benefited, or 993,548. Nearly one million afflicted people thus benefit by the baronet's generosity. The cost works out at less than ½d. each. The second lot of 150 outfits to insane asylums and infirmaries will not reach so many different patients, because individual changes are less frequent in such institutions. But the number will be very substantial."

\* \* \* \*

A young woman in Australia thought she had a singing voice, but wanted expert opinion as to whether she would be justified in taking the long journey from her home to London to compete for a scholarship. So she sang into a phonograph and sent the record to a well-known London professor of music and asked him if he would try the record and inform her if he thought her voice was good enough to try for the scholarship. The professor listened to the record, was duly impressed with the possibilities of the voice and wrote to say he thought she should try the examination. She came to London, reaching here just in time for the examination, and was one of two successful candidates out of 190 competitors.

### EDISON GRAND OPERA RECORDS No. 2.

The second list—Supplement No. 2—of Edison grand opera records will go out on May 1, with the prestige of the greatest single success in the history of the Edison phonograph. As showing the extent of the demand for the records, the National Phonograph Co. state that orders in the first three months reached a total five times as great as was anticipated when they were first issued. A better evidence of their popularity could not be wanted. These new selections are sung by Scotti, Knote, Dippel, Van Rooy, Resky, Constantino and Berti, the first five of whom sang the principal roles at the Metropolitan Opera House, New York, last winter. Constantino and Berti have not yet sung in this country, but they have won a name abroad as artists of unusual talent. The list, as follows, is with orchestra accompaniment in every instance: B. 11—Matinata, "Il Barbiere di Siviglia," Rossini, by Florencio Constantino, tenor; sung in Italian. B. 12—Celeste Aida, "Aida," Verdi, by Florencio Constantino, tenor; sung in Italian. B. 13—Preislied, "Die Meistersinger von Nurnberg," Wagner, by Heinrich Knote, tenor; sung in German. B. 14—Duetto, "La Traviata," Verdi, by Signor and Signora Resky; sung in Italian. B. 15—Romanze, "Die Hugenotten," Meyerbeer, by Andreas Dippel, tenor; sung in German. B. 16—Pregheira, Tosti, by Gustave Berl Resky, baritone; sung in Italian. B. 17—Siciliana, "Cavalleria Rusticana," Mascagni, by Romeo Berti, tenor; sung in Italian. B. 18—Questa O Quella, "Rigoletto," Verdi, by Romeo Berti, tenor; sung in Italian. B. 19—O, Du Mein Holder Abendstern, "Tannhauser," Wagner, by Anton van Rooy, baritone; sung in German. B. 20—Prologo, "Pagliacci," Leoncavallo, by Antonio Scotti, baritone; sung in Italian.

The company have also notified the trade that their grand opera records will not be made in concert size.

### HANDSOME COLUMBIA EXHIBIT.

At the Office Appliances and Business Systems Show in Chicago.

(Special to The Talking Machine World.)

World Office, 195 Wabash Ave.,  
Chicago, Ill., April 9, 1906.

Talking machines for office purposes cut a big swath at the Office Appliance and Business Systems Show at the Coliseum, Chicago, which was held March 17-24. They were more in evidence than last year, and the companies exhibiting secured good results. That has developed already

COLUMBIA COMMERCIAL GRAPHOPHONE DISPLAY.

—in fact, had developed before the show was two days old, although from the vast number of prospects piled up the full effect will not be known for six months or a year.

The Columbia Phonograph Co.'s exhibit occupied a booth covering 300 square feet just south of the main entrance, and was in charge of W. W. Parsons, manager of the Columbia commercial graphophone, Chicago department, assisted by a corps of salesmen and demonstrators, including E. R. Ormsby, P. M. Woods, Miss M. C. Moloney, Mrs. Mary Wilson. A fine representation was made of the Columbia commercial graphophone, 1906 style, all equipped with their combination recorder and reproducer, automatic stop and start, scale arrangement for the correction of mistakes, and adjustable speaking tube and numerous other interesting and valuable features. Visitors were permitted to talk into the machine, the records were then blazoned forth on a regular machine equipped with a 56-inch horn, and the visitor carried away the record as a souvenir. The medals awarded the company at the Chicago and St. Louis World's Fairs were prominently displayed. W. W. Parsons, the manager of the commercial graphophone department of the Columbia Chicago office, has been selling these machines for the Columbia people in Chicago since

1893, and is practically the pioneer in the commercial branch of the talking-machine business in Chicago. He has witnessed the business grow from infinitesimal to very imposing proportions, and has seen the commercial machine advance from an experiment to a point where it has conquered all previously existing prejudices, and has taken its place among the recognized means of saving time and labor in the great business offices.

### FRIEDERICH'S HANDSOME QUARTERS.

Julius A. J. Friederich, the well-known piano, musical merchandise and talking machine dealer of Grand Rapids, Mich., will soon have talking machine quarters which will vie with anything in the country. F. C. Steinmann, the capable man who has had charge of the small goods and talking machine departments for many years, has been working on the details for some months and has made trips to Chicago and other centers in search of ideas, many of which he has succeeded in improving upon. The third floor of the building adjoining the Friedrich building has been secured and is now being remodeled. A passageway has been cut through, and a few steps from the elevator shaft at the third-floor landing in

the present building brings one to the new talking machine department. There are three record rooms, onelarge one which will be used for public pronograph recital purposes, and two smaller ones—one for Victor and the other for cylinder machines. These rooms are located on either side of the record stock room. The demonstrating machine in either case will be placed on the shelf of a window opening from the stock room into the record room, and the machine fed by salesmen stationed in the stock room, where they will have everything right to hand. Another large room on the same floor will be used for music merchandise, cabinets, etc., although a line of samples will also be carried on the first floor. Mr. Steinmann has some excellent plans looking to the handling and exploiting of the talking machine department. Some time since, this house became jobbers on quite a large scale, and they are greatly enlarging their facilities for this branch of the business.

### A BIG ORDER.

What is considered one of the largest single express shipments ever made from the National Phonograph Co.'s factory was that to W. D. Andrews, a Syracuse, N. Y., jobber. It consisted of 86 cases of Edison records in a special car.

POSITIVELY GUARANTEED, OR MONEY REFUNDED

## INSTANTANEOUS AND AUTOMATIC REPEATER

FOR HOME AND STANDARD PHONOGRAPHS

You can put it on or off in one minute (no drilling holes in machine). CHEAPEST—SIMPLICITY—DURABILITY. Our delay was for your benefit; it is now perfect.

## OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped  
Abroad from the Port of New York.

(Special to The Talking Machine World.)  
Washington, D. C., March 9, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

## MARCH 12.

Bombay, 21 pkgs., \$354; Berlin, 26 pkgs., \$539; Buenos Ayres, 20 pkgs., \$600; 23 pkgs., \$749; 53 pkgs., \$1,183; Corinto, 3 pkgs., \$425; Callao, 11 pkgs., \$288; Cienfuegos, 9 pkgs., \$341; Caibarien, 19 pkgs., \$415; Glasgow, 16 pkgs., \$255; Hamburg, 17 pkgs., \$355; Havana, 53 pkgs., \$1,840; Havre, 10 pkgs., \$286; London, 1,172 pkgs., \$16,369; 37 pkgs., \$3,234; 657 pkgs., \$7,961; 90 pkgs., \$3,616; La Guaira, 5 pkgs., \$182; Liverpool, 4 pkgs., \$465; Mazatlan, 4 pkgs., \$124; Melbourne, 10 pkgs., \$323; Montevideo, 10 pkgs., \$375; 11 pkgs., \$191; Manila, 34 pkgs., \$1,628; Rio de Janeiro, 3 pkgs., \$415; Sheffield, 1 pkg., \$100; Vera Cruz, 8 pkgs., \$165; Sydney, 407 pkgs., \$5,628.

## MARCH 19.

Bombay, 15 pkgs., \$256; Brussels, 106 pkgs., \$863; Callao, 7 pkgs., \$880; 7 pkgs., \$247; Calcutta, 6 pkgs., \$162; Cape Town, 12 pkgs., \$230; Cardenas, 11 pkgs., \$194; Colon, 7 pkgs., \$227; Genoa, 60 pkgs., \$3,015; Glasgow, 37 pkgs., \$644; Havana, 31 pkgs., \$947; 27 pkgs., \$1,112; Havre, 5 pkgs., \$335; Limon, 3 pkgs., \$165; London, 8 pkgs., \$462; 109 pkgs., \$6,677; 767 pkgs., \$6,252; Progreso, 4 pkgs., \$216; Sheffield, 25 pkgs., \$213; Valparaiso, 9 pkgs., \$484; 35 pkgs., \$1,358.

## MARCH 26.

Batavia, 3 pkgs., \$259; Berlin, 127 pkgs., \$4,793; Buenos Ayres, 5 pkgs., \$200; Caibarien, 9 pkgs., \$142; Callao, 16 pkgs., \$495; Colon, 1 pkg., \$122; Guayaquil, 6 pkgs., \$100; Hamburg, 10 pkgs., \$209; Havana, 20 pkgs., \$737; 20 pkgs., \$1,125; Havre, 24 pkgs., \$498; Iquitos, 4 pkgs., \$101; Kobe, 3 pkgs., \$130; La Guaira, 10 pkgs.,

\$263; Limon, 6 pkgs., \$102; London, 4 pkgs., \$117; 39 pkgs., \$3,790; 798 pkgs., \$15,896; Manila, 12 pkgs., \$853; Milan, 26 pkgs., \$1,354; Naples, 2 pkgs., \$100; Para, 5 pkgs., \$275; Santa Marta, 3 pkgs., \$130; Santiago, 7 pkgs., \$192; Santos, 9 pkgs., \$123; Vera Cruz, 13 pkgs., \$200; Vienna, 20 pkgs., \$1,000.

## APRIL 2.

Acajutla, 13 pkgs., \$208; Berlin, 169 pkgs., \$968; Bombay, 23 pkgs., \$271; 35 pkgs., \$634; 4 pkgs., \$132; Brussels, 115 pkgs., \$940; Colon, 4 pkgs., \$232; Cardenas, 6 pkgs., \$178; Guayaquil, 5 pkgs., \$138; Glasgow, 43 pkgs., \$365; Havre, 19 pkgs., \$732; Havana, 10 pkgs., \$466; 20 pkgs., \$746; 781 pkgs., \$7,342; 97 pkgs., \$8,233; Liverpool, 70 pkgs., \$558; Manchester, 45 pkgs., \$345; Milan, 25 pkgs., \$1,040; Naples, 1 pkg., \$130; Rotterdam, 5 pkgs., \$200; Rio de Janeiro, 5 pkgs., \$351; Sydney, 569 pkgs., \$12,513; St. Petersburg, 12 pkgs., \$467; Tampico, 7 pkgs., \$510; Vera Cruz, 15 pkgs., \$190; Vienna, 21 pkgs., \$625; Valparaiso, 4 pkgs., \$55.

## REDUCTION IN "TALKER" FREIGHTS.

Commenting upon recent freight reductions in talking machines, the Portland Oregonian says: "A step that promises to increase the number of phonographs and other talking machines in the State has just been taken by the O. R. & N. Co., which announces a reduction in freights on that commodity from \$3.25 in less than carload shipments, to \$2.50 per 100 pounds. In carload shipments the rate will be reduced from \$2.25 to \$2.20. These changes will become effective April 1."

## "THE VOICE OF THE VICTOR."

A neatly printed, pertinently edited, well illustrated twelve-page paper, with the foregoing title, the first issue bearing date of March, is published as "the trade journal of the Victor Talking Machine Co., Camden, N. J." The publishers' announcement says: "It is the purpose of the Victor Talking Machine Co. to publish this paper

from time to time, as a convenient bulletin of Victor facts of manufacture, for the dealers who sell its product and also as an exchange of ideas and methods between the dealers themselves." The "Voice of the Victor" is for complimentary distribution.

## RECENT INCORPORATIONS.

The Italian Phonograph Co., of New York, was incorporated at Albany last week with a capital of \$5,000, for the purpose of manufacturing and selling talking machines and records. The directors are Francis Palmieri, E. R. Acetta, F. S. Stickie, New York.

\* \* \* \*

The Evans Phonograph Record Co., of New Jersey, with offices at 1219 Washington street, Hoboken, N. J., has been incorporated with the authorities of New Jersey for the purpose of manufacturing phonographs, graphophones, etc., with a capital of \$50,000. Incorporators, James M. Evans and J. C. Buxton, New York, and Chas. A. Reiners, of Hoboken.

The Queen City Talking Machine Co., 474 Queen street, west, Toronto, is a new addition to the talking-machine fraternity in Toronto. They have opened up one of the largest and handsomest talking machine stores in Canada and will carry, among others, the Columbia machines and records. B. J. Markle, formerly manager of the Columbia Phonograph Co.'s store at Hamilton, Ontario, is the proprietor.

The E. E. Forbes Piano Co., of Birmingham, Ala., have recently increased their capital stock from \$200,000 to \$500,000. One of the causes for this move was taking on the talking-machine business, which this concern are to push extensively.

W. E. Gilmore, president of the National Phonograph Co., Orange, N. J., is in the salubrious climate of South Carolina enjoying a brief respite from pressing business cares. He will return north next week.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., April 9, 1906.

**TALKING MACHINE.** Eldridge R. Johnson, Philadelphia, Pa., assignor to Victor Talking Machine Co., of New Jersey. Patent No. 814,786.

In a talking machine where an amplifying horn is employed for delivering the reproduced sounds it is desirable and advantageous in obtaining the highest degree of efficiency in the quality and volume of the tone reproduced to employ not only a large horn, but also to locate the small end of the horn as near as possible to the sound box or reproducing mechanism. By locating the small end of the horn in this manner so that the sound

conducting tube or horn flares outwardly practically from the sound box it allows the sound waves to advance with a regular, steady and natural increase in their wave fronts in a manner somewhat similar to that of the ordinary musical instruments, thus obviating the well-known disadvantages due to long passages of small and practically constant diameter. It is also desirable to avoid abrupt turns in the sound conducting tube or passage. It is, therefore, the object of this invention to provide a talking machine with an amplifying horn meeting these requirements and at the same time to reduce the size, length and weight of the horn, so that it can be conveniently transported.

In the drawings, Fig. 1 is a side elevation of the improved construction as applied to the talking machine; Fig. 2, a horizontal sectional view of the small end or hollow arm portion of the amplifying horn, showing the means to allow of the vertical movement of the sound box; Fig. 3, a vertical sectional view showing the means whereby the larger portion of the horn is adjustably mounted and the hollow arm or lower portion of the horn is pivoted so as to communicate therewith; Fig. 4, a plan view of the end of the support for the larger portion of the amplifying horn; Fig. 5, a view of the yoke for holding the same in position upon its support, and Fig. 6, a plan view of the end of the hollow

arm or pivoted portion of the amplifying horn.

**HORN FOR RECEIVING AND DELIVERING SOUND.** Leonard L. Terhune, Newark, N. J. Patent No. 814,891. This invention relates to improvements in horns for use in receiving and concentrating sound and for delivering and amplifying sound, and is particularly applicable to recording and reproducing horns on talking machines.

The object of the invention is to construct a horn made of one piece of material having the ferrule formed integral with the body of the horn, thereby reducing the cost of manufacture considerably and producing a more rigid and durable construction. Heretofore it has been customary to form the conical body of the horn in one piece and the cylindrical ferrule of the horn of another piece and then uniting the two pieces by soldering them together. This construction has been very objectionable in view of the fact that the acid used in the soldering process would invariably run into the seam of the conical part of the horn and prevent the japan with which the horn is usually covered from adhering to the seam at that particular point where the acid would run.

In the accompanying drawings, Figs. 1 and 2 are longitudinal views of a horn in which this improvement is shown. Figs. 3 and 4 are end views of the same, illustrating the seam of the horn in one case, as in Fig. 3, on the outside of the ferrule and the seam in Fig. 4 on the inside of the ferrule. Figs. 5, 6 and 7 are partial longitudinal views of a horn in which modified forms of the improvement are shown. Fig. 8 shows a horn blank placed upon a tapering mandrel with the forming die arranged above it preparatory to forming the cylindrical ferrule thereon. Fig. 9 shows the finished horn on the mandrel with the die in position. Fig. 10 shows a horn blank placed upon a tapering mandrel with the forming die, consisting of three rollers suitably mounted above the same preparatory to forming the cylindrical ferrule thereon. Fig. 11 shows a modified form of mandrel.

**AMPLIFYING HORN.** Eldridge R. Johnson, Merion, Pa., assignor to Victor Talking Machine Co., of New Jersey. Patent No. 814,848.

The object of this invention is to provide an amplifying horn, principally for use with talking machines, of such a character that the same will have all the material advantages of a single horn connected directly to the sound box, but without having the disadvantages due to long passages of small and practically constant diameter, to

the weight of the bell portion of the amplifying horn, and to abrupt turns in connecting tubes.

This application is a division of prior application, filed February 12, 1903, Serial No. 143,060, which covers certain features of construction of talking machines which are shown, but not claimed herein.

The subject matter of this application particularly pertains to the sound conveying portions considered as a continuous tapering horn having joints therein to allow movement of the sound box and the adjustment of the position of the bell portion of the horn.

In talking machines with which amplifying horns are used for delivering the reproduced sounds it is desirable to obtain the highest degree of quality and volume of tone that is possible. To this end large horns are used, but the weight of such horns must be so distributed as not to cause any bearing upon the sound box to increase the weight on the stylus or needle or otherwise interfere with the free movement thereof. Heretofore the amplifying horn in the usual form of talking machines has been carried by a pivoted arm, to the end of which is attached the sound box, which has direct communication with the small end of said arm, and such a construction materially affects the operation of the sound box when the horn is changed in direction or position or varied in size.

One special object, therefore, of this invention

is to provide such an amplifying horn that the effect will be the same as though the horn were connected directly to the sound box, as in the former types of talking machines, without the disadvantages due to the weight of the horn and without employing long passages of small and practically constant diameter, while the larger end of the horn may be directed to any point of the compass without affecting the sound box or the position of the machine.

Fig. 1 is a side elevation of the improved talking machine; Fig. 2 a horizontal sectional view of the small or hollow arm portion of the amplifying horn, showing means to allow of the vertical movement of the sound box; Fig. 3, a sectional view showing means whereby the larger portion of the horn is adjustably mounted and the hollow arms or lower portion of the horn is pivoted so as to communicate therewith; Fig. 4, a plan view of the end of the support for the larger portion of the amplifying horn; Fig. 5, a view of the yoke for holding the same in position upon its support, and Fig. 6 a plan view of the hollow arm or pivoted portion of the amplifying horn.

**SOUND REPRODUCING AND MAGNIFYING MEANS.** Jesse L. Gray, Santa Ana, Cal., assignor of one-

Dealers who want to increase their trade must be up to date. The No. 5 Horn Crane is the latest and most approved style on the market. Our horns are noted for their beauty and amplifying qualities.

Hand Decorated Flower Horn.

**Eclipse Phonograph Co.**

A. W. M. TOENNIES, Proprietor

203 Washington Street, Hoboken, New Jersey

half to Percy F. Rice, same place, and William H. Faust, Los Angeles, Cal. Patent No. 814,839.

The primary object of this invention is to provide means for use in connection with a phonographic reproducer for producing impulses in the air directly corresponding to the undulations in the record without the intervention of a solid sound distributor, such as a diaphragm, thereby preserving the character of the sound waves without any scratching, rattling or other extraneous noises. Another object of the invention is to provide for amplification of the sound to any desired extent and for regulation or variation of the intensity of the sound.

The invention comprises, in connection with a

reproducer and means for moving a record in co-operative relation therewith, a valve responsive to the movements of the reproducer and an elastic fluid pressure means having an outlet controlled by said valve, the movement of the valve being transverse to the movement of the fluid through the valve and the construction of the valve being such that there is no pressure on the valve due either to the pressure of the fluid or to the movement of the fluid.

The accompanying drawings illustrate the invention. Fig. 1 is a plan of a phonograph provided with the invention. Fig. 2 is a vertical section on the line x<sup>2</sup> x<sup>2</sup> in Fig. 1. Fig. 3 is a diagram showing the application of the device as a relay for telephones.

GRAMOPHONE. Charles Algernon Parsons, Newcastle-Upon-Tyne, England. Patent No. 814,561.

The following is one of three claims made for this invention:

"1. A needle attachment for gramophones and the like, comprising a socket arm attached to the sound producing means, said socket arm having a diamond shaped socket therein adapted to receive a needle and hold the same jammed with no lateral freedom when resting on the record and means external to said socket acting on the

portion of the needle which projects therefrom for holding the needle in the socket, substantially as described."

Referring to the accompanying drawings, Fig.

1 shows an elevation of a gramophone reproducer with one form of the improved attachment, Fig. 2 being a sectional plan of the socket.

DISC TALKING MACHINE BLANK. Rudolph Klein, New York, N. Y., assignor of one-fifth to Byron G. Harlan, Orange, N. J. Patent No. 814,053.

The object of this invention is to provide a ready means of producing disc talking machine records of a wax composition or the like in such a manner as to enable said records to be utilized in connection with the usual apparatus employed for reproducing the permanent records of trade and at the same time protect such records from accidental injury through being scratched or

rubbed together. This device also secures the ready tracking of the recording stylus in making said sound records on the improved blanks, resulting in the sound record being made in the form of a volute spiral on the disc. These objects are attained by the means illustrated in drawings herewith, and in which Fig. 1 shows a top or plan view of one form of the improved device. Fig. 2 shows a cross-section on line G H of Fig. 1.

PITCH INDICATING ATTACHMENT FOR SOUND REPRODUCING MACHINES. Charles L. Chisholm, North Sydney, Canada. Patent No. 814,941.

The object of the present invention is to provide an improved means whereby phonographs, graphophones and other sound reproducing machines may be utilized in the teaching of music, and particularly in teaching absolute pitch. A further object of the invention is to provide an improved form of indicating device in the nature of an attachment which may be made and sold as a separate article of manufacture and applied to existing sound reproducing machines or which

may be constructed as part of a machine during the manufacture of the latter.

A still further object of the invention is to provide for the adjustment of the indicating means in accordance with the pitch and tempo at which

Fig. 1.

a record is made, so that in reproducing the record the speed of the machine may be adjusted until the selection is being reproduced at the pitch and tempo of recording, after which the indicating means may be adjusted until the key symbol of reproduction is in correct position.

Fig. 4.

The speed of the machine may then be increased or diminished, each movement effecting a simultaneous adjustment of the indicator and the latter showing the new key of reproduction it being possible to produce any composition in every pos-

Fig. 5.

Fig. 6.

## 20th CENTURY GRAPHOPHONE

You have heard of it; have you ever *heard* it? This machine involves an entirely new principle of sound reproduction, producing the full volume and exact tone quality of the original.

An ordinary Cylinder Record, of any make, when reproduced on this machine, increases the volume of sound to *sixteen times louder* than any other talking machine in the world. Sound wave tests in the laboratory show this. Think what this means to you, Mr. Dealer, when you employ this machine to play records for your customers.

You know that the better your Reproducing Machine, the more Records you sell. The 20th Century Graphophone sells Records as no other machine can possibly do.

The price, retail, is \$100, without the horn. Liberal Discount given the trade.

Write us to-day for particulars regarding the 20th Century Graphophone.

### DR. CAHILL'S TELHARMONIUM.

**Remarkable Electrical Invention for Which Wonderful Things Are Claimed—Will Send Music Over Telephone Wires for Hundreds of Miles—Will be Given Initial Trial in New York Within the Next Four or Five Months.**

Another electrical wonder has been given to the world. Dr. Thaddeus Cahill, in a dingy shop at Holyoke, Mass., has, after twelve years of unremitting toil, succeeded in finally perfecting what is considered by electrical engineers to be one of the most remarkable devices in the history of electricity.

In this little shop there now stands a 200-ton electrical machine called by its inventor the telharmonium, which combines in itself the musical power of all known instruments, and besides this can send its music over telephone wires for hundreds of miles in all directions. Any telephone subscriber within its radius can be supplied with music in great or small amounts, as his feelings dictate.

"Future Paderewskis," says the Electrical World, "sitting in New York may be heard in 10,000 places miles apart, and in each place the original effect is heard."

The real wonder and novelty of Dr. Cahill's invention lies in the fact that the telharmonium does not, like the phonograph, reproduce music but actually makes it, and in an entirely new way. What the operator plays on are a number of little specially arranged dynamos. These are so connected to the keyboard, which is arranged like that of an organ, that the depression of a certain note, A for instance, causes a current in the transmitting wires which produces a vibration in the telephone receiver at the other end of the line just like that following the playing of A on a piano.

The person with the receiver at his ear hence hears the A as if it were played upon a piano. In other words, the note is not actually made until the current reaches the receiver at the end of the wire. So that this little two-inch contrivance is the actual music producer of the telharmonium.

It is wonderful enough that any sort of a tune can be played on such a simple little device, but when Dr. Cahill states that any note of any quality and timbre—violin, flute, piano, organ, clarinet, etc.—can be accurately reproduced by the telharmonium, and further, that the combined harmonies of these various instruments, as they occur in bands and orchestras, can also be accurately produced by a single performer at the keyboard, one's wonder becomes perilously near to skepticism.

These claims, however, seem to be well authenticated, and it is announced that in about three months one of the new machines is to be set up in this city. If this is the case, the public will soon be able to test Dr. Cahill's claims.

The telharmonium must, obviously, be a very complicated and hence expensive machine. The one at present in Dr. Cahill's Holyoke laboratory is said to have cost about \$200,000. This excessive cost is seen to be of no great importance when it is remembered that one machine will probably be able to supply from 7,000 to 10,000 subscribers.

In receiving the electrical music the ordinary

telephone receiver is screwed into the end of a horn, like that used on the phonograph. The music is said to be loud and clear, one receiver filling a good-sized room and entirely free from the disagreeable rasping and scraping accompaniments so common in the reproductions of some of the cheaper styles of talking machines.

Lord Kelvin, during his recent visit to this country, is said to have examined and been greatly impressed by Dr. Cahill's instrument. A local electrical engineer who has been up to Holyoke and heard the telharmonium, describes its tones as beautifully clear and pleasant to the ear. As to the genuineness and revolutionary character of the discovery, therefore, there seems no doubt. A recent issue of the Electrical World speaks of it as "the birth of a new art," one of "the notable achievements of our modern day," the "creation of another great electrical industry."

The company which will put this unique instrument upon the market is capitalized at \$750,000. Its officers are: President, O. T. Crosby; vice-president, F. C. Todd; treasurer, A. H. S. Post; secretary, H. F. Stevenson.

The instrument will be given its first trial in New York City. It has been estimated that service can be supplied private residences, restaurants, saloons, churches, schools, hospitals, theaters, hotels, barber shops and other places at rates ranging from 20 cents a day to \$10 a day.

### DOUGLAS CO. EXPANDING.

At the Douglas Phonograph Co., New York, the business quarters have been remodeled so as to provide a commodious private office for C. V. Henkel, president and general manager, and the accommodation of his private secretaries. It is handsomely finished in oak and cathedral glass and appropriately furnished.

Several important Edison patents expire April 3—and thereby hangs a tale, the quid nuncs say.

## INCREASE YOUR RECORD BUSINESS

### THE TRAY SYSTEM FILLS THE LONG-FELT WANT.

Every dealer will readily see the advantages obtained by using this System of carrying records in stock. It is concise and appeals at once to the prospective customer. Every dealer using this System speaks in the highest terms of its convenience and selling power.

By actual experience sells as many records as a first-class salesman. Makes a more attractive looking stock than can be obtained by any other method.

A handsomely printed pamphlet has just been issued by the Hawthorne & Sheble Mfg. Co., of Philadelphia, in which they illustrate their line of flower horns in their natural colors. They are mailing copies of this pamphlet free to all interested parties. Nicely constructed printed matter is the best salesman any manufacturer can employ, and we congratulate the Hawthorne & Sheble Mfg. Co. for the attractiveness of the pamphlet in question.

#### HOPKINS BROS. CO. GREAT EDISON TRADE

(Special to the Talking Machine World.)

Des Moines, Ia., April 8, 1906.

Hopkins Bros. Co., of this city, recently received a carload shipment of Edison phonographs and records to meet the demands of their business. The call for this line of goods has become so great that the Edison Co. are making the Des Moines and Fort Dodge stores the headquarters for all the trade of the State and for as much of the territory outside of the State as they can reach, in order to cut down trouble in handling orders.

The business of the Hopkins Bros. Co. has grown to such an extent that they will in the near future remodel their store, to make arrangements for 15,000 records and raising their present office eight feet and placing private booths in this place, where parties can be shown the goods unobserved.

When completed, the company will have room

for more than fifty thousand records, and for between two and three hundred machines.

#### AN EASTER WINDOW DISPLAY.

An Easter phonographic display is the conception of one of the uptown dealers. He has arranged several of the floral horns in his windows, and has filled them with artificial flowers suitable to the occasion, while imitation rabbits are supporting other horns which contain brightly colored eggs. Records sung by prominent artists, with songs and hymns appropriate to that festival, form a background and setting. The window attracts every passerby, and has been the means of selling a number of instruments.

The Strong & Williams Co., of East Orange, is a corporation which filed a certificate in New Jersey last week for the purpose of manufacturing phonographs and graphophones. Capital, \$500,000. Incorporators: James Strong, W. R. Williams, E. Williams, all of East Orange.

## INJUNCTION AGAINST OLIVER.

The Tea Tray Co., of Newark, N. J., Secure Order from United States Circuit Court for Infringement of Clamp Crane.

In the suit of the Tea Tray Co., of Newark, N. J., against Ellis S. Oliver, for infringement of patent No. 751,204, covering their No. 20 clamp

crane, an injunction has been issued by the United States Circuit Court of the District of New Jersey, which reads as follows:

"Whereas, The Tea Tray Company of Newark, N. J., lately exhibited its bill of complaint, in the Circuit Court of the United States, for the District of New Jersey, against you, the said Defendant, praying to be relieved touching the matters therein complained of, and especially that you, Ellis S. Oliver, and all acting under you, may be restrained from further infringing the Patent and the right of the said complainant in the premises, in the said bill mentioned, in any way, or manner, contrary to law or equity:

"We, therefore, in consideration thereof, and also of the particular matters in the said bill set forth, do strictly command and enjoin you, the said Ellis S. Oliver, your servants, workmen and agents, and all others acting under or with you, and each and every one of you, that henceforth you do absolutely and forever entirely desist and refrain from the further constructing, or using, or selling, in any way or manner directly or indirectly, or in anywise counterfeiting or imitating the invention claimed in claims one and two of said Patent, or any part thereof, or any horn-supporting device made in accordance therewith, or from in any manner infringement upon the said claims one and two of said Letters Patent, or upon complainant's rights thereunder. Witness the Honorable Melville W. Fuller, Chief Justice of the Supreme Court of the United States, at Trenton, this twenty-second day of January, A. D. 1906, and in the one hundred and thirtieth year of the Independence of the United States. (Signed) H. D. Oliphant, Clerk of Circuit Court."

The Tea Tray Co. state in this connection that the suit against Oliver has been terminated with the issuance of this injunction, and added: "He will therefore no longer make or sell such a crane, and we wish to say further that we shall similarly enforce our rights against any other persons or companies who infringe either in making, selling or using cranes of this kind. We are the sole manufacturers of these goods, and all dealers and users are hereby warned to handle, purchase and use only our products. As heretofore, the Tea Tray Co., of Newark, N. J., stands ready to supply this crane to the trade, and all orders will receive careful attention."

### ENTERTAINMENT BY WIRE.

Reproductions of Graphophone Talks and Songs by Telephone Proves a Great Success at the Annual Banquet of the Ad. Men's League in Portland—Remarkable and Highly Interesting Demonstration.

At the annual banquet of the Ad. Men's League, held recently in the spacious Hall of the Commercial Club in Portland, Ore., one of the novel features of the evening was a reproduction of graphophone talks and songs over the telephone which were plainly heard and enjoyed by all the banqueters. The local telephone company, at great expense, wired the hall so as to connect with their telephone system outside and with the Columbia Phonograph Co., six blocks from the dining hall. Suspended from the ceiling, in various parts of the hall, were graphophone horns attached to telephone receivers. The banqueters were amazed to hear actual conversations, over the telephone, coming from long-distance points. The genuine telephone messages sounded somewhat blurred and indistinct, but the graphophone sounded distinct, without the slightest metallic ring or buzz. It was placed opposite a telephone transmitter in the sales-room of the Columbia Phonograph Co., and played various selections. It proved so much more of a success than the actual vocal messages, that it was substituted for a genuine song and dance.

Murray and Mack, comedians at one of the local theatres, had been engaged to render one of their songs over the telephone. As a result of a previous rehearsal it was discovered, says the Columbia Record, that if they sang into the graphophone and the machine was used to transmit the music through the telephone system, the result was far more clear and pleasing than if they had sung directly into the telephone. As a consequence their selections were rendered in this way. The diners supposed they were listening to Murray and Mack direct, when as a matter of fact they were listening to the song sung earlier in the day and then coming to them from a Columbia record via the telephone. Owing to the number of horns the words and the music were exceedingly clear and soft, producing a very pleasing effect. The arrangements which resulted so successfully were in charge of Manager Smith, of the Columbia Phonograph Co., in Portland. The Ad. Men's League tendered a vote of thanks to the telephone company and to the Columbia Phonograph Co., thus recording their appreciation of what they pronounced to be the chief hit of an occasion which was as full of hits as a porcupine is full of quills.

## WILD BIDS FOR "TALKER."

Machine Worth \$10 Is Knocked Down at Auction for \$125 After Owner and Auctioneer Are Almost Mobbed by Would-be Purchasers.

A despatch from Darlington, Pa., under recent date, says: "The unusual spectacle of a group of music-loving farmers bidding up a second-hand \$10 phonograph to \$125 just because it rendered such popular songs as 'Nobody Works But Father' and 'Always in the Way' in good shape, was presented at an auction sale of William Fausnaught's furniture. Fausnaught operated the machine while the sale progressed and kept everyone in a good humor, and when the auctioneer put the music box under the hammer as the last article to be sold the crowd surged forward and the most spirited bidding occurred during the sale.

"As 'Nobody Works But Father' was being played one bidder exclaimed: 'I'll raise it from \$75 to \$100, Mr. Auctioneer; I must take that home to-night.' Another raised the bid \$5 and waved his greenbacks in the auctioneer's face, when the utmost excitement prevailed. The crowd surged backward and forward, knocking the auctioneer's stand from beneath him, and the operator of the phonograph was compelled to throw it on his shoulder and dash inside the house to keep it safe. The door was besieged

by the excited bidders, who thought someone had stolen it, but the auctioneer finally quieted them and knocked down the machine at \$125."

## PHONOGRAPH SPOKE FOR HIM.

Lord Talbot Returned to Parliament Through Wife's Clever Idea.

One of the Unionist members of Parliament who lost his seat in the recent political upheaval in England, arrived in New York a few days ago, and in trying to explain exactly how it was that his Liberal opponent had unseated him, referred to the successful campaign waged in behalf of Lord Edmund Barnard Talbot, the member from the Chichester Division of Sussex, by his wife, Lady Mary Talbot.

A few days before he was to open his campaign for re-election, Lord Talbot, he said, went deer stalking and met with an accident that was serious enough to preclude all possibility of his conducting a personal campaign. Lady Talbot, a woman of great political sagacity, realized at once that unless somebody came to the rescue, her husband probably would be beaten.

Accordingly her ladyship procured a phonograph (of American manufacture), and into this instrument her husband spoke a dozen or so speeches. Then she arranged to visit every section of her husband's constituency. It was extensively advertised that Lady Talbot was to ap-

pear for Lord Talbot, and that she would be accompanied on her tour by the phonograph.

At every meeting where she appeared she was greeted by great crowds, who, admiring her pluck, assured her that her husband's accident was the best thing that could have happened for his campaign.

At each meeting, when the phonograph had been heard, Lady Talbot would herself make a speech, and, according to the Unionist ex-member, they were all bright and witty, and every bit as good as Lord Talbot could have made himself. The result of the novel campaign was the return of Lord Talbot to Parliament by a greatly increased majority.

Lord Talbot is 51 years old, and is heir to the Dukedom of Norfolk. He assumed the name Talbot in compliance with the will of the seventeenth Earl of Shrewsbury in 1876. His wife is the daughter of the seventh Earl of Abingdon.

Williams College, at Williamstown, Mass., have just consummated an arrangement with the Columbia Phonograph Co.'s New York office whereby graphophones will be used for the study of modern languages in the department of Romance languages at this well-known institution. This department is under the supervision of Professor A. H. Morton, who already has experimented with the graphophone in a most successful way.

## With the Makers, Sellers and Users of Automatic Specialties

With the advent of spring the automatic business has taken on flourishing proportions, for the crowds drawn out of doors by the warming effect of the heightening sun's rays turn for amusement to the open-air palaces of music. March business was not up to expectations, owing to weather conditions, but April's opening days seem to presage a period of unusual prosperity. Manufacturers are working hard to get their new types on the market. Many of these machines are unique and inviting enough to tempt the most skeptical, and reflect great credit on those "men behind the guus," whose brains and untiring energy keep pace with the unchanging taste of the public.

\* \* \* \*

In the March issue of this paper we made note of the fact that the Siegel-Cooper Co., one of the great department stores of this city, has installed an "automatic parlor," for the use of its patrons. This opens up a new field for the exploitation of these instruments, and one which will prove worth looking into. It is easy to prove their value, and no proposition could be fairer. You place the machine, the man makes you an initial payment and agrees to pay you the balance at, say, \$50 per month. Then he doesn't worry. The machine does the whole thing. The public file in and deposit the coin. You have the key to the cash depository, and once or twice a month you call and collect the welcome cash. The purchaser doesn't get a chance to divert the money coming to you until all bills are settled. The experience of manufacturers—of at least the better class of slot-controlled devices—is that the average monthly collections are in the neighborhood of \$40, so you can see about where all parties concerned come out on the deal.

\* \* \* \*

Spring is now at hand, and all over the country plans are on foot for the opening of parks, pavilions, etc. These enterprises have been growing steadily for the past five years. Attractions seem to vie with one another in daring, hair-raising acts, until now it would surprise but few of the summer amusement seekers if some show came along and, repeating Roman history, placed a gladiator extravaganza on the boards. Millions of people visit these resorts, most of them having money to spend on that which takes their fancy. The way to succeed is not to hang back

—"butt in" and get your share. Nothing under the sun pays so well for a small outlay of capital as the slot parlor. Think it over, but not too long, lest you get left behind in the rush.

\* \* \* \*

We are making an effort to interest the slot machine man and concessionaire in this paper. Each month there will be found interesting features so that it will pay to read The World every month. In our advertising pages will be found a large number of excellent features. Possibly you are the proprietor, the inventor or manufacturer of some such specialty. In that case we can find a market for your wares. Place your invention before the proper persons. You can do this in but one way, and that to advertise in a publication, like The World, which will reach the purchasers of such devices.

### A PROGRESSIVE AMERICAN

Is G. E. Van Guysling Who Has Accomplished Much in the Moving Picture Field.

It is a fact not generally known that G. E. Van Guysling, vice-president and general manager of the American Mutoscope and Biograph Co., is one of the pioneers in the moving picture business. The first practical moving picture camera made was constructed under his supervision early in the year 1889 at No. 49 Ann street, New York City, for the United States Government as part of its equipment to be used in eclipse photography, in which service Mr. Van Guysling was detailed.

The interval of totality in eclipse work being extremely limited, combined with the general remoteness of its path, made it important to reduce the number of cameras and increase the pictures showing the different phases of the eclipse and corona. These conditions led to the building of this, the first successful moving picture camera, which rendered efficient service on the United States Astronomical Expedition to Africa the same year, was exhibited at the World's Fair, Chicago, 1893, and has since been in service on several important government expeditions.

In construction it followed somewhat the principle of the present-day camera. In the absence of film, negative glass plates, 1½x2 inches, hinged by tape, supported on spools at either end, forming a continuous belt, were passed intermittently before the lens. The length of exposure of each plate was regulated by a pneumatic stop, operated from a commutator regulated by a chronograph. A shutter quite similar to that in use to-day was provided. Power to drive the

mechanism was derived from a suspended weight unwinding a cord from a spool on the main shaft.

Mr. Van Guysling comes from one of the early Knickerbocker families of New York, is a 32d

G. E. VAN GUYSLING.

Degree Mason, Knight Templar, Shriner, Elk, lieutenant in the militia, also member of the Holland Society of New York, Society of Colonial Wars, and Sons of the Revolution.

**1 CENT IS ALL IT WILL COST YOU** to write for our big **FREE BICYCLE** catalogue showing the most complete line of high-grade **BICYCLES, TIRES and SUNDRIES** at **PRICES** **BELOW** any other manufacturer or dealer in the world.

**DO NOT BUY A BICYCLE** from anyone, or on any kind of terms, until you have received our complete **Free Catalogue** illustrating and describing every kind of high-grade and low-grade bicycles, old patterns and latest models, and learn of our remarkable **LOW PRICES** and wonderful new offers made possible by selling from factory direct to rider with no middlemen's profits.

**WE SHIP ON APPROVAL** without a cent deposit, **Pay the Freight** and allow **10 Days Free Trial** and make other liberal terms which no other house in the world will do. You will learn everything and get much valuable information by simply writing us a postal.

We need a **Rider Agent** in every town and can offer an opportunity to make money to suitable young men who apply at once.

**\$8.50 PUNCTURE-PROOF TIRES** **ONLY \$4.80 PER PAIR**

Regular Price \$8.50 per pair.  
**To Introduce We Will Sell You a Sample Pair for Only**

**4.80**  
NAILS, TACKS OR GLASS WON'T LET OUT THE AIR

(CASH WITH ORDER \$4.55)  
**NO MORE TROUBLE FROM PUNCTURES.**

Result of 15 years experience in tire making. **No danger from THORNS, CACTUS, PINS, NAILS, TACKS or GLASS.** Serious punctures, like intentional knife cuts, can be vulcanized like any other tire.

**Two Hundred Thousand pairs now in actual use. Over Seventy-five Thousand pairs sold last year.**

**DESCRIPTION:** Made in all sizes. It is lively and easy riding, very durable and lined inside with a special quality of rubber, which never becomes porous and which closes up small punctures without allowing the air to escape. We have hundreds of letters from satisfied customers stating that their tires have only been pumped up once or twice in a whole season. They weigh no more than an ordinary tire, the puncture resisting qualities being given by several layers of thin, specially prepared fabric on the tread. That "Holding Back" sensation commonly felt when riding on asphalt or soft roads is overcome by the patent "Basket Weave" tread which prevents all air from being squeezed out between the tire and the road thus overcoming all suction. The regular price of these tires is \$8.50 per pair, but for advertising purposes we are making a special factory price to the rider of only \$4.80 per pair. All orders shipped same day letter is received. We ship C.O.D. on approval. You do not pay a cent until you have examined and found them strictly as represented.

We will allow a cash discount of 5 percent (thereby making the price \$4.55 per pair) if you send **FULL CASH WITH ORDER** and enclose this advertisement. We will also send one nickel plated brass hand pump and two Sampson metal puncture closers on full paid orders (these metal puncture closers to be used in case of intentional knife cuts or heavy gashes). Tires to be returned at **OUR** expense if for any reason they are not satisfactory on examination.

We are perfectly reliable and money sent to us is as safe as in a bank. Ask your Postmaster, Banker, Express or Freight Agent or the Editor of this paper about us. If you order a pair of these tires, you will find that they will ride easier, run faster, wear better, last longer and look finer than any tire you have ever used or seen at any price. We know that you will be so well pleased that when you want a bicycle you will give us your order. We want you to send us a small trial order at once, hence this remarkable tire offer.

**COASTER-BRAKES**, built-up-wheels, saddles, pedals, parts and repairs, and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Write for our big **SUNDRY** catalogue.

**DO NOT WAIT** but write us a postal today. **DO NOT THINK OF BUYING** a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it **NOW**.

**MEAD CYCLE COMPANY, Dept. "JL" CHICAGO, ILL.**

## THE RELIABLE SELF-PLAYING PIANO

\$ \$ \$

DOLLARS FOR THE  
DEALER**PAYS BIGGER DIVIDENDS  
THAN A BANK**

\$ \$ \$

DOLLARS FOR THE  
CUSTOMER

Hundreds of thoroughly satisfied customers are testifying to the enormous earning capacity of our RELIABLE SELF-PLAYING PIANO. One man writes us that he has "averaged from \$18 to \$25 per week since the instrument was in-

stalled," and adds, "I can truthfully say I would not take \$1,000 for it were it impossible for me to duplicate it." Another says, "As to its earning capacity, it will earn from \$2.50 to \$5 per day," and we could give many more such letters.

**THIS IS OF INTEREST TO YOU,  
MR. DEALER**

BECAUSE a piano that makes money for its owner is one which requires the *least effort to sell*, and *less effort to sell means*

more sales and that means larger dividends for you. We have the best paying proposition ever offered. The amusement season will shortly open and you ought to be in a position to show THE RELIABLE to every summer-resort owner, hotel proprietor or other interested party. Be the first in the field and secure the agency for your territory. Send at once for prices and terms.

## NEWS OF THE TRADE.

The litigation between the Edison Kinetoscope Co., and the American Mutoscope & Biograph Co., New York, for years, has again resulted in favor of the latter. In a decision handed down recently by Justice Ray, of the United States Circuit Court, Southern District of New York, the court says: "After a careful consideration of the prior art and Edison's work and patent, it must be considered that complainant's invention, if there be one, is very narrow."

This is substantially the same view held by a concurrent decision of three judges of the United States Circuit Court of Appeals, Justice Wallace presiding, in the original case, which was first won by the Edison Co. and appealed by the Biograph Co. Judge Wallace's decision, while claimed as broadly in favor of the Biograph Co., intimated that the Edison Co. might be entitled to a patent on certain details of construction, and on the strength of this the Edison claims were narrowed and the patents re-issued. The Edison Kinetoscope Co. then brought suit a second time for an injunction and an accounting, but Judge Ray decided that in no respect can the defendant's biograph camera be regarded as an infringement. The decision serves to strengthen the mutoscope patents, which have never been contested, except in Germany, where they were carried to the court of highest record and their validity assured.

Justice Fitzgerald of the New York Supreme Court has denied an application for an injunction to restrain a dealer in automatic pianos and phonographs from operating a self-playing piano at his place of business on Broadway. The application was made by a dentist whose office is over the store, and who alleged that both his nerves and his business had suffered from the noise made by the piano. In deciding the matter, the court took the location of the store and office into consideration, saying that the premises were situated in one of the busiest sections of the city, "where, from the nature of things, noise and bustle are among the ordinary incidents to be continually expected."

The Automatic Novelty Co., 145 East 23d street, New York, are showing a number of first-class attractions in their 1906 catalogue. The adjustable Dumb Bell Lifter No. 2 has proved extremely popular, and is bringing money in hand over fist to its operators. This machine is made

entirely of iron, except an oak box in back. A large dial 14 inches in diameter registers 500. Large dumb bells 12 inches in diameter, equipped with electric bell attachment. This machine is substantially the same in operation as their dumb bell lift and grip developer, and is a winner. Among the other attractions the hat-puncher, Gloomy Gus and souvenir post card machines are bound to do a big business. Write for catalogue showing cuts and prices.

The Roovers Bros., of 100 Schermerhorn street, Brooklyn, have recently perfected an automatic electric machine, which they claim is "superior to any similar device ever placed on the market." And if one can judge by the amount of orders that keep piling in daily, this instrument goes far toward proving all they claim for it. Those who have tried it say that it gives a smooth and even electric vibration wholly unlike most of the older class, which either give no sensation or jerk your arms out of place, tying you up in a knot. These machines, when satisfactory, coin money for the owner, so it will pay you to look into the matter. A cut of the machine appears in their ad. in this issue.

One of the greatest time and even money savers ever invented, perhaps, is the Johnson's coin counter. The primary object of the patentee, J. M. Johnson (late of the United States Sub-Treasury) was to make the counting of coins easy, accurate and rapid. The machine perfected by him, and bearing his name, accomplishes all this. Counting coins by hand in places where millions of dollars are handled every month, is a prodigious task. Indeed, "counting cash" by large corporations and even by concerns handling only a few hundred dollars daily is no easy undertaking. It will therefore be understood that parlor, park or amusement men will find this instrument a boon when the day's receipts come to be gone over. Further information concerning this invention may be had by addressing the Automatic Department of this paper.

## ILLUSTRATED SONG MACHINE.

One of the greatest marvels of the age is the illustrated song machine manufactured by the Rosenfield Manufacturing Co., 591 Hudson street, New York City, which is winning its way into a large measure of favor for arcades, cafes and all public places. An idea of the demand for these instruments may be estimated from the fact that over two thousand are already in use.

They have proven tremendously popular, and the reason is obvious. The combination of beautiful illustrations which tell the story of the song, makes a valuable adjunct to the song itself. And this is what this machine does. The most delicate shades of nature are shown in the reproductions, and the entire forms one of the most attractive specialties placed on the market in many a day. In New York the Automatic Vau-

ILLUSTRATED SONG MACHINE.

deville Co., Surprise Vaudeville Co., the People's Vaudeville Co., the Auditorium, the Decomo Co., and others handle many of them, and as it is in New York, so it is elsewhere. To operate this machine a storage battery is not necessary. By simply connecting this machine to an electric lighting circuit the machine is ready for operation. It is generally conceded that it is one of the greatest money makers ever placed on the market, and is worthy of investigation.

The Automatic Musical Instrument Co., of Wilmington, has been incorporated with the Secretary of the State of Delaware for the purpose of manufacturing musical instruments of all kinds. Capital stock, \$50,000.

**New York.**

# ***The Six Reasons***

## **WHY**

**The PEERLESS Coin Operated Pianos differ from all others.**

- I.—The quality of the PEERLESS is never lowered in order to join the race for quantity.
- II.—Excellence in construction. The PEERLESS is made by practical piano action makers, whose life study is care in detail and nicety in workmanship.
- III.—The PEERLESS is not merely built to sell. It is built to return full value to the purchaser and more too.
- IV.—Every user knows that the PEERLESS is noted for its freedom from breakdowns, that it never balks at critical moments.
- V.—It is the age of the individual instrument that counts. The purchaser of a PEERLESS gets an automatic instrument which has a "life expectancy" far greater than any other.
- VI.—The PEERLESS is the best Coin Operated Piano in the world. It is the Standard. Roth & Engelhardt, Props. Peerless Piano Player Co. are the originators of the first successful Coin Operated Pianos. They have received the Highest recognition at three Expositions, one an International one.

STYLE D.

Mobile, Feb. 12, 1906.

Messrs. E. E. Forbes Piano Co., Mobile, Ala.

Gentlemen:—I am very much pleased with the Peerless Coin Operated Piano, Style "D," which I bought from you, as you may imagine when I tell you that I have taken in on an average of \$205 per month from the nickel-in-the-slot box of the piano since I have had it.

Furthermore, I will say that the Piano has been no expense to me and has given very little trouble, and I believe it is now practically as good as when I got it. It has a fine tone and stays in tune well. It is a great success and the only electric piano I have ever seen that was a complete success and I will take pleasure in recommending it to any one.

(Signed) A. M. QUIGLEY.

# Edison Goods Fast Sellers

Dealers throughout the country corroborate our statement that Edison goods are fast sellers. They daily advise us of the high opinion the public have of Edison goods, and how easy it is to make big sales. The reason why they are in demand is because our extensive magazine and newspaper advertising, covering the entire United States and Canada, is acquainting the public with the many points of superiority of the Edison Phonographs and Records.

Edison dealers are successful, money-making business men, and it will pay you to become one of them. They realize  $66\frac{2}{3}\%$  on every dollar invested in Edison Goods, and their interests are protected by prices being strictly maintained. Write to us now and we will tell you how to become a successful Edison Dealer.

## How Edison Goods Sell

Gentlemen:

I think I can report the largest sale of Edison Records to one man taken at one time and without playing any of them. That was yesterday when we sold to one of our citizens sixteen dozen new Edison Records.

# WHISTLIN'

You get the idea, don't you? Our records are the popular numbers that every one is whistling. That explains the new name we have bestowed upon our bulletin.

The BLUE ONES certainly have the call these days. It keeps us working overtime to turn them out fast enough. There is a smoothness, depth and finish to our AMERICAN RECORDS that puts them in a class by themselves.

You are never satisfied with any others after you have once adopted the BLUE ONES.

## SPECIALS THIS MONTH

### Over the Hot Sands

#### DESCRIPTION

AMERICAN SYMPHONY ORCHESTRA.

OVER THE HOT SANDS.

Blue Record No. 031339

031339. **Over the Hot Sands.** (Arab Patrol.) Dedicated to the Ancient Arabic Order of the Nobles of the Mystic Shrine. Popular interest is manifested in the Shriners just now on account of their annual pilgrimage, which this year is being made to the Shrine in Los Angeles, California. As an orchestra selection this number will appeal to all alike, whether a member of the Masonic Order or not. But to those who have "crossed the hot sands" the instinctive impulse, when hearing it, will be to "Hold on to the Rope."

## The Parson and the Turkey

#### DESCRIPTION

ARTHUR COLLINS. Orches. Acc.

031342. **The Parson and the Turkey.** By the author of the "Preacher and the Bear." A rag-time tale of the Parson's temptation. He was riding to the meeting house on his old mule "Maud." A nice fat turkey crossed the road and Maud stood still to argue with the Parson about it. Their conversation is laughable.

## TAUGHT BY A TALKING MACHINE.

**The Clubroom Idea Tried in a Village School—Desks Put Out and Replaced With Ordinary Furniture—Instruction Given by a Phonograph—Pupils Allowed to Govern Themselves—A Novel Idea.**

(Special to The Talking Machine World.)  
Macon, Mo., May 9, 1906.

In a three-room village school Prof. J. Greene MacKenzie has demonstrated the success of a self-governing department. Professor MacKenzie is the principal of the school and has one assistant, Miss Delia Hale, who teaches the primary classes. There is no teacher in the other room except a talking machine.

At the teachers' association here last fall a representative of the State University presented the idea of letting pupils study in an unconventional way. He suggested that tables be used instead of desks and that the students be permitted to enjoy all the privileges of a social body, unhampered by the interference of teachers. The advocate of the plan said the innovation promised greater enthusiasm, better order and superior work. The teachers said it was visionary and hobbyish. About the only instructor who did not turn up his nose at the idea was Professor MacKenzie.

He presented the plan of a self-governing department to the patrons of the Ethel school, where he teaches. They were not enthusiastic over it, but MacKenzie said he was going to try it. He resolved to make the experiment with the eighth and ninth grades. Those classes took to the idea and began fitting up the room. They tumbled the desks out into the barn and brought in polished tables.

In delivering the commission of freedom to them Professor MacKenzie told them he would expect results. If they fell below an average of 90 in their class grades they would have to return to his room and do penance until they could keep up. The self-ruling department elected officers and punishment for disorderly conduct was fixed by a vote of the students. On only one occasion since the inauguration of the plan last fall has it been necessary to apply it.

When school is opened the president of the class goes to the talking machine and sets it in motion. The pupils rapidly jot down the problems and go to work solving them. A particularly difficult question is discussed around the table, just as engineers discuss an obstacle in railroad construction, and each helps the other in reaching the answer. The officers of the room attend to the grading of the work and report to the principal.

The self-governing department has been in operation during the second and the third quarters of the present school year, and its average of work has been 8 per cent. above what it was during the first quarter, when the principal taught the two grades himself.

The parents of the pupil students are now thoroughly convinced that the idea is a practical one. Not only have the self-governing pupils done better, but the plan has inspired such enthusiasm among other children that they are bending every energy to win their way into the department of liberty.

In other rooms the children lean upon their teachers and look to them for examples as to deportment and industry. In the self-governing department these supports are removed and the student stands alone, to win or fail, according to the energy and faithfulness he puts in his work.

## THE KEEN CO. TO INCORPORATE.

The Keen Co., of Philadelphia, will apply for a certificate of incorporation on May 21 to the authorities of Pennsylvania for the purpose of

conducting the sale and manufacture of all kinds of talking machines, records and supplies. Those interested are: Bernard Silver, M. M. Keen and David Keen.

## CANNOT EVADE PRICE AGREEMENT.

**Another Decision Enforcing Patentees Selling Rights—Unauthorized Dealer Enjoined for Cutting.**

Another step has been taken by the U. S. Courts in broadening the scope and meaning of the protected-price agreement enforced by talking machine manufacturers with the trade. It is thoroughly established that the inventor or owner of a patent can fix a price for an article and maintain it legally when a contract to that effect is signed between the parties in interest. This ruling was first enunciated in a talking machine case. Then the courts decided that a dealer who had not signed the agreement, but was cognizant of its provisions, and violated them by cutting prices, infringed, and would be restrained. Now the United States Circuit Court, Eastern District of Pennsylvania, has enjoined a party not an authorized dealer, but selling records at less than the contract price, "having obtained them from some jobbers or dealers whose identity is not disclosed." The decision, which was filed in Philadelphia April 6, follows:

UNITED STATES CIRCUIT COURT, Eastern District of Pennsylvania.—New Jersey Patent Co. and National Phonograph Co. against Fred. G. Schaefer, in equity. Motion for preliminary injunction. McPherson, District Judge.

"The New Jersey Patent Co. is the owner of patent No. 782,375, which covers the phonograph records that are now in question, and the National Phonograph Co. is the exclusive licensee. The invariable custom of the Phonograph Co. for several years has been to sell its goods only to such jobbers, or dealers, as are willing to sign carefully prepared agreements by which the Phonograph Co. restricts the sale and use of its instruments and records in several particulars. It forbids the sale for a smaller sum than is specified in the contracts, and forbids their sale also to any merchant who has not signed an appropriate agreement, that makes him what is known as an authorized dealer.

"Each contract provides *inter alia* (among other things): 'All Edison phonographs, records and blanks are covered by U. S. patents and are sold by the National Phonograph Co. under the condition that the license to use and vend them, implied from such sale, is dependent on the observance by the vendee of all the foregoing conditions; upon the breach of any said conditions the license to use or vend said phonographs, records and blanks, immediately ceases, and any vendor or user thereafter becomes an infringer of said patents and may be proceeded against by suit for injunction or damages, or both.'

"And upon the box in which every record is enclosed for sale the following notice appears: 'This record is sold by the National Phonograph Company upon the condition that it shall not be sold to an unauthorized dealer, or used for duplication, and that it shall not be sold or offered for sale by the original, or any subsequent purchaser (except by an authorized jobber to an authorized dealer) for less than thirty-five cents apiece. . . . Upon any breach of said condition, the license to use and vend this record, implied from such sale, immediately terminates.'

"The defendant is not an authorized dealer, having never made any contract with the Phonograph Company, but he is selling and offering for sale records at less than thirty-five cents, having obtained them from some jobbers or dealers whose identity is not disclosed by the affidavits. I have no doubt that the defendant's purchases and sales have been made with full knowledge of the restrictions that have been placed upon the sale and use of these records, so far at least as these restrictions appear upon the box; and that he is deliberately violating the provision concerning sales at a minimum price. Under such circumstances, the complainant's right is established by Heaton Fastener Co. against Eureka Co., and the numerous cases that have followed the ruling that was there made by the Court of Appeals for the Sixth District. Other citations are referred to in Bement against National Harrow Co.; Edison Phonograph Co. against Kaufman; same against Pike; Victor Talking Machine Co. against The Fair, and Cortelyou against Johnson.

"If it is supposed, as the defendant's counsel seems to contend, that these cases are in conflict to some extent with Garst against Harris; same against Hall & Lyon; same against Charles, and same against Wissler, I can only reply that I am bound by the decisions of the Federal Courts if they are inconsistent with the rulings of the Massachusetts or the Pennsylvania tri-

bunals. But there is no conflict, as I think. The Federal decisions are put upon the right of a patentee to deal with his own monopoly very much as he pleases, while the Garst cases are concerned simply with a trade-mark and a proprietary medicine. The principles that govern the right of a patentee to do what he will with his own are not discussed in the opinions of the Massachusetts court, by whom, indeed, it is expressly stated, in the case against Hall & Lyon Co., that Garst's trade-mark did not give him 'the rights of a patentee in property manufactured under a patent.' A preliminary injunction will be granted."

A subsequent decree of the court, filed April 17, commanded Schaefer and all under him, to "Refrain from in any way or manner, directly or indirectly, using or causing to be used, selling or causing to be sold, or advertising to sell, or from acquiring, handling or dealing in any apparatus, articles or devices embodying or containing the invention set forth in U. S. Letters Patent No. 782,375, and particularly claims 1, 3 and 4 thereof, without the license of the complainants . . . until the hearing of the cause or the further order of the said court."

## TELEGRAPHONE CO. ORGANIZED.

**Officers and Directors of Canadian Telegraphone Co. Elected.**

(Special to the Talking Machine World.)  
Providence, R. I., May 6, 1906.

At a meeting of the stockholders of the Canadian Telegraphone Co., at the office of Allan McPherson, 220 and 221 Industrial Trust Building, Tuesday of last week, the following were chosen directors and officers for the ensuing year: Edwin A. Smith, president; Dr. E. M. Harris, vice-president; A. B. McCrillis, treasurer; Allan McPherson, secretary and general manager, and Raymond Bartlett Earle, corporation attorney.

This company owns the patents for the Poulsen telegraphone for British North America, and will develop the telegraphone business in the Dominion of Canada. The Poulsen telegraphone patents cover every use of magnetism for the storing and reproduction of sound, and there are already 38 different uses to which the localization of magnetism has been applied, all of exceeding commercial value. Among them may be mentioned recording dictation, language and music teaching, public speech recording, recording for music composers, recording both ends of a telephone conversation, long distance telephoning by means of relays, telegraph recording, rapid telegraphy, wireless telegraphy recording, teaching the blind, aged and infirm, news distribution, telegraphic train dispatching and for general amusement purposes.

The officers of the company are well known local men. The president, Edwin A. Smith, is a banker; Dr. E. M. Harris, vice-president, is a prominent physician and president of the Franklin Lyceum; A. B. McCrillis, treasurer, is the head of the wholesale flour firm of A. B. McCrillis & Son; Allan McPherson, secretary and general manager, is very well known in the fruit trade in which he was engaged prior to his connection with the telegraphone.

## A VISITOR FROM ENGLAND.

Felix Heilbronn, of London, and who also represents Carl Schroeter, of Berlin, has been visiting the talking machine trade in New York during the past few weeks. He made a thorough canvass of the talking machine trade in connection with a number of lines which he represents, and was much impressed with the enormity of the business in this country. It is not improbable that as a result of his visit some important connections will be consummated in the near future. Mr. Heilbronn left for England on May 5.

## RECENT INCORPORATIONS.

The Kipp-Link Phonograph Co., Indianapolis, was incorporated with the secretary of the State of Indiana last week with a capital of \$6,000 for the purpose of dealing in all kinds of talking machines. Incorporators: Walter E. Kipp, Indianapolis; Edwin A. Link and Jacob Dick, of Huntington.

# Majestic Self-Playing Piano

*The Pneumatic Coin-operated Piano without a fault. The best Spring and Summer Proposition a Dealer can take hold of*

View of Majestic Pneumatic Self-Playing Piano closed, showing its neat and artistic appearance. It sets close to the wall and all working parts are inside—away from meddlers. The special endless music roll is used and repeats itself automatically at the end of the program. This style is also playable by hand.

## THE SEASON of the MAJESTIC IS NOW!

You are looking around for a big seller—that will yield a nice profit and keep things moving. Here it is. Pianos in public places often take in \$5.00 to \$10.00 a day.

## THE MAJESTIC SELLS ON SIGHT

to Cafes, Hotels, Restaurants, Soda Fountains, Skating Rinks, and Amusement Parks and Resorts of all kinds, because they all appreciate its value as

## A WONDERFUL MONEY MAKER

Their customers pay for it. The returns are usually far more than is needed to

meet their payments on the instrument. This means satisfaction all around. To illustrate its value to the Cafe, etc.—if the Majestic played only 10 times in 24 hours the Cafe would still be making 36 per cent. on the investment. One of our dealers last season

## SOLD EIGHT MAJESTICS IN ONE MONTH!

another seven—and so it goes. An unique feature of the Majestic is the ability to start it playing from any table in a resort by simply dropping a nickel in the slot at that point. The Majestic has a great many other exclusive features which make it by long odds the best Automatic Piano on the market. These are fully described in our catalogue, which will be furnished on application.

## SPECIAL OFFER OF EXCLUSIVE AGENCY

to those who take up the matter at once. Tear off the coupon in the lower corner and mail it to us to-day for full particulars. Address Dept. D

*Lyon & Healy*

Chicago

View of Majestic Jr. closed and ready for use. This is the smaller size 44-note player without keyboard, and is a perfect model of simplicity. It also uses the endless music roll, and is not affected by climatic changes.

LYON & HEALY: (DEPT. D)  
You may send catalog and full particulars of your special offer of exclusive agency for the MAJESTIC SELF-PLAYING PIANO.

## HOW JONES MADE GOOD.

A Sequel to "He Did Something" in the April Issue of the "World."

"B-r-r-i-n-g!" blustered my office telephone emphatically. Taking down the receiver, my ear encountered a familiar "Hello! That you, Taylor?"

"Yes."

"This is Jones. Come around when you can. I have established myself in the business nearest to my heart, that of talking machines, and am prepared to give a very good account of myself."

"All right, old man, I will be delighted," I replied; "and how about bringing Raymond along? You know he is always looking for new ideas." I said this with a suspicion of mockery creeping into my words, for I very much doubted Jones's ability to give a brilliant man like Raymond ideas of any kind, let alone those connected with the talking machine business.

"Do so by all means," answered my friend, "and I think you will both find something here to interest you. My address is 1234 North Wayne avenue. Good-bye."

I hung up the receiver and went in quest of Raymond.

I found him initiating a genteel-looking youth into the mysteries of phonographs, and when I informed him that Jones was engaged in the same line as himself, and wished us to call upon him soon, he was keen for the trip.

"Why not go this afternoon?" he cried, enthusiastically. "I will be through here soon."

After a few parting instructions to his new clerk, he drew my arm through his and we left the store together. Boarding an elevated train, we were soon rushing up town, both of us consumed with curiosity.

"So Jones is in the talking machine business; that certainly is funny," laughed Raymond as we took our seats. "Why, he don't know a phonograph from a sewing machine. By Jove! I believe that's his place now." We had alighted by this time and were walking up Wayne avenue toward the number Jones had given me over the 'phone. "Yes, that's it, all right. Rather an attractive window display, is it not? Let's have a look."

We stopped outside and noticed a large decorative sign displayed amid a gorgeous array of horns and talking machine paraphernalia, which read as follows:

HAVE A RECORD OF YOUR FAVORITE SONG MADE FOR YOU WHILE YOU WAIT. No CHARGE.

That was all, but from the way people were streaming in and out of the store, it was quite enough.

"What do you think of that scheme?" I asked. "I don't see much in it, do you?"

"No, I'll be hanged if I do," exclaimed my companion, "sort of an Edison Laboratory in miniature, I presume. However, let's go in and see what's doing; this suspense is terrible."

We entered, and were received very cordially by Jones, who seemed to be well satisfied with himself, as though he had something good up his sleeve, so to speak.

Glancing about the store I made a delightful discovery. A decidedly pretty girl was sitting at a piano in the rear of the room with her face turned toward us. Beside her stood a talking machine, its horn of burnished brass giving a bright touch of color to the picture. Scarcely had my eyes accustomed themselves to her fascinating presence than she wheeled gracefully upon the piano stool and began the introduction of a march song. Then from some invisible source, I heard a sweet soprano singing "The Boys of Sixty-one." The voice was not loud, but clear and rich; the kind that brings tears to one's eyes in the evening when the lights are low, while the song with its stirring rhythm spoke of days of conflict in the South-land, the tramp of marching men, the battle cry of freedom, the dull, heavy crash of field artillery, and the groans of dying patriots.

I motioned my friend to a seat and we sat spellbound, drinking in the flood of melody. When the song was ended, another young lady, equally attractive in appearance, came from behind the piano with a record in her hand covered with fluffy shavings. She brushed these away deftly with a camel's-hair brush and inserted the black cylinder upon the mandrel of the talking machine. Then she turned the starting lever, and we heard an almost perfect reproduction of the song we had listened to in the original a few short moments before.

As the last trill of the piano finale died away, an old man in the garb of a veteran came forward and thanked the girl with a voice that trembled with emotion.

"It is beautiful, miss, and I shall prize it highly. It reminds me of Gettysburg," and he held up his empty sleeve.

"I am glad you like it," she answered smiling, as she handed him the record, neatly boxed and

"I MADE A DELIGHTFUL DISCOVERY."

wrapped; then with a pleasant word of greeting she turned to the next customer.

We noticed that the old gentleman had quite a large assortment of standard professional records set aside for him also, and in answer to our look of inquiry, Jones explained as follows:

"Yes, he bought about three dozen records; they all do after they have heard Miss Browning sing. She is so entertaining that people make purchases to show their appreciation. Come back here and I'll show you how we make records." We did as he bade us and found at the back of the store a talking machine set up for recording, its horn facing the rear of the piano.

"You will notice," he continued, "that the back of the piano has been removed. That is done to increase the sound and to permit of a clear accompaniment being made to the song. That we obtain very pleasing results I think you can both bear witness, as the record you heard was made here."

We were very profuse in our appreciation.

"As you know," Jones went on after a few moments' silence, "I have just started here, and in order to do business I must get customers and get them quick. I am doing both in this way: I send circulars around among people whom I have reason to believe are the owners of talking machines. These circulars are artistic affairs bearing the half-tone likeness of Miss Browning, and state that she will be pleased to make a record, free of charge, of the favorite song of all who will call and allow us to enroll their names among our list of customers. As a result, people come out of curiosity and remain to buy records. "Miss Manning, the other young lady, is a skilled accompanist, and a good saleswoman as well. She has charge of the music counter over there, where I am running a complete line of sheet music. Does that pay? Well, rather! Gentlemen, it has always been an enigma to me why talking machine dealers never, or very seldom, combine sheet music with their business. I know by experience that it is a good thing to do.

"No, I do not intend to make the original record feature a permanent one; it is simply to get my business started along the right lines, that is all. After the customers are obtained, the rest is easy.

"And by the way, Mr. Raymond, there is a vaudeville house in the next square. I was thinking that if your scheme regarding featuring theatrical attractions with records is not copyrighted, I would like to try it."

"My dear fellow, I will be only too glad to have you share my prosperity; and say"—here Raymond indulged in a look of mock supplication—"when you are through with the charming Misses Browning and Manning, I think I can use them in my business. See?"

"It's a go," answered Jones heartily, "and now that all is settled so satisfactorily, I propose we adjourn to the cafe on the corner, where we will imbibe a cold bottle to the enhancement of new phonographic ideas."

"That's a go, too," I remarked.

HOWARD TAYLOR MIDDLETON.

The Talk-o-phone Co., Toledo, Ohio, are about to place on the market a number of improvements in their machine, among which is a new motor, claimed to be vastly superior to anything now in the market. Their mechanical feed has also undergone a change from the one first shown, and greatly to its advantage in many ways, advance information states.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### EXPERIMENTING WITH THE REPRO.

F. M. Barney, the well-known dealer of Elm Creek, Neb., writes *The Talking Machine World* as follows: "It seems that people will never get through experimenting with the reproducer and making extravagant claims for their various inventions. There are very few of their ideas that have not been tried and thrown aside scores of times. For instance, experimenters will persist in the idea that if they use both sides of a diaphragm they can gain in volume and loudness or quality of tone. This is a mistaken idea. They will find absolutely nothing is to be gained. I have tried the above experiment also. Have placed two diaphragms side by side, both operated on by the same jewel, also placed two diaphragms in tandem, operated by same jewel. I have also placed a metal Y on a single reproducer, and used two separate horns on the branches thereof, and find that I get equal results in all the methods tried.

"You can try the latter experiment very readily, and you will find that each horn will give an equal tone and you will find the other experiment will give same results. The two horns in any case never give any louder tone than a single horn of their combined capacities on a single reproducer. The only way that you can increase the loudness of the tone from a reproducer is by increasing the amplitude of the vibration of the diaphragm. Larger diaphragms have a greater capacity for increased amplitude if it could be brought into use. And the only way you can increase volume is by increasing quantity of air set into vibration, and this is arrived at by increasing size of horn.

### OBTAINING INCREASED TONE.

"The method cited in last month's *World* is the most simple way of obtaining increased amplitude and loudness of tone, and that is limited to the inertia of the vibrating parts and weight that holds jewel to the record. The loud-speaking Columbia obtains increased amplitude by using an outside power, which is brought into operation through a friction clutch operated by the vibrating jewel. In the Maxim reproducer he uses compressed air for the power, and the jewel operates a small valve. It is possible that electricity could be used in a somewhat similar way or the loud-speaking or sensitive flame.

"By making the vibrating parts just as light as is possible, consistent with rigidity, and by making the diaphragm just thick enough to overcome the inertia of these moving parts, so they will not leave the record, and produce blast, and by making point of jewel as small as possible so that it will not damage record, and by making the weight that holds same in contact with record as light as will hold jewel in constant contact with the record; and by making the texture of the material as fine as possible, so that it produces a smooth surface, the roughness of which is magnified inversely by the size of the jewel or point, then, and only then, will increased quality of tone be produced. Purity of tone must in no case be sacrificed for loudness. Softness and sweetness of tone is the desideratum to which all companies are striving, and the only means through which it can ever be derived is included, I am safe in saying, in the above suggestions. The hardness of material, together with its smoothness, will do much toward solving the problem with the present reproducer, coupled with above suggestions.

### NEW IDEAS BEST WORKED OUT.

Our always welcome friend, William F. Hunt, of Wanatah, Ind., says that "new ideas are always best worked out by experts at the factories who have made the matter a life study, and are always ready to place the improvement before the public as soon as it has been found practical beyond a doubt, and an improvement in reality. Too many people that have really no knowledge of the construction and working of a talking machine are expressing their opinion on how, what to them, appears a defect may be remedied that it often leads others who have no more knowledge

in this line to experimenting and which usually results most disastrously. If one tried all the different ideas suggested by the average phonograph user he would soon have his machine resemble an ancient relic and good results would be out of the question. This evil is not so much practiced in this country as it is in England. I venture to say that if one was to see some of the machines over there, as described by them, he would be unable to distinguish them from a threshing machine. As soon as a person becomes the owner of a talking machine he becomes an enthusiast, and in most every instance soon begins to take it apart, thinking he can improve it in various ways. This is very wrong. The machine, before being shipped from the factory, is put up and adjusted with all the skill and care possible, after which it is most carefully tested by an expert, and should be left in that state. Of course, it infrequently happens that with even the most rigid inspection a machine is sent out improperly adjusted or the adjustment becomes disarranged in transportation. If such is found to be the case, the work of adjusting should be left to an expert repair man only, for an inexperienced person is very apt to make conditions worse rather than improve them. The putting in of new diaphragms is a most delicate task, and if one wishes to get good results it should never be attempted by an inexperienced person. It requires one who has a musical ear, so to speak, to give this little instrument proper adjustment. A gentleman recently brought in a reproducer to me for repair, in which he had broken the diaphragm, which had been of glass, and which he had himself replaced by one cut from ordinary mica with a pair of shears. I was greatly surprised when I further examined the reproducer to find that the mica was much too thin. No gaskets were placed on either side of the diaphragm, and the cross-head was stuck on with ordinary flour paste. Any one that has any knowledge of the workings of a reproducer can readily realize what results one may expect from that kind of a construction. The trouble yet mainly lies in the fact that talking machine repair men are too scarce and far between, and most dealers make little effort to learn the repair work themselves, consequently the owner of these machines, in many cases not caring to go to the expense of sending his machine to the factory for repairs, is left to experiment with the trouble himself.

### RESULTS FROM LEVER REPRODUCERS.

"In regard to F. M. Barney's suggestion in last month's issue for getting louder results from lever reproducers on cylinder machines, I wish to say that I think that any one who tries his method will find it most detrimental to his records. It is all very true that if the fulcrum end of the sapphire arm is shortened it will cause the vibration to be of greater amplitude on the diaphragm, but it will also cause a greater leverage to be brought onto the record which, in my estimation, is, in the present state, much cause for the shortening of the life of the record."

### REGARDING LARGE DIAPHRAGMS.

Writing to our esteemed London contemporary, *The Talking Machine News*, a correspondent asks if a reproducer, having a diaphragm 6 inches in diameter, would have an increased volume of sound? A moment's thought will suggest that if it would we should have had diaphragms as big as dinner plates long ago. They are no larger than they are because it has been found in practice that the present size gives the best results under existing conditions. But if any means are employed to strike harder blows upon the diaphragm its size can be increased to advantage. It is all a matter of initial impulse. The strength of the vibrations communicated to the reproducer in the ordinary way is not at present great enough to warrant a diaphragm of increased diameter. But increase the volume of the agitations—as in the Columbia sound-magnifying graphophone, or by any other method—and a larger diaphragm would give greater vol-

ume of sound. Volume depends on amplitude of vibrations. The larger your diaphragm is, the greater will be the distance of its swing, and, therefore, of the volume of sound. The rule is that volume increases as the square of the diameter. Hence a diaphragm 4 inches in diameter is 16 times louder than a 1-inch diaphragm, provided both are vibrated to their fullest extent.

### tone QUALITY.

But if we were to put a 4-inch diaphragm on an ordinary machine, the result would not be satisfactory. The present records have not power to vibrate the larger diaphragm sufficiently to produce from it a natural tone of pleasing quality. The effect would be sepulchral. The glass would vibrate just as many times per second and consequently the pitch would be exactly the same, though the ear might, and probably would, be deceived because of the great difference in the quality of tone. How different this quality would be may be indicated by the difference in the sound of the same note as sung by a soprano and tenor, or of the same note played on two different strings of a violin. So in order to get the benefit of a larger diaphragm you must arrange to increase in due proportion the strength of the blows struck upon it.

### WHAT CAUSES THE BLAST?

A. C. Mestraud writes *The Talking Machine World* as follows: "It is with the profoundest pleasure each month that I start in to read the 'Practical Suggestions and Comments' page of *The World*, as it is certainly enjoyable to look over the divers, and oftentimes contradictory, opinions given out by various subscribers upon subjects of interest to the experimenter. Would it not be advisable to add a new part or page in *The World* entitled 'The Debating Club,' or some such heading, and devote the space therein to both sides and opinions which differ? It seems to be the established belief that a blast is caused by either the recording or reproducing sapphire leaving the track! I am totally at a loss to account for the foundation of such a belief, as all my experience so far has never even suggested such an idea, and seems, according to my understanding of the matter, entirely out of question. As an instance, it is easy to see the utter impossibility of a 'jumping stunt' on the part of a disc machine sound-box, notwithstanding the fact that the latter 'blasts' just as much as a cylinder reproducer. Furthermore, it is undeniable that a reproducer will blast if diaphragm of same is in direct contact with its frame. This could in no way cause the sapphire or jewel to 'jump' any more than if properly set. The treatment of the subject in question, on my part, has long passed the theoretical stage, and my statements are the result of good, sound experience."

### GETTING MORE PHONETIC SUBSTANCE.

"Passing on to another subject of interest to your readers, regarding the advisability of decreasing the size of the center of a disc record in order to increase the quantity of phonetic substance. Mr. Hunt attaches too much importance altogether to the advantage obtainable by rapid surface recording. At this rate it would only be necessary to make 14-inch records with the amount of music usually found on an average 7-inch one to come very close to perfection! I think expert judgment will easily concede that the inner half of a 10 or 14-inch record is as good as the outer part, or if not, it would require a 'maestro' critic to determine the difference. Also I think credit will be given to the fact that a 10 or 12-incher is quite as good as a 14 in tonal quality, and the latter is merely made with the object of satisfying the universal demand for a longer running record."

### BEST MATERIAL FOR DIAPHRAGMS.

"Referring to diaphragms, I can only say that in my opinion, based upon results obtained and practical experience, no substance in existence, known or otherwise, can ever give perfection, as W. F. Hunt puts it, until an entirely different and superior system of engendering or transmitting vibration will have been found, and this not only in reproducing but as essentially in recording, besides the invention of a more perfect substance for making records. Mica is, beyond a doubt, the best and most satisfactory substance

## Do you get all

the new *Victor* records as they are issued each month?

You should get every one of them every month. It doesn't cost much and it's a great help in building up a steady patronage.

Customers like to know that they can come to a store and get any of the new records which we advertise every month as they are issued.

The records that delight you are not necessarily the ones that will please your customers—everyone likes something different. It's part of your job to have what the people want, but you can't satisfy them with an incomplete line. Every month you should get at least one of every new *Victor* Record.

This not only has a good effect upon customers and helps to bring them to your store regularly, but it puts confidence and enthusiasm into your salesmen, because they know they have the goods to back them up.

Get in your order promptly for next month's new records.

known for diaphragms, and in my opinion, and also in the opinion of almost, if not every other expert, it is comparatively a waste of time to experiment with diaphragms, if radical or even noticeable improvement is sought after. There is no room for argument in the above statements, as it is easily proven by any experimenter having the resources of such a laboratory as mine and the experience I have had."

#### THICKNESS OF DIAPHRAGM.

An English subscriber states that, of two authorities he has consulted, one says that 1/150 to 1/250 of an inch is the proper thickness of a diaphragm, while the other gives 7/1000 to 8/1000. There is very little difference in actual value between these figures, though they are differently expressed. 1/150 is equal to 7/1050, and 1/250 is the same as 4/1000. For specially delicate recording work the latter is suitable, while for all-round reproducing purposes 7/1000 or 8/1000 will be found most suitable. Any good micrometer will measure these thicknesses.

#### STATIONARY DISC WITH REVOLVING ARM.

An inventor in this city is making experiments with a disc machine, in which the disc remains stationary and the arm revolves. The first machine he has constructed is fairly successful, but before it can become a commercial possibility will require considerable improvement in the mechanical construction. The inventor claims to have applied for a patent, and when it is allowed, will have his machine in readiness to place on the market. He thinks his patents will in nowise conflict with the Berliner patents, and that much better results, including less scratch can be obtained than by the present method.

### OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Month.

(Special to The Talking Machine World.)  
Washington, D. C., May 7, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the Port of New York:

#### APRIL 9.

Brussels, 21 pkgs., \$206; Berlin, 37 pkgs., \$916; Bombay, 5 pkgs., \$100; 23 pkgs., \$467; Havre, 19 pkgs., \$350; Havana, 9 pkgs., \$196; London, 11 pkgs., \$429; 31 pkgs., \$6,680; 348 pkgs., \$3,901; Nuevitas, 9 pkgs., \$295; Para, 4 pkgs., \$180; Savanilla, 5 pkgs., \$177; St. Petersburg, 20 pkgs., \$981; Tampico, 17 pkgs., \$750; Vienna, 21 pkgs., \$668.

#### APRIL 16.

Antwerp, 1 pkg., \$175; Berlin, 39 pkgs., \$1,277; 164 pkgs., \$1,006; Cape Town, 51 pkgs., \$652; Colon, 8 pkgs., \$375; Glasgow, 16 pkgs., \$442; Havana, 43 pkgs., \$1,880; 1 pkg., \$113; Havre, 8 pkgs., \$239; Hong-Kong, 6 pkgs., \$104; Liverpool, 30 pkgs., \$156; 10 pkgs., \$155; London, 420 pkgs., \$4,527; 7 pkgs., \$267; 6 pkgs., \$118; Manchester, 30 pkgs., \$156; Milan, 53 pkgs., \$1,050; Montevideo, 12 pkgs., \$550; Rio de Janeiro, 6 pkgs.,

\$185; Shanghai, 21 pkgs., \$1,014; St. Petersburg, 15 pkgs., \$815; Valparaiso, 94 pkgs., \$3,709; Vera Cruz, 27 pkgs., \$647; Vienna, 35 pkgs., \$1,238.

#### APRIL 23.

Berlin, 21 pkgs., \$2,046; Buenos Ayres, 76 pkgs., \$3,524; Copenhagen, 1 pkg., \$250; Dresden, 4 pkgs., \$115; Glasgow, 10 pkgs., \$385; Havana, 28 pkgs., \$1,479; 9 pkgs., \$282; Hamburg, 2 pkgs., \$256; La Guayra, 4 pkgs., \$161; London, 86 pkgs., \$8,479; 520 pkgs., \$4,763; 3 pkgs., \$249; Nuevitas, 12 pkgs., \$217; Para, 17 pkgs., \$646; St. Petersburg, 5 pkgs., \$231; Trinidad, 5 pkgs., \$155; Wellington, 6 pkgs., \$219; Vienna, 17 pkgs., \$538.

#### APRIL 30.

Antifogosta, 13 pkgs., \$1,000; Berlin, 51 pkgs., \$1,100; Bombay, 18 pkgs., \$286; Brussels, 33 pkgs., \$420; Callao, 13 pkgs., \$1,000; Calcutta, 1 pkg., \$270; Corinto, 24 pkgs., \$1,395; Genoa, 7 pkgs., \$146; Havana, 30 pkgs., \$915; Havre, 19 pkgs., \$580; Liverpool, 32 pkgs., \$2,400; London, 37 pkgs., \$1,752; 16 pkgs., \$1,400; 458 pkgs., \$9,017; Matanzas, 24 pkgs., \$601; Melbourne, 492 pkgs., \$7,129; Montevideo, 27 pkgs., \$686; Naples, 1 pkg., \$120; Para, 6 pkgs., \$348; Rio de Janeiro, 15 pkgs., \$525; Shanghai, 12 pkgs., \$608; Souerabaya, 12 pkgs., \$1,135; St. Limon, 10 pkgs., \$163; Vera Cruz, 18 pkgs., \$1,512; Vienna, 12 pkgs., \$3,918.

### SOME RECENT PATHE CATALOGUES.

From the distinguished house of Pathé, 98 Rue de Richelieu, Paris, France, we are in receipt of a voluminous collection of catalogues, covering their latest issue of records in a number of languages. The artists employed number some of the most famous in the world, and the catalogues contain numbers of the very highest artistic merit.

The Pathé records are made for practically every country, and these catalogues, some of them running over 150 pages, contain lists in French, English, German, Russian, Portuguese, Norse, Italian, Spanish, Arabian, Hebrew, Roumanian, Hungarian, Egyptian, Dutch; in fact, every country in the world is covered in this remarkable list, issued by a remarkable house. There are also some interesting catalogues, containing descriptions and illustrations of their latest phonographs as well as illustrations and prices of parts of these instruments.

### TO TAKE GRAPHOPHONE IN A BALLOON.

Dr. Julian P. Thomas, who recently made a successful balloon ascension, accompanied by his wife, from Pittsfield, Mass., is a daily user of the graphophone for business. Manager Binder has arranged with the doctor to equip his car on the next excursion with a Type C graphophone and cylinders so that he can dictate his data and impressions without being obliged to write them out. A graphophone record made a mile up in the air will be considerable of a novelty.

John A. Goldrup, late of Providence, has been appointed manager of the Philadelphia store of the Columbia Phonograph Co.

### TRADE NOTES FROM GERMANY.

Artists of the Berlin Opera Forbidden to Make Records for Talking Machines—Claims It Injures Voice—The Beka Record Co. Issue Wonderful Catalogue—Result of Recording Expedition Through the Far East.

(Special to The Talking Machine World.)  
Berlin, Germany, May 2, 1906.

The newspapers state that the artists of the Berlin royal opera have been forbidden, on pain of dismissal, to sing into gramophones or phonographs, the management believing that their recent numerous pleas of inability to sing, owing to indisposition, were due to singing too much for the talking machines. It is said that the celebrated singers doubled their incomes by this means. It is reported that Caruso, who is now in America, makes \$20,000 annually by singing for a talking machine company.

The Beka Record Co. of this city have just issued an international catalogue which is a veritable work of art typographically, and admirably arranged in every respect for the convenience of those desiring the purchase of records. Its broad scope may be realized when we state that its 224 pages contain a complete list of the German, English, French, Italian, Portuguese, Spanish, Russian, Austrian, Hungarian, Danish and Swiss records. The catalogue is a striking illustration of the ceaseless activity of the company, which within a space of two years have taken records in all the civilized countries of the world and introduced them to the public through the medium of influential agents.

It is interesting to learn that the Far East Recording Expedition, which has traveled across India from Bombay to Calcutta, visited Burma, the Dutch East Indies, Straits Settlements and China, is at present busy in Japan taking the final records. The first Hindoostanee and Burmese records are already finished and on the market; the records in the other idioms will appear shortly. The vast importance which these records have for the world's market, as well as their claim to a high educational interest, will be obvious to everyone, and it is really wonderful how the Beka record has, in such an extremely short space of time, brought its name so prominently before the whole world.

The business has now made such enormous strides that the company have again (the fourth time within 15 months) been obliged to enlarge their premises; consequently, from the middle of April the company's headquarters will be No. 75-76 Heidelberger Strasse. The factory, consisting of the pressing plant with the galvanoplastic department and recording laboratory, as well as the stock department, forwarding department and offices, will be brought together in this large four-story building.

Another important item of news regarding the Beka record is that Valabhdas Takhmidas & Co., of Bombay, one of the largest talking machine concerns in the Far East, have been appointed sole agents for these records for India, Burma and Ceylon.

## DEALERS ATTENTION

No. 15 Horn Crane.

The No. 15 Horn Crane is the latest and most approved style on the market and will hold all horns up to 36 inches.

Our horns are noted for their beauty and amplifying qualities.

## THE VALUE OF WINDOW DISPLAY.

No Better Salesman or Better Means of Publicity Can be Found Than the Utilization of Windows to Display Talking Machines and Supplies—Should Always Prove to be the Banner Silent Salesman.

Among the many methods that the talking machine merchant has to use for advertising, the most direct, best and attractive means is the show window. For this reason the art of window dressing has advanced to a marked degree, in so far that the window dresser has to use all available auxiliaries for producing the best effects in his window, and the more individual and unique his display, the greater the impression on the outside public. The success of a tasteful window is best manifested by the interest it produces in the passer-by. One person looking and remaining before a window will invariably draw others, and soon we can see ring after ring of curious onlookers watching the "ensemble" and "details," admiring the peculiar ideas of the window dresser, speaking about some original, charming and novel effect, and going away to talk to others about it, thus unconsciously advertising the merchant and bringing him new customers. Thus is seen the importance of having modern ideas in dressing a window.

Some merchants do not favor putting prices on articles, unless they have special values. Have you ever found yourself looking into a show window, and without a price you found little interest in the display, but when price cards were displayed you were impressed with the price of the article, and when in need your mind always drifted back to where you saw the item and the price was impressed upon you.

In building a new store or remodeling same, the mistake too frequently made is that the base of the show window is built too high. The floor of the window should never be higher than eighteen inches over and above the level of the sidewalk, and on a line with the front. The display in the window should be brought before the eyes of the passerby in a natural manner.

A few statistics as to window displays. To appreciate their value, you should, as A. Steitler, Jr., says, do a little figuring. How many people pass your place in a day? If the average is five a minute, in the eight busiest hours of the day 2,400 people would pass your window. This number, 2,400, represents what, in "newspaper parlance," is called "daily circulation." Now, your show windows occupy say 100 square feet surface space, and in it you can display attractively quite a line of goods, changing the display as often as you wish. In a daily newspaper, with an actual circulation of 2,000, fifty square inches ("not square feet") would cost approximately \$5 per day, and in this space you can put only illustrations of the articles themselves, and, as a rule, the illustrations but imperfectly represent those articles. Now, your window space presents a surface of 288 times as great as your "five dollar newspaper space"; has depth, in addition to surface, and in it can be displayed the articles themselves, true to life, as to color, size, shape and everything, and, furthermore, they are seen at the entrance to your establishment, inside of which a salesman stands ready to give additional information and exercise his ability at making a sale.

This window space is yours every day and all day; it presents wonderful possibilities as an advertising medium, and "it's up to you" to get those possibilities out of it. If newspaper space, properly used, is worth its cost (and we are firmly convinced it is), how important it is that so valuable an advertising medium as show windows should not be neglected.

## TRADE NOTES FROM BOSTON.

Retail Business Quieter—Preparing for Summer Trade—New England Salesmen Meet—Talking Machines for Canoes—What the Leading Members of the Trade Report to the World—The Month's Happenings.

(Special to The Talking Machine World.)

Boston, Mass., May 10, 1906.

Retail business has suddenly become very light and the jobbers are feeling the slacking up just a little. This period of dulness is not, however, expected to last long, for the canoe season is about ready to start, and the vacation season is only three weeks away. This means an enormous output of records, anyway, for the percentage of canoeists or campers who do not carry talking machines with them is now very small. Sunday afternoon on the Charles river, the 3,500 canoes that flit up and down the stream resemble a continuous talking machine concert.

An event which means much to the jobbers here was the recent meeting of jobbers in New York. The decision to have the new records sent by freight instead of by express means the saving of thousands of dollars to them in the course of a year. It will also avoid many vexatious delays, a great deal of hustle and bustle at the last minute, and will insure fair and equal treatment all around.

The members of the New England Talking Machine Salesmen's Club held a meeting at the rooms of the Winchell Co. on the last Friday in April, and further perfected their by-laws. It was decided to have the next meeting in some local hotel, where a "good time" can be enjoyed. The club is progressing finely and will probably soon have a permanent club room.

President Winchell and Secretary Skelton, of the Winchell Co., have returned from a visit to the American Record Co. and the National Phonograph Co. in New York. John Wagner, of the Langley-Winchell Co., distinguished himself during a bad fire in the adjoining building last week by carrying a swooning woman down a narrow fire escape.

The April trade at the Boston Cycle Co. was the best for any month in the past year, except that of December. The Edison trade here is enormous, and a big general fall trade is looked for.

At the Columbia Phonograph Co. the trade resulting from the contract with the Traveler Newspaper Co. grows larger every month, as the Traveler's circulation grows. This is one of the greatest propositions ever devised. Retail Manager H. M. Blakeborough has been in Providence, R. I., the past few weeks, attending to the opening of a new branch store. His duties have been looked after by J. E. Lane.

It has come to the notice of The World's representative that a certain dealer in Victor machines is cutting way under the list price in order to make sales during this dull season. Competition is very keen in Boston, but there are very few who take unfair advantage in this way.

Victor business at the Oliver Ditson Co. and the M. Steinert & Sons Co. appears to run "neck and neck," and the manager at each store reports business as good. There are signs of "branching out" at each place.

Wholesale Manager Chamberlain, at the Eastern Talking Machine Co., disappeared for a few days last month—on a little vacation—and when he returned he brought the boys a box of cigars and presented his compliments to them as a benedict. He says married life is the only life.

## BARD BROS. GOOD PUBLICITY.

Bard Bros., the well-known dealers, of Wheeling, W. Va., are great believers in publicity, and their advertising in the local papers is a model in construction and effectiveness. They tell their story so well that they never fail to interest the public in the magnificent line of talking machine supplies which they handle. It may be stated as an axiom that advertising pays, but it pays best when the advertising matter is well written and educational in character.

Does This  
Sign Mean  
Profit to  
You  
?

I.C.S. LANGUAGE SYSTEM

WITH  
Thomas A. Edison  
PHONOGRAPH

ARE you one of those that have realized big returns from the sale of I. C. S. Language Outfits? Or are you among the doubters who have passed our proposition by with the idea that there was a "hitch in it" somewhere that would tend to make you lose money?

Dealers who have fairly tried the language feature of the phonograph business are more than satisfied with the results they have obtained, and many have increased their business from 10 to 30 per cent. It is no wonder that they have done this. There is an immense field for the language business. People who have become tired of their phonographs as a fad; people who would otherwise never think of purchasing a phonograph; and people who would be only too glad to find a profitable as well as a pleasurable use for their phonographs—which comprises nearly all phonograph owners—all are very much interested in I. C. S. Language Outfits. The experience of other dealers has made this proposition a tried and proved success. Will YOU hesitate any longer? Write to-day for further particulars, prices, etc.

## A NEW REPRODUCER FOR PUCK MACHINE.

The Cordock (Patent) Concert Reproducer gives loud, clear and natural reproduction heretofore unobtainable on Puck Machines. Will not slip, if the record is not damaged. Factors should write for sample and trade prices to

## A POPULAR BOSTONIAN.

Many Good Wishes for A. W. Chamberlain on His Deserting the Ranks of Bachelordom.

(Special to the Talking Machine World.)

Boston, Mass., May 10, 1906.

We publish herewith a counterfeit presentment of A. W. Chamberlain, manager of the wholesale department of the Eastern Talking Machine Co., of Boston, who, on April 18, deserted the ranks of bachelordom and took unto himself a wife.

Mr. Chamberlain is well and favorably known by the talking machine trade, having been identified with the business for several years. We feel sure his hosts of friends will be pleased to

A. W. CHAMBERLAIN.

hear of his entrance into the blissful state, and that their best wishes will go with him.

Mr. Chamberlain's first appearance in the talking machine field was as department manager for the Iver Johnson Sporting Goods Co., of Boston; later he exploited Zonophones for the Universal Co. throughout New England, severing his connection with that company to take charge of the wholesale business of the concern he is now with.

On the eve of the wedding Mr. Chamberlain was presented with a very elaborate gold and bronze clock by his fellow employes, the presentation speech being made by William J. Fitzgerald, of the Victor department, and Mr. Chamberlain responding in an able and convincing manner in acceptance. After an extended wedding trip in the South and West, Mr. Chamberlain is now back at his desk receiving the congratulations of his many friends.

## WAS GUARD AND LABORER.

C. E. Brown Piled Bricks, Distributed Sandwiches and Did Soldier Duty in the Stricken City of San Francisco.

(Special to the Talking Machine World.)

Los Angeles, Cal., April 29, 1906.

C. E. Brown, coast manager of the Talk-o-Phone Company, who has been in charge of the San Francisco branch of that company, arrived yesterday with his wife and family after a solid week of strenuous effort at piling bricks, distributing sandwiches and doing duty as a guard at San Francisco. A. L. Irish, president of the Talk-o-Phone Company, Toledo, upon learning of the disaster, telegraphed from three cities while en route to Los Angeles, requesting that relief be sent Brown and his family and other employees at San Francisco, and that they be furnished with means for leaving the stricken city. Mr. Irish arrived in Los Angeles last evening. Arrangements will be made at once to look after the Pacific Coast interests for the Talk-o-Phone Co., which were formerly handled from San Francisco.

## FROM THE EMERALD ISLE.

Open Air Concerts in Vogue—Twentieth Century Graphophone Entertains Lord Lieutenant—Fonotipia Records Introduced—Edison Grand Opera Records Popular.

(Special to The Talking Machine World.)

Belfast, Ireland, May 1, 1906.

As daylight lengthens, and during the excellent bright, dry weather which for a month past has prevailed here, our people are gradually diverting their thoughts from talking machines to cycling, golf and other forms of out-of-door pastimes, with the result that sales of instruments and records are gradually decreasing.

The open-air concert on Saturday evening last was a huge success. The sky overhead was clear and cloudless, and although—to borrow from Hamlet—there was "a nipping and an eager air," hundreds of pedestrians halted before Mr. Osborne's well-known warehouse (which faces that most ornate pile of classic architecture—the new City Hall), to enjoy the latest "Edison," "Columbia" and "Sterling" records, marvelously rendered by the twentieth century Columbia graphophone.

During the past month Belfast was favored by a visit from their excellencies the Lord Lieutenant (Earl of Aberdeen) and Countess of Aberdeen, who received a warm reception. Whilst the Viceregal party were passing Mr. Osborne's shop the twentieth century graphophone thundered forth an excellent loud selection of the National anthem, which instantly attracted the attention of the distinguished visitors. This interesting incident was chronicled the same evening in columns of the Belfast Evening Telegraph, wherein Mr. Osborne was congratulated on having thus exhibited his enterprise and originality.

The latest style of disc record—introduced by the same factor to Belfast—is the "Fonotipia" double-sided Odeon record, price from 10 to 25 shillings each. The selections are by best Italian sopranos, contraltos, tenors, baritones, instrumentalists, etc., and customers are as loud in their praise as the records themselves are loud in the rendition. Almost all the songs are in Italian, however, which fact operates somewhat

against their sale to the general public. If these Fonotipia records have not yet reached America some up-to-date firm in New York would find it to their advantage to introduce them to "The New World."

The phenomenal number of Zonophone disc albums (which hold 12 ten-inch records) recently sold at one dollar each, is a healthy sign, and indicates that users of talking machines are so enamored of their instruments that they are desirous of preserving from dust and protecting from damage the records they prize so much.

A somewhat drastic reduction has taken place in the ever-popular Zonophone discs. The ten-inch size now sells at 2 shillings each, or 1 shilling less than former price, and the seven-inch size at 1 shilling, or 6d. less than formerly. The result is a marked increase in the output of these goods.

Ever in the front rank, the National Phonograph Co., London, have placed upon the market ten genuine Edison "grand opera" records, which are, without exception, the finest phonograph selections to which I have ever listened. The price is just double that of the ordinary Edison cylinders, and accordingly 3 shillings each; but all lovers of true classical music consider these unique records well worth that figure.

Then again the Gramophone Co., London, always in the vanguard of progress, have issued 20 records, comprising the entire opera of "Il Trovatore" (in four acts).

Cheap continental phonographs and disc instruments, with flimsily constructed and unreliable motors, have ceased to be popular here. The public now prefer to pay the extra price for a genuine Edison phonograph, gramophone or graphophone.

Thomas A. Edison—the "old man," as he is called by every one of his business associates—has returned from his Florida winter home to Orange, N. J., and W. E. Gilmore, president of the National Phonograph Co., got back from his Southern vacation last week, appearing at the New York office the following day, looking the picture of health and thoroughly rested.

## TRADE NOTES FROM QUAKER CITY.

Business Fairly Good—Hawthorne & Sheble's New Plant—Change of Columbia Managers—H. T. Lewis's Fine Trade—Musical Echo Co.'s Display—A Chat With John D. Miller—Talking Machine Helps Pacific Coast Sufferers—The News Budget of the Month.

(Special to the Talking Machine World.)  
Philadelphia, Pa., May 10, 1906.

Business in talking machine circles here is fairly good, but it would be much better if the trade could only get their orders filled by manufacturers. A lull in activity is always anticipated after Easter—and it came on schedule time this year. At present writing, however, business is improving, and all hands predict excellent summer trade.

We were recently invited to visit the new factory of the Hawthorne & Sheble Manufacturing Co., now in process of equipment at Howard and Jefferson streets, in this city. The handsome plant is 50x250, and consists of five floors. Many features are included that go to complete a modern, well-equipped establishment. New offices handsomely finished in golden oak, with every facility, will be ready for occupancy this month. This well-known corporation anticipate that by July 1 they will not only have their Philadelphia plant in complete running order in the new premises, but will also have their Bridgeport factory entirely equipped with latest improved machinery, tools, etc., in a position to supply the trade with their fall shipments promptly. The business of this concern has grown so extensively that they anticipate continuing indefinitely to operate their old quarters which they now occupy at Oxford and Mascher streets, Philadelphia.

A good-natured rivalry exists between Eighth and Ninth streets as to which will attain supremacy as "Phonograph Row." Honors are about evenly divided. Both thoroughfares are main retail shopping centers. North Eighth street now has seven phonograph stores—with one more to come soon. These stores are in the "theatre district," and to an extent have some advantage over Ninth street.

A goodly number of suburban merchants of various kinds have placed side line stocks of machines and supplies in their stores, indicating that business is being vigorously pushed by jobbers.

The change in managers of the local general office of the Columbia Graphophone Co., 1109 Chestnut street proved of interest to the trade. The new manager, John A. Gouldrup, was assistant manager of the Columbia's office here two years ago, and so is not a stranger to the Quaker City by any means. "I'm not a newcomer," commented Mr. Gouldrup, "but rather one who has come back." Referring to trade conditions, he said: "Business has been good. Compared with our heavy fall trade it does not cut so much of a figure, but the outlook is most encouraging." He further stated he probably would have no assistant manager. "I feel," he said, "that by sympathetic action I can get more and better

work from heads of departments when they are left without an assistant manager and put on a merit and pride-in-work basis."

Geo. W. Lyle, vice-president of the Columbia Co., and Walter Eckhardt, manager of the wholesale department of the same company, were trade visitors the past month.

P. G. Underwood is manager of the Columbia Co.'s retail store, 140 North Eighth street. In a chat with his assistant, J. F. Halfpenny, he said: "Business is very good. We are adding new men to our outside salesmen's staff and they are doing good business." At a three-days' fair at the North Presbyterian Church, Clearfield street, Manager Underwood put in an exhibit of Columbia goods and scored a "hit."

Manager T. R. Goodwin, of the Camden, N. J., branch of the Columbia Co., also reports continued good business, especially from suburban and country points.

H. T. Lewis, of the Lewis Talking Machine Co., 15 South Ninth street, said of trade conditions: "Wholesale trade is good, but retail business is quiet. It usually is for a short spell after Easter. The lull is only temporary, however; the outlook is most encouraging." Mr. Lewis mentioned that he had a big deal on, which, when completed, he would give particulars of to The World. "It is quite probable we will move soon," said Mr. Lewis. "We must have more room on account of increasing business." The Lewis Co. handle Columbia machines and records, as well as American records.

A somewhat new departure is being successfully carried out by the Musical Echo Co., of this city. The handsome salesroom is furnished partly as a parlor, back of which is a chamber concert room, with seats similar to a small music hall. A large Victor machine on a dais, backed by an organ scene, lends effect and beauty to the concert, operatic and sacred records reeled off by the talking machine. Concerts are given daily to pleased audiences, with the result that record sales are fairly "boomed." Business is reported good. Henry Marschalk, formerly with the local office of the Columbia Co., is manager of the Musical Echo Co., and L. G. Gerson, who also was formerly with the Columbia Co., is assistant manager. Messrs. Marschalk and Gerson were visitors to the New York trade the past month.

Said Louis Buehn, of the Wells Phonograph Co., 45 North Ninth street: "Trade has been good; the best we ever had. We have had a big call for Edison, Victor and American goods." In the basement, racks having a capacity of 75,000 records have been installed, and on the first floor racks for an additional 20,000 records have been added. Mr. Buehn stated that business with his company since the first of the year has increased about 50 per cent. They have doubled their record rack capacity and carry one of the largest stocks of cylinders and discs in the city.

Manager S. Ford, of the Disc Talking Machine Co., 13 North Ninth street, has been busy on outside sales. Office sales are reported quite seasonable and satisfactory by his assistant.

Said Manager John B. Miller, of the Penn Phonograph Co., 19 South Ninth street: "Business is good, but unfortunately we can't get orders in from the manufacturers and that holds us back. We are doing from 30 to 33½ per cent. more business this year than last. Yes, the talking machine business is an established one. Some folks compared it to the bicycle trade—thought it would 'boom' and then 'fade away.' I thought the same thing once. Says I, 'If the business lasts four years I'll be satisfied.' And now, at the end of eight years, it is more firmly established than ever. We started business next door and soon outgrew its capacity. Now we occupy the basement and first and second floors of this large building. We have four 'hearing' rooms, excellent shipping facilities, and carry the largest stock of Edison and Victor records of any house in the country. We are retailers and jobbers." Thomas A. Edison, when in Philadelphia some time ago, called on the Wells Co., it being the only firm to be thus honored. Mr. Edison wanted to be shown the automobile route to Reading, Pa., and Mr. Miller accommodatingly put him on the right trail. About the only "shop talk" the noted inventor indulged in was to remark that the future of the talking machine business is most encouraging.

Wm. E. Gilmore, president of the Edison Co., was a recent local trade visitor.

"Len" Spencer and Ada Jones, vocalists, well known to many talking machine admirers, were visitors the past month. "Len" heard himself sing—via phonograph—an odd thing in its way, as one dealer remarked.

"It will never be known, maybe," commented a North Eighth street phonograph dealer, "but the humble talking machine has undoubtedly been the medium through which thousands of dollars have been raised for the relief of sufferers from the Pacific Coast disaster. One large machine and outfit I loaned to people getting up a fund earned over \$400—so what must the aggregate machines of the country have earned? That they earned a large sum is not to be doubted, and is additional proof that the talking machine is useful, entertaining and a fine charitable medium."

Another view of the talking machine was taken by a Ninth street dealer, who said: "Two years' close observation has convinced me that it is a great promoter of sociability, and by that I mean the machines attract young folks. They like to gather at each others' houses, hear the latest airs and have 'a real good time.' These informal gatherings often amount to a regular 'home party' and do good in the way of keeping young people away from possible detrimental influences. As to the old folks, they enjoy the music and mirth every bit as much as the youngsters."

It is probable a number of leading wholesalers of talking machines and supplies may attend the meeting at Washington this month of piano manufacturers and dealers and manufacturers of piano players, talking machines, etc. Representatives of the Victor Co. and the Hawthorne & Sheble Manufacturing Co. are expected to attend

The Columbia Phonograph Co.;  
Gentlemen:-

Through our Mr. Rockwell we learn that you have kindly donated one of your "20th Century" Machines for the use of our agents, The Hahn Co., on "Sunshine Day," and we simply want to assure you that this courtesy on your part is thoroughly appreciated. We are thoroughly familiar with this Twentieth Century Machine, inasmuch as your people furnished one for our use on a train-load of paint we shipped from Chicago to Duluth sometime ago. We made a daylight run and stopped at various towns along the way, giving concerts and distributing souvenirs, and we want to say right here that the Twentieth Century Machine made a great hit all along the line.

With best wishes, we are,

Yours very truly,

# When the Mid-Summer Lull in Trade Arrives PREPARE FOR THE FALL RUSH

BY ARRANGING YOUR RECORD STOCK IN SYSTEMATIC  
ORDER. THIS CAN BE ACCOMPLISHED BY ADOPTING THE

## H. & S. Unit Disk Record Filing System

PATENTS APPLIED FOR

Many improvements have been made in Disk Talking Machines and Records but there has been little effort to provide a satisfactory and economical system to carry stock. The Unit System has many practical features to recommend it. We mention a few.

**ORNAMENTAL**—Handsomely finished in cherry with nickel frames for record numbers, improving appearance of stock and store.

**ELASTIC**—Made in sectional units, as stock is increased the System can be expanded to meet the needs of a growing business.

**ECONOMICAL**—Moved quickly. Record capacity can be increased without annoyance, expense of frequently tearing down and erecting new shelving obviated, and costing less than shelving in the end.

**ORDERLY STOCK**—Placing records on edge and in numbered compartments facilitates selection of stock to fill orders. New stock can be placed in position rapidly.

**INVENTORY AND DAILY STOCK REPORT**—The Unit System will enable you to take account of stock daily, and with slight effort will keep you constantly informed of records required to complete the catalogue.

**NUMBERS**—Cards for selection numbers easily removed or changed when "cut outs" are made from catalogue.

**TIME SAVER**—Records quickly located; at a glance you can ascertain what you have in stock. Catalogue number of selection directly in front of compartment.

**RECORD ROOMS**—Units can be used as partitions, saving expense and space.

**PORTABLE**—Whenever necessary to rearrange stock, units can be readily moved from one part of the store to another, without disturbing records. This would prove of great advantage in case of removal from one store to another.

Partitions in boxes easily removed. Each compartment arranged to accommodate 5 records. Partitions can be removed and compartments increased in multiples of 5 to hold up to 50 of any one selection if required.

Complete Unit Capacity, 200 records. Four boxes to each unit. Boxes arranged with double front, providing handle so that boxes can be drawn forward and easily removed. All boxes and units lock-cornered. Units can be placed on top of each other and be built to any required height or length.

Showing partial view of interior of store of Eastern Talking Machine Co., Tremont St., Boston, Mass. Over 50,000 Disc Records carried in stock in the H. & S. Unit Disk Record Filing System.

Illustrating method of erecting units, showing 7-inch, 10-inch and 12-inch sections in position, with view of frames with cards numbered for selections.

### PRICES.

No. 7. For 7-inch records. Capacity, 200 records. Size, 42½ ins. long by 10¾ ins. high by 13½ ins. deep. Price, \$4.50.

No. 10. For 10-inch records. Capacity, 200 records. Size, 42½ ins. long by 14¾ ins. high by 13½ ins. deep. Price, \$5.00.

No. 12. For 12-inch records. Capacity, 200 records. Size, 42½ ins. long by 16¼ ins. high by 13½ ins. deep. Price, \$6.00.

# Hawthorne & Sheble Mfg. Co.

Station O.

Philadelphia, Pa.

and it is predicted much trade good will result from conventions held by the several interests.

Local department stores carrying talking machines, etc., continue to exploit them via cleverly written advertisements in the daily papers, and good business is generally reported. One large department store which heretofore regarded phonographs as "mere toys," has been won over to a different view and will, it is stated, soon put in a \$10,000 to \$15,000 stock of goods.

Said a Columbia avenue sheet music dealer: "Since I put in a talking machine my sales of sheet music have increased one-third."

M. Silverman, manager of the North Eastern Phonograph Co., 40 North Eighth street, was busy exploiting the merits of a Victor machine when The World's representative called. Between tuncs he said: "We handle Victor, Columbia, Edison and Zonophone talking machines, as well as Regina music boxes and all kinds of records. In addition we do repair work. Trade is normal and fairly satisfactory."

Maurice W. Beckhardt, formerly manager of the instalment department of the Columbia Phonograph Co., assumed management of the Eastern Phonograph Co.'s office and storeroom, 143 North Eighth street, the past month. Messrs. Futernick and Silverman are proprietors. "Mr. Futernick managed the office previous to May 1," said Mr. Beckhardt, "but the business outgrew his capacity, so I have taken the office management, while he attends to other important departments. We make a specialty of Edison and Victor products. We have salesmen to the number of forty covering Philadelphia and vicinity." The Eastern company have been located on Eighth street for over five years.

Referring to trade conditions, J. Abrahams, proprietor of the Keystone Phonograph & Camera Co., 148 North Eighth street, said: "It is now the betwixt and between season and business is fair, but nothing great. Slowness of delivery upon the part of manufacturers is holding back trade; we can't get the goods—if we could, we would be busy. We feature Edison and Victor goods, as well as carry a good line of cameras, etc." Mr. Abrahams' store is noticeably neat and attractive, and he understands the value and knack of show window displays.

James Bradley, of the International Record Co., Auburn, N. Y., was a recent trade visitor. He stated the business with them was very encouraging.

Reports from a number of the suburban dealers show that they are doing, proportionately, a larger business than some of the "heart of the town" folks. This is accounted for in one way by the fact that pleasant weather permits folks to sit in yards or on porches and "have a good time." Mr. "Talker" has to work for them overtime. New discs and cylinders are purchased in order to hear "the latest out"—hence, the good sales.

The Keen Co., who have applied for a certificate of incorporation for the purpose of dealing in and manufacturing talking machines, are preparing to open an office and sales room at North Eighth and Cherry streets. Delay in opening the

stand may be caused by inability to get goods on time, but strong efforts are being made to "push" matters. The company has no connection with the Keen Talking Machine Co., Kensington avenue, it is stated. A general line of talking machine goods will be carried.

An East Camden, N. J., barber has put in a pretty good-sized stock of talking machines, records, etc., and is doing such a good business he may retire from the "tonsorial artist" field.

Justice of the Peace Philip Schmitz, 212 Market street, Camden, N. J., has added a good-sized stock of Edison, Victor and Zonophone goods to his cigar store.

### M'GREAL'S EASTER WINDOW.

A Highly Original Display That Must Merit High Praise.

There is nothing about a store that commends itself so strongly to the attention of the public as an attractive show window, one not merely filled with goods, but with some original feature that will ensure the display receiving more than a casual glance.

There are special seasons of the year that afford opportunities for attractive display features, notably the Easter time, when a variety of rec-

ognized forms of decoration to typify that season may be used to advantage in connection with the regular display of goods.

We print herewith a view of the Easter window of McGreal Bros., Milwaukee, Wis., wherein is shown a number of small chickens with the legend, "Like the Edison Phonograph—Genuine; No Imitation." Ribbons, potted plants and some grass tend to add attractiveness. The success of the display may be judged from the number of people viewing it with evident interest.

### A NEW YORK INSTALMENT FORM.

Below is a form used by a dealer at Saranac Lake, N. Y., for selling goods on instalments. It is printed for the information of dealers in New York and other States where similar laws prevail.

JOHN I. NILES  
LEASE. Article.....  
Price .....

Saranac Lake, N. Y. .... 190....  
THIS IS TO CERTIFY that I have received this day from John I. Niles, one .....  
No. .... which I am allowed to use with care and keep in good order.

I have agreed to purchase said ..... and pay therefor the sum of \$..... per week, to be paid at his office, ..... and until fully paid, the same to remain the property of John I. Niles.

I further agree not to mortgage, sell or dispose of said ..... in any manner whatever, nor to remove from No. .... in ..... without the written consent of John I. Niles endorsed thereon.

It is hereby understood and agreed that in case of failure to comply with all or any of the foregoing agreements that the said John I. Niles, his agents, or attorneys, may take possession of the same without due process of law, and for that purpose or the purpose of searching for the same they, or their legal representatives, may enter any premises occupied by me, and to that end may use such force as may be necessary without any liability to any action for trespass or damage therefor, and that all payments made by me shall be considered as made for the use of the article.

Signed.....  
Witness.....

It is further stated and represented by the party of the SECOND Part that he is over twenty-one years of age and is competent to make this agreement. In consideration of the execution and delivery of the within agreement, the party of the second part (the purchaser) hereby expressly waives the provisions of Chapter 762, of New York State laws of 1900.

Received from ..... a duplicate of the foregoing agreement at the date thereof.  
..... Purchaser.

The Southern Pacific Co. have recently installed on their line a system of communication by means of which the conductors and brakemen on all trains may talk with an operator in a telegraph office along the line from any point on the road.

## A MAY TIP!

## DO YOU WANT TO MAKE MONEY?

Good, big money. The men who sent in an order for a sample line of our instruments were delighted with the results.

They found our instruments blended perfectly with the talking machine line, besides helping to make the store attractive. If you want to help out in the profits during the holiday season you can't go at it in a better way than with our specialties; your musical friends will come to you when they learn that you have the Durro violins, bows, strings, etc. They have a high standing.

We are judges of the excellence of all kinds of small goods, such as Accordeons, Mandolins, Guitars and Harmonicas, and carry a large stock, of which we offer at lesser prices, but which are superior to any on the market at the same price.

It will pay you to order a sample line at once. You will then see how profitable it is to devote a portion of your store to the exhibition and sale of small goods. Write for catalogue.

Make good money for the new year. It is easy with our help. We can tell you how and go with the business tide when it serves.

## TALKING MACHINE HAPPENINGS IN THE WEST

Wurlitzer in His New Quarters—Cable Company's Opening—Sympathy for Bacigalupi—Lyons in Aurora—Huseby Co. Remove—Some Losses in 'Frisco—Other Items.

(Special to The Talking Machine World.)

World Office, 195 Wabash Avenue,

Chicago, Ill., May 11, 1906.

The Rudolph Wurlitzer Co. are now in their new building at 266-268 Wabash avenue. The talking machine department is located on the first floor, where five convenient record rooms are being fitted up. The wholesale talking machine department occupies the spacious balconies. The automatic instrument department occupies the entire third floor.

The new talking machine department of the Cable Company, of which extended reference has already been made, will be opened for business some time during the week of May 14.

The Healy Music Co. are now in their new store at 298 Wabash avenue. As soon as the arrangements are completed, the talking machine department will occupy a large room in the rear of the first floor, with several record rooms in the basement.

At the office of the National Phonograph Co. reports are to the effect that the heavy rush of business experienced during the early months of the year is still in progress, and any immediate relief from the avalanche of orders seems out of the question.

The deepest sympathy is felt here for Peter Bacigalupi, the Edison representative on the Coast. His store in San Francisco was, of course, totally destroyed. The heat was so intense that when the vault was opened the books and papers were found to be nothing but ashes. For the present orders from the Coast are being filled from the Chicago office.

James I. Lyons, the large jobber of talking machines, records and supplies, of 194 East Van Buren street, has established a retail store at Aurora, Ill. He has bought out the talking machine, sheet music and small goods stock of Frank Braun, at 4 North Broadway, Aurora. Mr. Braun will continue the piano business, moving to another location. Mr. Lyons will occupy the entire store and basement salesroom as well, and will carry a complete line of machines and supplies. He also has a large retail store on Fifth avenue and one on Milwaukee avenue, Chicago. The Aurora store for the present at least will be in charge of W. F. Braun, brother of Frank Braun.

The Huseby Co., Milwaukee, large dealers in sporting goods and talking machines have moved their branch store from 134 to 316 Grand avenue. Their main store is at 464-466 Grove street.

The next meeting of the Central States Talking Machine Jobbers' Association will be held at Cleveland, Ohio, on May 23, at the Hollenden Hotel. Among the matters to be discussed, the new Victor contract will occupy a prominent place, it is understood. Messrs. Hawthorne, Sheble and Noyes, of the Hawthorne & Sheble Manufacturing Co., will be in attendance with a view of getting the co-operation of the jobbers in maintaining prices on their line of supplies.

President A. L. Irish, of the Talk-o-phone Co., was in Chicago last week on his way home from San Francisco, where he went to look after their interests, which were, to say the least, a bit disturbed by the quake and fire. They carried a stock in 'Frisco to supply the Coast trade, valued at \$19,000.

There wasn't any of it left that was noticeable when he got there, but the loss is fully covered by insurance, and the Talk-o-phone Co. were one of the few concerns suffering by the recent calamity which were covered by earthquake as well as fire insurance.

Mr. Irish made arrangements for establishing Coast headquarters at Oakland, and in the meantime their business is being handled from the store of the Southern California Music Co., of Los Angeles, their agents in that city. Mr. Brown, the Talk-o-phone's Coast representative had a thrilling escape. Mr. Brown, his mother and sister, escaped from their residence with only the clothes they had on their back, and

camped on a lumber pile for a couple of days, until Mr. Hart, of the Southern California Music Co., sent a man up on the train to take them to Los Angeles. Since the discontinuance of the Chicago office of the Talk-o-phone Co., J. H. Mitchell, who is in general charge of the company's sales, is spending about a week a month among the Chicago trade, but he expects that a Chicago office will be opened in the fall with a resident representative in charge.

Hillman's, the big State street department store, now has a new talking machine buyer in Mr. Moon, formerly with the Cash Buyers' Union. E. J. Tierney, the former buyer at Hillman's, resigned to open a fine cafe on Adams street, opposite the Fair.

A. J. Morrissey, who is city wholesale salesman for the Columbia Phonograph Co.'s Chicago office, is a remarkable hustler, and is a hand to create business for his company's product. The story goes that when Morrissey gets hold of a furniture dealer or a sporting goods dealer or any kind of dealer that he thinks ought to handle talking machines and doesn't, he can sing such a beautiful song of the profits to be derived from a graphophone department that the man is really not happy until he gives Morrissey a good initial order, and gets within the fold.

D. V. Bradley, of the International Record Co., Auburn, N. Y., was a Chicago visitor last week.

Lorin F. Leeds, of the Leeds & Catlin Co., spent a portion of last week in Chicago.

S. Yano, a Japanese talking machine dealer, of San Francisco, arrived in Chicago the other day. The clothes he had on and a few dollars represented all of the material goods that the quake had left him.

Mr. Yano went right direct from the train to E. C. Plume, who, when connected with the Columbia Co.'s interests on the Coast a few years ago, started Yano in business as a Columbia dealer. Yano carried a line of Japanese goods as well as gramophones, and valued the stock which was swept away at about \$5,000. The young man was looked after in good shape, and finally put on a train and sent to the Columbia headquarters in New York, where he expected to be "placed."

The Chicago office of the Columbia Phonograph Co. has recently opened a number of new sub-branches. A branch is now being opened at Des Moines, Iowa, in charge of Charles Moon, formerly with the Des Moines Specialty Co. In

Chicago the 63d street branch has been moved to 284 North avenue, and is in charge of O. H. Redax, as before. A new branch has also been opened at Elgin, Ill., in charge of J. L. Baker, and the neighboring city of Aurora also boasts a new Columbia branch.

## HOME RECORDING ATTACHMENT

For Disc Talking Machine Being Placed on the Market by the Land-o-Phone Co.

The Land-o-Phone Co., 288 Fifth avenue, New York, makes a very important announcement in this issue, in which they introduce a home recording attachment for disc talking machines. This device is made in different styles to fit all machines and no change is necessary in the machine, nor are there any extra horns, arms, etc., to buy. All that is necessary is to remove the soundbox, attach the recorder, and in its place put on a blank and go ahead. It's simple, isn't it? And what an improvement! This attachment is destined to boom the sale of disc machines because it supplies that which the users of disc machines have long desired—the ability to make their own records.

The Land-o-Phone Co. are also manufacturing blank disc records, 10½ inches in diameter, which can be used on both sides. This means two records for the small cost of a quarter, a good talking point, let alone the profit derived from their constant sale.

In a chat with one of the officers of the Land-o-Phone Co. he said: "We believe we have a good article, one which will be an immense value to the talking machine trade. The device is strongly covered by patents, and we are now prepared to send out a large staff of salesmen with samples to the trade throughout the country. All those interested will be assured not only of a call, but our best attention if they mail their name and address to our New York office."

The Land-o-Phone Co.'s plant is located in Brooklyn, and they are now working full force, full time, preparing stock to meet the demand that is certain to occur. Within the very near future it is not improbable several other specialties of an important nature will be announced by this concern.

Those gentlemen who are accused by their competitors of indulging in "hot air" will be interested to know that Prof. Nichols, the astronomer, made a delicate instrument some time ago to measure very faint heat waves. It is so sensitive to heat that it registers the warmth that emanates from a man's face 2,000 feet (or more than a third of a mile) away.

## TALKING MACHINE DEALERS!

Do you want your stock to be attractive and keep that bright, clean appearance that pleases customers and  
MAKES MONEY FOR YOU?

## TIMELY TALKS ON TIMELY TOPICS.

With the marvelous improvements made in records, it is believed that the harsh, rasping voices so familiar to the vaudeville singers will shortly be eliminated altogether by record manufacturers. The perfection of sound reproduction of the present day represent natural tones so nearly that there is no room for the high-pitched, metallic, harsh, nasal notes of the shouters, which are totally devoid of music. It must be admitted that records of this caliber have a sale, but those familiar with the advancements made do not hesitate to say that the time for these crude records have gone by. The public are now becoming so accustomed to the better grade musical records in the average price goods that, while they may not be trained musicians, they are apt to agree with Hawthorne when he said: "Heaven be praised, I know nothing of the science of harmony, so that music, if it pleases me, pleases me simply as a nurse's tale."

Elsewhere appears a brief report of the decision handed down April 26 by Judge Townsend, United States Circuit Court, New York City, in re the Talk-o-phone Co. and Leeds & Catlin Co. In granting the preliminary injunction applied for by the Victor Talking Machine Co. in connection with the prior case in which the Berliner free-swinging stylus patent claims had been unanimously sustained by the final court, the judge said, among other interesting observations refusing the admission of the so-called new evidence, that the basic or fundamental principles in their broadest sense could not be impeached. A stay, however, was granted in relation to the enjoining order, so that the Court of Appeals should pass authoritatively on the scope of the foreign patents invoked by the defense, in connection with which there might be a reasonable doubt.

It is barely possible that every dealer does not realize the importance of having machines in perfect order before being sent out. The manufacturer ships the goods in shape, but this does not mean the best results follow if put in operation without further attention. The most delicately constructed watch is regulated by the jeweler before selling, and this is also true of the best made talking machines, which must be run and adjusted in the store previous to being placed in the hands of the buyer. The speaker should be carefully looked after, the sapphire carefully adjusted and other essential parts looked over. Jobbers knowing their business and having a retail trade, never neglect these details, and dealers make a serious mistake if they do not adopt the same methods. A number of men who have been employed about the factories and subsequently joined the ranks of the dealers are wise to these precautions, and in consequence their business has prospered because the owner of the machines has obtained the very best results from the records. A dealer who is careless, or ignorant—which is worse—of these suggestions is working against his best interests.

Shortage of stock is a serious drawback to the trade at present, and there seems to be no immediate relief in sight; in fact, considerable business has been irretrievably lost thereby, and at a time when it can be illy spared. Every record and machine manufacturer of any note is in the same unwelcome position, with each making desperate efforts to—not catch up, of course, for that seems impossible—satisfy their trade in some manner of fashion. Jobbers are helping each other out as best they can; but this method of doing business is far from satisfactory, and has given occasion for much caustic criticism all around. Voicing their predicament the National Phonograph Co., in announcing a new method of shipment to the dealers, make the following statement: "Despite our increased facilities, and the fact that we are turning out more records than ever before, it has been im-

possible to keep pace with the increased demand for Edison records. We are now over 2,500,000 records behind orders for current stock, and to enable us to catch up, as well as give better service to the trade, it has been decided, for the best interest of all concerned, to omit June list altogether, therefore, following May, the next new record list issued will be July list."

The entertainment of the Edison jobbers in July promises to be a memorable event from many points of view. F. K. Dolbeer, chairman of entertainment for the National Phonograph Co., the host, in speaking of the affair, said to The World: "The acceptances of our invitations are practically unanimous, and with the company officials and other guests, probably 250 will be participants. We have made no special provision for ladies, but should a few come they will be looked after and made welcome. Were many to put in an appearance, it would materially interfere with the programme, for while pleasure is an incidental of the occasion, considerable business is expected to be transacted, nevertheless."

"At the time," continued the courteous credit captain, "I have reason to believe a national association will be formed, not of one distinctive line, but an organization representative of the entire talking machine jobbing trade. The Central States and the Eastern jobbers have lined up, and the far West are getting together, as I ascertained when in Denver, Col., last month. The sectional associations can handle and dispose of matters with which they are familiar, knowing the governing conditions, while the national body would be a sort of appellate court for settling questions of import to the trade in all parts of the country. These associations are of vast benefit when properly conducted, and no one thing demands closer attention than that of credits. If the slow-pays and dead-beats can be eliminated the talking machine business will be in better shape and on a sounder basis."

"Dubbing," as the unauthorized and possibly illegal reduplication of records made by concerns originating the "masters," is termed, seems to be on the increase, especially with high-priced discs. Every effort is exerted to suppress the nefarious practice, but trading in these illegitimate goods continues to thrive, much to the loss of companies, who have and are still expend-

ing large sums of money in securing the best vocal, talking and operatic talent. It will be remembered that in 1904 Judge Lacombe, of the United States Circuit Court, Southern District of New York, in the case of the Victor Talking Machine Co., against the American Vitaphone Co., enjoined the defendants from reduplicating their "red seal" records, "when such records contain the shop or catalogue numbers of complainant's disc records, or when the sound recording grooves thereon are copies of the grooves on complainant's disc records." The eminent jurist may be sound on the "shop or catalogue number" specification, but regarding the employment of the same grooves, there is room for discussion; for the same number of "lines" per inch are used by different companies now, and against whom a charge of "dubbing" cannot lie.

Should the claims of R. S. Gibson, Philadelphia, Pa., be established, "dubbing" will be a thing of the past, if the record making system he says is being perfected turns out a success. Mr. Gibson asserts that the record manufacturer's name will appear in each line or groove, which "dubbing" alone will reduplicate, but the needle or reproducing point will pass over without a sound. Other wonderful properties are also attributed to the new record and for which the inventor avers he is responsible.

Nowadays it is not so much a question of price in ordering records as that of quality. The goods must talk for themselves in the matter of sales or the seller need not come around again.

A traveling salesman of experience relating his impressions, expressed himself in the following enthusiastic strain: "The West is the greatest talking machine country in the world. The way they absorb goods at the principal distributing points is wonderful. In Chicago, for example, two concerns sell at retail a thousand records daily of a popular song hit, and others proportionately. Every trip West serves to wake me up to the great future possibilities of the trade, and increases my reserve stock of enthusiasm."

In the early days of the trade, when etching was in vogue, at a demonstration given for a bunch of capitalists, when a subject was to be chosen for the record about to be made, a party present, known for his financial genius and smoothness, suggested "The Lord's Prayer." The "talker," though subjected to the acrid, choking fumes of the acid, is reported to have expe-

PARIS

BRUSSELS

BERLIN

MILAN

rienced great difficulty in maintaining, under the trying circumstances, the reverent tone, he believed inseparable from a proper rendition of the revered invocation, but he managed to hold out to the end, and the results were long considered a model of clear enunciation, in view of the crude apparatus employed. The test, however, was sufficiently satisfactory to interest the gentlemen, who included some of the best known financiers of the present day, in the enterprise of developing what is now the great talking machine business of the world.

One of the well-known music lovers of New York who wanted to send an elaborate present to her father, who, while quite old, is most active, selected one of the largest and most complete Victor talking machines. "You see, I reasoned it out this way. All his life he has been passionately fond of the Italian opera and while he can't go to the opera out there in Portland, Oregon, I can in a way send the opera to him. I can think of nothing that would delight him more because those records are the most wonderful things I have ever dreamed of. I had no idea when first I decided to do this that they had reached such a degree of perfection and I confess I did not think of it as a musical instrument but more as a toy for grown up people if you will, but I assure you the reproductions are to me perfectly marvelous and I am happy in the idea of how much, how very much real musical joy he will derive."

This is only another of the very many musicians who give the Victor talking machine such endorsements. Another of equal value came from J. Armour Galloway, the husband and teacher of Anita Rio. Mr. and Mrs. Galloway are going to live in Berlin permanently and a short time since sold out all their household effects. A visiting musician, seeing a very large Victor, asked whether that was also for sale. "For sale!" exclaimed Mr. Galloway. "No, indeed. I find that the greatest assistance in my work. There is no way of demonstrating to a pupil correct tone production as to take him through some of the Melba or Caruso records. His ear grasps it more quickly than in any other way and there is no doubt about the purity of quality. It would be a great blessing if the teachers adopted it altogether as there is no question as to what could be accomplished by systematic use of it."

Even the great millionaires of the country are not immune against the talking machine fever, as is evinced by the number that have added them to the household effects. The latest purchaser is John W. Gates, who is now the proud possessor of a Columbia outfit costing him several hundred dollars. This consists of one of the finest of their disc machines, and a goodly equipment of their choicest records. Any one can now offer to bet Mr. Gates a million that he will secure more enjoyment out of new possession than he ever did out of any similar investment.

A circular embracing the above and one or two Phonograph Co.'s credit department. The committee was continued to complete the details.

## EASTERN TALKING MACHINE JOBBERS ASSOCIATION ORGANIZED

Several Meetings Held During the Month and Many Important Matters Passed Upon—Want Contracts Modified—Uniform Dates for Shipping—Credits Discussed—Meet May 17.

Following the preliminary meeting of New York jobbers, April 10, at the Blackman Talking Machine Co.'s place, mentioned in last month's issue of The World, the Eastern Talking Machine Jobbers' Association was formally organized on the 24th following, with the subjoined officers: President, W. D. Andrews, Syracuse, N. Y.; vice-president, J. Newcomb Blackman, New York; secretary, John P. Kelsey, Brooklyn, N. Y.; treasurer, S. B. Davega, New York. Trustees, the foregoing officers and S. B. Davega and C. V. Henkel, New York; H. L. Ellenberger, New Haven, Conn.; C. G. Andrews and E. F. Taft, Boston; Thomas D. Barnhill, of Peun Phonograph Co., Philadelphia. They are to hold office until August 1.

Concerning the much-criticized Victor contract, the following resolution was adopted:

"Resolved, That a committee of five Victor distributors be appointed to decide upon the objectionable feature in the new Victor contracts, and, if necessary, obtain legal advice. That a paper be drafted embodying their objections in said contracts, and submitted to every Victor distributor for signature. Further, that said protest be sent to the Victor Talking Machine Co., requesting that the contracts be modified as outlined by the Victor distributors as a body."

The committee having this in charge are: C. V. Henkel, Douglas Phonograph Co.; J. Newcomb Blackman, Blackman Talking Machine Co., of New York; R. H. Morris, American Talking Machine Co., Brooklyn, N. Y.; W. E. Henry, Powers & Henry, and Theo. F. Bentel, Theodore F. Bentel Co., Pittsburg, Pa., with President Andrews, Syracuse, N. Y., ex-officio. At the meeting on May 8 this committee presented their recommendations, which they requested the Victor Co. to accept, as appended:

"We, therefore, request that you modify these proposed contract as follows:

"Distributors' Contract—Clause 12: That the same be entirely omitted; clause 13, that the words 'or otherwise' be omitted; clause 14, that the same be changed to read, 'In the event of any termination of this contract by reason of the breach of any of the conditions by the party accepting the contract; the Victor Talking Machine Co. may, if it so elects and can so establish, prove actual damages, and be entitled to recover same. Distributors' Agreement Acceptance—That in the seventh line of same the words 'In the hands of dealers and distributors' be omitted. New Clauses—That the distributor and dealer be extended the privilege of discontinuing or cancelling agreement under proper conditions and restrictions. That the price restrictions of horns, needles, etc., are understood to refer only to articles manufactured and sold to the distributor and dealer by the Victor Talking Machine Co."

A circular embracing the above and one of two other matters of minor importance, were embodied in a circular and sent to the Victor distributors throughout the country for approving

signatures. The committee were also authorized to demand of the Victor Co. a modification of the contract in the event of the pending request not being complied with. Should this not be granted, finally to protest.

Credits were taken up at both sessions of the association, the committee appointed by President Andrews being J. Newcomb Blackman, I. Davega, Jr., and C. V. Henkel, acting with the chair. The report was unanimously accepted, with a few amendments concerning discounts and net settlement dates, having previously been indorsed by F. K. Dolbeer, chief of the National Phonograph Co.'s credit department.

The committee was continued to complete the details.

The committee on constitution and by-laws—B. R. Barklow, Hamilton S. Gordon and A. H. Jacot—reported at the second meeting, as instructed, and so much was adopted as contributed to the progress and maintenance of the association, the remainder being referred back for further action, namely: The name, object, officers and annual dues—\$10, which Secretary Kelsey was instructed to include in his membership application blank.

One of the main objects of the organization was to obtain uniform dates for shipping receiving records from the National Phonograph Co., which were immediately conceded, and the following circular to Edison jobbers was sent out, as follows:

To save our jobbers the expense of having new monthly records shipped by express, as well as to relieve us of our present congested condition; also to enable us to give better service to the trade on orders for current selections, it has been decided:

1st. To drop the June list of new records entirely. 2d. That, beginning with the July list, all first orders for new monthly records will be shipped to jobbers by freight, each jobbers' order going forward as soon as it can be gotten ready, but the records not to be placed on sale, or leave the jobber's store or possession, before date specified and authorized below.

3d. Beginning with July list, new monthly records must not be put on sale, either at wholesale or retail, until 8 a. m., on the 27th of the month preceding the month under which they are listed. That is, the July records cannot go on sale or leave the jobber's store or possession until June 27, August record on July 27, and so on. When the 27th falls on Sunday, the records are not to go on sale until same hour the day following.

4th. In making shipments by freight, we will get them off in ample time to be delivered ahead of the date on which the records are to go on sale, all things being favorable; but should any delay occur in transit or on the part of the transportation companies of carriers, we will not be held in any way responsible or liable.

5th. Samples of new monthly records will continue to be sent out at same time as though the June list was not being dropped, and first orders must be sent us at the same time as heretofore; that is, samples of July records will be shipped about May 1, samples of August records about June 1, etc., and first orders for July records must be mailed us not later than May 10, first orders for August records not later than June 10, etc.

6th. Any jobber selling or offering for sale, or in any way disposing of new records in advance of the date and time specified, forfeits his right to the privilege other jobbers receive, and thereafter his orders for advance records will not be shipped until after the date on which they are put on sale by other jobbers.

7th. The foregoing conditions are hereby made part of the Conditions of Sale forming part of the jobbers' agreement, and any breach thereof will be subject to the penalties provided for in said agreement.

C. H. WILSON,  
General Manager of Sales.

The ten New York jobbers originally signing a letter to W. E. Gilmore, president of the National

Phonograph Co., requesting information regarding the attitude of the company in the injunction issued by Judge Hazel in connection with the New York Phonograph Co., be continued as a committee to make further inquiries in the name of the Association; but no report followed, though it was intimated the company pledged themselves to defend suits brought against jobber or dealer.

At the last meeting a resolution was adopted that the "Association act in unison as far as possible, with the Central States Talking Machine Jobbers' Association on credit rules, to insure harmony." The request of Secretary Whitsit that the Eastern Talking Machine Jobbers' Association have a representative present at the meeting in Columbus, Ohio, May 21, of the Central States Association resulted in the appointment of C. V. Henkel. The secretary was directed, on a rising vote, to address a letter to Peter Bacigalupi, San Francisco, expressing the Association's sympathy for his loss and suffering in connection with the earthquake horror. F. K. Dolbeer was unanimously elected an honorary member of the Association. This timely action was suggested by Victor H. Rapke.

Those present when the association organized at the store of the Bettini Phonograph Co., April 24, were: W. M. Davis, of Forsyth & Davis, Kingston, N. Y.; Hamilton S. Gordon, John W. Blackman, of John F. Blackman & Sons; A. H. Jacot, of the Jacot Music Box Co.; Adolph Weiss, S. B. Davega and Lippman Kaiser, of S. B. Davega; I. Davega, Jr., Victor H. Rapke, Benjamin Switky, C. V. Henkel and A. P. Petit, of the Douglas Phonograph Co.; J. Newcomb Blackman, R. B. Caldwell, of the Blackman Talking Machine Co.; Fred G. Loeffler and B. R. Barklow, of the Bettini Phonograph Co., New York City; Theodore F. Bentel, of Theodore F. Bentel Co., and W. E. Henry, of Powers & Henry, Pittsburg, Pa.; H. L. Ellenberger, of Pardee & Ellenberger Co., New Haven, Conn.; W. D. Andrews, Syracuse, N. Y.; W. D. Andrews, of the Boston Cycle & Sundry Co., Boston, Mass.; John P. Kelsey, with A. D. Matthews' Sons, and R. H. Morris, of the American Talking Machine Co., Brooklyn, N. Y.; Adolph Weiss, of the Western Talking Machine Co., Philadelphia; A. William Toennies, of Eclipse

Phonograph Co., Hoboken; James K. O'Dea, Paterson, N. J.

At the second meeting held in the Douglas Phonograph Co.'s establishment, May 8, when J. Newcomb Blackman presided, the following were present: Hamilton S. Gordon, A. H. Jacot, of the Jacot Music Box Co.; Alfred Weiss, S. B. Davega, I. Davega, Jr., Victor H. Rapke, Benjamin Switky, C. V. Henkel, John Kaiser and A. P. Petit, of the Douglas Phonograph Co.; J. Newcomb Blackman and R. B. Caldwell, of the Blackman Talking Machine Co.; Fred G. Loeffler and B. R. Barklow, of the Bettini Phonograph Co.; N. Goldfinger, with Siegel, Cooper & Co., New York City; John P. Kelsey, with A. D. Matthews' Sons, Brooklyn, N. Y.; James K. O'Dea, Paterson and Passaic, N. J.; A. William Toennies, of the Eclipse Phonograph Co., Jersey City, N. J.; Charles A. Hausmann, Newark, N. J.

The next meeting will be held at the warehouses of S. B. Davega, 32 East 14th street, New York, Thursday, May 17, at 8 p. m. The attendance is expected to be greatly augmented by prominent firms in the Eastern territory, as it is clear the association has accomplished much practical work in the brief time it has been in existence.

### TALKERS AS TRAIN ANNOUNCERS.

Pennsylvania Railroad to Call Out Trains by Means of the Talking Machine.

Judging from a dispatch from Pittsburg on May 11, the old idea of Thomas A. Edison is to be put into practice by the Pennsylvania Railroad, which has decided to abolish the picturesque train announcer. Instead, the announcements will be made by phonographs, which, it is hoped, will enunciate more distinctly and will incidentally save the company several thousand dollars a year in salaries.

The phonographs will be worked by an electric switch from the train dispatcher's office, and they will also call out the change in running time, changes of schedule, and all other announcements.

Records are now being made at the Union

Depot, and the new system will be installed within a month.

### NEOPHONE DIRECTOR RETURNS.

A. W. Cameron, managing director of the Neophone Limited, London, Eng., who has been paying America a visit for the purpose of looking over the trade situation, left New York last week for home. During his visit here Mr. Cameron succeeded in interesting some very prominent talking machine people in the product which the Neophone Co. manufacture, and later on he will have some important announcements to make concerning the future of the Neophone in America.

### BLACKMAN'S NEEDLE STOCK.

The Blackman Talking Machine Co., 97 Chambers street, New York City, is putting out two styles of needles under trade-mark names, as per their advertisement in this issue. They claim that their "Playrite" needle is as good a needle as money will buy, or, in any event, will give as good results as any needle now on the market. They say "The name tells what they do." The "Melotone" needle is to fill a demand where records are too loud, or for any reason, a softer reproduction is preferred. One of the special features of the "Melotone" needle is that it requires no special attachment to use it on any disc sound box. There is such a large variety of needles on the market that it is even more important to determine the best quality, and as they offer samples they are evidently satisfied with the result that a test will bring.

### MEN THAT BEAR WATCHING.

E. A. Hawthorne, president of the Hawthorne & Sheble Manufacturing Co., and general manager of the American Record Co., and Horace Sheble, vice-president and treasurer of the Hawthorne & Sheble Manufacturing Co., were seen in New York together recently, and rumor has it that they have secured one of the largest orders ever placed for export shipment.

Success carries a penalty as well as a reward. To keep in the lead means constant improvement

## ANOTHER PROBLEM SOLVED IN RECORD RACKS

The New Number is 321—Its Characteristic Feature is "The Flat Band"

**T**HE INVENTOR may devise an almost perfect system of one sort or another—the use of his invention may save time, labor, expense, wear and tear and actual space—but, some fellow will kick and the "kick" will cause improvement. "The Heise System" is ahead of the kick, always.

This explains the coming into being of the No. 321. It resembles the No. 123 Cylinder Record Rack, but has a flat wire band running across face instead of a round wire.

This adds slightly to height and width—but, it adds to convenience, too. You can now stick the number of the record on the flat band just below opening. When out of a number the number on band shows shortage—helps keep stock. If records are in reserve you can tell at a glance where numbers are needed. "Improvement" caused our Wire Record Racks to become popular; added improvements add popularity.

## TRADE NOTES FROM ST. LOUIS.

Business Somewhat Uneven—Grand Opera Recitals a Great Success—Fuhri's Southern Trip—Western Talking Machine Co. Incorporated—Handsome New Quarters for the Talking Machine Co.—Other Items.

(Special to the Talking Machine World.)

St. Louis, Mo., April 28, 1906.

While there are some very favorable reports on the talking machine trade for this month, there are also some that state the month has been quiet.

D. S. Ramsdell, vice-president and general manager of the St. Louis Talking Machine Co., states that their recent grand opera recitals were quite a success, and that they resulted in the sale of a number of high-class machines and records. He reports a better demand for the high priced machines than ever before. Mr. Ramsdell leaves in a few days for a trip to Philadelphia and Camden, N. J. This concern will soon alter its store, and put in four private record exhibit rooms.

J. Frank Mahret, sales manager for this concern, is out again after a seven weeks' confinement on account of sickness.

W. C. Fuhri, manager of the Columbia Phonograph Co. here, and its Western and Southern branches, returned on Friday, April 27, from a trip to New Orleans and Memphis. He states that they have just moved into their new store in Memphis, and that they have an excellent location. Mr. Fuhri reports trade very good throughout his territory.

T. P. Clancy, manager of the talking machine department of the Conroy Piano Co., states that they expect to have the new automatic feed disc machines of the Talkophone Co. in stock in a few days, and he is looking for a large trade on them.

The Western Talking Machine Co. has been incorporated for \$9,000, full paid. Incorporators: E. L. Garvin, 50 shares; Henry Hamilton, 39 shares; Charles R. Hamilton, 1 share. This concern has just moved into handsome new quarters at 1110 Olive street, where they occupy the first floor and basement. They have three rooms on the first floor, one being used for the Edison, one for the Victor and disc machines, and one for shipping purposes. M. Neuman is the manager. He reports business as being fair.

The Talking Machine Co., M. Silverstone, manager, will move into their handsome new quarters at 1010 Olive street, about May 30. The new store will be entirely redecorated, and arranged in a very attractive manner, including three private record rooms. Mrs. Myron Goldbery, connected with this company, has just recently returned from a three weeks' trip to New York and other Eastern points.

The Koerber-Brenner Music Co., Manager E. B. Walthall, of the talking machine department, of the O. K. Houck Piano Co., and the Val A. Reis Music Co., all report a fair trade on talking machines.

M. G. Kreusch, representing the National Phonograph Co., was a recent visitor here.

## A TELEPHONE REPEATER.

San Francisco Inventor Says He Has Method of Telephoning to New York.

(Special to The Talking Machine World.)

San Francisco, May 9, 1906.

David C. St. Charles, an engineer of this city, has invented a repeater, which will make it possible, he claims, to telephone from here to New York. What the so-called "repeater" has done for telegraphy, St. Charles' invention is intended to do for the telephone. The combining of the echo in nature with the sounding-board of a violin furnished the clue to the discovery, according to a statement of the inventor. The superintendent of the local telephone company says that the invention is a success.

Albert Stevens, representing the Beka Record Co., Berlin, Germany, who has been here for several months on special business, sailed for Europe the latter part of April.

## "TALKER" IN ODD SUIT.

Record Plays Leading Role in Breach of Promise Suit—Interesting Disclosures.

One of the oddest suits for a breach of promise of marriage which has come up in the courts for some time is that instituted by Miss Blanche Cowman, of East Liverpool, O., against a former talking machines salesman in Baltimore. The case, if ever permitted to go in hearing, will be one of the oddest ever heard, for the girl claims that she has in her possession a phonograph record reproducing this man's spoken words, and that through it he asked her to be his wife and that she accepted his offer in writing, told him that she loved him, and then, instead of receiving a reply filled with the joyful ecstasies of the accepted lover, she received a cautiously worded request that she send the phonograph record back to him; and later, after she had refused to part with the record, and thus deprive herself of the pleasure and joy of hearing his proposal once, twice or thrice each day, she received another letter from him, in which he declared that he was not engaged to her, did not love her, never had proposed to her, and, worse than all, that he loved another girl.

After that, according to Miss Cowman, even the consolation of hearing his soft, passion filled voice breathe the words of love to her through the horn of the phonograph failed to comfort her, and, although she kept the record, she was so filled with anguish and chagrin that she felt herself damaged to the extent of \$25,000. The phonograph record containing the proposal is almost warm enough to melt the wax, and the wonder is that it ever survived the ordeal. Only a few months before this famous declaration was made Miss Cowman became acquainted with the Baltimore Romeo who called at her home and sold her a talking machine. This was the beginning of an interested friendship. Frequently he had sent her new records, some of them as gifts. So when she received a new record from him she supposed it was something interesting, and placing it in the phonograph she started the instrument and stood staring and trembling while she heard the passionate proposal, spoken with all the fervor of a man much in love, and, in addition, by one who had dictated and orated for phonographs many times. These, in brief, are the facts set up by Miss Cowman in her claim for damages.

His side of the story adds interest to the case, as well as mystery. He declares, in the first place, that he will seek an injunction restraining Miss Cowman or her attorney from using the phonograph record and immediately institute a replevin case to regain possession of the record. He claims that he did speak the proposal into the machine. He claims, however, that there is another girl in the case, whose name also is Blanche, but whose identity he refuses to reveal, fearing that her name will be brought into publicity in connection with the case. He vows that he will protect her name at all hazards, unless she gives her consent; and that he cannot ask her to do so until she has promised to marry him. Also, he fears she may refuse him if she hears the circumstances connected with the phonograph proposal.

"The girl I love," said our friend from Baltimore, "lives in Havre de Grace, Md., and her name is Blanche. In filling an order for records from Miss Cowman," says our friend from Baltimore, "I must have mixed up the records, for the girl at Havre de Grace received a rag time solo and a note asking her to listen to it in private, and Miss Cowman received the proposal, which was not meant for her."

Despite this explanation, Miss Cowman's attorney declares the suit will be pushed, and that the claim will not be dropped until the other "Blanche" is produced.

L. R. Porter, of Brockton, Mass., has leased handsome quarters at 34 High street, and opened up recently a full line of Edison phonographs and Victor talking machines. He is also handling a full line of records.

## Send us your hurry orders

We'll show you what a jobber ought to do for his trade; how promptly he should ship his orders.

Every order we get is a rush order on our part—we ship all goods the same day the order reaches us. It takes a large and complete stock to do this, but we are always equal to the task. Whatever's new and best in accessories, such as trumpet horns, English needles, fibre cases and other specialties, you're sure to find here in addition to a full line of Victor talking machines and records.

This quick service doesn't cost you any more than you pay ordinarily, but it is worth a good deal to you. It gives you a decided advantage over neighboring dealers who are slower in filling orders and must necessarily keep customers waiting. It puts you in a better light with your customers and holds to mark you as the leading dealer in your locality.

Give us your next rush order and let us drive our case. See how quickly you get your goods; and remember that this quick service is given not once or twice, but always.

Write to day for a copy of our latest catalogue.

NEW YORK, MAY 15, 1906.

SINCE the appearance of the last World the country has been called upon to mourn a catastrophe in one of its leading cities. The beautiful city of San Francisco has been stricken so suddenly, and to such a degree as to cause descriptive words to seem inexpressive. It has been estimated that the property loss will approximate three hundred million, which far exceeds the loss sustained by Chicago in the great fire in 1871. Help for present needs has been promptly extended, and one need only glance backward at the experience of other stricken cities to learn how quickly Americans rush to the succor of their fellow-citizens.

Immediately after the conflagration the machinery for the collection of funds, and the purchase and distribution of supplies was set in motion, and aid from all over the Union has been cheerfully extended. The rehabilitation of the city has commenced in a systematic manner, and the spirit of '49 lives in the hearts of those descendants of the early pioneers.

ALMOST as we write the country has recovered its financial equilibrium in the capital centers, but there is another side to the question, more of a personal side, as the financial resources of many concerns will be seriously impaired.

To counterbalance this it is but reasonable to suppose that trade in nearly all branches will be greatly stimulated. Like all calamities there is a bright side, and it comes in this instance when we witness the out-pouring of treasure for the stricken ones across the continent.

The San Francisco disaster will result in an unusual demand upon the productive powers of the country, for materials and goods to take the place of those destroyed, and which are needed for the rebuilding of the city. The financial interests will be well taken care of, because the great money forces of the country are united in standing by to see a new San Francisco rebuilt.

THE talking machine industry, like others, of course, naturally suffered keenly; in fact, the establishments of the great leaders of

the talking machine trade were entirely cleaned out. But the great houses like Sherman, Clay & Co., Peter Bacigalupi, Kohler & Chase, Eilers Music House, Clark, Wise & Co., and many others do not spend much time in brooding over their loss. Many of them have already opened temporary quarters in San Francisco, and others just across the bay, where they propose to prosecute trade with unrelenting vigor. That is the kind of enterprise which we admire, because it represents that spirit which has made the desert blossom with the rose of enterprise—it is of that unconquering kind which will rebuild San Francisco and make it bigger and better than ever before.

SAN FRANCISCO was one of the best cities for the distribution of talking machines in the land. The annual sales of single houses have amounted to upward of a half-million dollars, and one of the heads of the oldest concerns which was engaged in the sale of talking machines remarked to The World just before the fire that the sales of his talking machines had amounted to more in the past six months than his sheet music department had sold in six years.

The World representative said in a recent communication that one of the peculiar sights during the conflagration which followed the earthquake was to see the great number of people carrying talking machines with them in the streets when they were frightened out of their homes. He stated that he had no idea so many talking machines existed in San Francisco or that the people cared so much for them, that even in their haste they would still take with them a talking machine as one of the most dearly prized home accessories.

SOME of the large orders which had recently been placed East for the shipment of talking machines were, of course, canceled immediately after the fire. We may add, however, that telegrams have since been received requesting that the shipments be made as early as possible.

One well-known dealer remarked to The World that all the talking machines were burned up, so that when San Francisco was rebuilt there would be an opportunity to do a vast amount of selling again.

This instance shows how philosophically the talking machine men view the situation in far-away California. It takes more than a combination of an earthquake and a fire to completely upset their plans, because they are going at the rebuilding process with a determination to rebuild their business enterprises which were so sadly shattered by forces beyond the control of man.

THERE will be an important trade gathering in this city next month when the Edison jobbers meet at the invitation of the directors of the National Phonograph Co. to enjoy a week's outing in New York.

It is suggested that at that time the talking machine men will form a national organization for the purpose of forwarding the interests of the trade in a consistent manner.

The talking machine people are strong numerically in this country, and there is no doubt through an organization much good could be accomplished, provided no radical measures were introduced or their enforcement attempted. The moment an organization tries to establish rules which interfere in the slightest with the conduct of the business of individual members, then trouble begins. It has proved so in countless in-

stances, and it will prove so in this industry if attempted.

TRADE organizations promote good-fellowship and are helpful in a general way to mercantile interests. But they have to be handled with exceeding care. The talking machine industry is not one which needs radical reformation. Retail prices are fixed by the manufacturer, and in this way trade is strengthened, and respect for the business is engendered not only in the minds of purchasers, but men themselves have a greater respect for the business which is conducted on up-to-date lines than if the methods adopted are loose and slipshod. There is nothing which makes for business success so strong as correct business rules.

FROM present indications it would seem as if the trade in this country was going to maintain a surprisingly lively condition during the summer months. We have received letters from hundreds of men, actively engaged in the retail department of the industry who do not hesitate to say to The World that they expect to do a good business straight through the summer.

That is the kind of business spirit which materially assists in making a success of any enterprise. There should be really no dull seasons in this trade. In the summer it requires, of course, a greater emphasis placed upon the selling end in order to secure results, particularly when the people seek outdoor pleasures during the heated term.

THERE are, however, countless ways in which the entertaining powers of the talking machine may be used during the summer. In the parks, on yachts and verandas it can always be in evidence as a clever entertainer, and if these points are fairly and persistently presented, good results can be obtained. It needs more hustle to win business when there is a natural relaxing of the bodily vigor than when the weather is less enervating, but from our viewpoint the summer of 1906 is going to be an exceedingly lively one.

THUS far there has been but comparatively little slowing up of orders, and the manufacturers are still endeavoring to solve a very serious problem which confronts them in the way of supplying the demand which is steadily being made upon their productive facilities.

A number of representative dealers have expressed to The World their satisfaction at the successful working of the price agreement.

There has been a considerable change of feeling in this respect since the last issue of this publication, for a number look upon some of the new moves as something which tend toward coercion. Some of these men, however, have refused their views of the situation.

Price agreement invariably works for the good of regular merchandising. It does away with the vast amount of price cutting and slashing which lead up to greater trade evils. The courts have decided that a manufacturer of any patented article may be afforded legal protection in so far as the price maintenance is concerned.

A GLANCE at the Patent Department of The World will show how actively indefatigable minds are engaged in planning betterments for talking machines and accessories. Our special reports from Washington indicate that there is much life in this particular field of human endeavor.

## THE "TALKER" AS AN EDUCATOR.

The Influence It Has Had in Stimulating Musical Taste Throughout the World—Has Made American Music as Popular in London as in New York—The Records of Famous Artists Have Been as Valuable to Them as a Press Agent.

How much influence the talking machine has had upon the musical taste of the day it is very difficult to say, but it is certain that it has wonderfully aided in popularizing songs internationally. Perhaps it has popularized American music and songs more than that of any other nation up to the present, owing to the fact that the greatest number of records have in past come from the States, says a writer in The Talking Machine News, of London. To go back no further than five years, how many American songs one can recall that have had as big a vogue here as in their native land, a popularity largely owing to the influence of the talking machine. "Good-Bye, Dolly Gray," "The Honeysuckle and the Bee," "Hiawatha," "Blue Bell," and "Hot Time in the Old Town To-night" are only a few of them. On the other hand, English compositions, such as "Ta Ra Ra Boom de Ay," "The Man Who Broke the Bank at Monte Carlo," the "Dude's March," and Albert Chevalier's coster songs, have attained a wide celebrity in America. There, again, the talking machine was an important factor.

Sousa's marches have become familiar to hundreds of thousands in all parts of the globe who, without the talking machine, might never have heard of them. American coon songs and cakewalks would never have attained the vogue they did in St. Petersburg and Vladivostok but for the influence of the talking machine. "La Maitchiche," which has taken Paris by storm, and which is known in this country under that name, also as "Sorella" and "Monte Carlo," would never have become so popular to the great mass of the British public but for the fact that records of its strains are being sold by thousands. The newsboys of London and New York whistle the same tunes, whether they are "Navajo," "My Irish Molly O!" "Bedelia," or "In the Shade of the Old Apple Tree," because the talker has made them known on both sides of the ocean. How many of the great mass of the British public would hear the famous Garde Republicaine Band if it were not for their records on cylinders and discs? and how many of their brothers on the continent could enjoy the wonderful execution and precision of the Coldstreams, Scots Guards, Black Dyke, and Besses o' th' Barn Bands but through the same means?

Another interesting thought is the widespread reputation the artistes obtain through the distribution of records. It is said that to some extent, at least, Caruso's favorable reception in Germany was influenced by the splendid records of his voice which had been distributed in that country. Be that as it may, Englishmen to-day are enjoying in their own homes the singing of Russian, German, Italian, French and American artistes whom they never expect to see or hear in the flesh, but whom they have learned to

know and admire through their records. If George Alexander or Henry Burr or J. W. Myers were to advertise a concert in the Albert Hall next month, nine-tenths of their audience would be talking machine users. Similarly, W. G. Webber would be no stranger to an American audience, and the Italian artistes who sing as if they were in the angelic choirs are listened to with breathless admiration in South America, Australia, and the ends of the earth. This is an instance of the talking machine's powers as a civilizer.

## MORE VICTOR BUILDINGS.

To be Devoted to Offices and Laboratories—An Addition to Factory Also Under Way.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 6, 1906.

Ballinger & Perrot, architects and engineers, have completed drawings and specifications, and invited estimates for a very complete office building and laboratory to be erected at the northwest corner of Front and Cooper streets, Camden, N. J., for the Victor Talking Machine Co.

The building will have a frontage of 89 feet on Cooper street and 100 feet on Front street, and will be four stories in height, with provision for two additional stores in the future. It will be fireproof throughout, having the walls, columns, floors and roofs of reinforced concrete construction, and slag roof covering. Wall columns will be used in the exterior wall construction, with triple windows in between, giving the largest amount of light obtainable. There will be provision for a combined freight and passenger elevator.

They also have completed drawings and specifications, and invited estimates, due May 1, for an addition to the manufactory building of the same company on Front street, south of Cooper street. The addition will include an entire fifth story for the existing building, 78 by 170 feet, with walls of brick, floor of steel I beams and planking, and roof of wood construction with slag covering.

## WON WITHOUT ARGUMENT.

How a Talking Machine Figured in a Law Suit "Between Friends."

There are many stories constantly cropping up concerning talking machines and recently they have figured prominently in some lawsuits. Here is a late story:

Professionally, Doctor Doem and Doctor Quick were rivals; personally, they were the best of friends, until Doctor Quick acquired a large-voiced Newfoundland dog which had the habit of singing to the moon. Doctor Quick was fond of the dog and Doctor Doem was not. Swiftly a chasm widened between them, into which fell the neighboring families—for the two doctors dwelt beside each other. At last the offended Doem haled Quick and his dog into court on a charge of maintaining and being a nuisance, and two legal brothers undertook to thresh the

matter out before the court.

"How much noise does the dog make?" was the incessant question each asked of the witnesses.

"As much as a steam whistle," said the witnesses for the complainant.

"No more than a singing canary," asserted those for the defendant.

"He would wake the dead," said one.

"He wouldn't disturb a sleeping baby," said the other. The amount of noise seemed to depend upon one's nearness to the dog, ability to sleep through a Fourth of July celebration, and friendliness to one or the other of the doctors.

On the second day of the hearing, however, the lawyer for Doctor Doem came into court bearing a bulky burden, which he deposited upon a table, and unwrapping, disclosed a phonograph and an enormous megaphone.

"May it please the court," he said, "I have here the voice of the dog in question. To settle the dispute as to the quality of his tone, I have caught and fixed it upon a cylinder which will now reproduce it for the pleasure of the court."

"I object!" shouted the lawyer for the defense. "May it please your honor, there is nothing to show this is the voice of my client's dog, nothing to show that this machine is not adapted for magnifying many fold the voice which it contains. In short, this may well be a trick to deceive the jury into rendering a verdict adverse to my client."

Long and excitedly the two lawyers argued the point, and at last the judge ruled out the evidence. The lawyer who had brought it, and who had, during the argument, attached the big megaphone to the machine, called a porter and handed them to him. The porter started away with the burden, but as he did so the hand of the lawyer "inadvertently" touched a spring. Instantly the cylinder began to whirl, and before the porter could get away or the bailiff could interfere the voice of the dog came forth—pleadingly, waxing louder, dying away, now legato, now staccato, now low and mournful, now coming in short, decisive yelps. The bailiff flew across the room to stop the turmoil, but just as the porter reached the door the voice of the defendant, Doctor Quick, himself, came out of the megaphone, vainly mingling with the howl of the dog:

"There, there, Rover, that's a good dog. Keep still now, Rover, there's a nice dog."

"I submit my case without argument," said the attorney for the complainant when the porter had gone, and the jury brought in a verdict which made Dr. Doem toss up his hat with glee.

## URGENT CALL FOR GOODS.

That the call for goods is urgent may be judged from the fact that jobbers are wiring in for quick shipments to the manufacturers. The shortage on machines and records is astonishing, and it now looks as if business will continue active through the summer.

Rapke Horn Crane  
No 15

one half actual size

Retail Price, \$1.50 Dealers' Price, \$1.00

**VICTOR H. RAPKE, Manufacturer, 1661 Second Ave., N. Y.**

Rapke is now manufacturing labels for Edison, Columbia and Victor Records.

## Home of the International Record Company

We show here a photograph of our Office and Main Factory, as evidence of our ability to properly care for all business that may come to us.

We have been building up slowly and steadily for the past five years and now we have a strong, healthy business, not due to extensive advertising but to the constantly improving quality of our records which, as it were, speak for themselves.

That our sales were greater in April than any month previous is proof positive that **Our Records are meeting with better and better favor.**

We now want an enterprising jobber in every city in the United States to handle our records and push them.

We have the goods and our price is right.

We know, and you know, that the profits can be very large.

**Do not wait. Seize this opportunity while it is before you, and write to-day.** We carry a large and complete stock and can fill orders on short notice **absolutely complete.**

### Our Exclusive Specials for June

Len Spencer and Geo. Watson, with orchestra accompaniment. **On the Pier at Dreamland**, Baritone Solo by Dan W. Quinn, with orchestra accompaniment. **The Happy German Twins**, Vaudeville Sketch, by Dan W. Quinn, with orchestra accompaniment. **Coming Home from Coney Island**, Baritone Solo by Dan W. Quinn, with orchestra accompaniment. **Free Lance March**, (Sousa) Peluso's Band. **Flannigan's Night Off**, Vaudeville Sketch by Spencer & Jones.

**INTERNATIONAL RECORD CO. AUBURN NEW YORK**

(Special to The Talking Machine World.)

London, Eng., May 5, 1906.

At last a complete grand opera, "Il Trovatore," has made its appearance, and the Gramophone Co. are destined to have a tremendous demand for this opera, which consists of fifteen ten-inch and five twelve and one-half inch records, with a descriptive booklet of the opera. The entire opera, with descriptive booklet in the form of a libretto, sells over here for \$30, but if certain artists, somewhat more famous, are selected for the leading solos the opera costs about \$40. As might have been expected, there is a vast difference between listening to single numbers as detached songs and in going through a whole act of an opera in proper sequence, plus the immense importance of added chorus and orchestra. In the capacity of operatic impresario the Gramophone Co. have exercised good judgment in making "cuts," thus compressing the main features of the opera within dimensions most likely to be appreciated by users of the records in a perfectly artistic manner. When it is remembered that the records have been taken at Milan, where the company have had the advantage of the artists, orchestra and chorus of La Scala, it will be sufficient guarantee that no better performance could have been obtained of the concerted numbers.

The first act is given on four records, and opens with the "Abbieta Zingari" sung by De Luna (a baritone of that name, who must not be confounded with the character in the opera) and chorus. The vigorous enunciation and well-marked rhythm of this number arrest the ear at

once, and the entry of the chorus at the close is most effective. With the second record comes the concerted number between Ferrando and chorus, the admirable singing of the latter no less than the soloist being very impressive, the interest being further enhanced by the notes of the midnight bell and a fine climax. And now we are wafted away as if by magic to the Garden of Leonora, and are listening to the pure soprano voice of Lucia Crestani in "Tacea la notte placida," soon to be followed by the rushing finale, "Di geloso amor sprezzato."

Act II. opens with the famous Anvil Chorus, remarkably well done by both singers and orchestra, says "Music"; then follows "Stride la vampa" by Lina Mileri, and an exceptionally impressive and dramatic rendering of "Condotta el' era in ceppi" by the same artiste, and so one after another the famous airs which have made "Il Trovatore" what it is are heard. We hear the delightful "Il Balen," the rolling Soldiers' Chorus, "Di quella pira," until, before we realize it, we have reached the last act and are listening to the famous "Miserere," the gem of the whole work. Here the interest of the opera reaches its height, and we cannot pass the two fine duets, "Mira d'acerbe" and "Vivra contende," without commenting on the magnificence of the recording. "Home to our Mountains" soon follows, and we reach the end of the first, but we hope not the last, opera to be heard upon the Gramophone, the production of which more than justifies the expectations based upon it.

A very attractive record list has just been published by the Neophone, Limited, the cover of which is a fac simile of their new embossed record labels. It contains many new selections and a large number of the old numbers have been made so as to bring the list up to the standard of the new improved Neophone discs, which are being highly praised. They are in every respect a marked advance over anything which they have placed on the market.

A. B. Cromelin and J. Van Allen Shields, of the Columbia Co., have left for New York by the "Amerika." They will remain there about two weeks for the purpose of visiting headquarters. Their entire trip will not last longer than a month.

The Phono Wheel & Accessories Agency, 6 Cheltenham Road, Manchester, have won a unique position in trade here as manufacturers of accessories for talking machines—that is, parts that are difficult to get. They control one of the largest collections and stocks of spare parts in this country. They are a concern of responsibility and standing, and I am sure that any of your dealers or jobbers in a pinch can secure from this house parts that are almost impossible to get from any other concern, whether in the States or elsewhere.

The Gramophone & Typewriter, Ltd., are having great success with the records made by Evan Williams, tenor, who has been living in the States for many

years, and who is now visiting this country. They are considered among the finest ever produced by this concern, not even excepting many of the grand opera records.

The British Phonograph Industries Co., which is composed of former employees of the Edison Bell Co., have failed, and their affairs are now before the courts. A receiver estimates the liabilities at about \$7,500, with assets of about \$5,000. The company never cut much of a figure, so the matter is not of great importance.

The Odeon Co. are having quite a run on their grand opera records, which are 13¼ inches in diameter, playing virtually five minutes. This concern is the sole agents for Great Britain for the Fonotopia records, which are having quite a run nowadays, particularly the records made by leading grand opera singers.

The English-speaking people, not only in the States, but in the British colonies, will find much to interest them in the latest list of records published by the Russell Hunting Co. The list is very complete, and one that should find a large and growing market. The Russell Hunting Co. are constantly improving their records and making their list more interesting and more complete.

The local branch of Pathé Freres, at 14-18 Lamb's Conduit street, have just published six beautiful violin records, which are played by Signor Milarini. They are remarkable numbers in every respect.

The Columbia Phonograph Co. are preparing to open a very handsome branch store in Manchester early this month and from their show rooms, 54 Market street, they will work up the trade throughout the Midlands. Business with the Columbia Co. locally is excellent.

The talking machine has made its appearance in the variety hall. A recent "turn" by an artist named Orpheus includes the playing of solos on a number of instruments, accompanied by the talking machine instead of the usual orchestra. During the opening numbers the instrument is hid behind the screen, and it is only at the close that the audience is let into the secret of the medium accompanying the artist. It is quite a successful feature, and the accompaniments are amazingly realistic. This is something to copy if it has not already been tried over your way.

## To Our Friends Across the Pond

Are you wanting any Wheels or Pinions? Do you ever have a job to get them? If so, send us a line of what you want. We are experts at the job, and can cut any size, shape or pitch. It won't cost you much and will pay you and save you dollars, and we are quick—that's another thing.

We are the biggest and most up to date wheel cutting firm this side and would like to do a bit for you. Send right away at once to

## Just What All Your Customers Are Looking For!

Sells at once on being heard, with BIG PROFIT TO YOU. Will help you sell more Disc Talking Machines and Records. It will revive the interest of thousands who have given up using them an account of the nuisance of changing the needle after each playing. Reduces the wear on the record and will play at least 500 times without changing.

Made in various tones, to suit all tastes: No. 1, Soft Tone; No. 2, Medium Tone; No. 3, Loud Tone. Any of these needles will fit any make of sound box. Retail Price, \$1 each. Net Price to Dealers, 50c. each.

No. 4, Concert Tone. This needle requires the sound box to be fitted to it. Retail Price, \$5.00; Net Price to the Dealer, \$2.50. Send us your sound box and we will do this free of charge.

Send us \$1.00 and we will mail you, postpaid, one sample each of Nos. 1, 2 and 3.

We furnish Artistic Signs and Literature to all Customers.

The Symphonic Phone-Needle Co., 1907 Park Avenue, NEW YORK CITY.

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

The Edwin A. Denham Co., importers of talking machines and accessories, 31 Barclay street, New York, have inaugurated a clever selling plan, which has created so great a demand for their lower priced cylinder talking machines that the company have found it necessary to send its secretary, Mr. J. C. Groshut over to Germany in order to secure the deliveries of a sufficient number of machines to meet the unexpectedly great and sudden demand, the manager of the company's Berlin branch being at present in this country.

The plan devised by Mr. Denham is original, and he says its success is due largely to the fact that the demand for records and larger machines created goes directly to the local dealers, who have responded to the company's explanation of their plan in a most enthusiastic manner. Mr. Denham remarked while discussing the plan with *The World*: "The scheme is offered as a sure cure for the usual dullness in trade during the summer months."

The Denham Co. have just closed an important contract whereby they secure the sole rights for North America of the attachment manufactured by the Devineau Biaphone Co., which will enable the owner of any cylinder machines to play disc records of any make. In this connection, a recent improvement in the device is that the swivel will be made of hard rubber instead of brass, which will improve the sound and do away with metallic rattling. The device is very handsomely finished, and works splendidly in connection with certain types of Columbia and Edison machines.

The Syracuse Wire Works, of Syracuse, N. Y., are always devising something new for the talking machine dealers. Their new rack, which is illustrated elsewhere in this paper, is one of exceptional excellence. A valuable feature is the new numbering band, running across the rack, so that there is no trouble in stock taking and ordering because of there not being any locations for numbers. Dealers would do well to investigate this proposition.

The J. W. Jenkins Sons Music Co., Kansas City, Mo., have one of the best catalogues on the market devoted to talking machines of all kinds and supplies for the trade. There is nothing made virtually that they do not handle, and anybody desiring to embark in the talking machine business, or established dealers desiring to add to their equipment, will do well to look up the Jenkins line. They will find the variety and prices to be all that is desired.

The Symphonic Phcne Needle Co. are certainly having a tremendous demand for their needles. Their plant at 1907 Park avenue, this city, has been literally swamped by the deluge of orders from all over the world which have poured in on them since the appearance of their ad. in last month's issue of *The World*. They are now carrying on an extensive campaign in all the leading magazines. This will be of great value to the dealer handling their goods, as it stimu-

lates the demand among the best class of people. Probably the greatest factor in their popularity is the fact that the public has long complained of the necessity of changing the needle after each playing, not to speak of the short life of the disc record under past conditions. The Symphonic Co. are doing all in their power to further the interests of the jobbers and dealers, not alone by producing a highly salable article, which pays a good profit, but they are prepared to ship to all persons handling their goods interesting literature, including pamphlets, catalogues and signs, window cards, etc.

Inside of a month the cylinder or round record department of the Leeds & Catlin Co.'s factory at Middletown, Conn., will be in operation, the finishing work incidental to the installation of the equipment being almost completed. During the last few weeks Loring Leeds has made a couple of trips to the West, with Chicago his objective point, where he pocketed enough orders to keep their flat record plant running overtime for a while. Their ad. on page 10 is worth reading.

Malcolm Douglas, son of Mrs. M. V. Douglas, former president of the Douglas Phonograph Co., with which he was also at one time connected, returned to New York from a year's stay in South Dakota, on the 7th inst. He had been doing the cow-punching act in the West, a life the Eastern young man is wont to admire until he has had a dose, then little old New York is good enough.

The latest wedding coming from the Universal Talking Machine Manufacturing Co.'s office force is that of William H. Müller, head of the shipping department, and Miss Louise Shad, expert tester of records. The ceremony took place in old St. Mark's P. E. Church, New York, April 18, the friends of bride and groom filling the edifice. John ("Casey") Kaiser was head usher, and not a hitch occurred in the arrangements. The reception in the evening, followed by a dinner, was a crush, but fine in all the appointments. Among numerous presents received was a handsome silver service, with the company's hearty good wishes for the couple's future happiness and prosperity. Niagara Falls claimed them for the honeymoon. With so many examples before him, the president of the company might follow suit.

Two decided hits, "Over the Hot Sands," Arab Patrol, dedicated to the Ancient Arabic Order of the Nobles of the Mystic Shrine, orchestra selection, and "The Parson and the Turkey," descriptive selection by Arthur Collins, are illustrated in Bulletin No. 4, just issued by the American Record Co.

The annual vaudeville entertainment and reception for the benefit of Dan W. Quinn, one of the best-known comic singers in the recording laboratories of the trade, was given in the Amsterdam Opera House, New York, April 27. The

house was packed, and among those present were George K. Cheney, manager of the Victor Talking Machine Co.'s New York laboratory, and wife; "Casey" Kaiser and wife; Cal Stewart, the well-known "talker," and wife. Mention of Cal calls to mind the fact that he has made 85 records a day—a memorable feat, done in the olden, golden days of wax recording.

The record output of the National Phonograph Co. is 3,000,000 a month, while the Victor Talking Machine Co.'s plant turns out 50,000 daily.

J. F. Schmelzer, of the J. F. Schmelzer Arms Co., Kansas City, Mo., was in New York recently, stocking up on goods. Among his selections was a line of the Douglas Co.'s record cabinets, the new styles being examples which, in point of de-

sign, finish and utility, exceed anything hitherto shown by this enterprising house.

Orders for 20,000 of the Rapke horn crane No. 15 have been booked by Victor H. Rapke, inventor and manufacturer, New York. For the short time the article has been on the market this is a record breaker in point of prompt recognition of real merit. The particulars concerning the crane appear on another page.

Treow Williams, president of the Gramophone & Typewriters, Ltd., London, Eug., who accompanied Messrs. Johnson and Douglass, of the Victor Talking Machine Co., on their recent Florida fishing trip, in which a special steamer was chartered, sailed from New York for home in the latter part of April.

The factory of the Universal Talking Machine Manufacturing Co. is now being gradually removed from New York to their new premises in Newark, N. J. As previously stated the general offices of the company will also be shifted, but the export department will remain in New York, where General Manager Macnabb will retain a place of call twice a week, not to mention his time at the laboratory. The changes will not interrupt the company's business in any way.

The American Record Co., Hawthorne, Sheble & Prescott, sales managers, of Springfield, Mass., in a recent interview, stated that April was their banner month this year, and has only been previously exceeded by one month (November, 1905) in the history of their business.

D. F. Barbosa Gouvea, Cosa Gouvea 2 Santa Satharina 6, Porto, Portugal, advises The World that he would like to receive catalogues of talking machines, records and supplies of all kinds. Anything specially new with receive immediate consideration.

The theatre ticket slip gotten out by the National Phonograph Co. is a clever idea. The

ticket is reproduced in fac-simile type, arrangement and colors, and seemingly protrudes from the regulation size envelope. The text clinches the suggestion, to wit: "A theatre ticket wouldn't be needed if you owned an Edison Phonograph. It would bring the theatre to you."

Elsewhere announcement is made of the "Mello-Toue," an attachment that does not muffle but amplifies and mellows sound. The device is claimed to make a musical instrument out of a talking machine, doing away with the scratching, rasping noise so objectionable in certain disc records. It modifies and improves the loudest and harshest records, whether instrumental or vocal, and produces clear, mellow music that is pleasing to hear.

John ("Casey") Kaiser's artistic services ("on the side") at the meeting, Tuesday evening last, of the Eastern Talking Machine Jobbers' Association, in the salesrooms of the Douglas Phonograph Co., New York, were professionally perfect. As a distributor of moist joy he need sign no contract with anybody to sustain his reputation. John was certainly on to his job.

James K. O'Dea, Edison jobber in Paterson, N. J., with a branch at Passaic, is contemplating becoming a Victor distributor.

#### MAKING SPLENDID PROGRESS.

Though in existence less than a month the Eastern Talking Machine Jobbers' Association have gone ahead with commendable energy, leaving no grass grow under their feet in perfecting the organization. They will affiliate with the Central States Talking Machine Jobbers' Association, which holds its next meeting Monday, May 21, at Columbus, O. The proceedings of the Eastern Association for the several meetings held since the first appears on another page of The World, and is interesting reading for jobbers, dealers and manufacturers. The association is

composed of representative firms, with an eye single to the improvement of trade conditions, not to mention the pleasing relations generated by the exchange of social amenities; consequently the board of officers and trustees urge upon the prominent and influential houses in their respective localities the wisdom of being present at the meeting to be held Thursday, May 17, in S. B. Davega's inviting store, 32 East Fourteenth street, New York, at 8 o'clock in the evening.

#### A GOOD CARUSO STORY.

A good story is told of Caruso and Plancon, who dropped into a department store one afternoon while the Metropolitan Opera Co. was appearing in a far western city. In passing through the aisles they were attracted by a "demonstration" of a new cheap grade talking machine. The rasp-voiced young man doing the "demonstrating" was just putting a new record into the machine.

"Ladies and gentlemen," he said, addressing the knot of women assembled around, "we will now have a song by the in-com-peer-abul Caruso!"

Caruso and Plancon halted to listen to the in-com-peer-abul Caruso.

The sounds that presently rattled out of the machine were like the barking of a small dog. Caruso shrugged his shoulders, looked up into the huge Plancon's face and grinned with vast enjoyment. The two singers approached closer to the machine and Plancon stood peering into the big brass funnel with a wondering expression on his bearded face.

Caruso noted Plancon's attitude and he touched Plancon on the arm.

"His master's voice," he said, and he slid his arm through that of the chuckling Plancon and drew him away.

The business of the Bloomfield Phonograph Co., at Bloomfield, N. J., has been purchased by John B. Glennon, who will in future conduct it.

## Did You Receive Our Circular Letter of April 16th?

**IF** NOT, advise us and we will send you a copy at once. In that letter—which was sent to a limited number of dealers and jobbers—we advance a proposition which we claim will, if accepted by you, **double your phonograph business in a fortnight, and will increase your trade all through the otherwise dull Summer months.**

The scheme has been given a thorough trial in two States and has proved, and is proving, an unqualified success in both.

It has been taken up by most of the dealers and jobbers to whom it has been submitted.

It is meeting with the cordial and energetic support of even those jobbers who do not handle low-priced phonographs. Why? Because it doubles the demand for high-priced machines and for records in every district in which it is worked.

Will you not allow us—by sending us

your name and address and asking for particulars—to show you how you can not only make a direct profit of from 100 per cent. to 500 per cent. on every one of our new low-priced phonographs that we send you, but can also derive an almost incalculable indirect benefit from taking up our scheme? For instance, an increase in your trade all through the Summer months, instead of the usual falling off in business; together with the advantages derived from a large amount of the best kind of advertising absolutely free?

Will you not allow us to show you how all this can be effected without expense and with a minimum of trouble?

Let us hear from you now. We offer you our best machine in connection with this proposition; the output of the factory is limited; and at the present rate the demand will soon greatly exceed the supply. **Why not write TO-DAY?**

New York.

records in Utica restraining them from the further sale of these articles under penalty of being liable for damages for the amount of their profits or for any infringement upon the exclusive right to the sale of Edison phonographs and records in New York State, which is claimed by the New York Phonograph Co.

Despite the injunctions the dealers continued to sell, and claim they will do so until the highest court in the United States has passed upon the question. The dealers were notified by the National Phonograph Co. that it would protect them in any suit which might be brought. In fact, were awaiting the beginning of a suit by the New York Phonograph Co. against either a jobber or dealer to enforce the injunction by an attempt to restrain them from selling Edison goods. Then the matter would be brought to a head at once.

Local dealers claim that after securing exclusive rights in this State the New York Phonograph Co. failed to develop the business and that another company took it over. They also state that it is only an effort to throw a scare into the trade, as the New York company have no Edison goods to deliver and will never get any.

Dealers also claim that while they may be forced to buy of the New York Phonograph Co., they cannot be restrained from selling the stock they have on hand. In other places in the State it is learned that the dealers ignored the injunctions and say they will continue to sell the phonographs until the United States Court decided the matter. The style of the records involved has been changed in that the crease or groove used to hold the record on the cylinder has been discarded.

### PROMINENT EDISON OFFICIAL DEAD.

Wm. S. Logue, who had been identified with the Edison interests in various capacities for twenty years, died at Chicago, where at a time he was manager of the National Phonograph Co.'s branch office, on April 25, aged fifty-five years. He was buried in Baltimore Saturday following with Masonic honors, the deceased having been an active member of that order and the Elks. Among those present at the funeral were F. K. Dolbeer, manager credit department of the National Phonograph Co., Edison Mfg. Co., and the Bates Mfg. Co.; C. H. Wilson, manager of sales; Wm. Pelzer, of the legal department, and W. C. Patrick, of the Chicago office of the National Phonograph Co.

Mr. Logue was formerly manager of the Edison phonograph telegraph system at the Orange, N. J., works, subsequently in charge of the National Phonograph Co.'s Chicago branch, then manager of the Edison Mfg. Co.'s battery department, and late manager of the Bates Mfg. Co., and was considered a business man of extraordinary ability and force of character.

### PRESCOTT OFF TO THE COAST.

John O. Prescott, manager of the American Record Co.'s New York office, also of Hawthorne, Sheble & Prescott, started on the 2d inst. for Los Angeles, Cal., to attend the annual convocation of the Mystic Shrine. He will be gone about a fortnight and will visit San Francisco and other coast cities en route home. J. O. has made special records of Shriner music and has taken a full talking machine equipment which will be used to while away many a tedious hour of the long and tiresome trip across the continent.

From Cody, Wyo., a report says that at the funeral of Mrs. J. H. McCorkle, which was held at Burlington, no religious service occurred, but,

## NATIONAL CO.'S NEW BUILDINGS.

The Immense Structures Now Approaching Completion—Almost Twenty Acres Are Already Covered by the Plant of the National Phonograph Co. in West Orange.

Although the buildings owned by the National Phonograph Company, Lakeside avenue, West Orange, N. J., already cover many acres, perhaps 18 or 20 in all, new ones are being erected one after another in order to take care of the vast amount of business done by them.

Not long ago a new three-story concrete building, 187 feet long by 40 feet wide, was completed, and is being used for a machine shop and manufacturing purposes. That was built directly alongside of the Erie Railroad and in the rear of the large boiler and engine house. As every inch of floor space in the old buildings is being used to the very best possible advantage, two new buildings, both concrete, were started not long ago for the sole purpose of manufacturing the new Edison battery. One of these, the nickel-plating and polishing building, is 287 feet long and 50 feet wide. It has a 50-foot span, without any columns, and 50-foot beams, with a 7-foot monitor top roof for ventilation. This is entirely completed and as soon as the necessary machinery is installed, it will be ready to be put into operation, to be run in connection with the larger building, only partly completed. This is four stories high and will be 600 feet in length by 62 feet wide, extending along Ashland avenue, the same as the smaller one, only occupying the entire block between Charles street and Lakeside avenue.

At the present time only 200 feet of this building has been completed, owing to the absolute necessity of other buildings being erected in the meantime and the inability to get a sufficient number of men to work on all at once. It will be completed, however, as soon as the new office building recently started has been finished.

This office building will be for the phonograph works only and will be five stories high. It will be 137 feet long by 50 feet wide, made of steel and reinforced concrete, fireproof throughout, each floor also containing not only fireproof but burglarproof vaults and all other modern improvements for an office building. The first floor will be finished with imitation stone and ornamental panels, making it not only substantial, but attractive.

Besides this, another building which is also under way, is an extension to the cabinet shop, 120 feet long by 55 feet wide, and four stories high.

There is also in course of construction now a four-story concrete machine shop to be 300 feet long and 72 feet wide.

Owing to the enormously increasing business even the numerous buildings now under way will not afford sufficient room, so many more are contemplated within the next two years. It is very probable that much adjoining property will be purchased very shortly, because a great deal more is needed.

## TRADE NOTES FROM WHEELING.

Cheery Report From This Goahead Southern City.

(Special to The Talking Machine World.)

Wheeling, W. Va., May 4, 1906.

All the dealers report the greatest kind of business. The volume during April was considerably in excess of any other month in the history of the business.

The Palace Furniture Co. has added Columbia cylinder machines and records. Up to this time they have been exclusive Victor dealers.

Will M. Bard, Jr., has been receiving the congratulations of his numerous friends in the talking machine business, the occasion being his birthday anniversary. He is one of the youngest men in the business. The lack of years has been more than made up by his close application and enthusiasm during the years he has devoted to this line.

That monthly lists of new records play a prominent part in the talking machine game is a proven fact. The live dealers will agree that the cutting out of one month's list of records means not only loss in sales of new titles but older ones as well. When the users are educated to having their attention called at certain intervals to new records you can bank on a large percentage coming to investigate the merits of the new offerings. Rarely do they buy new records only. No other one thing stimulates the business to as great an extent as does the monthly lists of new records. All the Edison dealers here are feeling keenly the cutting out of the June list, although it's accepted as the very best policy that could be pursued in view of the shortage of current numbers.

Business is exceptionally good for this season of the year, although the volume for April suffered in comparison with March. A fair estimate of the falling off would be 33 1-3 of the March volume.

During the past two months all of the four houses handling Edison goods have increased their record stocks.

Bard Bros. report particular good business in the high-priced Victor outfits. Their sales of Red Seal records during the past month exceed any previous month.

## APPEAL TO BE HEARD LATE IN MAY.

Being a preference case, a hearing on the appeal of the Talk-o-Phone Co. and Leeds & Catlin Co., from the decision of Judge Townsend, will likely come on at the June term of the United States Circuit court of Appeals about the latter part of this month. Judge Townsend's opinion, a lengthy review of the issue in controversy on the Berliner stylus patent, between the Victor Talking Machine Co., complainant, and the above companies, was reported exclusively in last week's Review, in which the defendants were enjoined, though a stay was granted pending final hearing. Lawyers familiar with the question declare the patent's adjudication is one of pure law, depend-

ing upon so fine a point that but two decisions are in the books, one of which was rendered by the United States Supreme Court, where, they state, the case will ultimately go, unless a "lay down" occurs.

## YOUNG BLOOD IN MUSICAL ECHO CO.

Propose to Greatly Extend the Business and to Establish Branches in Leading Cities.

Recent changes have occurred in the Musical Echo Co., of Philadelphia, whereby Henry E. Marschalk, late manager of the Philadelphia branch of the Columbia Phonograph Co., and Mr. Louis Jay Gerson have taken an active participation in the business, and have assumed its management. It is the intention of this concern to make radical changes in the present quarters, which already possess great charms. They will also establish within the near future a series of talking machine parlors in a number of cities, also wholesale quarters will be opened up in Philadelphia, the exact location to be determined later. Messrs. Marschalk and Gerson are eminently fitted to push this enterprise successfully, as they have been acquainted with the talking machine business for many years.

## HENRY J. HAGEN ABROAD.

When Henry J. Hagen, of the Victor Talking Machine Co.'s laboratory staff, arrived in Hamburg, Germany, en route to Buenos Ayres, S. A., he was agreeably surprised with the warm reception given him by a number of well-known talking machine people over there, among them being F. M. Prescott, president and general manager of the International Talking Machine Co., of Berlin, which Henry visited for a couple of days, previous to taking the steamer for his South American destination, where he arrived safe and sound.

## H. &amp; S. UNIT RECORD FILING SYSTEM.

The H. & S. Unit Disc Record Filing System is being rapidly introduced throughout the talking machine trade. Its merits are fully shown in this issue, with cuts and descriptive matter. This method of handling record stock is of such a convenient nature that all up-to-date dealers and jobbers cannot afford to be without it. Several of the largest talking machine concerns have already adopted the Unit System for carrying their stock. Among the largest and most prominent are the following: The Cable Company, Chicago, Ill.; the O'Neill-James Co., Chicago, Ill.; Hayes Music Co., Toledo, O.; Alexander-Elyea Co., Atlanta, Ga.; Wells Phonograph Co., Philadelphia, Pa.; Eastern Talking Machine Co., Boston, Mass.; Unique Talking Machine Co., Houston, Tex., and many others.

A ball-bearing taper arm has made its appearance on the market, for which superior tonal effects and other improvements are claimed.

## MADE THE POLICE WORK.

How They Were Fooled by the Publicity Work at Whitson's Store.

J. E. Whitson, the enterprising talking machine dealer of Washington, D. C., received some excellent advertising in the Washington Times of recent date. Under a rather showy double column heading the cut herewith and story appeared:

"Cries of 'Murder! Murder! Oh, do not kill me!' fell on the startled hearing of pedestrians in the neighborhood of Ninth and F streets yesterday afternoon, attracting their gaze to a pushing, jostling crowd at the next corner, to all appearances a fighting, unruly mob.

"'Officer,' demanded a fat, excited citizen, tugging at the arm of the drowsy crossing officer, and pointing to the crowd beyond, 'will you let a murder be committed under your very eyes? Must citizens take the law in their own hands? Come with me and we'll prevent this crime.'

"With this the two, bluecoat and citizen, started on as rapid a run as can 400 odd pounds of short-winded, puffing, unwieldy fat. Through the mind of the citizen-rescuer flitted thoughts of saving some helpless person from an untimely butchery, and he puffed on, urging the bluecoat to his utmost. With a stout cane grasped determinedly in his hand he presented the grand appearance of a self-imposed D'Artagnan, that is, had he been less of a weight carrier.

"As the foot race progressed the same agonized cries rent the air, indicating to the rescue party that the work of the supposed butcher was still uninterrupted.

"'Mercy!' cried the fat citizen, as they at last reached the outskirts of the crowd, 'why don't some of you people stop this murder?'

"'What's the row?' demanded the winded officer, making his way through the crowd by a prodding movement of his club.

"'Aw, go on,' answered one of the crowd, indignant at being jabbed in the ribs, 'it's nothin' but a free phonograph show.'

"And sure enough, just then the silver-toned instrument placed at the open door of a phonograph establishment, presumably to draw custom, belched forth another blood-curdling cry of 'Murder!' The record was depicting in tones

red-hued and realistic the pleading of Fagin, of Dickens' 'Oliver Twist,' with his unresponsive jailers just before the unfortunate character was ushered to the gallows."

## COLUMBIA CO. IMPROVEMENTS.

One of the features of the remodeled Columbia warerooms at 353 Broadway, is what is known as a dealer's booth. This is a large booth, fitted up with every style of a talking machine made by the Columbia Phonograph Co., and arranged so

that every model shows off to the best advantage. One of the ideas in creating this booth was to enable dealers who do not carry a full line of the Columbia product to bring their customers to the wholesale wareroom and use this booth in making their sales, and receiving the assistance of the expert salesmen in their employ. It is the aim of this company to do everything in their power to further the interests of the dealers handling their product, and their recent improvements in their downtown warerooms were made with this end in view.

## EDISONIA SPECIALTIES.

Their Repeating Attachment Now Perfected and Ready for the Market.

A. O. Petit, of the Edison Co., Newark, N. J., in a chat with The World representative last week, said: "After many delays, due to the congested condition of the metal market and lack of skilled labor, we have so perfected our repeating attachment for the Edison standard machine that for perfection in operation and general make-up it is far superior to the first one placed on the market. It possesses all the latter's virtues, but with none of its faults. We request all persons who bought the first attachment to remail same to us at our expense and receive the new type repeater, free of charge."

The Edison Co. are submitting to the trade a number of highly meritorious articles for May. One well deserving mention is the "K. D." (Knock Down) record box for keeping cylinder records on the shelves in order. The point on which these boxes are an improvement on the old style is in the great saving in making shipment. These boxes are shipped in the flat condition, making it possible to express 1,000 in the same space occupied by 50 hitherto. Not only this, but the dealer or jobber can handle a large surplus stock without taking up much room.

The Price Manufacturing Co., Brooklyn, N. Y., have been placed on the suspended list by the National Phonograph Co.

**PERFECT**

**MEDIUM**

**QUIET**

**THE THREE BEST NEEDLES ON THE MARKET TO-DAY.**

WE SHOULD LIKE TO SEND YOU SAMPLES SO THAT YOU CAN JUDGE FOR YOURSELF AS TO WHETHER OUR STATEMENTS ARE CORRECT. WE SELL MILLIONS OF NEEDLES EVERY MONTH AND EVERY CUSTOMER IS SATISFIED. OUR CUSTOMERS RE-ORDER, THIS SHOWS THAT OUR GOODS ARE GIVING SATISFACTION.

**THE PERFECT.**—This is made in three tapers as shown above— $\frac{3}{16}$  taper is the regular standard size needle,  $\frac{2}{16}$  taper is the same size but louder,  $\frac{1}{16}$  taper is very loud.

**THE MEDIUM.**—This is a first class needle for small apartments, gives a rich mellow tone, not as loud as the perfect.

**THE QUIET.**—Just the thing for anyone wishing a low sweet tone.

The Perfect and Medium packed in boxes of 300 and 1000 and in envelopes of 100. The Quiet needle packed in envelopes of 200 only. We will be pleased to quote you prices in quantity.

**AMERICAN TALKING MACHINE COMPANY**

586 FULTON STREET (BROOKLYN), N. Y. CITY

LARGEST TALKING MACHINE HOUSE IN THE CITY.

## THE TRADE IN CALIFORNIA.

The Talking Machine Men of San Francisco Face the Situation Resolutely—Many Big Houses Located in Oakland—Dealers Order Goods Shipped and Work Surrounding Towns While San Francisco Is Being Rebuilt.

(Special to The Talking Machine World.)

San Francisco, Cal., May 5, 1906.

The wiping out of this city by earthquake and fire removes temporarily one of the best distributing points for talking machines and accessories in this country.

It was really surprising how many machines were sold here—an enormous number—and one of the surprising things was that when the people gathered on the streets after the first severe shock had occurred, it seemed as if every person was carrying a talking machine with a big trumpet tucked under their arms. One well-known member of the trade remarked: "I never saw so many talking machines in my life, and I didn't know that there were so many." There were mighty big establishments here, such as Sherman, Clay & Co., Peter Bacigalupi, Kohler & Chase, the Talkophone Co., Byron Mauzy, Columbia Phonograph Co., Clark, Wise & Co., and many others who were conducting steadily growing businesses in talking machines, and, of course, their loss was heavy by the fire, for their establishments were completely wiped out. However, they are undaunted by the losses which they have sustained, and are going right ahead for business. They have wired the manufacturers in the East to make their shipments, which means that they propose to work outside trade while San Francisco is being rebuilt.

Sherman, Clay & Co. have established headquarters at their branch in Oakland, and they have already secured their old site, and their landlord is ready to erect a new steel structure on the old site as high as the building laws will permit.

Kohler & Chase and others are also in Oakland temporarily.

It is proposed in the new building laws of San Francisco that no building shall be erected in height which is more than double the height of the width of the street on which it is erected.

Leander S. Sherman, who was in New York, en route for Europe when the news of the disaster reached him, is now back, and has taken command of the business which will be conducted from Oakland until the new building is erected.

## YOUR FAVORITE SINGER'S Photograph

Mr. Dealer:—

You can make no mistake in carrying enough of these handsomely finished photographs to supply the demand of your customers, they all want them and all the leading jobbers now carry a supply of them. Make up a list of what you want to-day and write your jobber; they can only be had through him.

NOTE: Owing to the great demand there was for these photographs we could not fill all the orders as promptly as we would have liked, but our stock is now complete.

**The Channell Studio**  
FOR PHOTOGRAPHY

486-488 Main St. ORANGE, N. J.

George Q. Chase, of Kohler & Chase, is now in the East to purchase stock of musical instruments which, of course, will include talking machines.

San Francisco at the present time presents a most desolate aspect, as there are nothing but ruins of sky-scrapers in what was once the heart of the city. The flames licked up everything on the inside of these steel structures. There really is a wilderness of ruined brick walls, but the spirit of San Francisco still lives, and business men here talk confidently of the future. And while the people are camping out in Golden Gate Park and receiving their rations regularly there, they all seem optimistic, and there is an evident desire on the part of many to make the lot of their neighbors the easier.

The business men of the stricken city are not wavering in the slightest, and face the future with determination. They are going ahead to build again on the ashes that represent a life's work of many of them.

It is hardly necessary for me to enter into a detailed account of the earthquake and fire, because you are all familiar with that, through the various papers which have reached you, as the papers have all been filled with reports from this city since the great disaster occurred.

I want to say, however, that the talking machine men of this city will be doing business right along, and plenty of it, for while San Francisco may be wiped out there is a rich tributary country which will be successfully worked now that the great city is in ashes. The fact that talking machine men here have wired for large shipments shows more than columns of matter how they feel about the business situation.

Acting upon the rumor generally prevalent that Sherman, Clay & Co. are likely to receive the Northwestern agency for the Victor Talking Machine Co., your correspondent has felt his way in this direction, and while he is not authorized to positively state the confirmation of the firm, he is nevertheless in a position to affirm that the rumor is not without some foundation.

Hitherto the Portland territory for the Victor Talking Machine Co. was in the care of the Eilers Music Co. If a change should be made it will not be done because Eilers was not satisfactory, but simply because Sherman, Clay & Co. have done so much for the Victor Talking Machine that in recognition of their splendid work in behalf of the Victor Co. they will be put in full charge of the Pacific Coast. It would not surprise any of the dealers here if Sherman, Clay & Co. would make a similar proposition to the Victor Talking Machine Co. as they did to Lyon & Healy. No doubt, with the full control of the Portland and Seattle offices and the intermediate branch stores and with the depot in Los Angeles, Sherman, Clay & Co. will control a territory very extensive in scope and most desirable for the proper distribution of records and machines.

For the first time I have seen the talking machine as an assistant to beggars in this city. Hitherto it was either the hand organ or the accordeon which served this purpose of extracting small coins from the passers-by, but the other day I noticed a beggar who used a talking machine for this purpose. This improvement on up-to-date begging is quite refreshing, for the talking machine is at least in tune. It was never safe to come too near the proximity of a hand organ or an accordeon. There were always a few notes missing, or the notes that could be heard were frightfully out of tune. With a talking machine all these disagreeable noises are done away with. It is to be hoped that all beggars will be enabled to use the talking machine. This will be a great relief to the sensitive music lovers.

With a high power "bubble," J. Newcomb Blackman, proprietor of the Blackman Talking Machine Co., New York, speeds from the office to his home in Orange, N. J., and thence wherever fancy dictates. This is J. N. B.'s respite from business cares, for he is a hard worker and the auto gives him an excuse to "sneak" occasionally.

"It's the Easiest Thing in the World" to Sell

## Hohner Harmonicas and Accordeons

A Good Side-Line for Talking Machine Dealers

**Small Stock  
Little Capital Required  
Big Demand  
Big Profits**

**Mr. Talking Machine Dealer:**

You have the facilities, why not handle Harmonicas and Accordeons and make an extra profit? There's a demand for these goods everywhere and it will require but a small investment to get a share of the business. The Hohner Harmonicas have been on the market for half a century during which time they have satisfied the desires of the most critical. The name "Hohner" is now a household word amongst the harmonica and accordeon playing public, and the mere announcement of the fact that you have these goods for sale will be sufficient to bring you numerous inquiries for them.

## A LETTER FROM "MISSOURI."

That Will Interest Sellers and Users of Talking Machines—C. D. Boynton, Gifted With a Fluent Pen, Gives His Impressions.

Lyon & Healy, the well-known dealers in talking machines, phonographs and supplies, Chicago, Ill., are in receipt of the following bona fide letter. The experience that Mr. Boynton so graphically portrays is not an unusual one; in fact, it will appeal to the majority of the trade.

Cape Girardeau, Mo.

Lyon & Healy, Chicago, Ill.

Gentlemen: Enclosed herewith find check in payment of your invoice of talking machine and phonograph records. I found this canned music perfectly fresh and sweet in every way with one exception, which I will briefly note.

I ordered, among others, a vaudeville record called "Fishing," said to be a faithful reproduction of the dulcet tones and synchronous heel-clicks of that popular favorite, Miss Ada Jones, and her sparring partner, Mr. Len Spencer. Judge of my surprise to find that you had substituted a dirge-like gospel hymn entitled "Pass Me Not, O Do Not Pass Me By," the copyright of which expired 217 years ago.

Possibly the erudite young person who boxes up things for you in your shipping department figured it out from the address that I belonged to that species of vertebrates called "Mizzourians"—described in your local papers as consisting principally of a broad-brimmed felt hat and a stogie.

This creature—the creation of your diseased intellects—is represented as passing his entire existence upon the banks of the Chicago Drainage Canal (formerly known as the Mississippi River). And thus the logical conclusion was that, being a Democrat, it was more essential for my welfare to send me something calculated to draw me nearer the throne than to the footlights.

It is true that formerly the literati of Cape Girardeau and the budding young intellects of its State Normal School sought the banks of the

Father of Waters for inspiration and soft drinks. This was before we were brought into such close touch with Chicago through the completion of your drainage canal. Now the entire population throngs the levee daily to view the mighty flood bearing upon its bosom tomato cans, Milwaukee pop bottles, and, ever and anon, a defunct pussy cat.

A scientific cuss from your town with a long aquiline nose having a large intake, said that we did not seem to be more than a few minutes removed from dear old Chicago.

Alas! the City of Chicago may pollute the water supply of Cape Girardeau with impunity. But when you attempt to interfere with our amusements we must draw the line.

Then, again, it might have been a mistake on your part. Mistakes are always liable to happen, as a Chicago young man found out while on a shooting trip down at Seldom Seen, Missouri, this winter. He came to the eating tent late one morning, and upon the wife of the guide asking him what he would have for breakfast, said he would take some pate-de-fois-gras. She called for help, and it took the united efforts of his companions and the neighboring inhabitants to keep the guide from killing him for using such language to a lady.

Another thing, the people of Missouri are suffering from too much substitution at the present time. We have alum in baking powder, preachers in politics and a four-flush reformer as Governor. The whole State is run for the benefit of the writers of fire-alarm articles in the ten-cent monthlies published in New York.

I can see how a druggist could give out morphine for quinine, or how a cross-eyed man could vote the Populist ticket by using the Australian ballot system; but for the life of me I cannot see how you could mistake the lugubriousness of "Pass Me Not, O Do Not Pass Me By" for the capers of Miss Ada Jones and the Hon. Len Spencer.

I invited a friend to hear my new records. He had been a river steamboat captain—that is to say, he was opposed to complicated rhetorical

flourishes, Dutch Trilogies and Dago operatic music of all kinds. He yearned for the merry quip of the blithesome vaudeville sketch. I said: "We will now have a laughable skit called 'Fishing.'" He closed his eyes to recall the rising curtain, the blare of the band and the burst of applause as the headliner soubrette with the wicked wink, the passionate hosiery and the abbreviated skirts emerged from the wings and tripped to the footlights in the most approved ten-twenty-third style. Then came the stentorian tones of Mr. Edison's robust announcer, "Pass Me Not, O Do Not Pass Me By," and then—but Mr. Roosevelt is so particular lately about what goes through the mails that I will not go into details.

The captain left without ceremony, and while I have a record as good as new I have lost a friend. He passes me on the streets without speaking, but he looks at me as if I had sold him one hundred shares at par in the Private Snap Gold Mining and Development Company.

Furthermore, the record in question grates on my feelings, and is still more inappropriate for constant use as the Frisco Railroad has not renewed my pass for 1906 and the hymn seems to give them scriptural authority for withholding the same.

Regretting to be obliged to call your attention to this preserved prayer, I am,

Yours truly,

C. D. BOYNTON.

## EXHIBITED AT ADVERTISERS' SHOW.

The commercial department of the National Phonograph Co. made a very handsome display of the Edison commercial system with office phonographs at the first annual advertising show held at Madison Square Garden, New York, from May 3 to 9.

A professor of stage and fancy dancing during a recent call to The World sanctum, stated that he is using a talking machine with great success instead of a piano for supplying music for his pupils.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS.

(Specially prepared for The Talking Machine World.)  
Washington, D. C., May 8, 1906.

GRAPHOPHONE REPRODUCER. Wm. Hart, Kirksville, Mo. Patent No. 817,062.

This invention relates to reproducers for talking machines; and one of the principal objects of the same is to provide means for preventing the jarring or jolting of the stylus in passing over the sound-grooves of the record. Another object is to provide means for varying the volume or giving greater or less amplitude to the production or record. These and other objects are attained by means of the construction illustrated in the accompanying drawing, in which the figure is a side elevation and partial section of a reproducer made in accordance with the invention.

TALKING MACHINE. Edwin A. Pancoast, Montclair, N. J., assignor of one-third to Ellsworth A. Hawthorne, Springfield, Mass.; one-third to Horace Sheble, Philadelphia, and one-third to John A. Prescott, Montclair, N. J. Patent No. 816,995.

The object of the invention is to improve the construction and increase the efficiency of talking machines of the disc type with respect chiefly to the reproducing feature thereof. The invention is based upon the theory that in the practice of the art on the lines heretofore followed, faulty reproduction results from the failure of the stylus to freely track in the record. In addition to faulty reproduction this results also in unnecessary friction and wear both upon one side of the stylus and upon the corresponding side of the groove in which it operates. In overcoming these defects in pre-existing structures, the inventor has constructed and arranged the support for the reproducing-stylus (such as the sound-box, the tone-arm, or the bracket in which the latter is mounted) as that the same shall operate freely in the record-groove and freely and faithfully follow its sinuosities without the objectionable friction above referred to and with a marked improvement in the quality of the reproduced sounds. The invention is illustrated as follows: Figure 1 is a plan view, partly in section, of a portion of a talking machine, illustrating the invention. Fig. 2 is a plan view of the sound-box, tone-arm, and its support as shown in Fig. 1; and Fig. 3 is a diagrammatic view.

TALKING MACHINE. Henry J. Hagen, assignor to Universal Talking Machine Co., of New York. Patent No. 816,978.

This invention relates to talking machines or sound-reproducing apparatus in general, and as

herein embodied is designed to produce a polyphone or multiple reproducer machine employing, preferably, the disc type of record. Such machines are ordinarily used in concert halls or

for exhibition or like purposes where the volume of sound must be greatly increased in order to be distinctly heard in all parts of an auditorium. The present invention relates particularly to the

mounting and arrangement of the several reproducers relatively to the record, the object being to obtain exact alignment and freedom of movement thereof in order to insure, first, proper engagement of the reproducers with the groove in the record, and, second, the requisite yielding

action of the reproducers in following the undulations of the groove. In the drawings, Figure 1 is a view in plan, illustrating the application of the invention to a well-known form of disc machine. Fig. 2 is a view in elevation thereof. Fig. 3 is a cross-sectional view taken on the line s<sup>3</sup> s<sup>3</sup> of Fig. 1; and Fig. 4 is a detail sectional view taken on the line s<sup>4</sup> s<sup>4</sup> of Fig. 1, showing in dotted lines the guides adjusted and the reproducers elevated thereby above the clear of the record.

SOUND-BOX. Joseph Gaynor, New York, N. Y. Patent No. 816,908.

This invention relates to an improved sound-

box for disc talking machines, for which it is necessary to frequently replace the needle engaging the record. The object of the invention is to provide means whereby the exchange of a new needle for the worn needle may be quickly effected in a simple manner and by a single manipulation.

In the accompanying drawings, Figure 1 is a

front elevation of the improved sound-box; Fig. 2, a side view thereof; Fig. 3, an enlarged front view of the needle-operating mechanism; Fig. 4 a side view of the needle-holder; Fig. 5, a plan, partly in section, thereof; Fig. 6, a bottom view thereof with some of the parts omitted; Fig. 7, a detail of the needle-feeder; Fig. 8, an enlarged section thereof on line 8 8, Fig. 2; Fig. 9, a cross-section through the magazine on line 9 9, Fig. 1.

SOUND-REPRODUCING DEVICE. Henry P. Roberts, New York, N. Y. Patent No. 816,742.

This invention consists of a sound-recording device, and its principal object is to provide such

device or "speaker," as it is commonly called, as will be automatically adjustable for recording upon blank cylinders of different thicknesses. The invention consists in arranging the parts so that the diaphragm, with its recording-stylus, will be moved toward and from the blank cylinder in a position always parallel with itself (so that the stylus will always be presented at the same angle). The invention will best be understood by reference to the accompanying drawings. Figure 1 is a perspective of one form of my invention. Fig. 2 is a vertical section thereof, and Fig. 3 shows a modification.

MAGAZINE PHONOGRAPH. Cyrus C. Shigley, Hart, Mich. Patent No. 816,608.

This invention relates to improvements in magazine phonographs of the class illustrated and described in United States Letters Patent issued to Shigley on May 5, 1903, No. 727,002, and No. 773,164, dated October 25, 1904. The objects are, first, to provide in a magazine phono-

Instantly attached, very rigid, and will hold any size Horn up to 36 inches. Will not injure the Cabinet.

## THE UNIVERSAL HORN CRANE

A Crane equally well adapted for Edison Phonographs and Columbia Graphophones. A novel, effective device for raising or lowering horn. Fully nickel-plated.

## IDEAL FASTENER CO.

Horn Crane Dept., 2722 Third Ave. NEW YORK CITY

graph an improved means by which the record-rolls are automatically brought into position for the reproduction of the records and the reproducer automatically adjusted; second, to provide in a magazine phonograph an improved means by which any desired record may be brought into

position for reproduction or the several records reproduced successively, as desired; third, to provide in a magazine phonograph an improved means by which the reproducing mechanism is automatically thrown into and out of engagement with the record-rolls; fourth, to provide in a magazine phonograph means by which the record magazine and the reproducer mechanism are actuated in proper relation to each other; fifth,

to provide in a magazine phonograph an improved means which may be readily adjusted so that two or more records will be reproduced upon the introduction of a single coin; sixth, to provide in a magazine phonograph means by which the bringing of the reproducer into engagement with the record-roll is timed so that the vibrations due to the adjustment of the magazine have practically ceased; seventh, to provide in a magazine phonograph an improved means for throwing the reproducer into and out of engagement with the record-roll.

A structure embodying the features of this

invention is illustrated in the accompanying drawings. Figure 1 is a side elevation view of my improved phonograph, portions of the casing being broken away and portions being shown in section to show the arrangement of the parts. Fig. 2 is an enlarged detail plan view of the mechanism removed from the casing. Fig. 3 is a detail elevation view looking from the right of Fig. 2. Fig. 4 is a transverse sectional view taken on a line corresponding to line 4-4 of Figs. 2 and 3. Fig. 5 is an enlarged sectional view through the reproducer carriage, showing the means of throwing the reproducer out of engagement with the record-roll and checking the carriage. Fig. 6 is a transverse sectional view through the reproducer carriage, showing the means for driving the same. Fig. 7 is an enlarged detail transverse sectional view through

the casing, showing the mechanism for adjusting the mechanism by hand. Fig. 8 is an enlarged detail sectional view taken on a line corresponding to line 8-8 of Fig. 7. Fig. 9 is a sectional view taken on a line corresponding to line 9-9 of Fig. 8. Fig. 10 is an enlarged detail elevation view showing the arrangement of the driving means for the record-rolls and of the trip-wheel N for throwing the reproducer into engagement with the record-roll and connecting the carriage with the driving shaft. Fig. 11 is an enlarged sectional view through the wheel N for throwing the reproducer into engagement with the record-roll and connecting the carriage with the driving shaft.

SOUND-BOX. Chas. G. Pritchard, Cleveland, O. Patent No. 818,119.

This invention relates to sound-boxes, and has for its object to provide in a simple and inex-

pensive construction means for storing and feeding styluses to the stylus tube or retainer, also means for securely retaining the stylus in place during the operation of the machine, also an improved form of resilient support for the stylus tube or retainer.

In the drawings, Fig. 1 represents a front elevation of a sound-box constructed in accordance with my invention. Fig. 2 represents a side elevation, partially in section, of the device shown in Fig. 1. Fig. 3 represents an enlarged sectional detail showing the construction of the stylus tube or retainer and of the support therefor. Fig. 4 represents an enlarged sectional view on the line 4-4 of Fig. 1, and Fig. 5 represents an enlarged sectional view on the line 5-5 of Fig. 1.

SOUND REPRODUCER OR INTENSIFIER APPLICABLE TO PHONOGRAPHS, GRAMOPHONES, ETC. Chas. A. Parsons, Newcastle-upon-Tyne, Eng. Patent No. 817,868.

Mr. Parsons is aware that mechanically or automatically-operated valves with air or steam—such, for example, as sirens—have been pro-

posed and are in use for the production of sound. He is also aware that Edison proposed the use of an air relay and valve moved by a diaphragm operated by sound, the air from the valve operating a second diaphragm, and this in turn operating a microphone for the purpose of intensifying sound. Also several persons since that date have proposed and described air-relays and similar apparatus for the purpose of intensifying sound, such relays being operated either by a diaphragm moved by the sound-waves or by

phonograph or gramophone records. The present invention relates to the construction and proportioning of such valves or sound reproducers and intensifiers, so as to render them successful and efficient. Referring to the accompanying drawings, Figure 1 is a front elevation showing the general arrangement of my improvements as applied to a gramophone. Fig. 2 is an enlarged elevation of the compressed-air chamber and its connections, the pipe leading to the trumpet being removed, while Fig. 3 is a section on the line

X X, Fig. 2. Fig. 4 is an enlarged elevation of the stationary part of the valve, while Figs. 5 and 6 are respectively an enlarged elevation and sectional end view of the valve-cover. Fig. 7 is

a plan view showing means for connecting the trumpet to the reproducer.

**MOLDING APPARATUS.** Edward L. Aiken, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 817,831.

This invention relates to apparatus for use in the molding of phonograph records, and preferably the molding process described in Patent No. 683,615, granted October 1, 1901, to Walter H. Miller and Jonas W. Aylsworth, wherein a hollow cylindrical mold bearing upon its interior surface a phonographic record in relief is dipped into molten material suitable for forming records, so that the wax or wax-like material congeals and forms a deposit upon the bore of the cylinder, whereupon the mold is then raised out of the tank containing the molten material and the congealed wax is reamed out while still warm. The mold being then chilled, the record contracts and may be drawn out from the mold by a relative longitudinal movement without injury to the record groove. In apparatus used heretofore for supporting the molds and raising and lowering the same it is common to support six mold-carriers side by side above a long tank, so that one operator can attend to the operation of six molds. The operation of such apparatus is as follows: The mold being in position to be lowered into the tank, the mold-carrier is allowed to descend by its own weight, slow and uniform motion being obtained by means of a dash-pot. The operator passes to the next mold, which has been immersed in the molten material the proper length of time to form a record, and raises the same by means of a rope passing over a pulley, the mold-carrier being held in its proper position by a sustaining hook. The operator then removes the mold from the carrier, inserts a fresh mold, and releases the mold-carrier, allowing the same to descend, as before described. He then passes on to the next mold-carrier, which is in its lowered position, and repeats the operations just described. In this manner he finishes up the row of six mold-carriers, and upon his return to the first a sufficient length of time has elapsed for the molding or congealing of the wax in the first mold, and the entire apparatus is in condition for a second cycle of operations exactly similar to the first. This manner of operating a molding apparatus requires a considerable expenditure of labor in raising the mold-carriers, so that after several hours of work operators do not generally work as rapidly as at first and the quantity of work turned out within a given time is diminished, even though the slowing up of the operator may be so slight as not to be noticeable. Furthermore, an indolent operator is at any time able to greatly reduce the number of records which the apparatus is capable of producing within a given time without the slowing up being very apparent. It is the object of this invention to provide an apparatus which will either produce the greatest possible number of records within a given time or else will indicate that it is not being operated at full capacity. Figure 1 is a side elevation, partly in section, of one form of device in which my invention may be embodied; and Fig. 2 is a front elevation, partly in section, of the same.

Fig. 1. Fig. 2. Fig. 3. Fig. 4. Fig. 5. Fig. 6. Fig. 7. Fig. 8. Fig. 9. Fig. 10.

TALKING MACHINE. Minard A. Possons, Cleveland, O. Patent No. 818,975.

This invention relates to improvements in talk-

ing machines and to that class of machines in which a disc record is used and a metal stylus. One object of the invention is to provide an improved means for rotating the stylus while in contact with the record, whereby the reproducing point thereof is kept tapered or sharpened and permitting the same stylus or needle to be used continuously until it is too short for further

present invention involves a specific means for revolving the needle, involves means for automatically feeding the needle longitudinally, and also certain details of construction, neither of which is shown in my prior patent.

**PHONOGRAPH MACHINE.** Benjamin Dubinski, San Antonio, Tex. Patent No. 817,756.

This invention relates to sound-reproducing

use. Another object is to combine with the rotating feature of the stylus or needle an automatic means for feeding the stylus longitudinally as it is worn away.

In the accompanying drawings, Figure 1 is a side elevation of my invention. Fig. 2 is a side elevation looking from the opposite side shown in Fig. 1. Fig. 3 is a top plan view of the mechanism which embodies my invention. Fig. 4 is a longitudinal sectional view taken through the adjustable needle and its co-operating mechanism. Fig. 5 is a sectional view at right angles to Fig. 4. Fig. 6 is an inverted plan view. Fig. 7 is a diagrammatic view showing the operation of the parts. Fig. 8 is an enlarged perspective view of the clamping-jaws for holding the adjustable needle.

United States Patent, No. 741,543, of October 13, 1903, shows and describes a rotatable needle and a certain form of means for rotating it. The

machines, and especially to a machine of that general class in which a plurality of records are presented successively to a single sound-box. The principal object of the invention is to improve and simplify the sound-box-traversing mechanism and insure uniformity of movement of the same at each operation, a further object in this connection being to provide for the movement of the sound-box away from the record at precisely the same point on each record. A further object of the invention is to provide for the returning of the carriage to its initial or starting position after each reproducing operation and to prevent premature return movement by so constructing the mechanism that the sound-box will be moved away from the record before the latter is released and allowed to start on its return movement.

A still further object of the invention is to provide for the accurate adjustment of the position of the sound-box with relation to the record

in order to prevent excessive inward movement of the sound-box and to provide means whereby the sound-box is yieldably held and is free to move outward to a greater or less extent during

the reproducing operation; and another object of the invention is to improve the construction of the record-carriers and to provide means for locking the records from longitudinal movement on the carrying cylinders or mandrels.

In the accompanying drawings, Figure 1 is a front elevation of sufficient of a sound-reproducing machine to illustrate the application of the invention thereto. Fig. 2 is an end view of the same, partly in section, on the line 2 2 of Fig. 1. Fig. 3 is a detail perspective view of a portion of the sound-box-carrying shaft and the lever for rocking the same. Fig. 4 is a detail view, partly in section, of the mechanism for traversing the sound-box carriage during the reproducing operation. Figs. 5 and 6 are similar views of the same mechanism with the parts in different positions. Fig. 7 is a sectional elevation of the same on the line 7 7 of Fig. 6. Fig. 8 is a detail sectional view of a portion of the sound-box carriage and its rock-shaft. Fig. 9 is a transverse sectional view of the same on the line 9 9 of Fig. 8. Fig. 10 is a sectional view of one of the record-carrying mandrels, showing a record in position thereon.

#### A NEW HORN CRANE.

The Ideal Fastener Co., 2722 Third avenue, New York, have recently perfected a new horn crane for use with all horns up to the 36 in. size. According to a member of the trade, "this crane for durability, simplicity and general beauty in construction will win a position all its own, while a number of improvements are attached which will enable it to appeal strongly to the talking machine trade."

#### LOUD TO HANDLE TALKING MACHINES.

Robert L. Loud has purchased the business of P. A. Powers at 615 Main street, Buffalo, N. Y., jobbers of Edison and Victor talking machines and records, and he will launch a complete talking machine department in a short time, conducting both a wholesale and retail business.

#### REPRODUCING COPYRIGHT MUSIC.

**Famous White-Smith Co. Versus Apollo Co. Suit Up in the United States Circuit Court of Appeals—Of Interest to Makers of Talking Machine Records Owing to Judge Hazel's Comments in the Lower Court.**

Record manufacturers are familiar with the celebrated test case regarding the status of the perforated music roll with the copyright statute. The suit was brought by the White-Smith Music Publishing Co., Boston, against the Apollo Co., Chicago. Both complainants and defendants in the action are nominal, in order to finally adjudicate the reproduction of copyright music in connection with a mechanical or automatically playing instrument, in which category the talking machine is placed. Fully two years were consumed in taking testimony before argument was heard by Judge Hazel, United States Circuit Court, equity part, southern district of New York. His decision of June 21, 1905, held that a perforated roll was not a musical composition within the meaning and intent of the Copyright Act. The case was taken to the United States Circuit Court of Appeals for review, and was argued April 26 and 27 by learned counsel on both sides, and their opinion is now awaited with more than ordinary interest by music publishers, perforated roll makers and manufacturers of talking machine records. The latter are concerned with the outcome, particularly as Judge Hazel, in citing precedents, was not only greatly influenced by the decision, but coincided absolutely with the views of Judge Shepard, United States Circuit Court of Appeals (Stern against Rosey), who ruled that records did not infringe the statute, as follows:

"We cannot regard the reproduction, through the agency of a phonograph, of the sounds of musical instruments playing the music composed and published by the complainants, as the copy or publication of the same within the meaning of the act. The ordinary signification of the

words 'copying,' 'publishing,' etc., cannot be stretched to include it. It is not pretended that the markings upon waxed cylinders can be made out by the eye or that they can be utilized in any other way than as parts of the mechanism of the phonograph.

"Conveying no meaning, then, to the eye of even an expert musician and wholly incapable of use save in and as a part of a machine specially adapted to make them give up the records which they contain, these prepared waxed cylinders can neither substitute the copyrighted sheets of music nor serve any purpose which is within their scope. In these respects there would seem to be no substantial difference between them and the metal cylinder of the old and familiar music box and this, though in use at and before the passage of the copyright act, has not been regarded as infringing upon the copyrights of authors and publishers.

"This peculiar use, in either music box or phonograph, instead of copying the music in the sense of the copyright act, to the injury of the publisher, would rather seem analogous to that of one who having purchased the sheet music of the publisher proceeds to perform it continually in public for his own profit."

#### SOME FONOTIPIA LITERATURE.

The Sociata Italiana di Fonotipia of Milan, whose English branch is located in London, have issued a very interesting catalogue containing portraits of the famous artists, both vocal and instrumental, who have made grand opera records for them. There is a biography of each artist, and mention of the special contributions. Sig. Bonci, who will sing in New York next season, is credited with sixteen numbers taken from the leading operas. These are made in duplex concert records, diameter 10¾ inches and 13¾ inches. This catalogue is handsomely printed in colors. The Fonotipia Co. have won the highest reputation in Europe for the remarkable excellence and fine quality of their creations.

## LYNN CARRYING CASES AND PEG BOXES

### The "Lynn" Record Holder FITS THE RECORD

No. 66.

No. 6.

Made of heavy paper board and covered in imitation of black leather. They are strong and compact, with each standard bearing a boldly printed number, which corresponds with index on front of box. The constantly increasing demand for which testifies to their popularity with the trade.

1 dozen size, No. 6; 2 dozen size, No. 66. With felt cushion and each wrapped in manila paper. 1 dozen size, No. B; 2 dozen size, No. BB. Similar to No. 6 and No. 66, but without felt or wrapper.

### OUR PATENTED STANDARD

permits placing a greater number of records in a given space, with less liability of breakage than any other method.

 9313 Flying Arrow (Holzman) "Intermezzo Indienne" by the composer of "Uncle Sammy March," "Blaze Away March" and "Yankee Grit March".....Edison Military Band

## AMERICAN RECORD CO.'S BULLETIN NO. 4.

- AMERICAN SYMPHONY ORCHESTRA.  
 031339 Over the Hot Sands—Arab Patrol.....  
 Dedicated to the Ancient Arabic Order of the Nobles of the Mystic Shrine. Popular interest is manifested in the Shriners just now on account of their annual pilgrimage, which this year is being made to the Shrine in Los Angeles, Cal. As an orchestra selection this number will appeal to all alike, whether a member of the Masonic Order or not. But to those who have "crossed the hot sands" the instinctive impulse, when hearing it, will be to "Hold on to the Rope."  
 REGIMENTAL BAND OF THE REPUBLIC.  
 031332 Boston Commandery March.....  
 031333 Come, Come, Caroline.—A new two-step imported from Paris.  
 031334 Silence and Fun—An eccentric bit of rag-time.  
 031335 Up the Street—One of the favorite marches at Harvard.....  
 AMERICAN SYMPHONY ORCHESTRA.  
 031336 Gambrinus Polka—A fine record of this well-known polka, with effects.....  
 031337 La Solree Waltz.....  
 031338 King Carnival March Orchestra.....  
 CORNET SOLO, ORCH. ACCOM..  
 031340 Riding Through the Glen—Song and dance with clogs.....  
 ARTHUR COLLINS, ORCH. ACCOM..  
 031341 The Ghost of the Banjo Coon.....  
 031342 The Parson and the Turkey.....  
 By the author of the "Preacher and the Bear." A rag-time tale of the Parson's temptation. He was riding to the meeting house on his old mule "Maud." A nice fat turkey crossed the road and Maud stood still to argue with the Parson about it. Their conversation is laughable.  
 031343 What's the Use of Knocking When a Man is Down?.....  
 COLLINS AND HARLAN, ORCH. ACCOM..  
 031344 Little Red Papoose.....  
 031345 Out in an Automobile.....

- BYRON G. HARLAN, ORCH. ACCOM..  
 031346 Keep on the Sunny Side.....  
 HARLAN AND STANLEY.  
 031347 Two Rubes and a Tramp Fiddler.....  
 HOWARD BLACKBURN, ORCH. ACCOM..  
 031348 Absence Makes the Heart Grow Fonder.....  
 FRANK C. STANLEY, ORCH. ACCOM..  
 031349 When the Mocking birds are Singing in the Wildwood.....  
 STANLEY AND BURN, ORCH. ACCOM..  
 031350 The Crucifix—Celebrated anthem by Fanre.....  
 VASSAR GIRLS' QUARTETTE.  
 031351 A Mother's Lullaby—A sweet little cradle song.  
 HARRY TALLY, ORCH. ACCOM..  
 031352 Smile on Me.—Sentimental ballad.....  
 BILLY MURRAY, ORCH. ACCOM..  
 031353 I Want Somebody to Love—A negro love ditty.  
 STEVE PORTER, ORCH. ACCOM..  
 031354 I Wish They'd Do It Now.....  
 LEN SPENCER—DESCRIPTIVE.  
 031355 Arkansas Traveller.....  
 7-INCH RECORDS. 35 CENTS.  
 184 Belle of Chicago—Band.....  
 185 Manhattan Beach March—Band.....  
 186 King Carnival March—Orchestra.....  
 187 Oriental Echoes—Orchestra.....  
 188 The Whistler and His Dog—Joe Belmont. Orch. accom.....  
 189 Is Everybody Happy?.....Collins; Orch. accom..  
 190 Sousa's Band is on Parade To-day.....  
 Collins and Harlan; Orch. accom..  
 191 You're a Grand Old Rag. B. Murray; Orch. accom..  
 192 When Mose with His Nose Leads the Band.....  
 Billy Murray; Orch. accom..  
 193 Good-bye, Sweet Maggie Doyle.....  
 Billy Murray; Orch. accom..  
 194 Let Me White What I Never Dared to Tell.....  
 Byron G. Harlan; Orch. accom..  
 195 In the Golden Autumn Time, My Sweet Elaine.....  
 Quartette

## TO TEACH CORNET BY TALKER.

The Conn Musical Instruction Co., of Elkhart, was incorporated with the Secretary of the State of Indiana last week, with a capital stock of \$5,000 for the purpose of conducting a music school by means of the Crean system of cornet instruction, which utilizes the talking machine. Those interested are: C. G. Conn, Stephen Crean, W. J. Gronert and A. E. Clarke. Messrs. Crean and Clarke are well-known cornetists, who have moved from Chicago and will be in active charge of the enterprise.

## THE MELLO-TONE

Makes a Musical Instrument out of a Talking Machine.

The addition of the Mello-Tone perfects the Disc Talking Machine and makes it an enjoyable Musical Instrument for the home and parlor.

With the use of regular Victor Needles and the Mello-Tone everything that is on a record is brought out clear and distinct, though in soft mellow tones that are simply perfect. The Mello-Tone is easily attached or removed. Nothing to get out of order and will last as long as the machine does.

For the Victor and Zon-o-phone Machines only.

FOR SALE BY ALL LEADING JOBBERS

RETAIL PRICE \$1.50 EACH

## NEW RECORD DISTRIBUTING SYSTEM

Inaugurated for Jobbers by the Columbia Phonograph Co. General—Working Admirably.

Although the new system for the distribution of records to jobbers was outlined to the trade about the first of the year by the Columbia Phonograph Co., General, wholesale department, it did not actually go into effect until the April samples were sent out. The arrangement, which was adopted after mature consideration, is of the clockwork kind, working smoothly and accurately, and giving great satisfaction to the trade. The explanatory circular issued by the company follows:

"A new system for the distribution of records on the monthly supplements has been adopted, and went into effect with the April supplement. It is substantially as follows: 1. On the 1st we sent to each jobber, and to such others as may be indicated by their advance lists of the selections to appear on the supplement, dated two months hence. 2. Sample records will be shipped on orders to be entered by us to each jobber, and to such dealers as may be indicated by them, as follows: Shipment on the 20th to destinations west of the Mississippi River, and on the 25th to destinations east of the Mississippi River. In the case of each jobber who does not request additional samples, the shipment will consist of one record of each selection. This will be increased,

within reasonable limits, upon application, to permit sending samples to dealers. Shipment will be made via express, marked "samples." Orders will be entered for shipment of samples to dealers only after receipt of specific request from jobbers. These requests must be made by letter, and not by formal shipping order. A separate letter must be sent for each dealer. The original letter will suffice for each succeeding month until further notice.

"3. Immediately upon receipt of sample records, each jobber will send their initial order. These orders must (A) be marked below the shipping instructions and above the items, "Initial stock order for April records"; (B) include the quantity of supplemental lists desired; (C) not call for any other records or goods; (D) be absolutely correct in all respects; (E) be in our hands not later than the 14th of the month.

"On orders complying with these conditions, we will make shipment not later than the 10th of the month, to destinations west of the Mississippi River, and on the 15th to destinations east of the Mississippi River.

"4. On initial orders the supplemental lists will be shipped with the records. 5. Records to be placed on retail sale by jobbers the 28th of the month, not before."

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

## BERLINER PATENT AGAIN UPHELD.

Talk-o-Phone Co. and Leeds & Catlin Co. Enjoining Order Stayed Pending Final Hearing.

On April 26 Judge Townsend, of the United States Circuit Court, New York City, granted the motion for a preliminary injunction in the application of the Victor Talking Machine Co., Camden, N. J., against the Talk-o-phone Co., Toledo, O., and the Leeds & Catlin Co., New York. Leave to move for a stay, however, pending an appeal was given the defendants. Argument was heard April 13, as reported in last month's World. The opinion is lengthy, and reviews the contentions of the defense regarding anticipation of the Berliner patent by cited French, German, English, Canadian and Edison inventions, to wit: "A method of reproducing sounds from a record of same, which consists in vibrating a stylus and propelling the same along the record by and in accordance with the said record."

The United States Circuit Court of Appeals, on March 1, sustained the Berliner patent, as concerns the foregoing claim, previously held valid by Judge Hazel in the lower court, in the case of Victor Talking Machine Co. against the American Graphophone Co. This suit was brought on the claim of newly discovered evidence, which Judge Townsend denies. On the point of alleged collusion between the parties in the prior cause, the court says: "The contention that by reason of a certain contract between the parties the prior suit was not \* \* \* a suit in which the Berliner patent in suit \* \* \* was fairly in controversy, is not deserving of notice." He also said, in conclusion: "The defendants have also failed to introduce any new matter which would, in my judgment, have led the courts to reach a different conclusion if it had been before them in the original suit. But if I am mistaken in this view \* \* \* or if a decision of the question raised as to the character and scope of the various patents now introduced for the first time should be postponed until final hearing, yet I am constrained to grant the injunction in order to permit an appeal and a determination of the questions at the earliest possible day."

The motion of the American Graphophone Co. made April 23 to reopen their case with the Victor Co. on the alleged new evidence disclosed in the Talk-o-phone Co.'s suit above, has been withdrawn, as they had forfeited their rights by delaying action too long.

The Newark Horn Crane Co., at 16 New street, are about to place on the market several new stands and cranes for which they make important claims. These devices are fully covered by patents. They will be prepared to make shipments about May 15.

## TRADE NOTES FROM NEWARK, O.

Business Exceptionally Active With Dealers.

(Special to The Talking Machine World.)

Newark, Ohio, May 10, 1906.

The talking machine trade here during the past few months has been exceptionally good. We do not believe that there is another city in the United States that has done the business in the talking machine line that the dealers have in Newark, considering the size of the city. One thing that helps boom the trade is due to the fact that Newark enjoys the distinction of being the only city to have an exclusive wholesale phonograph supply house.

A new retail store was added to the list of retail dealers last week, and from the present prospects it promises to be quite a factor in the trade. Roy Baird and E. H. Metz opened up one of the most complete talking machine parlors in Central Ohio under the name of the American Talking Machine Co., of Newark. They have a very attractive room, about 25 by 50. They use the

Rapke tray system for Edison and the wire racks for the Victor records. They will handle Victor, Edison, Columbia and Zon-o-phone goods.

C. E. Wyeth, the pioneer phono dealer, is making arrangements to enlarge his stock. He carries as large a stock as any of the dealers, and was one of the first exclusive dealers in Newark.

The Union Music Store (R. I. Francis, manager), reports the best trade during the past month they have ever had. They are also looking for new room, and are going to carry a larger stock to take care of their growing trade.

C. K. Patterson, the West End dealer, reports an increasing demand for Edison goods.

The Ball-Fintze Co. are exclusively wholesale, and are not in position to retail, so the dealers naturally feel very kindly toward them. As far as we know they are the only jobbers in the United States who do not have a retail department. A few days ago they received a shipment of 20,000 Edison records by express. This was only one shipment of many. They now carry a stock of over 200,000 Edison records and 50,000 Victor, also Columbia and Zon-o-phone.

## NEW COLUMBIA HEADQUARTERS.

The wholesale headquarters of the Columbia Phonograph Co., at 353 Broadway, have been undergoing extensive alterations. The door has been shifted to the south side of the building, giving them one of the finest show windows on lower Broadway, and the commercial phonograph headquarters has been moved to the front. On the south side, in the space formerly occupied by this department, several large booths for the trial of records and machines have been erected. A very handsome waiting room and parlor is also contemplated, and when the finishing touches get put on it will be one of the show offices of the city. They will conduct a retail business for the benefit of their downtown patrons.

Mr. Chas. C. Collier, late manager of the Musical Echo Company of Philadelphia, is open for an engagement. Have had several years' experience as a salesman and manager and am thoroughly familiar with Edison and Victor goods, and can fill any position in this line of work. Address CHAS. C. COLLIER, 922 Witherspoon Building, Philadelphia, Pa.

## THE FIXED PRICE AT WHICH PATENTED ARTICLES MAY BE SOLD.

Why the Feeling Prevails Among Many That This Ruling Tends to a Restraint of Trade Arises from the Failure to Consider the Basic Principles Upon Which Patent Laws Rest—Some Important Legal Citations of Interest in This Connection—Illuminating Contribution to The Review by Clarence N. Goodwin, of Chicago, Who Is a Well Known Authority.

It has been uniformly held by the United States Courts of Appeal, wherever the question has arisen, that the patentee may fix the price at which articles manufactured under his patent may be sold to the public, and where notice is given, the sale of a patented article at less than the license price is an infringement of the rights of the patentee and may be enjoined. The feeling among the many that these decisions are not sound, but that the right claimed is contrary to public policy as tending to the restraint of trade, arises from a failure to apply to the question the basic principle upon which patent laws rest. Anything in derogation of common right meets with public hostility unless clearly designed for the public good. Special privileges and monopolies given to favored persons have time out of mind aroused public resentment. The patent law secures to the patentee his heirs and assigns for the term of seventeen years the exclusive right to make, use and vend his invention. ("Fed. Statutes," Vol. 5, p. 419, Sec. 4884.) The right given *does* restrain trade, manufacture and use for the period limited, and is a curtailment of common right, but the reason for the law rests on solid grounds of public policy expressed in Article I, Section 8, of the Constitution of the United States, which provides: "The Congress shall have power \* \* \* to promote the progress of science and the useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The purpose of the provision clearly is to encourage invention as a means of accomplishing the declared purpose of the constitution, which is "to promote the general welfare." It is to be noted, moreover, that the right given is for a limited period, and that after its expiration the invention be-

comes common property of the general public.

The statute from which we have quoted above, passed under the constitutional authority just noted, gives to the inventor in broad, simple language the absolute dominion over manufacture, use and sale. At first the inventor made use of only his power to control manufacture, and to this no valid objection was or could be made. More recently he exercised his right to control *use*, and this was opposed, not because it was not clearly given by statute, but because it had not been exercised, at least to any general extent and therefore seemed an innovation, although in reality it was as old as the patent law itself. The right was, of course, sustained by the courts, and still more recently the patentee made use of his third right, viz.: to control the sale of his invention by fixing the price at which articles embodying it should be sold to the public, and this also was for similar reasons opposed, but was necessarily sustained by the courts on the same grounds upon which the right to control manufacture and use had been sustained. The subject is discussed and the authorities reviewed by the United States Circuit Court of Appeals for the Seventh Circuit in the case of *Victor Talking Machine Co., et al. vs. The Fair*, 123 Fed. Rep. 424, in which Mr. Horace Pettit of Philadelphia appeared for the complainant.

It is a mistaken notion that the control of the price at which an article may be sold to the public works a hardship to the public, even for the limited time during which the patent is in force. We have all come to see that railroad rebates and special transportation rates to favored individuals is a matter against public policy for the reason that if certain people are given rates that are unreasonably low this must be equalized by fixing rates for the general public that are un-

reasonably high, and it is simply robbing Peter to pay Paul, who is usually much abler to pay than Peter. In the same way, if a patented article is sold to favored individuals at prices which do not allow a fair percentage of profit, the general public must in the end equalize this by paying more than a fair price.

It will be seen at once that the price which the patentee shall receive is a matter entirely in his own hands by reason of the fact that he has a monopoly of manufacture and so has absolute control of the price that he himself receives from jobber and dealer. In fixing, under his power to control the sale, the price at which goods shall be sold to the public, he is not exercising the power primarily for his own benefit, but for the benefit of the public and the dealer. By fixing a uniform price he protects the dealer against the demoralization of trade which results from price cutting, and so gives him an inducement to handle the patented article. The benefit to the public is no less direct. If the patentee acts intelligently for his own interest he must fix the lowest price possible, for he is fixing the price, not for himself, but for jobber and dealer, and the lower the price the larger the market. In this way a permanent benefit is given the whole public instead of a temporary benefit to favored individuals. This finds a practical illustration in many cases; among others, that of the Victor Talking Machine Co., which, after stamping out price-cutting, reduced the price of its records 40 per cent. These cases are not examples of beneficent generosity, but rather of the exercise of hard business sense in fixing the lowest price consistent with profitable manufacture, and making that price absolutely uniform. The stability assured by price control also permits of a constant improvement in quality, while it is a matter of general comment that the demoralization of price-cutting leads to the substitution of varnish and veneer for quality and worth.

John H. Malin, piano dealer, and Mr. Parker, of Ridgeway, have opened a penny arcade in Lock Haven, Pa.

## THE WORLD'S STANDARD COIN-OPERATED MOVING-PICTURE MACHINE

WE TAKE THIS MEANS of announcing to the trade and to our many customers that we have just made an arrangement with the PATHE CINEMATOGRAPH Co., of Paris and New York, whereby the thousands of attractive subjects in their catalogue are now available for Mutoscope use. Our library, the only one of its kind in existence, is now enriched by hundreds of new pictures made in Paris and our patrons will have the benefit of them without extra expense.

We have an exceptionally attractive proposition just now for **Summer Parks, and Phonograph dealers** who would like a profitable line for the dull Summer months could find nothing more paying or easier to handle than a group of Mutoscopes in a lively resort. Write for terms.

**AMERICAN MUTOSCOPE AND BIOGRAPH CO.**  
11 West 14th Street NEW YORK CITY

## With the Makers, Sellers and Users of Automatic Specialties

### BUSINESS REPORTED EXCELLENT

With Makers and Users of Slot Controlling Devices—Latest Trade News.

Business during the past month has been of a high order, and everywhere is evidenced the greatest prosperity among the manufacturers of slot-controlled devices. Few complaints are heard even among the pessimists in this trade, unless it be for lack of room and a shortage of material. However, as these faults can only be connected with overtaxed plants, there can be but little cause for worry.

As the summer draws nearer, park and pavilion men are on the jump putting things in ship-shape condition for the opening rush. Arcades have become one of the strong attractions, and no money is spared in their construction. Since the enormous earnings of the modern slot parlor became known there has been a perfect rush of investors to this field—in many cases it must be admitted that "stone blind" is the only term applicable, judging from the absurd locations chosen by some of these inexperienced men.

It is all very well for a general store to open on a street where the same regular shoppers pass; but the arcade is different. Transient trade is necessary to its success, for its novelty soon wears on the local public unless by enormous expense a constant and entire change is made, and even then it is risky. We do not want by any means to throw cold water on the arcade business as a highly lucrative investment, but simply to point the necessary features for its success.

Managers of these emporiums of music will find during the hot summer months that the in-

stalling of a soda fountain, ice cream counter, or both, will be a paying side issue.

For some years past through the West what is called "The Touring Car Co." have been doing a large business, but it is only recently that they have endeavored to locate in New York. Wm. A. Brady, of this city, has just opened a place on 14th street, next door to the arcade of the Automatic Vaudeville Co.; another has been opened on West 23d street. As a crowd drawer these establishments are certainly winners, this particular one having, since the first, done a business on the average of \$600 a day. From the street the passerby sees the rear end of one or two (according to the size of the place) touring cars. Conductors in uniform are announcing the different tours to be taken by their respective trains. The unique surrounding, the puffing engine and clanging bell, accompanied by the moving pictures, make the trip one series of startling but pleasurable surprises.

### OF INTEREST TO AUTOMATIC MEN.

(Special to The Talking Machine World.)  
Cincinnati, O., May 7, 1906.

In reply to a question from Mayor Dempsey as to whether saloons with electric pianos are required to pay a concert hall license, City Solicitor Lowman says: "A saloon is a place where intoxicating liquors are sold. The mere fact that an electric piano or graphophone is operated therein does not render the proprietor or lessee of such a place subject to a license as the proprietor or lessee of a concert hall or place of amusement and entertainment or exhibition, but if a portion of the saloon is set apart for the purpose of carrying on an entertainment, whether that entertainment be provided by mechanical

or human means, and the customers of the place are seated for the purpose of seeing and listening to the entertainment provided, the saloon would be converted into a place of amusement or entertainment and its proprietor or lessee would be subject to a license."

### AMERICAN CO.-PATHE DEAL.

The American Mutoscope & Biograph Co. Will Handle Hereafter the Entire Stock of Pathe Cinematograph Films—This Gives Them a Splendid Stock.

The American Mutoscope & Biograph Co., of this city, have just closed a contract with the Pathé Cinematograph Co. of Europe, through their American representative, J. A. Berst, whereby the entire stock of films of the Pathé Co. will be available for use on the Mutoscope machines. This supply of new and attractive pictures, some 3,500 in number, when added to the American company's present list of 10,000 rolls, will give to operators an unexcelled opportunity to choose their selections with a certainty of their novelty and paying qualities. The Mutoscope Co. have won a leading position in the moving picture world. They make the initiative moves, and it is this spirit of untiring energy which has placed them in this enviable position. They are now about to place on the market a new style exhibition machine for arcades, etc., and, according to reports, it will throw everything else in the shade. Orders are already piling in, and it will be a wise move on the part of all people in any way interested to write for particulars at once.

### NICKEL VAUDEVILLE THE RAGE.

Places Springing Up in Every Part of the Country.

Nickel vaudeville is the rage now, and all over town have sprung up the store shows with moving pictures and illustrated songs as the programme for fifteen minutes for five cents. One firm from the West has \$60,000 invested in these affairs, and there are several concerns and individuals with from five to twenty shows each. The larger operators take three and five-year leases on the stores they occupy and spend from \$1,500 to \$2,000 on an attractive front, while others content themselves with hiring a vacant store until some permanent occupant is secured. The songs are sung by some one in the employ of the music publishing firm whose output is used and advertised; the pictures cost from \$30 to \$60 weekly, and with but two or three small salaries the idea is more profitable than the more important theatrical ventures. The 10-cent shows, in which the observer is seated in an automobile or parlor car and views pictures of travel while experiencing a sense of motion, are owned by a single firm, according to a wise writer in The Sun. The others are largely individual enterprises. In good locations from 10,000 to 12,000 persons patronize the place in a week.

### SUPPRESS SLOT MACHINES.

American Makes Retired from Use by Spanish Authorities in Barcelona.

Consul-General Ridgely, of Barcelona, furnishes the following for the information and guidance of American manufacturers of slot machines:

"The new civil governor of Barcelona has just issued an order forbidding the operation of all such machines in this city and province as have gambling devices of any sort attached to them. There were about 80 American machines of this character in operation in Barcelona and about 200 similar ones of Spanish fabrication, all of which have been suppressed. Some of these

**1 CENT IS ALL IT WILL COST YOU** to write for our big **FREE BICYCLE** catalogue showing the most complete line of high-grade **BICYCLES, TIRES and SUNDRIES** at **PRICES** BELOW any other manufacturer or dealer in the world.

**DO NOT BUY A BICYCLE** from anyone, at any price, or on any kind of terms, until you have received our complete **Free Catalogue** illustrating and describing every kind of high-grade and low-grade bicycles, old patterns and latest models, and learn of our remarkable **LOW PRICES** and wonderful new offers made possible by selling from factory direct to rider with no middlemen's profits.

**WE SHIP ON APPROVAL** without a cent deposit. **Pay the Freight** and allow 10 Days Free Trial and make other liberal terms which no other house in the world will do. You will learn everything and get much valuable information by simply writing us a postal.

We need a **Rider Agent** in every town and can offer an opportunity to make money to suitable young men who apply at once.

**\$8.50 PUNCTURE-PROOF TIRES ONLY \$4.80**

Regular Price \$8.50 per pair. To Introduce We Will Sell You a Sample Pair for Only **4.80** (CASH WITH ORDER \$4.55)

**NO MORE TROUBLE FROM PUNCTURES.**

Result of 15 years experience in tire making. No danger from **THORNS, CACTUS, PINS, NAILS, TACKS or GLASS.** Serious punctures, like intentional knife cuts, can be vulcanized like any other tire.

Two Hundred Thousand pairs now in actual use. Over Seventy-five Thousand pairs sold last year.

Notice the thick rubber tread "A" and puncture strips "B" and "D," also rim strip "H" to prevent rim cutting. This tire will outlast any other make—**SOFT, ELASTIC and EASY RIDING.**

**DESCRIPTION:** Made in all sizes. It is lively and easy riding, very durable and lined inside with a special quality of rubber, which never becomes porous and which closes up small punctures without allowing the air to escape. We have hundreds of letters from satisfied customers stating that their tires have only been pumped up once or twice in a whole season. They weigh no more than an ordinary tire, the puncture resisting qualities being given by several layers of thin, specially prepared fabric on the tread. That "Holding Back" sensation commonly felt when riding on asphalt or soft roads is overcome by the patent "Basket Weave" tread which prevents all air from being squeezed out between the tire and the road thus overcoming all suction. The regular price of these tires is \$8.50 per pair, but for advertising purposes we are making a special factory price to the rider of only \$4.80 per pair. All orders shipped same day letter is received. We ship C.O.D. on approval. You do not pay a cent until you have examined and found them strictly as represented.

We will allow a cash discount of 5 percent (thereby making the price \$4.55 per pair) if you send **FULL CASH WITH ORDER** and enclose this advertisement. We will also send one nickel plated brass hand pump and two Sampson metal puncture closers on full paid orders (these metal puncture closers to be used in case of intentional knife cuts or heavy gashes). Tires to be returned at **OUR** expense if for any reason they are not satisfactory on examination.

We are perfectly reliable and money sent to us is as safe as in a bank. Ask your Postmaster, Banker, Express or Freight Agent or the Editor of this paper about us. If you order a pair of these tires, you will find that they will ride easier, run faster, wear better, last longer and look finer than any tire you have ever used or seen at any price. We know that you will be so well pleased that when you want a bicycle you will give us your order. We want you to send us a small trial order at once, hence this remarkable tire offer.

**COASTER-BRAKES,** built-up wheels, saddles, pedals, parts and repairs, and everything in the bicycle line are sold by us at half the usual prices charged by dealers and repair men. Write for our big **SUNDRY** catalogue.

**DO NOT WAIT** but write us a postal today. **DO NOT THINK OF BUYING** a bicycle or a pair of tires from anyone until you know the new and wonderful offers we are making. It only costs a postal to learn everything. Write it **NOW.**

**MEAD CYCLE COMPANY, Dept. "JL" CHICAGO, ILL.**

American machines are of the finest construction and finish, and were sold here at prices ranging from \$50 to \$500."

## TELEPHONE FOR YOUR VEST POCKET.

Pilfers Messages from Wires Three Miles Off  
—Is of the Wireless Variety.

(Special to The Talking Machine World.)

Cottage City, Mass., May 3, 1906.

Charles E. Alden, of New York, who has been pursuing experiments here since last fall in wireless telephoning, has, he says, solved the problem of wireless telephoning, and the result is so simple that it is likely to create a sensation in the business world as well as in scientific circles.

Mr. Alden, while studying the problem, constructed an instrument so small that it can be put into a vest pocket, which, attached to a wireless battery such as is used by the Marconi system, at once begins catching conversations carried along ordinary telephone wires, the distance depending only upon the energy behind the telephones that are sending the messages.

The basis of the system is like that of the wireless telegraph. But a small invention, the details of which he does not make public, completes it. This is called the "new detector." It is this machine, attached to the wireless batteries, which is responsible for the results.

## NEW TALKING FORTUNE TELLER.

"The Gypsy Queen Talking Fortune Teller" is a new and decidedly attractive machine which has recently been placed on the market. Her majesty the queen is a beautiful life-size model with Oriental face. The bust sets in rich draperies and in an arch of colored electric lights. This attractive beauty moves her head, expanding her chest in a natural and graceful manner, while she moves her hands and works the cards as if reading your fortune, speaking with a loud, clear voice. The case is in the shape of a tent covered with bright-colored material and with gold window molding. The general construction of both case and mechanism is strong and durable.

## LUNA PARK HAS SLOT PARLOR.

Luna Park now boasts of one of the best equipped slot parlors in the country. The Rosenfield Manufacturing Co., of this city, obtained the contract, and have fitted it up in the most mod-

ern manner. Among the machines used are the following of their own make: Forty talking machines, 50 of the illustrated song type, and a large variety of strength and muscle-testing devices. They also made a large shipment recently to Australia to the International Exhibition to be held there.

Four-year-old Muriel McCormick received a handsome present on her fourth birthday from her grandfather, John D. Rockefeller, the multi-millionaire. It consisted of a lifelike doll and a check for \$1,000. The doll has a talking machine concealed in its eternal economy and can do marvelous feats; carry on a conversation, or sing the latest song in a real lifelike manner.

Tompkins & Green, of Philadelphia, have added another number to the list of their establishments at Lancaster street, Baltimore. This parlor, while not large, is one of the prettiest in the country, and they cater only to a high class trade.

Is there money in the penny arcade business? Harry Davis, the well-known theatrical man of Pittsburg, evidently thinks so, as he has just opened another new parlor on Smithfield street.

Humbert's new arcade at 404 East Baltimore street, is reported as doing a phenomenal business.

Peerless Piano Player Co.,

2 East 47th St.,

N. Y.

Gentlemen:--

In reference to our PEERLESS ELECTRIC PNEUMATIC PIANO, which was the first in Memphis, we are glad to advise that we are more than pleased with it. We do not see how there could be a better COIN OPERATED PIANO than this one has proved to be.

The PEERLESS was installed in our place on Sept. 16th, '03, and up to this date, a period of four months and fifteen days, it has earned \$490.15, or an average of \$108.92 per month. In addition, it has materially increased our sales by making our place more attractive to our patrons.

Among its many points of merit are-- beautiful quality of tone and durability. Our PIANO has not required any tuning, and it has not cost us a cent for repairs.

Very truly,

*Friedman & Rosenbaum*

Peerless Piano Player Co.,

Roth & Engelhardt, Prop.,

#2 E. 47th St.

New York.

Gentlemen:--

About one year ago we purchased one of your Peerless Nickel in the slot pianos for use in our Penny Arcade. This instrument has been running steadily every day except Sunday from nine o'clock in the morning until ten o'clock at night, a steady run of thirteen hours each day, and it is as good now as when we purchased it. It requires only a few minutes attention each day and we freely give you this endorsement because we consider it positively the best Automatic Piano both Structurally and musically that has ever been produced.

Wishing you success, we are,

Yours truly,  
Treon & Miller.

*J. B. Miller*

# WHISTLIN'

## REGIMENTAL BAND OF THE REPUBLIC.

031356. 'TIL WE MEET AGAIN. Waltz. (Auf Wiedersehn.) Reminiscent of the Vienna Waltzes. A most excellent band record. The counter melody by the tenor, trombone and baritone is clear and distinct. Played slowly for dancing.
031357. KEEP TIME MARCH. One of the most popular summer two-steps. The obligato of orchestra bells in the trio is bright and snappy.

## AMERICAN SYMPHONY ORCHESTRA.

031358. OVER THE WAVES WALTZ. (Sobre las Olas.) The celebrated Spanish waltz by Rosa is a great favorite because of its graceful, swinging rhythm, suggestive of the dreamy glide of the summer sea. Special attention is called to the faithful reproduction of the violin tones.

## MINSTREL RECORDS.

Have you heard the boys whistlin' "I Kind o' Like to Have You Fussin' 'Round?" It's a happy hit from our Minstrel Record A. In the American Records, the minstrel numbers begin with a snappy overture, which is sung by the company to orchestra accompaniment. This is followed by an interchange of wit, and then a long musical selection. Plenty of laughter and applause fill in the interludes. Remember that the American Records are dark blue in color and bear the trade-mark of an Indian. They are regarded by experts as the most perfect yet produced—smoothness, clearness and volume considered. In addition to this the selections are all so exclusive that they are in no danger of becoming commonplace. See that your new ones are blue ones.

## 031359 MINSTREL RECORD A.

This is a typical minstrel first part. It opens with a rollicking overture which is sung by the company—of course with orchestra accompaniment. A burst of applause follows and the "Gentlemen, be seated," marks the beginning of a rapid fire of jokes and repartee. "Arthur," says the interlocutor, "what drove you to drink?" "A cab-man drove me to the last one," is the reply. When the fun quiets down, Mr. Murray is introduced and sings that clever, catchy song, "I Kind o' Like to Have You Fussin' 'Round." The company joins in the chorus. Be certain to add this one to your collection.

031360. MINSTREL RECORD B. Record B introduces a song by Arthur Collins called, "Good-Bye, Mr. Greenback," with quartette chorus.

031361. MINSTREL RECORD C. Record C contains "Dixie Dear," sung by Billy Murray with quartette chorus.

These are certainly the most interesting collection of minstrel records that have been produced for any talking machine in many months. We are confident they will prove to be very attractive.

## 031362 DIXIE DEAR. (Quartette Chorus.)

This is a tuneful, sentimental ballad of the "Nature's dreaming moon's a streaming," sort. The words are sung by the soloist with remarkable distinctness, and the melody is of the "haunting" variety that you find yourself whistling unconsciously. The company joins in the chorus with the plaintive refrain, "Dixie, Don't You Hear Me Calling?" It is good for an encore every time.

031363. NEARER MY GOD TO THEE. With organ accompaniment. This favorite hymn needs no introduction. This record by the male quartette is sweet and clear, with all voices harmonized and well balanced.

## HARRY TALLY. Orchestra Acc.

031364. ANXIOUS. Another of those popular love songs on the order of "Coax Me" and "Teasing."

## HARLAN and STANLEY. Orchestra Acc.

031365. I LONG TO SEE YOU ONCE AGAIN. A touching song of longing for the old farm. The bright June days suggest the shaded porch, the green fields and the daisies.

"For I'm weary of the city's glare,  
Its mingled pride and pain,  
And gladly now I'd leave them all  
To see you once again."

## FRANK STANLEY. Orchestra Acc.

031366. BELLE OF THE BALL. By the author of "After the Ball," one of the most promising ballads of the season. Messrs. Chas. K. Harris & Company, the publishers, predict a phenomenal call for this selection. A waltz song of more than ordinary distinction.

## CURTI'S MEXICAN ORCHESTRA.

We consider that the following list of selections by this famous orchestra, under the leadership of Carlos Curti, should prove to be unusually attractive. The music is essentially Spanish in its rhythm, and the dances are decidedly characteristic. In several of the numbers is introduced a distinctly Mexican instrument called the "Juiro." This consists of a dry gourd, hollow, the outside of which is made rough by being scarred, and it is played as an accompaniment to the Spanish dances. The effect is similar to our sand dance effect. In playing it the Mexicans use a small steel rod to scrape across the scars on the gourd.

031367. EL AMOR ES LA VIDA. (Love is Life.) Mexican Dance.

031368. LA GOLONDRINA. (The Swallow.) This popular number is known everywhere as the Mexican "Home, Sweet Home." In this record it is played as a cornet duet with full orchestra accompaniment.

031369. EL MATADOR. Spanish two-step. In this selection the Mexican "Juiro" is used.

031370. JOTA, LA GRAN VIA. The Spanish Jota Dance may be regarded as typical of all Spanish music. The movement is peculiar and it is always used for accompanying dancing señoritas.

031371. LAS GOLONDRINAS. A beautiful Castilian waltz.

## 7 INCH RECORDS.

196. 'TILL WE MEET AGAIN. Waltz. Band.
197. AFLOAT ON A FIVE DOLLAR NOTE. Collins and Harlan.
198. HONEY, WON'T YOU LOVE ME LIKE YOU USED TO? Collins and Harlan.
199. HERE IT COMES AGAIN. Arthur Collins.
200. DADDY'S LITTLE GIRL. Byron G. Harlan.
201. BUFFALO RAG. Banjo Solo. Vess L. Ossinan.
202. BELLE OF THE BALL. Frank C. Stanley.
203. THE SAME OLD GIRL. Frank C. Stanley.

Price Ten Cents

## PLANS TO DISSEMINATE MUSIC.

**Two Inventors of Muscatine, Ia., Plan to Outdo Dr. Cahill—Will Furnish Continual Performance for Five Cents a Day.**

August Granville, an inventor, and Walter Wolfe, an electrical engineer, of Muscatine, Ia., are the inventors of a system by which music may be disseminated over a territory of any extent for a sum less than five cents per day.

Mr. Granville's invention consists chiefly of an instrument called an ampliphone which can be placed in any house the same as a telephone receiver and when music is desired all that is necessary is to turn on a switch similar to that of an electric light and immediately strains of music will be produced from the horn of the ampliphone.

The music is of the same nature as that which is produced by a phonograph, but by Mr. Granville's system it will be furnished at a cost which is insignificant even compared with the cheapest phonographic machines. The plan at present is to furnish a daily programme showing a continuous entertainment for music lovers during every minute of the year. On this programme there are set pieces every 15 minutes. The intervals between these pieces are filled in with songs, comic speeches and light vaudeville and such encores as may be requested by telephone of the operators in the company's office. The owner of the invention will immediately interest capital in his scheme, and plans are already on foot to install the system extensively all over the country.

If one has company to dinner and desires to dine to the accompaniment of strains of the best compositions and newest songs that are in the city music houses all that is necessary is to call central and ask for a certain selection and turn on the switch. Or make the connection and take whatever comes in the way of music. Selections of all kinds will be furnished from the snappiest ragtime to the heaviest of classical selections, and one may turn on the switch at any selection that is desired, the programme being changed each day.

The inventor makes the claim that for \$1 a month the instruments can be placed in houses at any place along the wires of the company, and for this sum the subscribers may have music at any time they desire it or they may have a continuous concert during every moment in the day and night if they wish.

The ampliphones will be put in at a trifling cost to the company, and the subscriber has no expense except the monthly dues. Several instruments are in operation in Muscatine, and so far they have been highly successful. It remains to be seen whether they will be as successful on a larger scale or not.

## SPAIN INCREASES DUTY ON "TALKERS."

A report from Consul-General Ridgely, of Barcelona, to the Bureau of Manufactures, gives the rates of the new Spanish tariff which goes into effect July 1 with duties payable in gold. Among the various specialties enumerated are that of talking machines which hereafter will pay a duty of \$1.93 per kilogram instead of \$1.30 as at present.

## ALL-THE-VICTOR-RECORDS-CONCERT.

George M. Pitot, manager for the New Haven house of the M. Steinert & Sons' Co., has taken up the practice of announcing a concert on the 28th of each month, at which the entire list of the Victor records for the ensuing month are played. Announcements are made by mail and through the papers of a free concert and the interest awakened is remarkable.

## McGREAL SECURES NEW QUARTERS

**For Their Wholesale Business in the Seeman Building—Retail Will be Continued at Old Store—Steady Expansion With This House.**

(Special to The Talking Machine World.)

Milwaukee, Wis., June 7, 1906.

McGreal Bros., the prominent jobbers of Edison phonographs and Victor talking machines, records and supplies, have been steadily developing their business for the past few years, so much so that larger wholesale quarters became imperative. In order to meet the demands they have just taken a long time lease of the entire fourth floor of the Seeman Building, 317-319 Milwaukee street, which will be devoted exclusively to the wholesale trade, while the retail branch will be attended to as heretofore from their well-equipped quarters at 173 Third street. This division of interests will enable them to cater, with much greater dispatch, to the calls made upon them.

## DEALERS CAN MAKE MONEY.

**That Is All Who Desire to do so if They Handle Talking Machines and Work Up Their Territory—An Illuminating Example.**

A new York City dealer in talking machines, in commenting on this branch of the trade as a means of livelihood, remarked to the World: "I am surprised at the scarcity of talking machine dealers in the small towns in this and adjoining states. I recently had some business in eastern and northern New York and in New England, and made a point of visiting some towns of from 1,500 to 3,000 inhabitants, and was greatly surprised not to find a single person handling these profitable instruments. There were several men dealing in pianos and music in a small way, who, when I suggested that they look into the talking machine trade, said that they could not afford to carry a stock, and 'any way, the people round here won't pay any such fancy prices for talking machines.'

"When I told them what I was doing in New York, they replied: 'New Yorkers have more money to spend than country people.' I proposed to one man, who had a good place for such a business, that I would stock him up on a partnership basis, and sent for two disc and two cylinder machines and about 200 records suitable for the community. The village had about 2,000 population, with an outlying farming population of as many more.

"I advertised a concert in the local hall and packed it to overflowing, and took occasion, between the changing of records, to tell the audience of the wonderful improvements that had been made in talking machines during the past few years, their scope and cost, and finally that my friend would supply any who cared to purchase on 'easy terms.'

"I stayed a week with him, and when I left, between us we had booked orders for twelve disc and fourteen cylinder machines, and over 200 records, with a big bunch of prospects in view. What we did, any live man in a country village of a thousand or more inhabitants can do, and it only requires the same amount of courage as it takes to make a plunge into cold water to be successful. Of course, it is unwise to put in a big stock on the start, particularly of records, as the demands of the community must be carefully studied. My erstwhile partner is now running the business for himself, and has made a good thing of it."

The Crescent Talking Machine Co., who manufacture the Crescent Tone Modulator, have opened offices at 3749 Cottage Grove avenue, Chicago, Ill. The manager is Frederick Sheppy, formerly with Lyon & Healy.

## THE VALUE OF COURTESY.

**As Necessary in the Talking Machine Business as Capital—An Illustration to Prove the Point—Worth Noting by the Unobserving.**

Courtesy is just as necessary in the talking machine business as capital, for without it the business cannot thrive. A friend of The World and an enthusiastic amateur talking machine man, speaking on this subject the other day said:

"I know by actual experience of a case where discourtesy proved a dealer's Waterloo. In one of our large cities there are situated side by side two talking machine stores. I had dropped in at one of these one afternoon to hear some new records, and was waiting my turn in the hearing room, when an old gentleman entered. He was tall and soldierly looking, with a fine face and masses of wavy white hair. The store at the time was in charge of a lad of eighteen, and there were beside myself several customers waiting to purchase supplies. However, without paying the slightest attention to any of us, the young man proceeded to entertain his friends, four in number, with an elaborate account of a burlesque show he had attended the night before.

"I would like to ask a few questions, please, about the flower horn. I understand that it is superior to all others, and if this is the case, I desire to procure one," said the old gentleman.

"Well, there's one; look at it!" shouted the boy over his shoulder, at the same time pointing a finger at a shelf where a row of horns stood. This accomplished, he went on talking to his friends.

"Will you be kind enough to demonstrate its superiority? I do not care to purchase until I have heard it in competition with other horns."

"Ah, say! old man, where you been? Any guy knows that the flower horn has got all others skinned to death."

"Well, I declare, such rudeness I never heard in all my life before," whispered the old gentleman indignantly to me. "Can you direct me to another store, where their salesmen are not young hyenas?" I volunteered to escort him next door, and he accepted my offer gladly. He purchased an expensive horn there and is one of this firm's best customers to-day.

"Others received the same treatment at the hands of this fresh youth, and left in disgust. Eventually the store changed hands, and there is positively no doubt that the discourtesy such as I have described was responsible for the change."

Moral: Be courteous.

## "TALKERS" FOR SUMMER OUTFITS.

**Dealers Should Make an Advertising Point of the Value of Talking Machines as Companions in Vacation Time.**

A Broadway dealer in talking machines is urging on his customers and friends the advisability of including a talking machine and goodly supply of records in their summer outfits. He impresses upon them the fact that there is nothing that will add more to the pleasure of their evenings than listening to the songs of the great artists or dancing on the grass or in the barn to the strains of their favorite orchestra. His efforts have evidently been crowned with success, if the number of dance and other records contracted for is a criterion. Dealers in talking machines may find the summer trade very profitable if they look for this class of trade. Several orders have been already executed for the equipment of some of the largest as well as small private yachts, some of the orders running up to several hundred dollars.

W. E. McArthur has added a phonograph department to his store in Augusta, Me.

# Majestic Self-Playing Piano

*The Pneumatic Coin-operated Piano without a fault. The best Spring and Summer Proposition a Dealer can take hold of*

View of Majestic Pneumatic Self-Playing Piano closed, showing its neat and artistic appearance. It sets close to the wall and all working parts are inside—away from meddlers. The special endless music roll is used and repeats itself automatically at the end of the program. This style is also playable by hand.

## THE SEASON of the MAJESTIC IS NOW!

You are looking around for a big seller that will yield a nice profit and keep things moving Here it is. Pianos in public places often take in \$5.00 to \$10.00 a day.

## THE MAJESTIC SELLS ON SIGHT

to Cafes, Hotels, Restaurants, Soda Fountains, Skating Rinks, and Amusement Parks and Resorts of all kinds, because they all appreciate its value as

## A WONDERFUL MONEY MAKER

Their customers pay for it. The returns are usually far more than is needed to

meet their payments on the instrument. This means satisfaction all around. To illustrate its value to the Cafe, etc.—if the Majestic played only 10 times in 24 hours the Cafe would still be making 36 per cent. on the investment. One of our dealers last season

## SOLD EIGHT MAJESTICS IN ONE MONTH!

another seven—and so it goes. An unique feature of the Majestic is the ability to start it playing from any table in a resort by simply dropping a nickel in the slot at that point. The Majestic has a great many other exclusive features which make it by long odds the best Automatic Piano on the market. These are fully described in our catalogue, which will be furnished on application.

## SPECIAL OFFER OF EXCLUSIVE AGENCY

to those who take up the matter at once. Tear off the coupon in the lower corner and mail it to us to-day for full particulars. Address Dept. D

*Lyon & Healy*

Chicago

View of Majestic Jr. closed and ready for use. This is the smaller size 44-note player without keyboard, and is a perfect model of simplicity. It also uses the endless music roll, and is not affected by climatic changes.

LYON & HEALY: (DEPT. D)  
You may send catalog and full particulars of your special offer of exclusive agency for the MAJESTIC SELF-PLAYING PIANO.

Name.....

City.....

State.....

(Special to The Talking Machine World.)

London, England, June 5, 1906.

Let me at once congratulate the trade, factors and dealers, in America on having such a fine paper as The Talking Machine World to cater to them. It is one of the best I have come across during my twenty years' connection with the press.

\* \* \* \*

The trade in this country just now is most satisfactory. On every hand one hears of remarkable strikes made in the talking machine business during the past three years. One can hardly recognize the vast improvements made. The factors and dealers are just now waking up to the fact that a good business is obtainable both for disc and cylinder machines and records during the summer time, consequently all are very busy just now, and the prospects for the future are bright, rosy and most encouraging. I have recently interviewed the leading firms in London. What struck me mostly was the activity shown in every department of their business. Everywhere signs were clearly shown that the business in England to-day is a vast one. The managing director of the National Phonograph Co., J. H. White, assured me that his firm could not even now fill half the orders on hand. They are doing a splendid business, which is growing daily. From my inquiries the same can be said of the Columbia Co., Gramophone & Typewriter, Limited, Russell Hunting Co., British Zonophone Co., Odeon Co., Edison-Bell, Limited, and the Neophone Co., Limited. All seem well satisfied with their present output, which I am assured is 75 per cent. better than at the same time last year.

\* \* \* \*

S. W. Dixon, the popular and energetic manager of the Gramophone & Typewriter, Limited, is now in South Africa opening up new business of his company. I am told he has met with considerable success. He returns to London at the end of June.

\* \* \* \*

Regret throughout the whole of England has been freely expressed at W. E. Fisher severing his connection with the Columbia Co. The six years he spent in England must have been very pleasant to him, and at the same time very profitable to the Columbia Co. He was respected, admired and beloved by every factor and dealer in England. May he enjoy better health in his own country is the wish of all. He is succeeded here by Joseph P. Bradt, who has been transferred from the Berlin branch of the Columbia Co.

\* \* \* \*

Russell Hunting, one of the greatest experts in recording in the world, is making a bold bid for premier position with the "Sterling" records. To sell 1,000,000 in six months is certainly several steps to that end, and I shall expect his copy to beat all "records" in the near future.

\* \* \* \*

The Pathé Freres, Limited, London, have just put on the market some very fine standard records of violin solos. They are having a huge sale in England, and should command success abroad.

\* \* \* \*

The largest factors in England, Messrs. J. G. Murdock & Co., Limited, are doing a fine trade just now. When I say that they always carry a stock of 300,000 cylinder records and nearly as many disc records, one cannot wonder at their success.

\* \* \* \*

P. Mellerio, who was for some time manager of the Zonophone Co., has been appointed assist-

ant sales manager to the National Phonograph Co. He is one of the best liked men in the business, and I wish him every success.

\* \* \* \*

I notice that the Neophone, Limited, have opened up business in New York. If my friend Cameron does as well in the States as he has done in London his company will have a lot to thank him for. By the way, this company have just introduced a new style of disc record which they claim to be absolutely unparalleled in their perfection. They are called "Neolite," and the 12-inch double-sided sell at 3 shillings each.

\* \* \* \*

Since the reduction in Zonophone records—7-inch, 1 shilling, 10-inch, 2 shillings—and the appointment of Mr. Long to the managership of the company, they have been compelled to take much larger premises in City Road. The sales of their records now are stupendous.

\* \* \* \*

The American Talking Machine Co., of Putney, London, furnish a remarkable instance of holding a very big stock of records. An order was sent them of 1,436 different numbers, and from stock 1,398 titles were filled.

\* \* \* \*

The Edison-Bell Co., of Charing Cross Road, are bringing out a new cylinder 1-shilling record, which they have named "a spun record." The name implies that it is made by "spinning," and a very ingenious process it is, I am told. More anon on this.

\* \* \* \*

A very amusing case was recently heard in the High Courts of Justice here and which occupied several columns in our daily press. A private gentleman, living at one of the popular seaside resorts, brought an action against his next-door neighbor to stop him playing a Monarch gramophone in the small hours of the night. The plaintiff and his wife said that all the defendant repeatedly played was "Bedelia," and the wife's nerves became unstrung by it. The judge ordered the offender to be brought into court. This was done to the delight and amusement of a crowded court. The first record put on was one of Caruso's, and his lordship thought it very good indeed. The machine was then taken into the well of the court, and the offending record, "Bedelia," put on, and the court people laughed and applauded it with glee. Eventually the parties came to terms, and the gramophone once more triumphed.

\* \* \* \*

The "Advertiser's" Berlin correspondent tells a pretty story which is worth "recording" here. A visitor to Berlin lost his pet dog in the city.

After his return home a friend found what he believed to be the missing dog, so he at once rang up the master on the telephone and applied the receiver to the spaniel's ears. As soon as the spaniel heard "his master's voice" he began to bark joyously, and could hardly be got away.

\* \* \* \*

In the House of Commons on April 26 on the vote of £602,700 for salaries and expenses, Colonel Legge moved the reduction of it by £2,000, the sum paid to the Earl of Crewe as Lord President of the Council. The gallant soldier said that "a gramophone could perform at much less cost the duties required of Lord Crewe in the House of Lords. It was stated that Lord Crewe received this £2,000 yearly for answering questions in the Lords, to which Colonel Legge replied, "That the gramophone could do it much better." There's fame and free advertising for you!

\* \* \* \*

Signor Caruso, who is appearing at Covent Garden Opera just now, has made some magnificent records for the Gramophone Co. These remarkable records (12-inch) are all with orchestral accompaniment, and are unquestionably the most lifelike and thrilling reproductions of the great tenor's voice ever made: "M'appari tutt' amor" ("Marta," Flotow), "Che gelida manina" ("La Boheme," Puccini), "Spirito gentil" ("La Favorita," Donizetti), "Salut demeure" ("Faust," Gounod), and the following 10-inch records: "Di quella pira" ("Il Trovatore," Verdi). Price £1 each. In acknowledging them, Signor Caruso wrote the Gramophone Co. as follows: "Gentlemen—I am indeed satisfied with my new records. They are magnificent, and I congratulate you on the great improvement you have made in the last year." The sales in England alone are enormous for these records. They are grand and perfect.

\* \* \* \*

Two record manufacturing companies have just "gone under." They are the Nicole Disc Co. and the Electric Cylinder Co. Both issued cheap records, and "cutting" killed them.

\* \* \* \*

There are signs in England to-day that in the near future the first-class disc machines and records will certainly hold the sway. Every dealer that I have met distinctly asserts that he is doing more in disk making and records to-day than he has ever done since he went into business. This should be "cheery" reading to disc manufacturers. I have always contended this would come about if handled properly.

F. PROCTOR, A. J. I.

### LOUIS F. GEISSLER'S ADDRESS

At the Recent Convention of the National Piano Dealers' Association in Washington Has Been Widely and Favorably Commented on—Value of the One-Price System.

At the recent convention of the National Piano Dealers' Association, held in Washington, D. C., which was one of the most important and best attended gatherings of the music trade of this country that ever assembled, a very interesting paper was read by Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J. His remarks made a profound impression, and there can be no question that they were productive of splendid results. His paper was as follows:

#### LOUIS F. GEISSLER'S PAPER.

Gentlemen:—I have been requested to say something on the relation of the talking machine business to the piano industries. While the compliment paid me by your organization is duly appreciated, a rather embarrassing situation is thrust upon me, because it does not seem possible for one to say anything on the talking machine business to you gentlemen without being compelled to season it so highly with a positive atmosphere of advertisement of the talking machine industry as to be in very poor taste and objectionable.

It has been my privilege to view the music, piano and talking machine business from a great number of viewpoints, and the strongest impression that has been left on my mind (and I think it would be indorsed by such piano houses as have had experience somewhat similar to mine) is the gratitude that the piano and allied musical and talking machine manufacturers and dealers should feel toward the fates that brought the talking machine as a musical instrument into existence. It has been a creator of new business, a producer of profits to all those who have appreciated the commercial value of the article and given it the attention which its merits deserve, such as no other one article invented in recent years has been in our music trade. Its connection is more closely allied with the capital and profits which actuate the piano industry, it is my opinion, than it is to the piano itself, and in this way does the talking machine best illustrate its relation to the piano industries.

It is the honor and pleasure of some of the talking machine companies to be connected with the largest piano, small goods and sheet music houses in the United States. Of late, quite a number of exclusive piano houses have seen fit to add an exclusive talking machine department, thereby indorsing the views of talking machine makers that such an act will prove helpful and not harmful to their piano sales.

The question that is uppermost in the minds of piano merchants not dealing in our line naturally is, "Is it a good or a bad thing for us to take hold of or for others to sell?" Our answer and opinion, based upon an observation of its workings throughout the United States, is decidedly in favor of the talking machine; we have had no concern which has gone into it report to us that it has exercised any influence against piano sales; we have had dozens of concerns report an enormous increase of visitors to their stores since its addition.

Let each man think for himself—would he do without his piano on account of the talking machine? Would he refrain from buying one on account of the talking machine? If his children came to him and showed a preference for the talking machine, would he not absolutely coerce them into the purchase of a piano for the sake of a really fundamental musical education before he would buy his talking machine?

Do children really practice at their piano in one case in five hundred of their own volition? The labor is pressed upon them by their elders who know better. However, is it not a fact that the talking machine, and notably the Victor, with its higher aims at musical—operatic and classical—record production, educates and familiarizes these students with desirable music and selections more in three months of possession

than they would, in all probability, acquire in five years of piano practice?

However all this may be, the talking machine industry has arrived at that stage of strength and rapidly increasing growth that it can no longer be ignored as it was in its infancy by the piano houses. Speaking for my own company, I would state that we are more than desirous of marketing our goods through the medium of the music trades. It has been the persistent policy of such splendid merchants and broad-minded men as our president, Mr. Johnson, and vice-president, Mr. Douglass, since the inception of the company, and the piano trades must not let these opportunities go into the hands of other lines of trade or exclusive talking machine houses, unless they wish to give over to them a constantly growing department.

It has occurred to me, and has been the subject of a few talks with piano dealers and trade paper publishers when at our office, that piano manufacturers and dealers, without reference to whether they wish to handle talking machines or not, should make a study of the methods as practiced by some of the manufacturers of talking machines. For the first time in the history of the trade it has been proven conclusively, and adjudicated favorably in the courts of the country, that a one-price system can be maintained; that arbitrary prices placed upon wares covered by a patent was feasible and legal; that a manufacturer making pianos in Boston may establish a line of prices on his various styles, in consequence of patent rights, that would place his business throughout the country in as stable a condition as is our own; that he may even go further, and properly establish one price for the Eastern States and another for the Middle West, and a third for his Pacific Coast representatives, prices advancing as necessitated by freight rates or increased selling expenses. Our experience proves to our satisfaction that the merchants throughout the country would hail with joy the application of talking machine principles and methods to their piano departments. It is truly interesting, sometimes amusing and always instructive, to go into a large music house where, perhaps, a piano department is run without a one-price system, then to slip down into the sheet music department, provided there is some cut-rate work going on in that city in the music houses, or perhaps in the department stores, and note the somewhat chaotic condition of the minds of the salesmen, and then to pass into the talking machine department, where everything is comparative serenity. To offer a price or a condition other than that authorized by the factory is useless—would not be submitted for consideration to the management; a five-dollar-a-week clerk, if he knows his stock of records and is courteous, is frequently trusted with a \$200 customer, and can make the sale with the same authority as the manager, and, strange to say, dickering and bickering on the part of customers is noticeable by its absence in that department. It is for this condition of affairs injected into the music business by the talking machine department, and which condition we all know was generally absent in the music trade until of recent years, that the piano trade, as before stated, would be under, we might say, obligations to the talking machine people were they to study up the talking machine situation and inculcate some of their merchandizing methods with the dealers. We venture to predict that an improvement and expansion almost inconceivable will continue in the talking machine world; that more beautiful, more extensive and higher priced styles are to come, assuring larger sales, more profitable and easier selling goods for those who can afford to pay for them. The great strides being made in the perfection of sound-recording and class of records, with the bringing together of the world's great artists in concerted work, such as our company has done recently in the voices of Eames, Sembrich, Caruso, Scotti, Plancon and other artists, will force further the talking machine into the homes of the wealthiest and most artistic, and is also an assurance of the future growth and permanency of the talking machine industry.

That the piano will likewise precede the talking machine into the homes of the people, and continue to be its necessary and one of its earliest acquired pieces of furniture, we firmly believe, but the piano trade should realize that the situation and relation of the talking machine to the piano trade is of utmost importance and worthy of their serious and favorable consideration if they would maintain their reputation for enterprise and far-sightedness.

In conclusion, I would state that a visit of inspection from all of the piano trade to the talking machine factories, I know, would be welcomed by them. In no other way can so good an impression of the extent, development, dignity and systematic production and organization of the talking machine business be had, and on behalf of my company, I will extend most heartily a cordial invitation to you all to call.

### MUSICAL ECHO CO.'S NEW QUARTERS.

Will Move July 1st to 1217 Chestnut Street Where They Will Have Handsome Ware-rooms—L. J. Gerson to be Married.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 6, 1906.

The Musical Echo Co., which is now under the able management of Henry D. Marschalk and Louis Jay Gerson, expect to move from their present quarters to 1217 Chestnut street, one block below their present location, which will give them splendid facilities for handling a large wholesale as well as retail business.

It is their intention to give up their present location July 1, at which time they will be in position to open up in their new establishment, which will be one of the handsomest and best equipped talking machine stores in the country. The new establishment is 30 ft. wide and 150 ft. in depth, with a fine basement underneath the entire store. It is the intention to have a series of sound-proof booths along one side of the store, and parallel with these booths will be the auditorium, to be used for concert work as well as a general salesroom. Towards the front, adjoining the window, will be a beautifully finished display room about 25 ft. wide and 50 ft. deep. The rear part, where there is a mezzanine gallery, will be devoted to offices and stock. A front part of the basement, made easily accessible through a wide staircase, will be made into a retail Edison salesroom, and in this room will be kept a retail stock of Edison records, so as to facilitate the handling of customers. The balance of the basement will be devoted to stock and shipping.

An interesting item of news in connection with the Musical Echo Co. is that Mr. Gerson will be married June 16 to Miss Jean Ingelow Macauley. His many friends in the trade will extend to him the heartiest wishes on this important venture on the sea of matrimony.

### MRS. EDISON'S GIFT TO MISSION SOCIETY.

(Special to The Talking Machine World.)

Akron, O., June 6, 1906.

Rev. T. L. Ketman gave an interesting review of the work that has been accomplished by the American Baptist Publication Society, at the First Baptist Church, Sunday evening, and incidentally referred to the assistance that had been given by Mrs. Thomas Edison, of Orange, N. J., who is now visiting in Akron. Mrs. Edison presented the association with mammoth phonographs, which have been installed in the mission cars belonging to the society, and six of which are now in commission.

Among recent incorporations is that of Ashtabula Phonograph Co., Ashtabula, O., with a capital of \$10,000, and that of Dixie Music House, Chicago, Ill., capital \$30,000, to manufacture and deal in musical instruments.

A talking machine department has been added by the Pasadena Music Co., Pasadena, Cal., who will handle Columbia and Victor machines and records.

## 49,000,000 prospective customers

are reached every month by the *Victor* magazine advertising.

Many of these 49,000,000 readers live right in your neighborhood, some of them pass your store frequently, but do they know that you sell those

## Victor Talking Machines and Records

which they see advertised in the leading magazines?

It will pay you to tell them, through advertising in your local newspapers, through circular work, window displays, etc.

After we spend hundreds of thousands of dollars to get people interested, you shouldn't lose a single sale just because people don't know where they can hear the *Victor*.

Let them know you handle the *Victor*, invite them to your store to hear it, and you'll soon find out that you are doing more business and making more money.

The dealers who have the most success with the *Victor* are those who do the most liberal advertising.

### Victor Talking Machine Company

Camden, N. J.

☞ P. S. Try this plan and see if it doesn't pay you: Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.) Artistic Monthly Supplements furnished free for this purpose.

## THE MONTH'S HAPPENINGS IN PHILADELPHIA.

Demand for Records Still Unfilled—Phonograph Burglar Alarm Protective Co. Perhaps—Popular Versus Classical Records Discussed—Activity at Victor Plant in Camden—Politician Utilize "Talker" to Good Purpose—Bellak's Sons to Handle Graphophones—Some Early Talking Machine History from David Keen—Manager Goodwin Goes to Providence—Dealers as a Whole Are Optimistic Over Outlook—Are Talking Machines an Annoyance?

(Special to The Talking Machine World.)

Philadelphia, Pa., June 9, 1906.

Local jobbers of talking machines and records almost unanimously report that trade would be far better if they could only get needed discs and records from the manufacturers. "It is old records we want," is the way one jobber put it; "popular airs and songs which made a hit and which went like hot cakes. Yes, there is always a fair demand for new records as they appear, but the buying public want the old ones first."

Trade has fallen off some, as is usual at this time of year. May was a pretty good month, due in part to orders from pleasure park managers and people going to seaside and mountain. In a few cases jobbers have called in their outside salesmen until fall.

Said Manager F. B. Reinick, of the Western Talking Machine Co., 128 South Ninth street: "We ought to have a good summer's business; the only drawback is our inability to get records demanded."

"Business is keeping up very well," reported Manager J. B. Miller, of the Penn Phonograph Co., South Ninth street. "It would be better if we could get back-number records, the demand for which keeps up remarkably well."

Said Manager H. T. Lewis, of the Lewis Talking Machine Co.: "There is a good demand for June record catalogues. We find trade far better than it was several weeks ago."

R. G. Oellers, trustee, 540 Drexel Building, transacted good business the past month in Talk-o-phone tapering arm machines and outfits. Orders came in mainly by mail, and as prices were under usual figures a good business resulted.

According to William H. Klotz, a musical instrument dealer of Macungie, Pa., a phonograph set off by intruders, recently frightened away burglars who intended to rob his store. Referring to the case a large local jobber said: "Who knows but that we may have a 'Phonograph Burglar Alarm Protective Co.'? The idea is plausible. Equip windows and doors with wires which, when pushed or bent by burglars will set a strong-lunged phonograph going, and I have an idea the ordinary burglar will be glad of a chance to decamp. To enlarge on the idea, let the talking machine be placed before a telephone and automatically connected so that the nearest police station will hear the phonograph yelling 'Stop thief! Police!' Then there would be a chance of capturing the thieves."

The Central Phonograph Co., 251 North Ninth street, owned by L. Futernick & Co., report seasonable business in both Edison and Victor lines.

Walter Eckhardt, manager of the Columbia Graphophone Co.'s wholesale department, visited the branch offices here the past month.

"Classical music records are in limited demand," said a large jobber who has had a num-

ber of years' experience. "I find that people capable of appreciating classical music are rather intolerant of phonograph classics—they want their sonatas and chamber music given forth by pianos and other musical instruments. The average buyer of records wants 'popular' airs and jolly and sentimental songs. With them it is 'skiddoo' to what to them is unintelligible sounds, but which advanced musicians appreciate so well as classical compositions. I question whether talking machines will teach the great masses to appreciate classical pieces; the average person nowadays turns to the talker for recreation and relaxation rather than advanced knowledge of harmony, counterpoint and fugue. 'Wait 'Till the Sun Shines, Nellie,' does them more good than a heavy Bach number; in fact, several of our customers who bought classical records returned them, saying, 'They're broke; no tune to 'em.' So, you see, popular, light, easily understood songs and airs are the records most wanted and where the money is. And it is no reflection whatever on our good common people. They have a right to say what they want and buy it. We can't all be virtuosos—eh?"

A number of jewelers, it is noticed, have added a stock of phonos and records to their regular lines, and it tends to give a higher "tone" to the retail selling end.

Building activity is noticeable in and about the plant of the Victor Talking Machine Co., Camden, N. J. The fifth story addition to the Front street factory will be occupied as the mechanical motor manufactory. Good progress is being made on the new power building on Cooper street, while borers are driving an artesian well at the corner of the two thoroughfares named, the second one sunk by the company. Secretary A. C. Middleton is preparing plans for the new office building which will be erected on Front street, opposite the present main building and adjoining the large factory of the Esterbrook Pen Co. When the laboratory is built on the northwest corner of Cooper and Front streets the Victor folks will occupy three of the four corners—the fourth corner being a part of beautiful Cooper Park.

It turns out that Isaac Seligman, who has property near the Victor Co.'s works, and who has endeavored to prevent the operation of the power plant at night, claiming it annoyed him, asked \$8,000 for his property about a year ago. President Johnson offered him \$6,000, reckoned a very generous price, which Seligman refused. Since then Seligman has evinced a disposition to harass the company. Camden city officials are displeased with him. They realize the Victor Co. have been a benefactor to the city and want the company to have every-reasonable facility to operate its plant freely and fully.

Said Frank Middleton, of the Victor publicity

department: "We ceased night work June 4, having caught up enough with orders to justify that move. Of course, we haven't filled orders, and we are very busy in the packing department; but with one million records on hand we believe we can get along now for a while without running at night. Business on talking machines is very good."

Vice-President Leon F. Douglas was on the sick list the past month, being indisposed and in need of a rest. Mr. Douglas and Mr. Johnson were recent Florida visitors, and had as their guest Mr. Williams, the company's London representative. The three managed to catch two tarpoons while on a fishing trip, but no one knows how the piscatorial spoils were divided.

T. R. Goodwin, who successfully managed the Camden, N. J., Columbia store and salesrooms, left for Providence, R. I., the past month, where he takes charge of the Columbia Co.'s branch on Westminster street. C. E. Gabriel is now acting manager of the Camden branch, and he said of trade conditions: "Business is increasing right along. May was one of our very best months; we opened a large number of new accounts. C. H. Rogers, Columbia representative at Riverside, N. J., continues to add to his stock, and is building up a good, steady trade."

Unable to be in two places at the same time, a shrewd politician at Wilmington, Del., "talked" a red-hot political speech onto several records, and while he personally addressed a large meeting of the faithful in one hall, by talking machine proxy he whooped it up to an enthusiastic assembly in New Castle. When the "gang" applauded telling points, a knowing operator stopped the speech until the applause subsided, after which the address went on. This suggests the thought that "campaign literature" may go out in the future in the form of recorded "gab," a good picture of the "speaker" being displayed to add effect to the absent one's remarks.

The Lewis Talking Machine Co. the past month closed an agreement with J. Bellak's Sons, well-known pian dealers, Chestnut street, whereby that firm now carries a large and complete stock of Columbia graphophones, records, etc. The firm has given over the large fourth floor of its building to the talking machine department and placed a competent manager in charge. The venture has proved successful from the start, due mainly to the aggressive pushitiveness of the firm and good use of printers' ink.

David Keen, manager of the Keen Co., 132 North Eighth street, a recently incorporated concern, which will conduct a wholesale and retail phonograph business, is considered a godfather to the talking machine business in Philadelphia. In 1891 he was quite a phonograph expert, and has been connected with the industry ever since. In the days when the Gramophone Co. went into bankruptcy Mr. Keen purchased some 50,000 records from the receiver of the embarrassed firm. It is phonograph history now that Eldredge Johnson, now president of the Victor Co., purchased the gramophone machine patents and perfected them; and that the Universal Talking Machine Co. bought title to the gramophone records.

(Continued on page 10.)

When Mr. Keen put the records he purchased on sale the Universal Co. secured a writ of injunction stopping said sales. In turn Mr. Keen sued the company for damages, and next fall, in Pennsylvania courts, it is thought rather prolonged litigation between the parties will be decided. Incidentally, involved in the suits is the Auburn (N. Y.) Button Co., which was actual manufacturer of records for the Gramophone Co. Eldredge Johnson, who at the time conducted a first-class machine and foundry plant at Camden, N. J., manufactured the metal appliances, etc., used in gramophones. The suits mentioned have been interesting, if nothing else. Mr. Keen asserts he has papers to show that he purchased title to gramophone records of the receiver of the bankrupt company. The Universal Co., it is stated, claim the same thing.

"I was the first man to open a phonograph salesroom on Eighth street," said Mr. Keen to The World's correspondent, "and I have started several men in business who are now conducting successful salesrooms. I am patentee of the concert tapering arm, which saves scratching records and produces clear tones without vibrations. Demand for these arms continues good." Of present trade conditions, he said: "We have been open only a few weeks, and have found business very satisfactory. We handle Edison, Victor and Zonophone goods. The Talking Machine World has been a most helpful trade journal in advancing the interests of the industry."

An Allentown alderman the past month, under Pennsylvania's blue laws, fined Andrew Ebelhauser \$4 and costs for running a music box on Sunday to the annoyance of his neighbors. Some little time ago a Camden, N. J., man tried to secure an order from the court enjoining a rooster, owned by a neighbor, from crowing at "unholy hours in the morning," in Philadelphia recently a citizen took steps to have a neighbor's talking machine declared a "common nuisance," although so far no final action in the matter has been taken. Referring to the topic: "Phonographs as Disturbances of Others' Comfort and Peace," a large dealer here said: "Talking machines now have an enormous volume of sound, and in proportion to this sound-volume, length of time a machine is run, place where it is operated, and a few other considerations, depends possible future action by municipalities tending to govern and regulate the running of phonographs and automatic players. Talking machine enthusiasts unwittingly do a great deal to make the phonograph unpopular because they operate them night and day and 'at any old hour,' which any sane man must admit is foolish. I judge that in due time regulations more or less strict will apply to talking machines, just as now there are rules in many cities applying to street pianos, music after 10 o'clock p. m., etc. Such regulations will help and not adversely affect sales of phonographs."

A. B. Butcher, a popular Camden, N. J., confectioner, bought a talking machine in order to furnish amusement to patrons of his ice cream parlors. He became very much interested in the industry with the result that he laid in a good stock of records, etc., and is now carrying on a joint business. The "records" attract candy lovers and the candy, contrariwise, leads record buyers to invest in ice cream. Two birds killed with two stones.

Morris Keen, talking machine dealer, at 2443 Kensington avenue, is continuing efforts to improve a talking machine of which he may be said to be the inventor.

Manager Marschalk, of the Musical Echo Co., 1339 Chestnut street, and his assistants, are busy, trade having been seasonably satisfactory. Within a short time the firm will remove to a new location on Chestnut street, near Twelfth, having outgrown the present quarters. It is understood that the company will greatly enlarge its wholesale department and inaugurate other improvements.

Reports from Atlantic City, N. J., show that the talking machine season has already opened up good, dealers having had better business than last year, and it has encouraged them to lay in heavier stocks.

## OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York.

(Special to The Talking Machine World.)

Washington, D. C., June 10, 1906.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

MAY 7.

Adelaide, 7 pkgs., \$195; Antwerp, 3 pkgs., \$270; Berlin, 13 pkgs., \$431; Bombay, 30 pkgs., \$618; Bremen, 1 pkg., \$100; Colon, 14 pkgs., \$351; Cienfuegos, 8 pkgs., \$157; Glasgow, 6 pkgs., \$160; Hamburg, 6 pkgs., \$117; Havana, 14 pkgs., \$660; Havre, 34 pkgs., \$1,506; London, 7 pkgs., \$273; 4 pkgs., \$160; 557 pkgs., \$5,272; Para, 7 pkgs., \$270; Rio de Janeiro, 15 pkgs., \$628; Santiago, 16 pkgs., \$245; St. Petersburg, 60 pkgs., \$2,741; Tampico, 18 pkgs., \$404; Valparaiso, 55 pkgs., \$2,762; Vera Cruz, 8 pkgs., \$188; Vienna, 20 pkgs., \$8,827.

MAY 14.

Acajutla, 3 pkgs., \$142; Berlin, 205 pkgs., \$1,655; Bombay, 14 pkgs., \$226; Brussels, 15 pkgs., \$450; Buenos Ayres, 69 pkgs., \$4,168; Cardiff, 7 pkgs., \$260; Glasgow, 7 pkgs., \$155; Guayaquil, 29 pkgs., \$719; Havana, 9 pkgs., \$558; 10 pkgs., \$236; 10 pkgs., \$312; Havre, 21 pkgs., \$600; Limon, 10 pkgs., \$227; Liverpool, 31 pkgs., \$206; London, 274 pkgs., \$4,286; 23 pkgs., \$2,570; Manchester, 30 pkgs., \$156; Milan, 31 pkgs., \$982; Phillipeville, 1 pkg., \$100; Santo Domingo, 2 pkgs., \$114; Santos, 4 pkgs., \$318; Southampton, 1 pkg., \$306; St. Petersburg, 8 pkgs., \$325; Vera Cruz, 8 pkgs., \$152; Vienna, 26 pkgs., \$849.

MAY 21.

Adelaide, 1,119 pkgs., \$11,392; Barbadoes, 1 pkg., \$110; Berlin, 240 pkgs., \$1,799; Bombay, 19 pkgs., \$312; Buenos Ayres, 60 pkgs., \$4,982; 77 pkgs., \$3,240; Cairo, 3 pkgs., \$560; Calcutta, 8 pkgs., \$250; Callao, 5 pkgs., \$1,120; Colon, 7 pkgs., \$159; Havana, 5 pkgs., \$501; 43 pkgs., \$1,590; Havre, 9 pkgs., \$638; Limon, 6 pkgs., \$121; Liverpool, 46 pkgs., \$325; London, 32 pkgs., \$2,756; 126 pkgs., \$13,001; Manchester, 25 pkgs., \$130; Montevideo, 105 pkgs., \$3,868; Port au Prince, 3

pkgs., \$114; Rio de Janeiro, 3 pkgs., \$186; Santiago, 4 pkgs., \$229; St. Johns, 106 pkgs., \$104; St. Petersburg, 32 pkgs., \$1,238; Sourabaya, 8 pkgs., \$305; Tampico, 31 pkgs., \$866; Vera Cruz, 11 pkgs., \$156; Vienna, 17 pkgs., \$418.

MAY 28.

Berlin, 69 pkgs., \$988; Brussels, 5 pkgs., \$118; Buenos Ayres, 35 pkgs., \$1,378; Callao, 8 pkgs., \$114; Cardenas, 11 pkgs., \$259; Glasgow, 3 pkgs., \$141; Hamburg, 5 pkgs., \$153; Havana, 8 pkgs., \$343; 22 pkgs., \$529; Havre, 22 pkgs., \$702; Limon, 18 pkgs., \$383; Liverpool, 4 pkgs., \$248; 26 pkgs., \$165; London, 4 pkgs., \$209; 20 pkgs., \$660; 701 pkgs., \$5,915; 2 pkgs., \$150; Milan, 6 pkgs., \$137; Para, 18 pkgs., \$455; Rotterdam, 4 pkgs., \$110; Shanghai, 16 pkgs., \$582; Sydney, 85 pkgs., \$3,478; Vera Cruz, 39 pkgs., \$892; Vienna, 12 pkgs., \$100.

JUNE 4.

Bombay, 63 pkgs., \$1,040; Brussels, 3 pkgs., \$107; Colon, 7 pkgs., \$505; Corinto, 20 pkgs., \$624; Demerara, 6 pkgs., \$179; Glasgow, 4 pkgs., \$155; Hamburg, 214 pkgs., \$1,551; Havana, 7 pkgs., \$346; 3 pkgs., \$337; Havre, 8 pkgs., \$604; La Guayra, 15 pkgs., \$639; Liverpool, 55 pkgs., \$1,768; 32 pkgs., \$204; London, 55 pkgs., \$6,511; 597 pkgs., \$9,222; Manaos, 16 pkgs., \$855; Manchester, 30 pkgs., \$158; Oporto, 13 pkgs., \$169; St. Kitts, 4 pkgs., \$167; St. Petersburg, 10 pkgs., \$381; Sydney, 628 pkgs., \$6,127; Tampico, 28 pkgs., \$917; Vera Cruz, 4 pkgs., \$175; Vienna, 7 pkgs., \$133; Yokohama, 59 pkgs., \$5,650.

## LAND-O-PHONE CO. INCORPORATED.

The Land-o-phone Co. was incorporated with the Secretary of State of New York at Albany on Tuesday, May 22, with a capital of \$20,000, for the purpose of manufacturing and dealing in talking machines and supplies. Incorporators: Max and James B. Landay, 145 East 30th street; Bernard Altman, 58 East 91st street, New York.

The talking machine department of the Simpson-Crawford Co., Sixth Ave and 19th St., will hereafter be under the management of J. W. Whitney, who has conducted the piano department of this house with so much success.

## Needles Free To Prove Quality "THE BEST THAT MONEY CAN BUY"

**Playrite**  
TRADE MARK

### NEEDLES

"THE NAME TELLS WHAT THEY DO"

Best for VOLUME, TONE and LASTING QUALITY. PLAY RIGHT from START TO FINISH.

PRESERVE RECORDS and can be used on ANY DISK MACHINES or RECORD. Packed only in RUST PROOF packages of 100.

RETAIL, 10c. per 100; 25c. per 300; 75c. per 1,000.

**Melotone**  
TRADE MARK

### NEEDLES

"GIVE A MELLOW TONE"

REDUCE VOLUME and DON'T SCRATCH! Make records last longer. Each "MELOTONE" NEEDLE can be used SIX times without changing. Can be used on ANY DISK MACHINE OR RECORD. No special attachments needed. PACKED only in RUST PROOF packages of 200. PRICE, 25c. per package.

**FREE Samples of "Playrite" and "Melotone" Needles to Dealers or Jobbers who write on business letter head. Special Prices to Jobbers and Dealers. Write Now.**

## New Style Place Record Brushes.

PATENT ALLOWED.

No. 2 fits Standard or Home.  
No. 3 fits Gem or Triumph,  
on Old or New Style Models.

LIST PRICE, 15c. EACH.

We give DEALERS and JOBBERS a good PROFIT. WRITE for DISCOUNTS and Samples.

The Place Brush clamps under the speaker arm and AUTOMATICALLY removes all dirt or dust from the RECORD, so the sapphire runs in a CLEAN TRACK and insures a GOOD REPRODUCTION.

WE OWN THIS INVENTION and WILL PROSECUTE INFRINGERS.

THE MARVELOUS  
SEARCHLIGHT  
HORN

FOR DESCRIPTION SEE OTHER SIDE

# THE MARVELOUS SEARCHLIGHT HORN

is Designed and Constructed on the Scientific Principle of  
a Searchlight Reflector by a Master of Acoustics

Made of carefully selected rust proof sheet steel, giving uniformity of tone, strengthened by drawn ribs and braised practically into one piece (more metal but properly distributed), thus avoiding rattling or discordant vibrations.

Reproduces louder and clearer than any other horn, and to the full capacity of the record. Artistically decorated.

For all styles cylinder machines, and for all Victor machines, except Victor No. 1, in Five colors.

Gold Striped, Decorated and De Luxe Decorations. Samples on view about July 1st.

## TRADE NOTES FROM ST. LOUIS.

**Santiford's Clever Means of Transmitting "Talker" Music Through His House—Clever Columbia Display—New Concern in Joplin—What News Is Going.**

(Special to The Talking Machine World.)

St. Louis, Mo., June 6, 1906.

General reports in talking machine circles are that the retail trade for the month has been rather quiet, and it is stated that the wholesale business has been about fair.

C. H. Marshall, of Terre Haute, Ind., a well-known talking machine dealer, spent Saturday and Sunday, May 26 and 27, here.

E. S. O'Neill, traveler for the Universal Talking Machine Co., spent several days here recently on his way East from an extensive trip through the South. He reported the talking machine business very good in the territory he covered.

G. A. Klemkauf, of Joplin, Mo., recently closed out his drug business in order to open a fine new talking machine store. He is reported to be the oldest talking machine dealer in Southwest Missouri.

J. Frank Walker, the prominent piano dealer of Joplin, Mo., has re-entered the talking machine business.

The Columbia Phonograph Co. have a very attractive window display of a wax female figure representing Columbia, draped in the national colors, with an eagle mounted by the figure, and the words "Columbia recommends the graphophone."

Miss Myrtle E. Brown, for three years in charge of talking machine and small goods department for Morton Lines, Springfield, Mo., has accepted a position with Eberhardt & Hays, of Wichita, Kan., in same capacity.

J. F. Stantiford, president of the Paine Photo Supply Co., Fort Scott, Kan., dealers in talking machines, has cleverly piped the rooms of his cottage with one pipe and with a patent arrangement, has diverted sound so that a machine played in any part of the house sounds soft and sweet all over the house. Horns projecting from the ceiling pipe give sound clearly in all rooms. He has applied for a patent.

Manager D. S. Ramsdell, vice-president and general manager of the St. Louis Talking Machine Co., returned recently from a three weeks' Eastern trip, during which time he visited the factories. This company have just completed remodeling their place, altering the salesrooms and record rooms, which make a very attractive appearance.

## "NON-ELIGIBLE JOBBERS."

**Discussed by Wm. F. Hunt—Says Jobbers Should Not Sell at Retail—A Strong Pre-sentment in This Connection.**

"While the talking machine dealer has in the past year or more had no small share of trouble in getting needed supplies from the jobber, through the inability of the manufacturer in keeping up with the demand, yet, much of the trouble—in fact, I believe most of it—is caused by dealing with what may be termed 'non-eligible jobbers,'" says Wm. F. Hunt, the well-known dealer of Wanatah, Ind., in a communication to The Talking Machine World.

"Most of the so-called jobbers are no more than large retail dealers. They buy in jobbers' quantities, it is true, but mostly for their own retail trade. Many of them maintain one or a number of retail stores, and when a dealer orders from them he is either put off by a substitution in goods ordered, or else he receives a short shipment and the best selling goods are retained by

them for their retail trade, where they bring them a higher percentage of profit. Some of them even conduct a mail order business, being in direct competition with the dealer that patronizes them. I even know of some who are classed as jobbers and do not sell at wholesale at all. The above kind of jobbers are becoming too thick for the good of the dealer, and not until a more rigid qualification is demanded by the manufacturer will the trouble be remedied. A jobber should not be permitted to sell at retail at all. He may use the excuse that the jobbing profit is too small to permit him to conduct a strictly jobbing business, but if such is the case let him go into the retail business, which he thinks more profitable. If the jobbing business is not a profitable one it is altogether due to the fact that there are an oversupply of people engaged in the business. If the manufacturers want to make every large dealer a jobber, they will certainly ruin the jobbing business. One manufacturing company, however, goes the others one better by having established its own retail stores throughout the country."

## SOME PHONO NOVELTIES.

**The Dictograph an Unique Device—The Multiphone Sends Music Broadcast.**

The Dictograph is a telephone arranged so that the receiver and transmitter are in one part. The advantage of the instrument is that it enables a person speaking 30 feet away from the transmitter to be heard, and it will allow of the hearing of a whisper, six to ten feet away.

The internal mechanism of the instrument is the secret of the inventor, but it lies largely in the receiver, which is constructed without the regular induction coils in use in the ordinary receiver.

The possibilities of this instrument are great, but it is especially adapted for use in place of the ordinary speaking tube, or where a local telephone is needed. It can be very easily used by an employer for dictating to a stenographer, as the latter could take the dictation at any dis-

tance from the speaker, without having to hold a receiver to the ear. It, of course, works both ways, allowing both persons to converse equally well.

The multiphone, which is much similar to the acousticon, was given a practical demonstration in New York on the evening of November 17. At that time a performance of "Veronique," the English opera, was being given in the Broadway Theater. Two doors above and 200 feet away from the stage a number of guests of the company were sitting in a room and enjoying the singing by means of the multiphone.

The room was out of hearing distance from the stage, being shut off by two or three thick walls, which were absolutely sound-proof. In the room was a receiver, fitted with an ordinary metal megaphone horn, through which the whole opera was heard by the company. The monologue and solo parts were as realistic as they would be heard from the stage, but, owing to a slight vibration made by the metal horn, the regular chorus and orchestra parts were vibrated.

## COLUMBIA CO. OPEN IN DES MOINES.

(Special to The Talking Machine World.)

Des Moines, Ia., June 8, 1906.

The Columbia Phonograph Co., which has branches in all the principal cities of the country, has opened a store in this city at 704 West Walnut street, in the room formerly occupied by the Specialty Co. The Des Moines branch will be the headquarters for the company's trade in Iowa, and will carry the largest stock of graphophones and records to be found west of Chicago. Charles Mohn, formerly manager of the Specialty Co., will be the local manager.

J. H. Barney, Jr., & Co. have recently opened a talking machine store at 122 Bellevue avenue, Newport, R. I., where they handle Victor machines and records as well as a full line of cabinets, etc.

A new Columbia phonograph store has been opened in Holyoke, Mass.

## Sell Them

**Every Phonograph dealer should handle I. C. S. Language Outfits.**

**1. Because** there is an immense field for these outfits, comprising people who have become tired of their phonographs as a fad; the wealthier class who would otherwise never think of purchasing a phonograph; and people who would be only too glad to find a profitable as well as a pleasurable use for their Phonographs

**2. Because** the

**I.C.S. LANGUAGE SYSTEM**

WITH  
*Thomas A. Edison*  
**PHONOGRAPH**

is a most meritorious article that would naturally appeal to *any* person. It has been endorsed by the highest educational authorities in the country, by United States Government Officials, and by the French, German, and Spanish embassies.

**3. Because** other dealers have proved by experience that I. C. S. Language Outfits are an assured success as business producers, and that they increase their business from 10 to 30 per cent.

We will send **you** full particulars, literature, and supply you, free of charge, with advertising matter for distribution, if you will write us to-day.

**International Correspondence Schools**

**Box 918, Scranton, Pa.**

## LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled. Factors should write for sample and wholesale prices, to

CABLE ADDRESS, "COLPHO. NEW YORK."

FACTORY AMERICAN GRAPHOPHONE COMPANY  
BRIDGEPORT, CONN.

90-92 WEST BROADWAY,  
NEW YORK CITY,

May 23, 1906.

To the Talking Machine Trade.

Dear Sirs:-

Have you heard of the new and liberal proposition offered by the Columbia Phonograph Company to the jobbing trade?

If not, this letter will interest you.

We recognize the big expense to the jobber incident to procuring business from the trade.

WE ARE NOW PAYING THE WHOLE OR A LARGE PART OF THIS EXPENSE IN ADDITION TO THE REGULAR AND VERY LIBERAL PROFIT HERETOFORE EXTENDED TO THE JOBBER.

Interesting news, isn't it? And this, together with the best product on earth, accounts for the fact that within the last few months over fifty new jobbing contracts have been closed by us.

Unless your territory is already covered, we would be pleased to submit to you in detail this important proposition.

Write us at once to Wholesale Department, 90-92 West Broadway, New York City.

THIS LETTER WAS DICTATED TO THE  
OFFICE GRAPHOPHONE

Very truly yours,

COLUMBIA PHONOGRAPH COMPANY.

## TRADE NOTES FROM BOSTON.

**Business Is "Stringy"**—New England Salesmen's Association to Hold Clambake in August—Eastern Talking Machine Co. Hustling and Getting Results—Langley & Winchell Dissolve Partnership, L. E. Winchell Succeeding—Tray Cases Have the Call at Boston Cycle Co.

(Special to The Talking Machine World.)

Boston, Mass., June 8, 1906.

Some one said the other day that the talking machine business in Boston was "stringy," and that just expressed it. It is good one day, bad the next, and not particularly good on the average, but every one expects to see it brighten up just as soon as the hot weather sets in in good shape and becomes steady and settled. This will give the people an opportunity to get out in their canoes or go away to their summer homes, where they will sit on the verandas every evening and wear out records, thus affording the opportunity to sell them more and thus make business brisk.

The business is peculiar here. In one large house there is hardly a disc record or machine being sold. The customers there don't want them. They demand the cylinders. In another large house, handling the same lines of goods, the demand is all for discs, and no one wants the cylinders. And so it goes.

The chief feature of the trade recently was the meeting of the New England Talking Machine Salesmen's Association, at which it was decided to postpone further meetings until August, and then to hold a clambake at some beach resort, and make of the meeting a general outing. The Association at this meeting did the Boston representative of The Talking Machine World the honor to make him an honorary member. Inquiries are coming in from all over the country as to the nature and objects of this association, and it is possible that other associations will be organized in the large cities where talking machine men are in big numbers.

William B. Beck, principal owner of the Eastern Talking Machine Co., was in Boston this week, and he and Manager Taft, of the local office, left for New York to-night for the purpose of canvassing the talking machine situation for the fall trade. While here Mr. Beck said to The World that he feels that there is a good field for some recognized, capable music teacher to get up a series of music lessons on the phonograph. He thinks that this will be done before very long, and that it will be successful.

Salesman Freeman, of the Eastern Talking Machine Co., has been demonstrating the advantages of the talking machine for the teaching of German, French and Spanish to the teachers at the Charlestown High School, and the prospects are that it will be adopted there. This will mean a big opening for the development of this business among the schools. The presence of the doctors of the country at their convention in Boston has increased the business at the Eastern Talking Machine Co. by one \$250 sale at least. It was of a best machine in the store, with a

large stock of records, for one of the biggest doctors in the city.

At the Columbia Phonograph Co. this month the report is that they are "plugging along." Retail Manager Blakeborough is confident that the dull period just now being experienced will soon pass over, and that there will then come a hustle.

At the Boston Cycle Co. an enormous increase is reported in the trade on their new tray cases, and also on their new carrying case for cylinder records. The omission of the June records has worked wonders in the order list at this place, as at all others, and there is every expectation of being caught up by the time the records are released for shipment.

W. C. Fuhri, manager of the Columbia Phonograph Co. at St. Louis was a visitor to the trade here this week, coming on a brief vacation.

Fred Ellis, one of the bright lights in the talking machine department at M. Steinert & Sons, has been transferred temporarily to the pianola department.

At the office of the New England Talking Machine Co. there is every evidence of a big business being done. The recent changes in the office add greatly to its efficiency and to its good appearance. The force of clerks has been increased, and the list of agents and new stores is rapidly spreading. Manager Connell reports an excellent trade on all Victor goods, particularly upon the highest priced.

Langley & Winchell, of this city, have dissolved, L. E. Winchell succeeding to the business, but preserving the same name. Percy D. Langley, a man of wealth and leisure, resigned from the firm on account of poor health, and after a brief rest will go abroad for an indefinite time. John Magner, their outside salesman, is now recuperating in the country above New York, and will make another connection in the trade later in the season.

## BACIGALUPI'S BRAVE WORDS.

**Suffers Great Loss, But Is Not Disheartened—An Ad. That Shows the Spirit of the Man.**

(Special to The Talking Machine World.)

San Francisco, Cal., June 3, 1906.

The enterprise and indomitable energy of the merchants of this city has worthily become the subject of comment the world over. No better illustration that the old-time spirit of '49 still lives is to be found than, for instance, in the following advertisement which appeared in the local papers from Peter Bacigalupi, the well-known talking machine veteran of this city. It is a heart-to-heart talk which shows the kind of man Mr. Bacigalupi is, and how San Francisco will be built up and become a greater city than ever before. The article referred to is as follows:

STICK TO 'FRISCO.

Peter Bacigalupi, veteran of five fires, including the Baldwin fire, where I lost \$15,000, without one cent of insurance, wish to say that first of all I desire to thank the Supreme Ruler of the universe for having spared the lives of my wife, eight children, and the rest of my relatives, as well as my own; I wish to thank Him for the energy which He has generously bestowed on me. I

have lost everything I possess in my three places of business.

786 Mission street, wholesale and retail Edison phonographs, records, slot machines, automatic pianos, etc. 840 Market street (Phelan Building), Penny Arcade, the first to be established on the Pacific Coast, and retail phonographs.

805 Kearney street, Old Bella Union Theatre and Penny Arcade.

I can positively state that \$150,000 in coin would not place me where I stood on the 17th day of April, 1906.

These three places represented the labor of thirty-eight years of my life, but I am not discouraged and will

STICK TO 'FRISCO.

My rent receipt for my present location is dated April 20, 1906. Can anyone beat that?

I wish to thank my numerous friends in the East and Europe who kept the wires warm asking about my safety. I wish particularly to thank my old friend H. W. Mosier, of Stockton, who came especially from that city and brought me \$500, which came in the nick of time.

Also wish to thank the Elias Marx Music Company of Sacramento for sending me \$500 on account in greenbacks, and even foregoing their cash discount and pre-paying express charges.

Leon F. Douglass, President of the Victor Talking Machine Company, Camden, N. J., who wired me \$2,000 at an Oakland bank. W. E. Gilmore, president of the Edison Phonograph Works; Jones & Lenuck of the White City, Chicago; Howard E. Wuriltzer, of Cincinnati; all of whom wired me goodly sums of money—taking a chance (perhaps) of ever getting it back.

Also wish to thank A. S. Rose, of the Wuriltzer Company, who happened to be here on business and who lost his clothes and working tools; George D. Adams, Eddie Advedi, Charlie Wolff, Frank Green and others, who helped me stand in the bread line and hustle for grub and water four blocks away, so as to feed my numerous family and others who stayed at my house during the historical crisis.

To all my workmen and employees who stand by me in my trouble, and last but not least, to the public, who always favored me in my different business enterprises. I wish to notify the insurance companies with whom I am insured that I have lost my policies that were not hypothecated, and don't know where I am insured, but I have implicit faith in all of them, and my friend, Bill Lange, will do the needful for me.

AM NOW

Associated with the well-known attorney, Martin Stevens, who for the present has given up his profession and joined me in the real estate business to help build up New 'Frisco. He and I will

BUY, SELL OR LEASE ANYTHING.

Have taken my sons in business with me, and the firm, Peter Bacigalupi & Sons, will continue to sell Edison Phonographs, Victors and Zonophones, as well as all the products of the Rudolph Wuriltzer Company of Cincinnati, viz: Piano-Orchestrons, Pianinos, automatic harps, automatic mandolins, a full stock of which is on the way.

I have joined my old Irish friend, Francis Doran, late of the Davy Crockett, in a first-class cigar stand in

BACIGALUPI NEW 'FRISCO MARKET,

South side of Golden Gate avenue, near Buchanan, where I have seventy-five stalls to let to butchers, poultry dealers, delicatessen, vegetables, fruit, etc., at a low rental.

The finest brand new market in New 'Frisco to-day, built by myself. Have also joined my friends of the Buon Gusto Restaurant, and in a few days we will furnish the public with all the old-time "Dago Dinners," cooked by the best of the best cooks, G. C. Andreacci.

I am open for any honest business proposition. If everybody will boost good old 'Frisco as much as I do there will be nothing to it and 'Frisco will rise, Phoenix like, from its ashes.

Peter Bacigalupi, San Francisco, Cal., and the Douglas Phonograph Co. have become Zonophone jobbers.

**"TALKER" AS AN EDUCATOR.**

Mlle. Fidella Inspired by Victor Record—  
Destined to Become a Great Artist.

As an example of what a talking machine is capable of as an educational factor, the case of Mlle. Fidella, a young American girl, may be cited, who learned the value of her splendid soprano voice by teaching herself to sing Gounod's "Ave Maria," as recorded by Mme. A. Michailowa, with violin obligato, from a black label Victor record. Previously Mlle. Fidella, who is the daughter of Meyer Cohen, connected

Mlle. FIDELLA.

with a New York music publishing house, and known as a professional singer with a strong baritone, had been singing the popular ballads of the day in a deep contralto, bordering on a light baritone. Subsequent to following the music of the record the range of her voice expanded to the other extreme, and was of such rare quality, purity and sweetness that it attracted the attention of operatic managers, through whom she was brought to the attention of Jean de Reske, the celebrated tenor, in Paris. She repeated the "Ave" for the great teacher, and he was so pleased that he offered to instruct her gratis, being satisfied with the glory of instructing whom he believes will eventually be one of the great prima donnas of the age. Mlle. Fidella is now in Paris with her mother under the tuition of the enthusiastic master.

**MOVED TO LARGER QUARTERS.**

The Ohio Phonograph Co., of Youngstown, O., have moved to larger quarters at 131 West Commerce street, that city, where they are doing a large wholesale business in all kinds of talking machines and supplies.

**THE WORM HAS TURNED.**

Talking Machine Cleverly Utilized to Lecture  
Recreant Spouse Who Stays Out With "the  
Boys" a Little Too Often.

A lady living on the upper west side, whose husband is "one of the boys," has devised a scheme whereby she may obtain her regular allotment of sleep and still deliver the usual lecture to her recreant spouse upon his return home from the club, or, rather, "important business meeting" in the wee sma' hours. Through the kind aid of electricity, when hubby opens the main door, no matter how stealthily, the wife's voice, with its usual grimness, greets him with scathing rebukes and continues until he reaches the upper floor. It is needless to say a talking machine acts as agent for his better half, being automatically operated. Upon his entering his sleeping apartment another machine is automatically started, and the final or curtain lecture is delivered in full, and with all natural emphasis while his wife serenely enjoys her beauty sleep, knowing the work will be well done. Of course, the lecture may be changed occasionally, but if the lectured party takes after the usual run of married men the mere sound of the angry wife's voice will be sufficient, the sentiments expressed being of secondary importance.

Possibly the talking machine as a means of scolding may find wide favor, and its use extend in time to the schoolroom and nursery.

The up-to-date concern will grasp the opportunity and catalogue a line of lecture records suitable for all occasions.

**PERFECTING THE "TELHARMONIUM."**

Authoritative announcement is made in an article written by T. C. Martin for the Review of Reviews that Dr. Thadeus Cahill, of Holyoke, Mass., has perfected the instrument which he calls the telharmonium (and referred to at length in last month's Talking Machine World) by means of which a performer at a central station may distribute music to thousands of different homes. Mr. Martin says that the instrument may be compared to a pipe organ, only that the performer, instead of playing upon air pipes, plays upon an electric current generated in a large number of small dynamo-electric machines of the alternating type. In each one of these the current surges at a different frequency or rate of speed, thus causing the telephone diaphragm corresponding to it to emit a musical note characteristic of that current. These are so arranged that the player may produce notes through a compass of five octaves. Before the different currents are connected with the receivers, however, they are passed through transformers, or tone-mixers, so that musical chords of great beauty and purity may result. The performer has a receiver close at his side, so that he may tell exactly how he is playing to his unseen audience. The experimental instrument set up by Dr. Cahill is said to have cost \$200,000, and to weigh about 200 tons. The current consumption in a single receiver is about 1-20th of that in a glow lamp.

**BOOMING THE TELEGRAPHONE.**

Stock Being Placed on the Market—Promoters  
Emphasize Its Strong Points.

The Sterling Debenture Corporation, 56 Wall street, New York, are carrying some very attractive ads. in the financial columns of the daily papers in which they are showing the possibilities of the Telegraphone as a money maker. It is pointed out that anyone who invested \$100 in the Bell Telephone stock a few years ago could sell their interests to-day for "nearly a quarter of a million dollars." They emphasize further that another similar opportunity for securing rights in a basic patent is to be had by securing stock in the company organized to exploit the telegraphone. Among the claims put forth are the following: "In the judgment of those best qualified to estimate, the telegraphone has a greater future than the telegraph, the telephone, the typewriter or the phonograph, because it supplants the phonograph; it supplements the telegraph and wireless; it makes a telephone message as tangible and as safe as a written contract."

**EDISON GIVES DAUGHTER \$10,000.**

(Special to The Talking Machine World.)  
Akron, O., June 6, 1906.

Miss Madeline Edison, daughter of Thomas A. Edison, was graduated from Oak Place Private School here to-day. She was one of a class of three. Miss Edison received a check of \$10,000 from her father as a graduation present. She will enter Bryn Mawr College.

**WM. H. MULLER MARRIED.**

The latest wedding coming from the Universal Talking Machine Manufacturing Co.'s office force is that of William H. Müller, head of the shipping department, and Miss Louise Shad, expert tester of records. The ceremony took place in old St. Mark's P. E. Church, New York, April 18, the friends of bride and groom filling the edifice. John ("Casey") Kaiser was head usher, and not a hitch occurred in the arrangements. The reception in the evening, followed by a dinner, was a crush, but fine in all the appointments. Among numerous presents received was a handsome silver service, with the company's hearty good wishes for the couple's future happiness and prosperity. Niagara Falls claimed them for the honeymoon. With so many examples before him, the president of the company might follow suit.

**A NEW YORK VISITOR.**

J. F. Schmelzer, of the J. F. Schmelzer Arms Co., Kansas City, Mo., was in New York recently, stocking up on goods. Among his selections was a line of the Douglas Co.'s record cabinets.

R. C. Avery, Redlands, Cal., has sold his talking machine and music box departments to A. J. Caldwell.

## NOTES FROM ERIN'S GREEN ISLE.

Edison Grand Opera Records Liked—Complete Opera of "Trovatore" in Great Demand—Reduced Price of Zonophone Records—Break in Price Agreements—Osborne's Display at Agricultural Fair Attracted Attention.

(Special to The Talking Machine World.)

Belfast, Ireland, May 29, 1906.

Nothing worthy of being chronicled has transpired during past month in connection with business in talking machines here, save perhaps the new grand opera records issued by the National Phonograph Co., Limited, of London, which have been unanimously voted "the most perfect reproductions of classical music ever rendered by any 'talker.'" These records are double the price of the ordinary Edison "gold-moulded," but no one regrets paying 3 shillings for a record which is "the acme of realism," and almost human in the rendition of vocal selections.

That most enterprising firm—the Gramophone & Typewriter, Limited, London—are to be congratulated on having placed upon the market, and in so doing have acquired the well deserved encomiums of their clientele, the complete opera of Il Trovatore comprised of 15 ten-inch and 5 twelve-inch records. The set sells at £5 12s. 6d. Customers who have already purchased full sets from T. Edens Osborne (the well-known Belfast jobber) have expressed a strong desire for similar issues of "Faust" and other operas.

G. F. Long, the new manager of the British Zonophone Co., visited Mr. Osborne during last week of April and reported—what was generally anticipated—an abnormal sale of Zonophone records consequent upon the reduction in price which has been in operation since March 1. The advance June samples fetched with him to Ireland were much admired, not only by his factor, but by several dealers who met at Scottish Provident Buildings to hear them and order their supplies.

Feeling convinced that the "price maintenance" agreements which have hitherto existed between the principal manufacturers and their factors and dealers have meant the salvation of the talking machine industry, it was an unpleasant surprise to hear of an English firm having recently advised all their factors that their agreements would be canceled on 1st inst. They thus leave their goods open to the suicidal "price-cutting" of irresponsible traders, and the intelligence of your readers need not be insulted by enlarging upon the disastrous results which have invariably accrued from the keen competition of dealers who are unrestrained by such agreements, and whose profit was ultimately reduced to an unremunerative margin.

During present month (23d to 25th, inclusive), there was a special exhibition of talking machines at the spring show of the Royal Ulster Agricultural Association, Balmoral, Belfast. The genuine Edison phonograph, also the gramophone, were specially in evidence. The free musical concerts organized by Mr. T. Edens Osborne, an exhibitor, were much appreciated by the many thousand visitors who attend this "show" annually.

The popularity of the Sterling phonograph records is being well sustained.

## STILL SERVES ITS PURPOSE.

"Say," complained the stranger, stepping in-

side the drug store, "this weighing machine in front of your place is out of order."

"I've got nothing to do with that machine," said the sleepy-looking young man behind the counter.

"Well, somebody ought to have."

"What's the matter with it, anyway?"

"It won't work. I dropped a penny into it just now, and the indicator didn't fly around. I shook the machine, and jumped up and down on the platform, and still it didn't move. It's a swindle."

"It took the penny, all right, didn't it?"

"Certainly."

"Well, that's what it's for. There's nothing the matter with the machine, sir."

## AN ENTHUSIASTIC "TALKER" MAN

Expatriates on Beauty of Some Records by Leading Artists and Gives an Imitation of a Band on a German Steamer on a Sunday Morning.

Business had quieted down when The World dropped in to see a small goods importer on lower Broadway, New York, recently. The party is an expert harmonica player, and in that capacity has a natural fondness for music in all forms, but is a shrewd, cool mercantile proposition nevertheless. A talking machine occupied a prominent position in the place, but it was supposed the line was being handled, and it was a sample. As The World was about leaving the proprietor remarked: "Do you want to hear something nice? Just wait. I've got some new talking machine records. I don't handle the goods—have it for my own amusement. This is a Caruso and Scotti duet."

The record proved to be Verdi's "La Floreza et Destino," and the brilliancy and clearness, yet soft tones, delighted the small audience. "Now, listen to this, Gounod's 'Ave Maria,' with violin obligato (who is it sung by, Mr. Butler?). Oh, yes, by Mme. Michailowa, and she's a dandy. I've run this record at least 400 times, and it is a little scratchy; but you will catch the effect all right." The record was faulty, to be sure, but was enjoyed, nevertheless. This was followed by Gounod's "Lullaby-Jocelyn," rendered by the same talented Russian soprano.

"Say," ejaculated the enthusiastic small goods man, "have you ever crossed the ocean in a German steamer, and heard the band at sunrise every Sunday morning, start in at one end of the deck and slowly march the length of the ship, playing the 'Land of the Lord'? Well, if you have you will never forget it as long as you live. As you lie in your berth, rolling with the ship, and half sick, when you hear this old German hymn sounding way off in the distance by a full military band, you will think of everything that ever has happened in your life. If you have forgotten what day it is you will know it is Sunday when you hear this music. Here, I'll stuff my handkerchief in the throat of the horn so as to reproduce the effect of distance." It did most effectually, the melody being soft and low. When the obstruction was removed the full strains of the band came out strong, and as the delighted amateur demonstrator declared, it was indeed realistic.

"You see," concluded the pleased importer, "some of my records have been played over a couple of hundred times, and it is really surprising how well they wear, and what a vast amount of entertainment can be had with a talking machine, which has been improved wonderfully—almost perfect in sound reproduction. That Caruso and Scotti record simply makes your hair stand, it is so clear and smooth."

A report that the Pathe Freres records are to be marketed in this country by a New York jobber is said to be well founded. Perhaps Promoter Miller could say a few words in explanation.

J. O. Prescott, of the American Record Co., returned home from his Mystic Shriner trip to Los Angeles, Cal., Monday. He had a great time, which will be duly recorded later.

## Do you have to jog your jobber?

When you give a jobber your order it shouldn't be necessary for you to keep after him to get your goods. If you have the right kind of a jobber there won't be the least delay in filling your orders.

You can't afford to dilly-dally with a jobber and keep your customers on edge for their goods. Not every customer will stand that kind of treatment, and those who do won't put up with it any longer than they can help.

There's an easy way to get over these troublesome delays. Give us your orders for Victor Talking Machines and Records, trumpet horns, fibre cases, English needles and accessories and specialties of every sort. You won't need to tell us to hurry—we always do that; send out goods the same day the orders are received.

That is the kind of service you always get here, and it puts you in position to take the best care of your customers and saves you a lot of needless worry.

Try us on your next rush and see how we handle it. In the meantime you'd better get our latest catalogue—write for it to-day.

## PROTESTS AGAINST PROVISIONS OF NEW COPYRIGHT BILL.

**Lively Times at Public Hearing—Sousa Scores Talking Machines—Herbert's Plea—Petit Wants Protection of Records—Paul H. Cromelin's Exhaustive Presentation of Facts in Opposition. Other Gentlemen Heard—No Bill This Session—Hearing Adjourned Until Next Winter.**

(Special to the Talking Machine World.)

Washington, D. C., June 11, 1906.

Well, the hearings before the joint patent committees of the Senate and House, which commenced Wednesday last, are over; but while they were going on the sessions were of the liveliest description. When the last speaker got through Saturday, Chairman Currier, of the House, announced that the committee would resume hearings at the next session of Congress, possibly shortly after convening in December, and therefore the bill goes over. In the meantime persons interested may file briefs. Senator Kirtledge and Representative Currier presided turn and turn about.

### BUTTERS-IN AT PRELIMINARY CONFERENCE.

As previously noticed, the Librarian of Congress, Herbert Putnam, as chairman, was present at the conference Tuesday of organized bodies interested in the copyright bill and attending the previous meetings in New York and Washington, strictly executive sessions, and at which no members of the press reporting the proceedings were permitted. Much to the consternation of the accredited delegates a number of others, particularly concerned in the pending legislation as affecting the talking machine industry, "buted in" unceremoniously, a proceeding that disconcerted the Librarian not a little, so much so, in fact, that he is reported as stating, in the open meeting, that perhaps his presence as a Government official might be misconstrued as favoring certain interests against others, an attitude he wholly disclaimed. S. T. Cameron, counsel of the Columbia Phonograph Co., general; G. Howlett Davis, Orange, N. J., inventor of automatic players, and Alfred H. Walker, counsel for the Connorized Music Co., New York, were denied the privilege of speaking. Any rate, the conference broke up in confusion, without accomplishing anything.

The following day the public hearing before the Congressional committees was on, the first speaker being John Philip Sousa, the bandmaster and composer, who seemed to take great delight in "pounding" the talking machine people. Prefacing his remarks about the primary rights of composers to their music against the depredations of anybody and everybody, without their consent, for any purpose whatsoever. He said:

### SOUSA SCORES TALKING MACHINES.

"When the copyright law was made the perforated rolls and phonograph records were not known, and there was no provision made to protect us in that direction. Since then they have come out with the claim that the record of sound is not a notation. When these perforated roll companies and these phonograph companies take my property and put it on their records they take something that I am interested in and give me no interest in it. When they make money out of my pieces I want a share of it."

"They are protected in their inventions?" asked Representative Sulzer. Receiving an affirmative reply, Mr. Sulzer then asked: "And why should you not be protected in yours?" to which Sousa replied:

"That is my claim. They have to buy the brass they make their funnels out of and have to buy the wood they make the box out of, and the composition for the disc, and that disc as it stands, without the composition of an American composer on it, isn't worth a penny. Put the composition of an American composer on it and it is worth \$1.50. What makes the difference? The stuff that we write."

Representative Bonyng asked: "What is the protection given you by the terms of this bill?" to which Sousa replied:

"In any production of our music by any of these mechanical instruments they must pay us money for the use of them."

"The publishers of this country make a contract with the composers and agree to give them a sum outright, or a royalty on sales, and follow it out, and we demand and get for each and every copy that is published and sent out, and the notation that they publish, a certain return."

"These companies having records and talking machines take this one copy and produce 1,000. If they could buy my one copy and sell that one copy I would have no objection, but they take my copy and make another copy and give me nothing for it. They could not do it if I did not write it, and I want to be paid for it."

Representative Webb asked whether records already

made would be affected. Chairman Currier replied that it would not affect existing copyrights, whereupon Sousa interjected: "No. That is a sop; I am willing to do it for the sake of the future, but I think it is wrong. That is a sop to them, and hereafter they will make money, after this law passes, on the pieces that I made before the law went into effect."

"So," interpolated Representative Chaney, "we will still get 'El Capitan' from the phonographs in various places?" to which Sousa retorted: "Yes, sir, and I get nothing for it, and I am the man that made 'El Capitan.'"

Following the laughter which greeted this asseveration, Sousa said: "When I was a boy—I was born in this town of Washington—in front of every house in the summer evenings you would find young people singing the songs of the day—or the old songs. To-day you hear these infernal machines going, night and morning. (Laughter.) We will not have a vocal cord left. (Laughter.) On this river, the Potomac, when I was a young man, we went out boating, and we heard nothing but songs everywhere. Last summer, or the summer before last, I was in one of the biggest yacht harbors of the world outside of Long Island, and I did not hear a voice the whole summer. Every yacht had a gramophone, a phonograph, an aeolian or something of the kind."

Chairman Currier suggested that "A great many people in the country get a great deal of comfort out of the phonograph."

"But," replied Sousa, "they get much more out of the human voice, and I will tell you why. The phonograph companies know that. They pay Caruso \$3,000 to make a record in their machine, because they get the human voice, and they pay a cornet player \$4 to blow one of his blasts in it. (Laughter.) That is the difference."

### VICTOR HERBERT'S DISPASSIONATE PLEA.

Victor Herbert, the composer, who followed pleaded the cause of "many hundreds of poor fellows who have not been able to come here—possibly because they have not got the price—brother composers, whose names figure on the advertisements of the companies who make perforated rolls and talking machines, etc., and who have never received a cent, just as is the case with Mr. Sousa and myself. I do not see how they can deny that they sell their rolls on their machines because they are reproducing a part of our brain, of our genius, or whatever it might be. They pay, as Mr. Sousa said, the singer who sings a song into their machines. They pay Mr. Caruso \$3,000 for each song, for each record. He might be singing Mr. Sousa's song, or my song, and the composer would not receive a cent. I say that that cannot be just. It is as plain a question as it could be, to my mind. Morally, there is only one side to it, and I hope you will see it and recommend the necessary law."

### VICTOR TALKING MACHINE CO. FAVORS BILL.

Horace Pettit, of the Victor Talking Machine Co., Philadelphia, counsel, said:

"It may be that Mr. Herbert and Mr. Sousa have been somewhat abused by the talking machine companies. They certainly do not show it in their appearance. Our position is equitable and just. We believe they should have protection, the author and composer, and we are willing, so far as the provisions of this act are concerned, that they should be passed substantially on the line indicated, so that the composer should have the protection against his music being copied on a record or talking machine, with the understanding, however, that it does not apply to existing copyrights."

"If the talking machine companies are under this act to pay royalties to authors and composers on copyrighted compositions, the talking machine companies should also be protected, in this way: We might pay Mr. Sousa or Mr. Herbert or Mr. Caruso, or any of the opera singers, \$1,000 for making a record. It is perfectly possible within the known arts for that record, after we make it, to be reproduced by a mere copper plating process by somebody else, and copied, so that we would pay \$1,000 or so and have no protection against the person manufacturing a duplicate of it. Therefore, for that and other reasons, the talking machine manufacturers should be entitled to register the particular records which they prepare, and that provision should be included in the act."

### VICE-PRESIDENT CROMELIN'S STATEMENT.

Saturday Paul H. Cromelin, vice-president of the Columbia Phonograph Co., General, submitted the following statement:

*Mr. Chairman and Gentlemen of the Committee on Patents:*

On behalf of the American Graphophone Co. and its sole sales agent, the Columbia Phonograph Co. and the Columbia Phonograph Co., General, and in the name of all music-loving American citizens, I respectfully protest against the passage of those provisions of the new copyright bill by which the benefit of copyright protec-

tion is extended in such a manner as to include under the word "writings," in that section of the Constitution of the United States, which protects authors in their writings, sound productions or reproductions by means of mechanical devices or appliances; and in particular, insofar as they may be intended or construed to cover or relate to reproductions obtained by means of talking machine records used in connection with the talking machine itself in whatever form so ever, whether such so-called records or phonograms are produced in the form of cylinders, discs or by means of electrically induced currents, as at present used in the so-called Poulsen telegraphophone, or in any future form or development of the talking machine art; and in opposing same I respectfully submit the following:

1. That such legislation, insofar as relates to talking machine sound records of any kind, is unconstitutional.

2. That such legislation is against public policy and directly contrary to the spirit and progress of the times.

3. That the demand for such legislation does not emanate from the great mass of the musical authors (composers) nor is it demanded by them, but has been conceived by certain selfish individuals who have conspired together to form and create a giant monopoly the like of which the world has never known.

4. That such legislation, instead of being in the interest of the composers, is directly opposed to their real interest, which is to have the greatest possible distribution of such records as the best means for creating a demand for their sheet music. Abundant evidence can be furnished to sustain this fact, if desired.

5. That it is class legislation in the interests of the few as opposed to the enjoyment and happiness of the masses, whose rights seem singularly to have been lost sight of during its preparation, and that it is particularly vicious when the rights of the poor are considered.

6. That insofar as the question of copyright must of necessity be viewed from an international standpoint, it is inadmissible, intolerable and distinctly un-American to grant to foreign composers the right to extract toll from every American citizen where such right is denied such foreigner at home in his own land and is denied to American composers abroad.

7. That such legislation is directly contrary to all recent legislation in foreign countries, the most important of which is the act of the German Reichstag in 1901, by which perfect freedom is given to use copyrighted works for the purpose of mechanical reproduction; and by which, by reason of an interpretation announced by the Minister of Justice prior to the third reading of the bill, the right to record and reproduce any copyrighted work by means of talking machines was expressly permitted.

8. That such legislation is contrary to the spirit of the Berne convention.

9. That in no other country is substantially like protection afforded to composers, but that such protection has been universally denied.

10. That even if such rights were granted under the laws of Great Britain, Germany, France, Belgium and other countries, which they are not, it is beyond the power of Congress to do other than that which it is expressly permitted to do under our constitution, and the only way by which such a law could be enacted which would stand the test of the highest court of judicial inquiry, would be by an amendment to the Constitution of the United States. On behalf of my company, I protest against being plunged into such long and expensive litigation as would necessarily ensue if this bill becomes a law, unless the necessity for same is urgent, and this I emphatically deny.

### QUOTES WHITE-SMITH-APOLLO CO. DECISION.

11. That such legislation is in direct contradiction to all recent judicial decisions on the subject, in this country and abroad, in which no common law rights and statutory rights of authors and composers, their scope, extent, intent and purpose have been discussed, the most noted of which in this country is the decision handed down by the United States Circuit Court of Appeals, second circuit, during the last week of May in the Aeolian suit (sic) against the Apollo Co., Judges Lacombe, Townsend and Cox, without a dissenting voice, approving and upholding Judge Hazel's opinion rendered in the court below, sustained the contention that the perforated roll is not a violation of the copyright; and it is interesting to note that the court went out of its way to say: "The argument, that because the roll is a notation or record of the music, it is, therefore, a copy, would apply to the discs of the phonograph, \* \* \* which it must be admitted is not a copy of the sheet music."

In England, the same position is taken by the courts, the leading and most recent case being Boosey against Wright, in which it was clearly held that the perforated roll was not a violation of the copyright. In Belgium by decree of the fourth chamber of the Court of Appeals in Brussels, December 29, 1905, in the case of Massenet and Puccini, composers, against Ullman & Co. and Patbé Freres, manufacturers, in dismissing the suit with costs the court uses this language: "Considering that these apparatus cannot be assimilated to the writing, or the notation by an engraving process, of the thoughts of the author; that they have nothing in common with the conventional signs permitting reading or comprehension of the work to which they are related; that isolated from the rest of the instrument they remain in the actual state of human knowledge, without any utility, that they are only one organ of an instrument of execution." In dismissing the suit the court referred to a similar suit decided in France, February 1, 1905, in which it was confirmed that "airs of music on discs or cylinders of graphophones and gramophones do not constitute a musical infringement."

12. That the proposed legislation, insofar as relates to mechanical reproduction, is in furtherance of the plans of certain powerful interests to obtain a monopoly—an international monopoly—on mechanical reproducing instruments of all kinds, and that they are attempting to use the legislative branch of the government to secure that which has been repeatedly denied them by the courts.

13. That it is vicious, in that if it is permitted to be enacted into law it will deal a death blow to great American industries which have been extended until now they embrace all countries, and in which millions of dollars have been invested in the knowledge that the right to manufacture was perfectly lawful, and that the right to continue such manufacture unhampered by such ruinous conditions as would be imposed by this bill could never be brought into question or become the subject of serious dispute.

14. That if this bill becomes a law it will seriously affect the rights of thousands upon thousands of American citizens who have purchased these machines and who have the right to expect to continue to use them and to obtain the supplies for them at reasonable prices instead of paying tribute to a grasping monopoly.

PAYS HIS RESPECTS TO THE MUSIC PUBLISHERS.

15. And, finally, that whatever arguments may be advanced by the Association of Music Publishers, and their allied interests whose representatives framed the bill, and who, if it becomes a law, will get 99 per cent. of the benefits to be derived therefrom, regarding other methods of mechanically producing sound, on the theory that same constitutes a method or system of notation, and under certain conditions may be read by persons skilled in the art, under no circumstances can such arguments be truthfully advanced to cover or apply to talking machine sound records. No man living has ever been able to take a talking machine record and by examining it microscopically or otherwise state what said record contains. In this sense it stands pre-eminently in a class by itself, being unlike perforated rolls, cylinders containing pins, metal sheets, and other devices used in mechanical production of sound, and is not to be likened in any manner to the raised characters used in methods of printing for the blind, where, by the sense of touch, the meaning is intended to be conveyed. The sense of touch is a mere incident due to the disability of the blind, but it is perfectly feasible and easy to read the characters with the eye, and they are very properly the subject of the copyright. I repeat that to attempt to decipher a phonograph disc is in the very nature of the proceeding "reaching for the impossible." How utterly preposterous and ridiculous it would be to pass this act in its present shape, which would make a telegraphic sound record, which is something that cannot even be seen—the record itself being caused by the magnetization and demagnetization of an electric current on an ordinary piece of wire or a cylinder or disc of steel—a copyright violation.

In conclusion, I respectfully ask that the bill be amended, and will, if your honorable committee desires, submit at the proper time such suggestions for alterations and amendments as may seem proper and appropriate.

Subsequently Mr. Cromelin said to The World: "In the first place, the bill is killed for this session. I really believe it was the intention to rush it through, but when we made it plain the measure had been framed up at star chamber sessions of certain interests to the exclusion of representatives from industries—such as the talking machine trade—in which millions of dollars are invested, I feel confident that the section dealing with the reproduction of compositions will be eliminated. At any rate, should the bill pass it would place all the talking machine companies on an equal footing, a by no means unimportant matter."

WRITINGS AND WORKS CONSTITUTIONALLY CONSIDERED.

S. T. Cameron, of counsel for the Columbia Phonograph Co., General, said that Messrs. Sousa and Herbert did not represent the majority of composers and therefore their presentations were in a sense ex parte. Another thing, these players or mechanical instruments were gradually working into a trust, and the passage of the law would consummate the combination. Mr. Cameron further contended that the United States constitution says that the authors had exclusive rights to their writings; but the bill proposed to change this to works. It would be much better to leave the interpretation of the law, in its broadest and widest sense, to the courts, for the enactment of the bill would certainly be a flagrant violation of the constitution.

S. O. Edmonds, attorney of the American Record Co., was given leave to file his remarks, owing to the consumption of his allotted time by others; and the Librarian of Congress gave him the assurance they would be placed before the Congressional committee as a part of the official hearing at this session, and be printed as such in the official proceedings.

In addition to the foregoing names mentioned as representing the talking machine interests, besides R. L. Thomae, with the Victor Talking Machine Co., being present, were a number of music publishers from New York, Chicago and elsewhere; Nathan Burkan, New York, and A. R. Serven, their counsel; manufacturers of automatic players, perforated music rolls, etc., of Chicago, New York, Detroit, etc., and counsel, besides fully 60 or 70 people in other lines of business interested in different sections of the bill.

Feeling that the hearings on the bill could not be concluded at time designated Senator Kittredge submitted a resolution to hold sessions of the patent committees during recess of Congress.

## THE NEW COPYRIGHT BILL.

Sections of the Proposed New Measure Which Effect the Talking Machine Trade.

A bill to amend and consolidate the acts respecting copyright, introduced simultaneously in the Senate (by Senator Kittredge) and the House (by Representative Currier) on May 31, contains a few sections of vital interest to the talking machine trade. It is the first attempt made to apply legal restrictions in the manufacture of sound records, and consequently has aroused bitter opposition to its enactment, as the hearings on the measure before the joint Congressional Committees on Patents, June 7, 8 and 9, reported on another page of The World, would seem to indicate. The portions of the bill affecting the trade follow:

Section 1. Paragraph g, says: "That the copyright secured by this act shall include the sole and exclusive right to make, sell, distribute, or let for hire any device, contrivance, or appliance especially adapted in any manner whatsoever to reproduce to the ear the whole or any material part of any work published and copyrighted after this act shall have gone into effect, or by means of any such device or appliance publicly to reproduce to the ear the whole or any material part of such work."

Sec. 2. That the copyright provided by this act shall extend to and protect all the copyrightable component parts of the work copyrighted, any and all reproductions or copies thereof, in whatever form, style, or size, and all matter reproduced therein in which copyright is already subsisting, but without extending the duration of such copyright.

Sec. 4. That the works for which copyright may be secured under this act shall include all the works of an author.

Sec. 23. That if any person shall infringe the copyright in any work protected under the copyright laws of the United States by doing of causing to be done, without the consent of the copyright proprietor first obtained in writing, any act the exclusive right to do or authorize which is by such laws reserved to such proprietor, such person shall be liable:

(a) To an injunction restraining such infringement;

(b) To pay to the copyright proprietor such damages as the copyright proprietor may have suffered, due to the infringement, as well as all the profits which the infringer may have made from such infringement, and in proving profits the plaintiff shall be required to prove sales only, and defendant shall be required to prove every element of cost which he claims; or in lieu of actual damages and profits, such damages as to the court shall appear just, to be assessed upon the following basis, but such damages shall in no case exceed the sum of five thousand dollars nor be less than the sum of two hundred and fifty dollars, and shall not be regarded as a penalty:

First—In the case of \* \* \* any device especially adapted to reproduce

to the ear any copyright work, not less than one dollar for every infringing copy, made or sold by or found in the possession of the infringer or his agents or employees.

Sec. 25.—That any person who wilfully and for profit shall infringe any copyright secured by this act, or who shall knowingly and wilfully aid or abet such infringement or in any wise knowingly and wilfully take part in any such infringement, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by imprisonment for not exceeding one year or by a fine of not less than one hundred dollars nor more than one thousand dollars, or both, in the discretion of the court.

Sec. 38. That the right \* \* \* to make any mechanical device by which music may be reproduced to the ear \* \* \* shall be deemed a separate estate subject to assignment, lease, license, gift, bequest or inheritance.

## "KICKERS" WERE "TURNED DOWN."

The playing of talking machines in public, at least in connection with the automatic parlors in this city, has aroused some enmity among people living in the locality of these popular places of amusement. Suits were recently brought against the proprietors of some of these "parlors" located in Harlem, but in all instances the cases were promptly dismissed by the presiding judges. The loud-sounding Columbia Graphophone was used, and the policemen testified that, despite the noise of trolley cars, it was heard over 150 feet away.

It would be well for those kickers who are continually finding fault with music of all kinds to be more liberal in their ideas. Their motto should be, "Live and let live," and unless some wrong is done them, to be less complaining about a machine that has proven not only a civilizer but a promoter of happiness wherever known.

## THE NEOPHONE IN BELGIUM.

The Compagnie Belge Du Neophone, Ltd., was registered May 18 with a capital of \$100,000 to acquire from Neophone, Ltd., London, Eng., their interests in certain Belgian patents relating to the Neophone machine and records.

## Just What All Your Customers Are Looking For!

Sells at once on being heard, with BIG PROFIT TO YOU. Will help you sell more Disc Talking Machines and Records. It will revive the interest of thousands who have given up using them an account of the nuisance of changing the needle after each playing. Reduces the wear on the record and will play at least 500 times without changing.

Made in various tones, to suit all tastes: No. 1, Soft Tone; No. 2, Medium Tone; No. 3, Loud Tone. Any of these needles will fit any make of sound box. Retail Price, \$1 each. Net Price to Dealers, 50c. each.

No. 4, Concert Tone. This needle requires the sound box to be fitted to it. Retail Price, \$5.00; Net Price to the Dealer, \$2.50. Send us your sound box and we will do this free of charge.

Send us \$1.00 and we will mail you, postpaid, one sample each of Nos. 1, 2 and 3.

We furnish Artistic Signs and Literature to all Customers.

The Symphonic Phone-Needle Co., 1907 Park Avenue, NEW YORK CITY.

## PRICES WILL ADVANCE

According to J. Chas. Groshut on Talking Machines—Returns from European Trip.

J. Charles Groshut, secretary of the Edwin A. Denham Co., has just returned from a trip abroad. While on the continent he visited the various factories in Germany, France and Switzerland, in which the Denham phonographs are manufactured. From a business standpoint the trip was a most successful one. Several important deals were consummated by which the position of the Edwin A. Denham Co., as sole im-

J. CHAS. GROSHUT.

porters of the cheap type of foreign machines, was strengthened considerably.

Mr. Groshut predicts that owing to the heavy advance in the price of raw materials, occasioned by the increased consumption of same by American manufacturers, in addition to the labor difficulties which have arisen in France and Germany, that the price of phonographs and musical instruments will rise in the near future.

## PRESERVING DYING DIALECTS.

Use to Which Phonograph Is Being Put in the British Isles.

Although nothing can be done to prevent the decay of local dialects, much can be done to preserve their records. The phonograph is being applied for this purpose both in Guernsey and in the Isle of Man, says the London Daily Mail. The dialect language in the former is Norman-French, in the latter Manx, one of the Gaelic group.

It is believed that in the Isle of Man, with the passing away of the present generation, no one will be found to speak the dialect. The phonograph is being sent to different parts of the island by the Manx Language Society; old men whose accent is pure will speak into the receiver, and the records are to be stored at Douglas.

Mr. E. D. Marquand says that the old Norman language still spoken in the Channel Islands is in its main features the same as that used by the cultured classes of England eight centuries ago; the tongue in which Taillefer sang the "Chanson de Roland" at the battle of Hastings.

"In Alderney," he says, "it will certainly have become extinct in a very few years. In Guernsey it will probably linger on for a generation or two. In Jersey Norman French will survive longest, owing partly to the larger size of the island, partly to its proximity to France, and partly also to the influx of French agricultural laborers, who spend some months each year during the farmers' busy season."

Mr. Marquand proposes using the phonograph to preserve records of the dialect poems, folk songs and folk lore of the island.

Walter L. Eckhardt, manager of the Columbia Phonograph Co.'s wholesale department, reached New York, May 17, from his Western tour. The trip was eminently successful; that is to say, the list of Columbia jobbers has been lengthened, strengthened and expanded. Walt can always be depended upon to deliver the goods, his business ability and personal popularity being equalled by few in the trade.

## RELIC OF SAN FRANCISCO

Displayed at the Warerooms of the Columbia Phonograph Co.

At the retail warerooms of the Columbia Phonograph Co., at 872 Broadway is an interesting relic of the San Francisco earthquake, by which that company's warerooms and \$100,000 of stock was totally destroyed. It is the metal part of an AZ type of phonograph, and was the first taken from the ruins. Manager Cleveland has had it placed in their show window, with a letter from the San Francisco manager that accompanied it, describing their loss. It naturally attracts considerable attention, and draws a crowd, who naturally examine all the rest of the Columbia products.

## NEW VICTOR DISTRIBUTERS.

(Special to The Talking Machine World.)

Milwaukee, Wis., June 7, 1906.

McGreal Bros., of this city, who for the past four years have been jobbing Edison goods exclusively, placed a very large order with the Victor Talking Machine Co. about a month ago and have just received their first consignment of two hundred Victor machines and 20,000 Victor records. McGreal Bros. recently rented 5,000 feet of floor space on Milwaukee street, where they will carry on their wholesale business in both Edison and Victor goods.

## NOT DIRECTLY CONCERNED.

The connection of the Leeds & Catlin Co., record manufacturers, New York, with the pending case on appeal of the Victor Talking Machine Co. against the Talk-o-Phone Co. and themselves, recently decided by Judge Townsend, United States Circuit Court, Southern District of New York, is an incident or an accident, as one is pleased to call it. They are not directly concerned or involved in any shape or form in this litigation, and their being made co-defendants was brought about by certain dealings with the Talk-o-Phone Co. in which the Leeds & Catlin Co. acquired some of their machines in a business transaction. The L. & C. Co. do not make, nor never have made, a machine, being manufacturers of records only, and in this respect they desire to have their position clearly understood by the trade.

The A. S. Cook Co., of Woonsocket, R. I., have opened a talking machine department where they are showing a large line of Edison phonographs, records and supplies. The establishment is under the management of Robert Peck, a musician of ability.

## GOOD MOVE BY PAWNBROKERS.

Anyone Pawning Talking Machines Must Show Receipt Proving Ownership Before It Is Accepted from the Pawner.

The pawnbrokers in New York are enforcing the rule adopted by them some time ago in regard to the pawning of merchandise purchased on the instalment plan, by compelling the pawner to show a receipt. This applies particularly to talking machines, as several of the fraternity have been stuck by people who have pawned them immediately after making the first payment. They work on the theory that legitimate purchasers will not pawn their talking machine except as a last resort, and new instruments are never offered, so if one comes in that shows no signs of wear, they are justified in asking for a receipted bill from the dealer.

## REUNION OF EDISON JOBBERS

During the Week of July 16th to 20th Will Bring Many Notable Men to the City—Splendid Programme Arranged.

Everything points to a magnificent time for the Edison jobbers when they become the guests in New York, during the week of July 17-20, of the National Phonograph Co. At least 200 jobbers have signified their intention of being on the ground prepared to enjoy themselves, not only in the way of pleasure, but the opportunity presented for visiting the works at Orange, N. J., and seeing on what a great scale the manufacturing is carried on, the care and supervision exercised in each department; and last, but not least, the honor of meeting one of the intellectual and practical wonders of the age, Thomas A. Edison himself. Then there will be business meetings to attend, at which matters of great importance will be discussed that will be mutually beneficial to the manufacturer, jobber and dealer. A few surprises are in store, of which we are not at liberty to reveal, but when "pulled off" will create no end of enthusiasm. Fully 250 people—with company officials and special guests—will participate in the July days which are destined to become historical in trade annals.

## CREATED 14 NEW ZON-O-PHONE JOBBERS.

W. T. Boyd, who came in from his Western territory a couple of weeks since, created fourteen new Zonophone jobbers during the selling season just terminated. B. Feinberg, also of the Universal Talking Machine Manufacturing Co.'s traveling staff, who returned to New York at the same time, likewise made a splendid record. Both gentlemen started on a three weeks' trip June 3.

# There's Only ONE Talking Machine OIL

worth considering—that's "3-in-One"—the 12-years-on-the-market oil. "3-in-One" is the **only** oil that lubricates perfectly, cleans, polishes and prevents rust on all talking machines, and keeps disc and cylinder records in proper playing condition.

Sell any other oil, and **you** must bear the burden of proof, Mr. Dealer. Sell "3-in-One" and you have no burden to bear. Everyone, everywhere, knows "3-in-One." It **sells** itself—and there's a good, substantial profit in it for you—50 and 100 per cent. 10c. and 25c. bottles. Order a trial dozen from your jobber to-day.

If you want to **try** "3-in-One" first, we will send you a **FREE** sample bottle and the "3-in-One" Book on request. Use this oil yourself and you'll advise your customers and friends to do likewise.

**G. W. COLE COMPANY,** Sole Makers of "3-in-One"

Long Distance Telephone—Number 1745 Gramercy.

NEW YORK, JUNE 15, 1906.

OUR special reports which reach The World office from almost every important town in America, indicate that there has been but a slight slowing up in the talking machine business during the past few weeks. One of the veterans of the trade remarked that he anticipated a summer of unusual business activity, and that while July and August were not usually counted good months for business, he believed that this year would be an exception.

SURELY the demand for talkers is continuing right along at a brisk rate. It will require, of course, a strong emphasis placed upon the selling end of the business when there is a natural lessening of vitality which abounds during the crisp months of winter. But it is a pretty good business plan to figure that there should be no dull seasons, and plenty of energy placed upon the selling end will always result in good returns.

THERE are many novel ways in which the talking machine may be exploited in an advertising sense, so that it is constantly brought before the people in an interesting manner. Advertising is a great business lubricator, and no man who tries to secure trade to-day should hide his light under the bushel of indifference. He should let it shine so that he who runs, skips or walks, may read with ease.

WE can name some houses that will not have a dull summer, because we know that the forces behind those institutions never permit of halting upon the vantage ground won. They are going on to win greater results for the future. They know that

"The heights of great men gained and kept  
Were not won by sudden flight;  
But they, while their companions slept,  
Were toiling upward in the night."

IT has been truly said that this is a commercial age, and whether we like it or not, competition spurs us on to greater accomplishments, and the man who fails to respond to the influence of his environment may be counted well out of the

race, whether he sells talking machines or shoe-strings. Perhaps the greatest secret of success in life is due to sticking qualities. Determination conquers the world, the faculty of sticking and hanging on when everybody else lets go, and the man that sticks and hangs on in the summer when there is a general relaxation is the man who can be counted on pretty safely to win his business spurs in a most pronounced manner.

IT is the five minutes more which wins the battle, the perseverance, the determination, of never giving up, and there are plenty of young men who are readers of The World who would do well to make up their mind that they can and must win good business this summer. They can if they will. The general conditions are favorable. There are no strikes on, and no general disturbances of any kind whatsoever. The distribution of money to the various wage earners is larger than ever before in the country's history, and it means that there is a tremendous purchasing power which can be cleverly turned in the direction of buying talking machines if systematic lines are planned and carried out.

THE great calamity which overwhelmed San Francisco has had its reflex effect in every section of the country, but America is not easily disturbed or shaken by any catastrophe. Our resources are too great and varied. The crop reports never were more favorable at this season of the year, and after all, there is a wealth which is supplied by old Dame Nature which helps to fill the mercantile coffers throughout the land. There is nothing to depress business and everything to stimulate it.

IN another portion of this publication will be found a report of the speech delivered by Louis F. Geissler before the piano men's convention at Washington last month. Mr. Geissler's subject was "Talking Machines and Their Relation to the Piano Trade." One of the strong points which he made in his address was in urging piano men to establish a retail price at which their product should be offered to the public. He stated that the history of the talking machine business showed that a one-price system could be maintained, that arbitrary prices placed upon wares covered by a patent was feasible and legal. He compared the conditions which existed in the piano trade with those in the talking machine line where the prices are fixed by the manufacturer, emphasizing that this condition which has worked so satisfactorily in the talking machine trade could be applied with equally good results in the piano line.

AS a matter of business truth the talking machine industry can be sustained on a high plane only by the maintenance of prices, and we have urged piano manufacturers through the columns of The Music Trade Review, the oldest journal in the music trade industry, to fix the prices at which their instruments shall be sold to retail purchasers. That our arguments proved beneficial in producing results may be seen in the fact that at the music trade convention resolutions were passed favoring the fixing of piano prices by the manufacturer. The passing of these resolutions will interest that section of the talking machine industry who have been opposed to the present existing plan of sell-

## Notice to Subscribers

On and after July 15 the Annual Subscription to *The Talking Machine World* will be ONE DOLLAR. Foreign Countries One Dollar and Fifty Cents.

ing talking machines. They will now learn that a kindred industry is adopting the plan upon which the talking machine trade has been conducted for years.

IT means business stability, and by the maintenance of prices a respect is engendered for the products offered. If a cigar manufacturer can name a price at which a particular brand of cigars may be sold in every city of the Union, and a shoe manufacturer likewise, and the same with other trades too numerous to mention, is it wrong to place a fixed value upon certain styles of talking machines which are offered to the public? It seems to us that it is only good business, and, studying the field as a whole we are inclined to the belief that the maintenance of prices will work out permanent benefit for the entire industry.

THE editor of The Talking Machine World left on the "Carmania" for Europe on the 5th inst. The World has been steadily developing a good circulation in the various countries abroad, and it is the intention of the editor to carefully investigate trade conditions in Europe, with the view to greatly extending the business of this trade newspaper institution in other lauds.

AT the recent trade convention in Washington, a number of copies of The World were distributed to the visiting music trade men. A well-known United States Senator came to the lobby and saw one of the papers, and expressed his surprise and amazement that the talking machine industry had grown to such an extent that it maintained a journal of such manifest importance. He requested a copy specially mailed to his home and afterward placed a subscription to receive The World regularly.

IN this connection a well-known talking machine man said at the convention that this publication had been the greatest known force in developing this business during the past year and a half, and he did not hesitate to praise the paper and its policy in the broadest possible manner. He said that it was a credit to the industry to have such a journal published, and every man interested in the sale of talking machines should encourage its distribution by every possible means, as its influence was helpful in the greatest degree.

THERE seems to be a considerable shortage of stock, but if the demand slows up during the summer season the manufacturers will be afforded an opportunity to catch up with their orders. Large efforts have been put forth by the various makers to increase their facilities in order to meet every demand, for it is not the desire of up-to-date business men to keep their trade waiting for orders. It would surprise

some to know the preparations that have been made for the increase of business in the manufacturing department, but so great and continuous has been the demand for talking machines and supplies that manufacturers have been unable to keep in sight with their orders.

**CORRESPONDENCE** from the Pacific Coast shows that the talking machine dealers are actively working territory outside of San Francisco. The Pacific-Northwest just now is a particularly rich field for the exploitation of talking machines, and there are plenty of live concerns in that section who are improving their opportunities to the utmost. Los Angeles, too, is looking up as a most important distributing point for talking machines, and while San Francisco is being rebuilt the dealers and jobbers are placing the strongest efforts upon outlying points.

**OUR** readers in all departments of the talking machine industry will be interested in the report of the copyright conference appearing elsewhere. Owing to the strenuous opposition to some sections, particularly those effecting this industry, the bill will not be introduced at this session of Congress and further hearings on the bill will not take place until December.

#### SOMETHING NEW IN "TALKER" HORNS.

The demand for something individual and meritorious in the horn line is destined to be amply fulfilled through the appearance of the Searchlight Horn, made by the Searchlight Horn Co., of Brooklyn, and whose announcement appears elsewhere in this issue. The announcement is one that should interest the trade at large. This company have been long at work on

the production of special machinery for the manufacture of these horns, and are equipped to supply all demands.

#### PREPARING TO RESUME

In San Francisco—Temporary Quarters in Oakland.

(Special to The Talking Machine World.)  
San Francisco, Cal., June 4, 1906.

The talking machine houses are making active preparations to resume business in this city. Temporary quarters will soon be opened by several of the leading houses, but the trade is, and will, for some time to come, be largely handled from Oakland. All the concerns burned out are in evidence in the latter city, among them being Walter S. Gray, manager of the Columbia Phonograph Co.'s store. His new quarters are at 512 13th street, Oakland. The Oriental business of this company has been transferred to New York.

#### TRAVELING MEN ORGANIZE.

Now the Talking Machine Traveling Men's Association is the latest organized body to appear in the trade. It was formed May 29, in New York, amid the lurid glare of enthusiasm which surprised even the participants in the "cold gray dawn of the morning after." The following are the officers: President, John Kaiser, with Douglas Phonograph Co.; vice-president, Wm. T. Boyd, with Universal Talking Machine Mfg. Co.; secretary, A. T. Doty, with Victor Distributing & Export Co.; treasurer, B. Feinberg, with Universal Co. The following gentlemen were enrolled active members: Walter L. Eckhardt and Tom F. Murray, with Columbia Phonograph Co., general; "Doc" O'Neill and J. A. Macnabb, with Universal Co.; A. L. Irish, of Talk-o-phone Co.; Loring Leeds, with Leeds & Catlin Co.; E. A. Hawthorne and J. O. Prescott, of American Record Co. It is proposed to open club rooms in New York so as to have the traveling men of the trade make it their headquarters when there.

#### FURTHER LITIGATION.

Samuel Heymann Brings Suit Against New York Jobbers in Connection With New York Phonograph Co. Affairs.

Another move is scored in the long-drawn-out litigation of the New York Phonograph Co. against the National Phonograph Co. et al. On the 8th inst. Samuel Heymann, a New York attorney, who claims certain rights were assigned him by the complainant, commenced to file bills of complaint against a number of jobbers and dealers, among them being the Douglas Phonograph Co., S. B. Davega, Blackman Talking Machine Co., Alfred Weiss and others. The suits are brought in the Supreme Court, Westchester County, N. Y., the registered home office of the New York Phonograph Co., and the motion for an injunction and accounting will be argued tomorrow (Saturday, June 16), unless an extension of time is requested.

The National Phonograph Co., when questioned by The World concerning these cases, said: "The purpose of these suits is to throw a scare into the trade. We will take care of every one of them, no matter how many, and the trade need be in no way alarmed or anxious. All they have to do is to turn the papers over to us, and we will do the rest. We are really pleased some step has finally been taken to enforce what they may consider their contract rights under the recent decision of the United States Circuit Court of Appeals. We are ready and waiting, and the trade will soon see just what the whole move really amounts to, and the courts, not ourselves, will define the situation."

#### THE "MAJESTIC" A MONEY MAKER.

The Majestic self-playing piano made by Lyon & Healy, of Chicago, is having a tremendous vogue in leading cafes in all parts of the country. It has proven a tremendous money maker, and never fails to pay for itself. Talking machine and piano dealers who have given attention to the development of this automatic piano trade have found it a very profitable feature.

## Edison and Victor Dealers

Throughout Wisconsin, Michigan, Minnesota, Iowa and Northern Illinois, will find it to their advantage to order their supply of Machines and Records through us.

We are never short on any goods that factories can supply. We always try to ship the day order is received and never substitute. Prompt, Careful and Conscientious Service has been the means of building up our large jobbing trade—now the largest in the West. We furnish our dealers with blank forms, leases, etc., for instalment trade, and assist them in every way possible in getting business.

**McGREAL BROS.,** 173 THIRD STREET, Milwaukee, Wis.

## PRACTICAL SUGGESTIONS AND COMMENTS.

### QUALITY IN TONE PRODUCTION.

William F. Hunt, of Wanatah, Ind., writes: "I must say that I am greatly surprised at the stand Arthur C. Mestraud takes in his article in last month's issue in criticism on my article on the importance of not running the recording lines too close to the center on disc records so as to maintain as uniform surface speed as possible throughout the reproduction and prevent the deterioration in volume of the selection as it nears its end. Had Mr. Mestraud not emphasized the fact in his article that he is a reigning authority on sound reproduction and an expert of renown in his line, the surprise would not have been so great. He states that there is no appreciative difference in the tone quality between the inner circle and that of the outside circle of a disc record. Now, this is rather strange, when the fact is generally known that all cylinder record manufacturers have in the past few years adopted a much higher surface speed in recording to secure a better tone quality, and when any one who will stop to figure will find that the surface speed of the inner circle of a disc record is only one-half as great as that of the outside circle. Is it not very natural that the longer sound waves on the outer circle will throw off a fuller and smoother tone than the shorter and abrupt ones on the inner circle? Furthermore, the longer and more gradual the undulations in the recording line the less blast and vibrating harshness in the reproduction, for it permits the diaphragm to perform its functions with more ease. The short and long undulations in the recording line may be compared with the waves of the lakes and those of the oceans. While the waves of the lakes are not so large as those of the oceans, yet they are choppy and more dangerous than those of the ocean, and it is an established fact that a boat will ride the long waves with more ease and less danger to itself. Likewise the diaphragm responds to the longer and more gradual undulations more perfectly than the short and abrupt ones.

"He further states that if my idea is correct all that would be necessary to attain perfection in sound reproduction would be to record the amount of a seven-inch record on a fourteen-inch size. I did not wish to make this impression, for the record would not be perfect, but it must be admitted that it would be nearer perfection and more equal in tone quality throughout than in its present state. If any one will take the time to take a disc of a selection of equal pitch throughout and run the needle over the first few lines, and then the last they will readily see that I am quite right in my statement. As I

stated in my previous article, of course, the deterioration is but little if any noticed in a selection if the record is run through without making the comparison, as it is so gradual. Furthermore, Mr. Mestraud seems to think that I am suggesting the diminution of the phonetic substance on the present disc record. In this he is quite mistaken, as I think the records very good in their present state, and in my previous article I was only pointing out to another correspondent the folly in his suggestion of filling the discs out fuller than at present to secure a longer reproduction."

### CAUSE OF DISC WEARING OUT.

J. W. Fitzmaurice, in a communication, says: "There are frequent discussions among users of disc machines regarding the reason for the discs wearing out much more rapidly near the outer edge than toward the center. Possibly the most plausible explanation is that the needle being sharpest at the beginning of the record cuts into the groove and in a short time spoils that portion of the record. As it travels toward the center of the disc the point is naturally worn down and the effect is not so ruinous. Another cause for spoiled records is the habit of starting the machine before placing the needle in the groove. When the needle does not settle into the groove immediately it destroys the walls of the recording lines, and this constant wear soon results disastrously."

### SIZE OF DIAPHRAGM.

Writing to an English exchange Linzey A. Wilcox says: "I have often wondered how it is that Edison has stuck to  $1\frac{3}{16}$  in. for his diaphragms, and how this size was arrived at. There are many firms who use larger diaphragms. What is the largest ever made commercially? Probably the Rex or Bettini, of course excepting the magnophone. There must, however, be a size limit, and I wonder if an expert could plot a curve showing exactly the diameter of a diaphragm of given material and thickness, at the point where the sound would begin to diminish, after having increased to its fullest extent? What I want to get at is the ratio between the diameter of diaphragm and the loudness of the reproduction."

### HOW SCRATCH IS OBIATED.

An amateur, who has made a great study of talking machine discs, has made a discovery, which, if practical, will prove of great value to owners and dealers of talking machines of that type. By using a fine but stiff camel's hair or badger hair brush, and thoroughly dusting the record occasionally with a very finely powdered graphite, he finds the scratch is practically

obviated and even an old record reproduces much better. He also claims that this treatment will add considerably to the life of a record. It is an experiment easily tried and worth the trying.

### SOME INFORMATION DESIRED.

Theo. Orisen writes as follows: (1) "I remember having read in one of your issues that a certain dealer up West hit upon the following idea to increase his business: He made arrangements with his distributors to get each month all the new records 'on selection,' i. e., to be returnable within 24 hours. He would invite his customers to come at a certain hour to hear all the new records played. Naturally every owner of a talking machine would take advantage of the occasion to see if there is anything suitable to his taste. Now, I wonder if there is such an enterprising dealer in this city?

(2) "Since the exchange proposition was withdrawn, the dealers are extremely chary in putting in new stock, and I—like, probably, most buyers—have little chance to know what is going on in the record world. I do not, of course, go by the catalogue; a record must be heard. I know that the jobbers carry a full line, but who can spare time during business hours? Besides, the jobbers do not play the records for you willingly. If I do not buy more records it is not my fault.

(3) "In your last issue you speak about Pathé frères producing high class records. They have a branch in London. Have they no branch here?

(4) "Lately came across a libretto in the Russian language, published by the Gramophone Co., Russia. It contains all the songs of their records. I fail to understand why our record makers here neglect such an important part of their business. In reply to my inquiry the Victor Co. said that that would interfere with the copyright law. But it would surely be worth while to buy the privilege, as the Gramophone Co. have probably done in Russia. It would make a very desirable adjunct to every owner of a talking machine."

(1) We do not believe that any such plan has been adopted by any dealer in New York, but it is something worth while trying. (2) We respectfully submit this inquiry to dealers and jobbers. (3) Pathé Frères have no branch in New York, although we understand negotiations are under way whereby their specialties will be handled by a well-known New York jobber. (4) The demand for records in foreign languages is becoming such a feature of the record business today that it is not improbable that some of our leading concerns will fall into line and make Russian records in due course. The Russian instrumental composers, however, are well represented in the lists of the leading houses.

In Greater New York about 200 dealers are doing business, with 150 Victor distributors.

**THE EDWIN A. DENHAM COMPANY**

BERLIN LONDON

31 Barclay Street, NEW YORK

**EDISON GRAND OPERA RECORDS.**

The Third List Introduces a Number of New Artists Who Furnish Some Notable Numbers.

The third list of ten Edison grand opera records, which has just been announced, promises to be even more popular than the two lists previously issued. This list introduces four new artists in Mme. Rappold, soprano; Miss Bessie Abbott, soprano; Mme. Jacobi, contralto, and Alois Burgstaller, tenor, who achieved such a great success at the Metropolitan Opera House last season.

The National Phonograph Co. announce that these records will be shipped by freight from Orange with the regular August selections, and will reach all jobbers in the United States and Canada before July 27. The numbers, which all have orchestra accompaniment, are as follows: 21, Ave Maria (Gounod), by Mme. Rappold, soprano; sung in Latin. 22, "Fanget An," "Die Meistersinger von Nurnberg" (Wagner), by Heinrich Knotte, tenor; sung in German. 23, L'Air des Bijoux, "Faust" (Gounod), by Miss Bessie Abbott, soprano; sung in French. 24, Erzählung, "Konigin von Saba" (Goldmark), by Andreas Dippel, tenor; sung in German. 25, Aria ("Ein Band der Freundschaft"), "Don Giovanni" (Mozart), by Alois Burgstaller, tenor; sung in German. 26, E Lucevan le Stelle, "Tosca" (Puccini), by Romeo Berti, tenor; sung in Italian. 27, Los Ojos Negros (Alvarez), by Gustave Berl Resky, baritone; sung in Spanish. 28, Aria del Paggio, "Gli Ugonotti" (Meyerbeer), by Mme. Jacobi, contralto; sung in Italian. 29, Aria, "Wie oft in Meerestieten Schlund," "Der Fliegende Hollander" (Wagner), by Anton van Rooy, baritone; sung in German. 30, "M'Appari," "Marta" (Flotow), by Florencio Constantino, tenor; sung in Italian.

**FONOTIPIA LIMITED REGISTERED.**

A recent registration in Loudou, Eng., is that of the Fonotipia (Ltd.), with a capital of £50,000 (\$250,000), which has been formed to manufacture and deal in any machine or instrument for recording or reproducing sound, to publish music, to acquire editorial rights for phonographic reproduction, and, in particular, to purchase, with certain exceptions and reservations, the business of the Societa Italiana di Fonotipia in Accomandita, of Milan, Italy, as a going concern, from December 31, 1905, and, after the said Societa has been reconstructed as a Societa Anonima, to purchase from the shareholders of such Societa Anonima their interests therein. The purchase price for the assets and business so to be purchased by this company from the Societa Italiana di Fonotipia in Accomandita, who are the promoters of this company, has been fixed at £12,680 (of which £750 is for the good will), payable in fully paid shares of this company. The purchase price for the interests of the shareholders of the proposed Societa Anonima has been fixed at £4,000, payable also in fully paid shares of this company. No figures as to the profits of the Italian company are available; but the present 13,695 shares have been guaranteed in return for a commission of 6,225 shares, or at the rate of about 45 per cent. The first directors are: Chairman, H. V. Higgins, of the Grand Opera Syndicate, Ltd., London; Duke Uberto Visconti Di Modrone, chairman of the Scala Theatre Syndicate, Milan; Baron Frederic D'Erlanger, banker; Commendatore Tito Ricordi, music publisher, Milan, and Cavalliere Francesco Roberto Quei-

razza, of the firm of Belloni & Queirazza, Milan. A. Michaelis, of Milan, is general manager.

**AN IMPROVED SOUND BOX.**

Dr. Michaelis, of the Neophone, Ltd., London, Eng., is the inventor of a greatly improved sound box which can be used for either needle or sapphire, and a connecting adapter, which can be fitted to all the disc type of machines, and by which the double-sided Neophone records can be reproduced. Dr. Michaelis, by the way, has recently been elected a fellow of the Royal Geographical Society of Great Britain.

**MAHOMEDANISM AND THE PHONOGRAPH.**

Sheikh Mohamed Bakhit el Mutei, one of the ulema of the University of Al Azhar, has just published two pamphlets on the subject of the phonograph and life insurance and their relation with the Sacred Law of Islam, according to a Cairo correspondent, says The Times. The learned Sheikh declares that there is nothing in Islamic doctrine to forbid Moslems to listen to the phonograph, and that, if the verses of the Koran are suitably intoned from the phonograph the listener may be justly considered to be performing an act of worship.

**DEATH OF A. THEO. E. WANGEMANN.**

Much regret has been expressed in talking machine circles over the passing of A. Theodore E. Wangemann, who was killed while boarding a train in Bath Beach, New York, on June 2. The deceased was a musician and acoustician of acknowledged ability, and for seventeen years virtually worked side by side with Thomas A. Edison at the Edison phonograph works. He had charge of the experimental work and practical demonstrating, and did much to bring the talking machine up to its present high state of efficiency.

He was born in Germany fifty-two years ago, and was a pupil of Helmholtz, the great scientist, and had written a number of papers on the voice. The funeral services which occurred in Brooklyn on June 3 were conducted by the Placides Club, of which Mr. Wangemann was an honored member. There was also a deputation in attendance from the National Phonograph Co., including Messrs. Wilson, Pelzer, Stevens, McChesney, Miller, Weber, Aiken and Bachmann.

Tozer, Kemsley & Fisher, of Sydney and Melbourne, have secured the sole agency for Neophone goods in Australasia. From their establishments in these cities they send out a number of travelers who cover the entire continent.

**RECORD BY ADMIRAL TOGO.**

Promises to Send One Soon to Mr. Shuze Yano.

Shuzo Yano, who handled the Columbia talking machine in San Francisco, having built up a large Japanese business, and who is now connected with the Columbia Phonograph Co., New York, has received a letter from Admiral Togo acknowledging the receipt of a graphophone which Mr. Yano sent him a few months ago. As will be seen from his letter, Admiral Togo promises to make a record of his voice and forward it at an early day, for the edification of his American admirers. While the spoken words will not be understood, as a rule, by any but his own countrymen, it will be a source of pleasure to everybody to listen to the record of this famous warrior.

**COLUMBIA CO. IN LONDON, ONT.**

The Columbia Phonograph Co. have opened spacious quarters at 205 Dundas street, London, Ont., which will be under the management of D. E. Hooker. Proof of the enterprise of this gentleman is evident from the fact that he has arranged with the Mayor and Council to give two concerts per week in their Central Park, situated in the heart of the city, and large enough to accommodate thousands of people. The type of machine to be used to furnish the music will be the BC. It has already been tested in this park and the music can be heard for miles around, so that every person in the park will be able to get the full benefit of everything that is played.

The first catalogue or list of Columbia gold-moulded Twentieth Century cylinder records (B. C.), half foot long, 2 1/4 inches diameter, has been issued by the Columbia Phonograph Co., general. The titles cover every variety of entertainment, and are 70 in number. Hereafter a list of these records will be sent out monthly, containing from ten to a dozen titles.

Burke & Rouss, Brooklyn, N. Y., have dissolved partnership, the business having been purchased by Thomas Burke, the senior partner, who has looked after the outside trade.

Pathé Freres, of Paris, France, have again favored us with a voluminous list of records sung by noted artists in French, German, and other languages.

### "HIS MASTER'S VOICE"

Again Figures in the Leading Cartoons of the Day.

No trade mark used in commerce is so universally utilized by the leading cartoonists of

the day as that of "His Master's Voice," which is associated with the Victor talking machine, wherever sold. Hardly a day elapses that one doesn't come across reference to this well-known trade mark in connection with leading political and social happenings the world over. The following cartoon from The World bearing on the attitude of the Duma, the newly organized Rus-

sian parliament, and the Czar of Russia, is exceedingly interesting, and the artists's clever pen has cleverly pictured the Russian people as making new strides toward freedom of thought, conscience and political rights.

The second cartoon comes nearer home and bears upon the recent deplorable controversy at Washington, in which Annanias played a leading role. The point of reproducing these cartoons is to show how universally known is the Victor trade mark.

### PRICE REDUCED

### TALKING MACHINE MEN MEET

With President Andrews in the Chair—Important Reports from Committee.

President Andrews, Syracuse, N. Y., was in the chair at the meeting Thursday evening, May 29, of the Eastern Talking Machine Jobbers' Association, in the salesrooms of S. B. Davega, New York. As usual, the session was prolonged until a late hour owing to the nature of the business transacted. J. Newcomb Blackman, chairman of the credit committee, presented a supplementary report including the forms to be employed for the gathering and distribution of information. Sol Bloom took exception to the acceptance of these suggestions until legal advice had been obtained and the association incorporated to avoid personal liability. Subsequently the chair appointed the following committee to incorporate the organization: Sol Bloom, W. O. Pardee and A. H. Jacot. The credit committee was continued and their report referred back for further action.

As chairman of the Victor contract committee C. V. Henkel had read a lengthy letter from the Victor Talking Machine Co., Camden, N. J., replying to the committee's request relative to suggestive modifications of that document. As to that part of the previous resolutions to demand and then protest relative to certain contingent action of the company in connection with the proposed agreement, it was rescinded. The committee, however, were authorized to respond to the Victor Co.'s letter, in the name of the association, through Secretary Kelsey.

The constitution and by-laws were adopted, with appropriate amendments to conform with circumstances, and an adjournment was taken until May 31, at 8 p.m., in the salesrooms of the Jacot Music Box Co., 39 Union Square, New York.

Those present were: W. D. Andrews, Syracuse, N. Y.; W. O. Pardee, Pardee & Ellenherger Co., New Haven, Conn.; Edmund E. Buclin, Wells Phonograph Co., Philadelphia, Pa.; J. U. Willys, Elmira (N. Y.) Arms Co.; A. O. Petit, Edisonia Phonograph Co., Newark, N. J.; John Rose, Astoria, N. Y.; John P. Kelsey, with A. D. Matthews' Sons, Brooklyn, N. Y., and the following New York houses; A. H. Jacot, Jacot Music Box Co.; S. B. Davega and L. Kaiser; Fred Loeffler and B. R. Barklow, Bettini Phonograph Co.; I. Davega, Jr.; C. V. Henkel, A. P. Petit and John Kaiser, Douglas Phonograph Co.; Victor H. Rapke, Sol Bloom, Alfred Weiss and J. Newcomb Blackman, Blackman Talking Machine Co.

### IMPORTANCE OF THE NEEDLE

As a Means of Proper Reproduction of Records on the Talking Machine.

In the present day when the talking machine has reached a point where it is not merely a parrot-like contrivance but faithfully reproduces all the modulations and peculiarities of the human voice, anything that will add to the naturalness of the reproductions is to be welcomed.

Much effort has been spent on improving records, sound boxes and other parts with great success, but in addition to these experiments the American Talking Machine Co., of 536 Fulton street, Brooklyn, N. Y., have given close attention to the needle. The result is that they have produced three special styles of needles, namely, "Perfect," "Medium" and "Quiet." The Perfect is most suited to large halls, arcades and outdoor uses, and is made in three tapers; 3/16 in. of regular size for ordinary reproduction, 2/16 in. same size but louder, and the 1/16 in. for very

loud effects. The Medium is specially adapted for private use in small houses or apartments, being sufficiently loud to give first-class results, but not producing an annoying volume of sound. The Quiet is for use where a low, sweet tone is desired, lullabies and certain other kinds of classical and popular airs.

Use of these needles considerably enhances the value of both record and reproducer, for where the three are combined to produce a special effect wonderful results are attained.

The Perfect and Medium are packed in envelopes of 100 and boxes of 300 and 1,000. The Quiet comes only in envelopes of 200. Dealers would do well to obtain samples and after testing the needles to their own satisfaction add them to the regular line. The increased variety of effects thus made possible will help sales.

### LAND-O-PHONE HOME RECORDER.

The record made by the Land-o-phone home recorder is as loud as any disc record. The recording and reproducing is accomplished by means of a feed device, and the mechanical action is positive and absolute. The simplicity, accuracy and safety of the device are its chief attributes. Max Landay, of the company, sails for Europe the first week in July, and expects to be abroad about two months. He will visit London, England, his old home, and where many of his relatives reside, as a matter of course, and subsequently tour the famous springs and pleasure resorts of the continent.

### GOOD RIDDANCE.

It took the Brooklyn courts just seven days to land Louis Palma in jail for attempting to defraud the Columbia Phonograph Company. Palma bought a graphophone on the instalment plan, made a few payments, and then reported that the machine had been stolen. He was charged with having pawned it, was found guilty, and is now serving a three months' sentence in the King's County Penitentiary.

### LEEDS & CATLIN'S IMPERIAL RECORD.

The Leeds & Catlin Co., 53 E. 11th street, New York, in announcing their new lists of Imperial operatic and other high class disc records, speak with commendable pride of the standing of the talent—artists of the highest class—and quality of the product. The "masters" were made in Europe for the firm, at all the recognized musical centers. As they say, on another page, these records "are unequalled; no high class, high priced record heretofore produced can be compared with these superb productions," which are offered at attractive prices.

E. Schweiger, formerly with Charles H. Ditson & Co., the famous New York music trade house, is doing a flourishing business as a Brooklyn, N. Y., dealer, handling the Edison and Victor lines. He also carries sheet music, photographic outfits and miscellaneous novelties.

## TALKING MACHINE HAPPENINGS IN THE WEST.

The Discontinuance of the Chicago Office of the National Phonograph Co.—Jobbers Will Handle All the Business Henceforth—Edison Commercial Department Remains—Vim Co. Pay Fine—Cable Company's Opening—C. W. Noyes Off to Coast—Columbia Co. Items—A New Chicago Jobber—The News of the Month in Detail.

(Special to the Talking Machine World.)

World Office, 195 Wabash avenue,

Chicago, Ill., June 9, 1906.

The notable news of the month has been the announcement of the discontinuance of the Chicago office of the National Phonograph Co. The office force is being retained for the present to close up the affairs of the branch here, but to all intents and purposes the office was closed on June 3.

The official announcement to the trade was received here on May 28, and is as follows:

On May 31, 1906, we will close and discontinue our Chicago office, now located at No. 304 Wabash avenue, Chicago, Ill., after which *all remittances, orders and communications* of every kind and nature heretofore sent to Chicago office, should be addressed to the National Phonograph Co., 31 Union Square New York City. The original necessity which caused us to open this office (scarcity of representative jobbers in the territory) has now ceased to exist and we are pleased to be able to turn over, so far as is possible, the dealers' business to the established jobbers who are now in a position to cover the Central and Western States.

In order that they may be in position to properly take care of dealers' requirements, we would urge upon our jobbers the necessity of carrying a full and complete stock of Edison goods, thereby placing themselves in position to obtain a share of this new business. Dealers who have been securing goods from Chicago office direct, are requested to sign our agreement with one or more jobbers, thereby enabling them to obtain their supplies promptly and at the same or less transportation charges than was incurred from our Chicago office.

Yours very truly,

W. E. GILMORE,

President and General Manager.

The principal Chicago jobbers of the Edison goods are Lyon & Healy, Rudolph Wurlitzer Co., the Cable Company, Vim Co., Babson Bros., and James I. Lyons. While the office was closed so far as transacting business on June 1, it will probably be a month before the affairs can be wound up and the office force dispensed with.

Manager G. N. Nisbett, who has been with the Chicago office since it started, and who has been the manager for the last two years, will, it is understood, after everything has been cleaned up here, become connected with the New York office of the company.

President M. E. Gilmore and Credit Manager F. K. Dolbeer arrived in Chicago May 22, and left for the East later. There will be no change in the Chicago branch of the Edison commercial department, which will be continued as heretofore.

The contempt proceedings instituted by the Victor Co. against the Vim Co. and L. A. Olm-

stead on account of price cutting in violation of the court's injunction, came up for a final hearing last week before Judge Kohlsatt, of the United States Circuit Court, who adjudged the defendants guilty of contempt, and discharged them upon payment of \$500 to the complainants.

The popularity of the Lyon & Healy Softertone needle seemed to be threatened for a while on account of its not being adapted to all styles of needle arms. The ingenuity of Manager C. E. Goodwin and his expert assistants in the talking machine department of Lyon & Healy have finally overcome this difficulty. By a series of simple attachments the Softertone needle can now be used on practically every type of disc machine. The attachment for holding the new spring clamp needle arm of the Victor exhibition sound-box is meeting with most favorable reception by the trade. It is instantly attached, holds the needle like a vise, and is made in two sizes for Softertone and for medium tone needles.

After successive delays, owing to the non-arrival of certain fixtures the new talking machine department of the Cable Company is now complete, and the formal opening occurred last week. The retail department proper occupies the second floor of the Cable building annex, and is reached by the elevator from the entrance to Cable Hall. The windows on the first floor of the annex will be used to excellent advantage for display purposes, and beginning next Monday, regular programme recitals will be held each noon hour. Later on evening concerts of a unique character will be given. On the second floor the handsomely fitted-up offices of Manager J. W. Harrison and his staff extend across the Wabash avenue frontage. Back of these is the general salesroom and along the north side of the floor are four conveniently located private record rooms. The stockroom and record shelving are in the rear. In the very near future Manager Harrison expects to have another entire floor, which will be devoted to the wholesale and mail order departments. The line consists of the Victor, Edison and Columbia machines and records, and the American records. Gradually talking machine departments will be established in the 35 branch stores of the Cable Company. Richmond, Va., has already fallen into line and a department is about to be established at the Detroit store.

Max Landay, of the Land-o-phone Co., New York, was in Chicago last month, making arrangements for the introduction of the Land-o-phone recording device for disc machines. Lyon & Healy are among the important jobbing houses of the country who will act as Land-o-phone distributors.

C. W. Noyes, secretary of the Hawthorne-Sheble Manufacturing Co., and Western representative of the American Record Co., will leave on June 15 for a general Western trip, which

will take him to the Coast, and will last fully two months. In his absence Malcolm B. Henry will be in charge of the office. Mr. E. A. Hawthorne returned with Mr. Noyes from Cleveland, where they attended the Central Jobbers' meeting and they visited St. Paul together. The latest introduction of the Hawthorne-Sheble Manufacturing Co. is a handsome needle box, containing compartments for four different types of needles and a center compartment for used ones. The boxes are to sell at \$1 each, including a thousand needles.

E. C. Plume, wholesale representative of the Columbia Phonograph Co., has returned from a Western trip, during which he visited many of the Columbia branch offices and jobbers. Among the recent important changes he reports is the promotion of C. W. Long from the management of the Salt Lake City office to that at St. Paul, Minn. J. Kelly, formerly connected with the St. Louis office, is now in charge of the Omaha and Lincoln, Neb., branches.

At the Chicago office Manager Willson and his corps of assistants are accomplishing excellent work. Since O. W. Eckland took charge of the instalment department the number of instalment salesmen has been increased to 190, necessitating the inauguration of daily classes for the instruction of novices, and the admonishment of the weak in argument. J. H. Hollingshead, formerly assistant manager of the instalment department, is now manager of the Joliet office. Will Bentley, the manager of the recently established branch at Aurora, Ill., became a member of the happy army of benedicts last month. Shuzo Yano, the Japanese graphophone dealer, who had such a disastrous experience in the 'Frisco quake, and who passed through Chicago last month on his way to New York, secured a good position in the export department of the Columbia Co.

H. A. Yerkes, manager of the Boston office of the Columbia Phonograph Co., has been on a Western pleasure trip, and called on Manager Willson of the Chicago office last week.

Carson, Pirie, Scott & Co., of Chicago, have been added to the list of Columbia jobbers.

## COLUMBIA CO.'S NEW STORE NOW OPEN.

(Special to The Talking Machine World.)

Buffalo, N. Y., June 8, 1906.

The Columbia Phonograph Co.'s new store at 568 Main street, is now open for business. Handsome in appearance and equipment, with every up-to-date device for the convenience of its patrons, the new store is a great improvement over the old one. There is an immense showing of graphophones of all sizes and at all prices, and a complete line of disc and cylinder records, which include all the new productions in music, song and story. A number of sound-proof rooms is one of the features of the new store that will be appreciated by those who want to hear the new records.

The Kipp-Link Phonograph Co., of Indianapolis, Ind., have increased their capital stock from \$6,000 to \$10,000.

## HARRISON DISAGREES WITH SOUSA.

**Says the Talking Machine Is Not an Evil, But a Great Public Boon—Soothes Business Seamed Souls—Well Known Comedian Tells How England Was Phonographically Saved—A Contribution Worth Reading Twice.**

It will be remembered that when John Philip Sousa was before the Joint Committee on Patents of the Senate and House in the hearing on the new copyright bill, an account of which appears elsewhere, he made a savage attack on the talking machine, because he claimed it deprived him of royalties on his music. Louis Harrison, the well-known comedian, replied to Sousa, through the New York Herald, defending the talking machine, in his own inimitable manner, as follows:

"I hope it will not be regarded as gross presumption if I venture to disagree with John Philip Sousa, who told the Joint Committee on Patents of the Senate and House in Washington that the human vocal cords were fast becoming useless, and in a little while there would be no singing, all because of the talking machine. I think Mr. Sousa is right in claiming royalty from the talking machine manufacturers for the use of his charming compositions, but, nevertheless, the phonograph is not an evil, but a great public boon. In it Edison gave the people the only American voice that does not continually talk business for 365 days in the year. I would not presume to argue with Mr. Sousa about the decay of the vocal cords on account of the rise of the talking machine, as fate has placed me where one never hears singing (I am a member of a comic opera company), but when you dwell in a country where you never hear any subject discussed between the acts of a play, at the dinner table, on the street, in the cafe, at the seaside, or in the home, except business, then the voice of the talking machine, with its stirring Sousa marches, its humorous monologues and simple ballads, wafts us out of an atmosphere of 'no matter how you git the money so you git it,' and soothes our business seamed souls.

"Mr. Sousa recalls the time when he was a boy in Washington, and the young people sat on the steps and porches in the evening and sang the old songs and the new ones. Now, if you walk down a Washington street you will not hear these young voices, you will hear these infernal talking machines.

"When I was a boy in Philadelphia the neighbors also started in to sing on the steps and porches, and I am sorry to say that property in our neighborhood decreased 80 per cent. after the first al fresco concert. When they sang the old songs grass and flowers withered in the back yards; pictures of the dead hanging on the walls smiled in sweet content at having passed forever from that neighborhood. After the second concert the sun refused to shine in our street, the policeman put on earmuffs when he passed the singers, and finally one night, when a young man who possessed a noisy tenor with a hotel register, tackled Manrico's 'Ah, I Have Sighed to Rest Me,' from 'Il Trovatore,' the landlords formed themselves into a Society for the Prevention of Cruelty to Ear Drums, and told the singers that they would not allow their property to be 'sold for a song.'

"How different it would have been if they had clubbed together and purchased a talking machine, which would have held the neighborhood spellbound with the voices of Jean de Reszke, George Cohan, Caruso and Francis Wilson. Mr. Sousa says these machine managers will pay Caruso \$3,000 to sing one song for them as a record, and one of his (Sousa's) best cornet players only \$4 a tune. I can understand that.

"The sum an artist receives is a matter of individual admiration. I have dwelt in houses where I would have given the cornet player in the next room a thousand dollars to move. Again, Mr. Sousa says: 'Last summer I was in one of the famous summer resorts, where were congregated the swellest yachts of the country. I went among them, and in place of the usual songs of the water in the evening what did I hear? 'El Capitan' on the talking machine!'

"Mr. Sousa may not be aware of the fact that talking machines saved England, Ireland and Scotland from becoming uninhabitable. Several years ago scientists and sea captains noticed, with horror, that the Gulf Stream was gradually diverging from its course, which would result in the British Isles becoming mountains of ice. Scientists set about solving why the Gulf Stream was trying to get away, and discovered the cause was yachting concerts, in which society women tried to sing Melba into vaudeville. The government officials informed them that they must either buy talking machines or lose the Gulf Stream. Naturally they didn't want England to become icebound, so each yacht bought a machine, and England was phonographically saved."

## HENRY B. BABSON WEST.

**Establishes Many New Jobbers—Factory Being Gradually Moved to Newark.**

The factory of the Universal Talking Machine Manufacturing Co. is now being gradually removed from New York to their new premises in Newark, N. J. As previously stated the general offices of the company will also be shifted, but the export department will remain in New York, where General Manager Macnabb will retain a place of call twice a week, not to mention his time at the laboratory. The changes will not interrupt the company's business in any way.

Henry B. Balson, president of the Universal Talking Machine Co., New York, who is on the Pacific coast, establishing Zonophone jobbers, will not return east before the latter part of June. He will visit the principal cities from Los Angeles to Seattle. The ubiquitous and hustling Henry is reported as doing a land office business, and General Manager Macnabb, who is kept informed of transpiring events by brief wires—H. B. has no time to write—is tickled to death. The company will be ready to ship from their new factory in Newark, N. J., about July 15. Their general office will not be removed before September.

## TIMELY TALKS ON TIMELY TOPICS.

For a whole year the preparation of the new copyright bill—now before Congress, having been introduced May 31 in both branches—has been under way, and during that time the record manufacturers, with one exception, have seemingly ignored the entire matter. Reports of the various conferences held in New York and Washington have been reported in *The World* from time to time, in which the probability of the law being amended so as to prohibit the reproduction of music or writings without the consent of the composer, author or copyright owner was dwelt upon; in fact, the matter was brought directly to the attention of several attorneys, counsel for leading record manufacturers, as well as to the principals themselves, but little if any attention was given the question. When the bill was finally completed, introduced in Congress and the public hearing announced, then they commenced to wake up. Whatever may be the fate of this bill, certain it is the record makers, with the exception of the above mentioned concern, were not onto their job.

A successful talking-machine dealer in this city attributed his prosperity to the fact that he always pleases his customers so well that they act as salesmen for him. "It is in this way," he remarked to *The World*: "I make it a rule to be as accommodating as I know how to everyone that comes in, and will put myself out of the way in order to interest visitors in my stock. Once I gain a hearing I can always make a sale. They do not forget it, and when any of their friends are in want of anything in my line they are sure to bring them in. Then they tell them of records that they like, call their attention to little odds and ends that always are found in any well-equipped phonograph outfit, and without my saying a word sell several dollars' worth of goods for me. A talking-machine dealer must have an unlimited amount of patience, and not feel disappointed if a visitor does not buy the

first time he comes in. Such I always make it a point to invite to drop in whenever they are in the neighborhood and hear some of the new records. It is not long before they have placed an order, and usually a better one than if they had purchased the first time. I think that if all the phonograph companies would establish an exchange basis it would work for their benefit. There are many old and worn records that, if they could be withdrawn from use, would be at once supplanted by something new. I would advocate permitting the dealers to allow a certain price per pound for used records in exchange for new ones, and I know if I could get some of my customers to unload a lot of the worthless records that they have, they would at once invest in new ones; but so long as they have, say, fifty on hand, even if they are poor, they will buy sparingly."

In the new Spanish tariff, which goes into effect July 1, with duties payable in gold, an advance has been made on American talking machines, which will pay \$1.93 per kilogram (220 pounds), instead of \$1.30, as at present. By the proposed changes in the Japanese tariff talking machines are advanced from 35 to 50 per cent. ad valorem. It is evident by these levies that the talking machine is figuring largely in the column of leading importations in those countries.

Who said Victor contract? The heated discussions over this now thoroughly well-known document are cooling down, for it seems the trade are inclined to believe the Victor Co. have no intention of taking undue advantage of either their business or their source of supply. The company frankly admits the agreement is not altogether perfect or even satisfactory to themselves, but they propose making it acceptable in the course of a few months by and with the advice of their dealers and distributors. In this spirit, the acrimonious criticism previously indulged in by jobbers in various sections of the country has subsided, and further developments are being awaited in a less bellicose frame of mind.

Apropos of this the Universal Talking Machine Manufacturing Co. are arranging to launch a contract, so as to get their trade shaped and lined up in accordance with present-day methods. The benefits of price protection are too apparent to every one who witnesses the needless slashing of margins in other lines. The principle has been declared legally unassailable, and commercially it is recognized and accepted as absolutely sound from any and all points of consideration.

Our judges, while wise and learned in the law, occasionally get mixed when it comes to the use of technical terms. For example, in the recent decision of the United States Circuit Court of Appeals, Second Circuit, on the perforated music roll case, the court speaks of the "disc of the phonograph." This error might occur in an opinion written elsewhere than in the Second Circuit, where the principal talking machine litigation has been carried on for the past five years, and therefore it seems the "honorable justices" there, at least, should be as familiar with the trade terms as the counsel at bar.

The difficulty of making good records in South American countries is due in great measure to the absence of the piano accompaniment. String instruments are universally used, the piano being comparatively unknown, and therefore experts declare they have unusual trouble in securing even passable results in recording.

Discussing the situation, present and prospective, C. H. Wilson, general sales manager of the National Phonograph Co., said to *The World* the other day: "We are slowly catching up on our orders, but are still far behind. For instance, 2,000,000 records and 35,000 machines. Of course, these orders will be filled eventually, as business

## To Talking Machine Dealers

The MUSIC TRADE REVIEW is the oldest publication in the music trade industry. It contains more than fifty pages devoted to the piano trade, musical merchandise news, music publishers' department and talking machine trade. A special technical department is a regular weekly feature of the publication. A vast amount of valuable information is contained in each issue. The REVIEW has won higher honors at the great expositions than have ever been won by any other publication in the world.

## Hohner Harmonicas and Accordeons

The Lyre Harmonica Assortment

A Good Side-Line for Talking Machine Dealers

Small Stock  
Little Capital Required  
Big Demand  
Big Profits

### Mr. Talking Machine Dealer:

You have the facilities, why not handle Harmonicas and Accordeons and make an extra profit? There's a demand for these goods everywhere and it will require but a small investment to get a share of the business. The Hohner Harmonicas have been on the market for half a century during which time they have satisfied the desires of the most critical. The name "Hohner" is now a household word amongst the harmonica and accordeon playing public, and the mere announcement of the fact that you have these goods for sale will be sufficient to bring you numerous inquiries for them.

slows up; but, frankly, I do not believe trade will fall off as much as may be imagined. Again, the same congestion will occur again when trade sets in good and strong, as is certain, unless advance orders are placed for stock, no matter what our factory facilities happen to be at the time, though they are being greatly increased."

Whenever she knows that she must indulge in a flight of oratory at some meeting, a certain member of many women's clubs doesn't trust to the inspiration of the moment. She takes a phonograph into her confidence before the appointed day. She utters her "impromptu" epigrams and rounded periods into the machine, which repeats the speech, giving her a pretty clear idea of how her eloquence will "go." She has the added pleasure of preserving a record which can entertain her on dull days, or can be put away for the benefit of posterity. It may not be such a source of delight to her children's children as she imagines, but she never will know that, and the plan is a great comfort to her vanity.

A subscriber of *The World*, residing in 74th street, New York—a gentleman of great musical taste—has the unique hobby of collecting records of an opera, and when he has a sufficient portion of the work gives concerts at his home, announcing to his friends the presentation of "Il Trovatore," "Carmen," "Faust," etc. It is a hobby that has all the fascination of collecting, as he has to search through the productions of the various companies, and the results are capable of offering more substantial entertainment than a collection of shoe buckles or postage stamps. Not the weakest feature of the idea is that the hobby reverts directly to the benefit of the dealer, as it means increased sales of standard records.

The man who thinks himself funny, the shrew or the garrulous mother-in-law should talk into a phonograph—and then be compelled to listen to the reproduction of their own voice. If some people were made to hear themselves talk they'd soon be tired enough to enjoy a solid night's sleep, and learn something of the value of silence.

The ingenuity displayed by a Paterson dealer who, having his shop painted, made a record announcing "Wet Paint!" and kept it going all day in order to warn passersby, suggests the possibility of adapting the talking machine to a number of special uses not heretofore thought of. A machine placed over a store entrance and commenting on the weather, the state of crops and the day's bargains in the specialties handled would save much effort on the part of the dealer. A similar contrivance at the barber's would make a visit to his shop a source of unconfined joy, for with all its faults the talking machine hasn't a garlic laden breath and an abominable accent. Then a talking machine placed at certain points could repeat the time-honored phrases so familiar to us on signs, as "Keep Off the Grass," "Private Property—No Trespassing," "Beware of Pickpockets," or of "The Dog," and countless other little speeches. But think of the thing being overdone, of hearing the trainman's "Step lively!" from the horn

of a phonograph, or the tantalizing "busy" of the telephone girl from the same source. The possibilities are too numerous and alarming to contemplate.

Perry B. Whitsit, of Perry B. Whitsit & Co., Columbus, O., secretary of the Central States Talking Machine Jobbers' Association, was cordially received and treated during his first visit to New York, when he attended a meeting of the Eastern Association, May 29. He left for home two days later, greatly pleased with his reception, and promised a "bunch" of friends that when he came on to attend the Edison jobbers' entertainment next month he would stay a week after the ultimate date. In anticipation of this, a programme of significance has already been framed up.

May 25, in the United States Circuit Court, New York, before Judge Lacombe, owing to the great labor in making up the record on the appeal from Judge Townsend's opinion in the case of the Victor Talking Machine Co., Camden, N. J., against the Talk-o-phone Co., Toledo, O., a motion was argued to have the hearing go over to the fall term of the Circuit Court of Appeals. It was granted, and it being a preference cause the case will come on at the October term. As the suit—for alleged infringement of the free-moving stylus claims of the Berliner patent—now stands a preliminary injunction was issued by Judge Townsend, but a stay granted concurrently, pending the appeal, though the defendants were required to enter a bond.

The phonograph is now pronounced a great panderer to human vanity. Do you wish to know how you sound, what is the quality of your voice, how that after-dinner speech will "go," just take the phonograph into your confidence. According to the latest wrinkle, public speakers need leave nothing to chance. They can rehearse their "impromptu" eloquence into the machine, and then turn it out to hear how they did it, and they can preserve their splendid flights of oratory for their children's children, not to mention their own, delectation in the days to come. Who ever dreamed modern man could be recorded more completely by his voice than the Egyptians in their hieroglyphic tombs? Yet the builders of the pyramids are dumb, while the man in the phonograph will talk on forever! It may not be so much of an advantage for posterity as imagined, but at present the idea is rather comforting to the vox et praterea nihil class of politics. However, if we can't see ourselves as others see us, we can at least hear ourselves as others hear us, and that's something.

Harold A. Loring, who was commissioned by the Government last summer to study Indian music, has already collected material among the Sioux (who are living at present on eleven scattered reservations), the Cheyennes, the Crows, the Ojibways, the Puyallups, and other tribes. He is accompanied by two officers of the Indian police and an interpreter, and makes his records partly on paper, partly in phonographs. He expects that two years and a half will be required to finish his labors.

When Henry J. Hagen, of the Victor Talking

Machine Co.'s recording laboratory department finishes his work in South America he will proceed to Italy, about the middle of July, where he is to be joined by Mr. Long, in charge of the Universal Talking Machine Manufacturing Co.'s export department. The couple are to make special instrumental records, especially of prominent bands and orchestras, in which they will be engaged probably six months or more. Mr. Hagen is considered such an expert in his line that his stay abroad may be prolonged indefinitely.

The long looked for decision of the United States Circuit Court of Appeals in the celebrated case of the White-Smith Music Publishing Co. against the Apollo Co., was handed down Friday, May 25. Judge Hazel's elaborate opinion, which was reviewed, was sustained unanimously, declaring that the perforated roll is not a copy of music within the meaning and intent of the copyright statute, but "are mere adjuncts of a valve mechanism in a machine." The court also said: "The argument that because the roll is a notation or record of the music, it is, therefore, a copy, would apply to the disc of the phonograph \* \* \* which, it must be admitted, is not a copy of the sheet music." This decision is final.

John Kaiser, chief of the Douglas Phonograph Co.'s traveling staff, and known in the record-making circles as "Casey," is cultivating his voice for professional purposes under the capable tutelage of Albert B. Pattou, of the Church Choir Exchange and Bureau of Music, New York. Later John's rich baritone will become famous as an income producer in the recording laboratories of the country.

### SUCCESSFUL MEETING OF JOBBERS

Held in Cleveland, May 28—Victor Contract Matters Discussed—Committees Appointed—Messrs. Hawthorne and Sheble Dine the Visitors.

(Special to The Talking Machine World.)

Cleveland, Ohio, May 28, 1906.

The meeting of the Central States Talking Machine Jobbers' Association, held at the Hollenden House, Wednesday last, was successful from every point of view, about twenty-five representative firms being represented. An informal conference on the preceding day furnished an opportunity to discuss matters before the regular session. At the regular session the proceedings lasted from 10 a. m. to 6 p. m., with an hour's adjournment for luncheon at noon. George Ilsen, of Ilsen & Co., Cincinnati, the president, ruled the gathering in his customary genial manner, with Secretary Whitsit, of Perry B. Whitsit & Co., Columbus, O., wielding the reportorial pencil. The major part of the discussion dealt with the Victor contracts, and as General Manager Geissler, of the Victor Talking Machine Co., was present, a few heart-to-heart talks were indulged in, which seemed to clear the atmosphere. C. V. Henkel, president of the Douglas Phonograph Co., New York, who attended as delegate from the Eastern Talking Machine Jobbers' Association, was shown a great deal of attention, as he took an active part in the proceedings. Previous to the final adjournment the following were appointed as a press committee by the association: W. E. Henry, of Powers & Henry, Pittsburg, Pa.; C. V. Henkel, of Douglas Phonograph Co., of New York City; Rudolph Wurlitzer Co., Cincinnati, O. Several new members were elected.

Monday E. A. Hawthorne and Horace Sheble, of the Hawthorne & Sheble Mfg. Co., Philadelphia, Pa., and Bridgeport, Conn., gave the members a dinner at the hotel, which proved a most enjoyable occasion. At midnight the Association and their guests sat down to a spread in the Rathskeller. The following evening L. F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., tendered an elaborate banquet at the hotel to everybody on the spot. After a choice menu had been disposed of, accompanied by harmonizing solvents, and the cigars lighted, the flood of oratory came along and pretty nearly everybody had something to say, and they said it in the most agreeable and approved manner. President Ilsen filled the difficult part of toastmaster with eclat.

Besides the jobbers on the ground, the following gentlemen were also in Cleveland: L. F. Geissler, of Victor Talking Machine Co., Camden, N. J.; E. A. Hawthorne, Horace Sheble and Chas. A. Noyes, of Hawthorne & Sheble Mfg. Co., Philadelphia; William McArdle, with American Record Co., Springfield, Mass.; C. S. Gardiner, with Columbia Phonograph Co., general, New York; P. B. R. Bradley, with International Record Co., Auburn, N. Y.; B. Feinberg, with Universal Talking Machine Mfg. Co., New York; Max Landay, of the Land-o-phone Co., New York. It was decided to hold the next convention in Detroit, Mich., August 14th.

### HOW HE EDUCATED THE DONKEY.

The donkey Caruso had on the London opera stage one time recently in the "Jongieur de Notre Dame" was lent by a nobleman for the occasion. The owner fitted up in the donkey's stable a "talker" with a Caruso record in order that the donkey might become accustomed to the music before making his debut. The machine performed three times a day for him.

### TALKING MACHINE MEN AT THE BAT.

Saturday last, the 9th, a match game of baseball was played between picked nines of the Douglas Phonograph Co. and the Victor Distributing & Export Co., New York, in the Ridgewood section of Brooklyn Borough. The sport was great on both sides, the pitching of Henkel, the batting of Petit, in the Douglas team, and the stunts of Williams, Beekman and Haas on the V. D. & E. line were great. The rooters were vociferous, but the Douglas players were beaten by a score of 13 to 15. R. E. Caldwell, with the Blackman Talking Machine Co., umpired the game. After the game a bountiful dinner was enjoyed at a local hotel.

### RECORDS BY DAVID BISPHAM.

The Columbia Phonograph Co. have arranged with David Bispham, the celebrated baritone, for a number of records, which are destined to have a wide popularity. The initial number is "Danny Deever," Kipling's famous verse, set to Walter Damrosch's clever music. This appears as No. 3,016, a 12-inch disc record.

The Elyria Talking Machine Co. have opened a store at 596 West Broad street, Elyria, O., with Karl Lenzler in charge.

## TALKING MACHINES IN CHINA.

Geo. K. Cheney Speaks of Yuen Sing Foong, Who is One of the Talking Machine Hustlers of China—Helped Mr. Cheney Secure Good Records of the Various Dialects—Story from the Orient.

We take pleasure in printing herewith a photograph of Yuen Sing Foong, of S. Moutrie & Co., Ltd., manufacturers and dealers in pianos and organs and all musical instruments, as well as agents for the Victor Talking Machine Co., in China. Their main office and factory is in Shanghai. They have branches in Tientsin, Hong-Kong and London. S. Moutrie is the managing director, J. Hinton assistant manager and treasurer, and Robert Briener secretary. Mr. Yuen Sing Foong has been many years connected with the talking machine business, and has es-

YUEN SING FOONG.

tablished throughout China for the S. Moutrie Co. many branches, and has sold Victor talking machines and records to dealers in every city and large town in the Chinese Empire. Mr. Yuen speaks good English, although he has never been out of China. He is a great scholar, and speaks most of the different dialects spoken in China. It was through his influence that Geo. K. Cheney was able to secure for the Victor Co. the best talent in China. The records taken in China turned out so satisfactory that the S. Moutrie Co. have placed orders for thousands of them. In China there are many dialects spoken, and Mr. Cheney took records of all the principal dialects. Mr. Cheney, who recently returned from the Far East, said to The World that "the Chinese take great interest in the talking machine. In towns which are not large enough to support a theater they use the Victor machine as an entertainer, charging a small admission, which enables all to hear songs sung by some of the most noted actors in China."

## USE OF COMMERCIAL MACHINES.

Steadily Growing in Favor—The Famous Book "The Jungle" Was Dictated to One of These Machines—Large Corporations Find Them Invaluable.

The great strides made in the sale of the commercial talking machines during the past few years is regarded by dealers in that commodity as only a little short of marvelous. It is being adopted by the largest corporations in the country, and lawyers, authors and court stenographers are finding it invaluable in their professions. All of the testimony in the recent insurance and kindred investigations was dictated to these machines, and transcribed directly from them. Henry P. Roberts, of the commercial grapho-

phone department of the Columbia Phonograph Co., has in his possession a letter from Upton Sinclair, the author of the "Jungle," in which he states that he used one of their commercial machines for dictating that remarkable book, and considered it an invaluable aid in his work. The Columbia Co. also have a huge pile of testimonial letters from some of the largest corporations in this country, several of which have over fifty of these machines in constant use, and all of which speak in the highest terms of the results attained from their use. They report that the output for May was 45 per cent. greater than for the same month of last year, and the only difficulty is in having them made fast enough. Among the large piano houses that are using them daily is Wing & Co., of Thirteenth and Hudson streets.

## DUPLEX CO. IN KALAMAZOO.

Purchase Two and One-Half Acres of Land and Will Erect Factory and Make Their Own Specialties in Future at This Point.

(Special to The Talking Machine World.)  
Kalamazoo, Mich., June 5, 1906.

The Duplex Phonograph Co., a manufacturing concern, have completed arrangements to erect a factory in this city and make their goods here. F. D. Eager, secretary and general manager of the company, has come to Kalamazoo from Lincoln, Neb., and expects to make this city his home in the future.

He announces that his company has purchased two and a half acres of land on East Paterson street, near the Chicago, Kalamazoo & Saginaw railroad, and will erect thereon a factory building 120 by 60 feet in dimensions, two stories, and that they will give employment at the start to about 125 hands.

For some time this same concern have been advertising their goods extensively under the caption, "Made for you in Kalamazoo," and the product, which is a double-horn phonograph, has been made by the Kalamazoo Novelty Co. of this city. That was not altogether satisfactory, and the company decided to build their own factory and grow.

## BUSINESS SOMEWHAT QUIET.

Business is not remarkably active and it looks as if a quiet summer might be expected. It is believed, however, that when the public begin to change their abodes to the resorts in order to escape the warm weather, trade will pick up in a marked degree. The manufacturers are still running their plants full capacity.

## HOME RECORD MAKING

Should be Encouraged by Dealers—It Helps Trade Not Only in Blank Records But Increases Greater Interest in the Talking Machine and Its Possibilities.

Do you know that there are thousands of talking machine owners who cannot make a record to save their lives? This is true, and there is no reason why this pleasure (and it is a pleasure) should not be encouraged to the mutual advantage of dealer and customer.

It means simply this: The dealer will receive large orders for blanks, and then, of course, this will naturally be followed by orders for shaves. Both pay well. It does not take more than two minutes to shave a record, and there is five cents in it. Fifteen dollars a day in excess of regular record sales have been made in this manner. This part of the business can be developed so that it will keep a boy at the shaving machine all day.

When you send out your next bulletin, insert an extra sheet stating that the recorders now in use are really practical and that you will be glad to demonstrate them at any time. You will find that your customers will respond readily.

There is frequently talent in a family, and when the art of record making is mastered, a great deal of wholesome fun is enjoyed and successful records made. It will not hurt the sale of your regular stock either.

Since the new moulded process has been in vogue, the opinion prevails that good records cannot be made at home, and when this opinion is dissolved by a demonstration, business all along this line will follow. Then the making of disc records at home is a still more later development which promises well.

Try it.

## JAPAN INCREASES DUTY

On Talking Machines from 35 to 50 Per Cent.—Building Higher Tariff Walls.

The Parliament of Japan have just passed a tariff bill which emphasizes that the Yankees of the East are following our example in endeavoring to build up their manufacturing and commercial power through the aid of a protective system. We note that the new bill increases the duty on a great many American products; for instance, talking machines are advanced from 35 to 50 per cent. The amount of trade in these machines has developed quite extensively in the Far East.

## Cleapol Waterproof Metal Polish

MPARTS A LASTING LUSTRE

### "TALKER" TRADE IN TWIN CITIES.

Use of Machine Improving Musical Taste—T. C. Hough in New Quarters—A Chat With A. M. Magoon—Minnesota Phonograph Co. Open Branch in Minneapolis—Columbia Co. Report Excellent Trade.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, June 6, 1906.

The most striking development in the talking machine trade over last year is the fact that the musical taste has been considerably improved, and the call is for a higher priced machine, and a better quality of records.

T. C. Hough moved into elegant quarters on the second floor at the corner of Washington and Nicollet avenues, about the first of this month. Mr. Hough now has three stores, two in Minneapolis, and a branch in St. Paul. He handles the Edison machine exclusively. Speaking of the trade, he said: "My business in April was double that of last year, and so far this month the results have been more than satisfactory." Mr. Hough, by the way, was the pioneer dealer in talking machines in Minneapolis.

A. M. Magoon, manager for the Victor department of the New England Furniture Co., said: "The trade has not been so good as a year ago in machines, but the demand this year is for higher grade machines, and the sales of records have been much larger. I notice, too, that the taste has improved in music, and our customers are asking for better things. The lake business has just begun to open up, and I have had a number of orders from people who have gone out to Minnetonka."

The Minnesota Phonograph Co. report trade as very good, and a big increase so far over last year. Shortly before the holidays a branch was opened in Minneapolis, the headquarters being in St. Paul, Mr. Lowey, formerly with the New England, taking charge. Prior to that time, the Edison had been handled exclusively, but Mr. Lowey also added the Victor, and only recently secured the permission to act as jobber for the

Victor, and has had more business in that line than he could handle with his limited facilities. The St. Paul store was also made a jobber the past week.

The Columbia Phonograph Co. report excellent results at both stores in the twin cities. There has been a very satisfactory increase over a year ago with a demand for higher-priced machines.

W. J. Dyer & Bro., who handle the Victor and Edison, report: "We can't get sufficient stock to supply the demand."

### CANAL DIGGING BY MUSIC.

Unique Method Discovered of Making Panama Laborers Happy.

(Special to The Talking Machine World.)

Washington, D. C., June 9, 1906.

Music is playing an important part in the digging of the Isthmian Canal. Laborers from the West Indies are all accustomed to sing as they work, and bosses who are capable of leading a chorus have much greater success than men who do not have that faculty.

Reports received by the commission from officials on the Canal Zone indicate that one boss has developed songs with the aid of a talking machine, which have inspired contentment and energy among his men, with the result that he has outdistanced all rivals in the amount of work accomplished. "Down, men, down," are the words for which this music master has provided music that delights the Jamaican heart. Other bosses are using the traditional "Yo, heave, ho."

Bosses who have been in the employ of fruit companies and other corporations in the tropics have carried the methods of the West Indies to the Isthmus with excellent results, and on all the Government work singing is becoming general, and it has been much stimulated through the utilization of the talking machine.

### WATCH HAS TINY PHONOGRAPH.

A Swiss watchmaker has invented a watch which speaks the time from a tiny phonograph.

A very small hard rubber plate has the vibrations of the human voice imprinted on it, and is actuated by clockwork, so that at a given time the articulation is made, indicating the hour. The utterance is sufficiently strong to be heard 20 feet away. It is possible by means of a device of this kind to combine sentiment with utility, as the vibrations can be made by any clear voice, and a man's watch may tell him the time in the tones of wife or children.

### WILL OCCUPY ENTIRE BUILDING.

The National Phonograph Co. Acquire Lease of Building at Fifth Avenue and 8th Street, Which They Will Utilize for Offices.

An entire building on the northwest corner of Fifth avenue and Eighth street, New York, has been acquired by the National Phonograph Co., the sale being consummated recently, which they will occupy for their New York offices. The foreign and commercial system departments will also be located there. The place is one of historic interest, having been owned in Colonial times by members of the English nobility, and recently the New York house of C. H. McCormick, of Chicago, the present American Ambassador to France. It is a beautiful old brown stone mansion, with solid mahogany doors and stairways, and the company will remodel the house for their business and refurnish it in the most lavish manner as splendid quarters for the president, legal department, general sales, credit and other chief executive departments. Alterations are expected to be completed and possession taken by July 1. Their present premises, at 31 Union Square, will be surrendered.

### INCORPORATED IN OHIO.

The Ashtabula Phonograph Co. was incorporated this week with the Secretary of State of Ohio, with a capital of \$10,000, by C. L. Scrivens, E. J. McClintock, R. S. Parker, J. H. Johnson, etc.

## LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Specially prepared for The Talking Machine World.)

Washington, D. C., June 7, 1906.

**SOUND RECORD.** George A. Manwaring, Bayonne, N. J., assignor to the American Graphophone Co., Bridgeport, Conn. Patent No. 819,072.

This invention relates to disc sound records and the labels carried thereby. In dealing with record tablets of celluloid or the like it has been found that the paper of which the label is composed will not adhere to the celluloid surface. The difficulty appears to lie in finding an adhesive which acts permanently both upon celluloid and upon paper. The present invention enables one to secure a paper surface to another

paper surface upon the other side of the disc record through an opening cut in the record tablet for that purpose.

This invention will best be understood by referring to the accompanying drawings. Figure 1 is a sectional view, greatly exaggerated in thickness, of a disc record-tablet having its label secured thereto in conformity with my present invention. Fig. 2 is a modification, and Fig. 3 is a plan view illustrating the invention.

**REPEATING ATTACHMENT FOR PHONOGRAPHS.** Edward L. Aiken, East Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 820,165.

This invention relates to phonograph repeating attachments of the type wherein the lifting operation by which the feed nut is disengaged from the feed screw is effected by means of a

rotating lifting pin or projection which engages a contact member in the form of a dog carried by and traveling with the sound box carriage and pivoted on an axis parallel to the direction of movement of the said carriage. Devices of this character are well known in the art. (See, for example, United States Letters Patent No. 583,679, dated June 1, 1897, to Fletcher, and Patent No. 678,890, dated July 23, 1901, to Matthews.)

In these patents the pivoted dog operates as a lever for effecting the elevation of the sound box carriage. When it is attempted to effect the elevation by a direct lift of the rotating pin upon a pivoted dog, it is found that special devices are necessary to produce a structure which will be operative when applied to phonographs of the usual construction, for the reason that in such instruments the pitch of the feed screw is only one one-hundredth of an inch, so that the first contact of the rotating member and traveling member cannot be more than one one-hundredth of an inch in width and may be anything less. This width of contact is not sufficient to accomplish the lifting of the sound box carriage with any degree of certainty, because the rotating member moves at a high rate of speed and strikes the traveling member with considerable violence, the usual result being that the carriage is lifted sufficiently to disengage the feed nut from the feed screw, and the carriage is then pushed or hurled in a backward direction, so that the lifting pin and traveling dog are separated, whereupon the carriage falls, to be again fed toward the rotary lifting member. The mechanism referred to may occasionally operate when the width of initial contact is at its maximum (one one-hundredth of an inch) and before

the parts have become worn to any appreciable extent; but even under the most favorable conditions the device will fail so often as to be worthless for any practical purpose. It is therefore necessary in designing a device of this type to provide special means for obtaining a sufficient width of overlap of the traveling dog or contact member and rotary lifting member as to make the device reliable and certain in operation. This fact was pointed out in Patent No. 798,087, granted August 29, 1905, and a special construction for accomplishing this result was therein disclosed and claimed. This structure, however, requires accurate setting—that is, the lifting pin and pivoted dog cannot vary much from the relative positions shown in the drawings of the said patent.

It is the object of the present invention to produce a device in which sufficient overlap of

the lifting pin with respect to the pivoted dog can be obtained for the lifting operation, and which device will at the same time admit of a considerable variation in the relative positions of these parts without its operativeness being impaired. In other words, it will not require accurate setting, so that unskilled persons may apply the device to phonographs, and it will also possess the same advantages as the structure of said Patent No. 789,087 in that the device will be effective and positive in its operation, of but few parts, and will not in any way affect the operation of the phonograph or prevent the reproducer from being fully raised to permit the records to be applied to or removed from the mandrel, being at the same time readily adjustable, so that the reproducer may be caused to engage and be disengaged from the record at any desired point—as, for instance, immediately before and after the selection has been reproduced.

Reference is hereby made to the accompanying drawings, in which Figure 1 is a plan view showing a part of the main shaft, feed screw, back rod, sleeve and feed nut spring arm of a phonograph with the present improvements applied thereto. Fig. 2 is a front view of the same. Fig. 3 is a section on line 3 3 of Fig. 1, showing the repeating mechanism out of operation, as when the reproducer is in engagement with the record. Fig. 4 is a similar section showing the repeating mechanism in operation, as when the sound box carrier is being returned to its initial position. Fig. 5 is a detail side view of the pivoted dog and the forward end of the arm by which it is carried. Fig. 6 is a section on line 6 6 of Fig. 5. Fig. 7 is a section similar to Fig. 6 of a modification of the contact member. Fig. 8 is a view similar to Fig. 5, but partly in section, showing a second modification of the contact member. Fig. 9 is a section on line 9 9 of Fig. 8. Fig. 10 is a section on line 10 10 of Fig. 8. Figs. 11 and 12 are front and side elevations of a third modification of the contact member. Fig. 13 is a vertical section of a modification of the rotary lifting member, and Fig. 14 is a similar view of another modification of the same.

**PHONOGRAPH HORN.** Peter Weber, Orange, N. J., assignor to New Jersey Patent Co., West Orange, N. J. Patent No. 820,158.

This invention relates to collapsible horns for use principally in connection with phonographs

or other talking machines, although it is obviously capable of other uses. The invention operates, broadly, upon the same general prin-

Instantly attached, very rigid, and will hold any size Horn up to 36 inches. Will not injure the Cabinet.

## THE UNIVERSAL HORN CRANE

A Crane equally well adapted for Edison Phonographs and Columbia Graphophones. A novel, effective device for raising or lowering horn. Fully nickel-plated.

## IDEAL FASTENER CO.

Horn Crane Dept., 2722 Third Ave. NEW YORK CITY

persons who are ignorant of the proper manipulation of the machine make use of the said spring for raising the carriage when it is desired to change the record on the mandrel. In this way the spring frequently becomes bent so that it does not properly hold the feed nut upon the feed screw. It is desirable, therefore, that means be provided for preventing such injury even though the spring be used for this purpose. It is also desirable that means be provided for adjusting the free end of the said spring in a downward direction, so that any desired pressure of the feed nut upon the screw may be obtained. With these ends in view the invention consists in the features hereinbefore described.

Reference is hereby made to the accompanying drawings, in which Figure 1 is a plan view illustrating an embodiment of this invention, and Fig. 2 is a side elevation, partly in section, of the same.

TALKING MACHINE. Einar Leschbrandt, Philadelphia, Pa. Patent No. 821,045.

The object of this invention is to furnish

an improvement in coin-operated multiplex talking machines. In the accompanying drawings, forming parts of this specification, and in which similar characters of reference indicate similar

parts throughout the several views, Figure 1 is a side elevation, partly in central sectional elevation, of a multiplex talking machine embodying improvements; Fig. 2, a plan of Fig. 1; Fig. 3,

a section of Fig. 1 on line 3-3; Fig. 4, a section of the cup j on line 4-4, Fig. 1; Fig. 5, a section of Fig. 2 on line 5-5; Fig. 6, a section of Fig. 1 on line 6-6; Fig. 7, an expanded view or development of the cylinder j. a is an upper, and b a lower, plate which form part of the frame of the machine. These plates are stationary and are carried in any suitable manner.

AUTOMATIC CUT-OFF FOR SOUND REPRODUCING MACHINES. Joseph Eifel, Chicago, Ill. Patent No. 821,629.

This invention relates to sound reproducing instruments wherein a record is rotated and thereby sounds are reproduced, and to means for automatically stopping such instruments at either the end of the record or at any predetermined point on the same; and for the purposes of illustration the device is shown attached to a disc and to a cylinder phonograph, but it will be apparent that it could as operatively be applied to any other form of talking

machine or music box. The principal objects of the invention are, to provide a cheap, safe and accurate means for automatically stopping the rotation of the record on sound reproducing machines at any desired point during their repro-

duction, or at a predetermined point when the complete record is not used; to provide accurate means for automatically stopping the rotation of the record when the end of the sound groove is reached, and to generally cheapen the cost of and

Figure 1 is a sectional view through the case of a disc machine with the cover of the case raised to show a plan view of the driving mechanism and my cut-off device; Fig. 2 is a sectional view on line (2) of Fig. 1, showing the disc and sound box above the case, but not showing any of the driving mechanism; Fig. 3 is a broken top plan view of a portion of the disc and sound box on line (3) of Fig. 2, showing the parts of the device applied to the disc and sound box; Figs. 4 and 5 are vertical sectional views on lines (4) and (5) of Fig. 1, respectively, showing de-

tails of the circuit closer and magnet; Fig. 6 is a detail showing the plate is secured to the disc, and an alternate means of contacting it with the driving shaft; Fig. 7 is a partly cross sectional view of the end of the driving shaft taken on line (7) of Fig. 2; Figs. 8 and 9 show a modification of the device; a top plan view of the arm which extends over the disc, and a cross section on line (9) of Fig. 8; Fig. 10 is a diagrammatic view partly in section through the case of a cylinder machine equipped with the device, and showing in elevation the cylinder and the parts

above the case; and Figs. 11 and 12 are detail views of the under side of the sound box and a portion of the cylinder (on line 12 of Fig. 10), respectively, showing the terminals carried by the two parts.

PHONOGRAPH, GRAMOPHONE AND OTHER SIMILAR SOUND REPRODUCING MACHINES. Frank F. Shanks, Chicago, Ill. Patent No. 822,024.

This invention relates to machines for reproducing sounds from records, and its particular

object is to provide means whereby sound waves energized by the instrument are transmitted therefrom and audibly delivered at a distance from the needle or tracker engaging the record to the hearer in clear ringing tones.

Heretofore it has generally been found very difficult and well nigh impossible to reproduce sounds from the machine in the precise manner and tone in which they were originally received

by the record. This was often caused by the vibrations of the sound waves passing through the metal horn or megaphone, and therefore the sound reproduced was "metallic" in tone and high notes or swells became harsh and rasping. These objectionable features have all been overcome by my improved means for the transmission to a point beyond the range of the immediate vibratory field of the needle or tracker and

the audible delivery of the transmitted sound waves after they have been projected upon a reproducing device. This is accomplished by the mechanism herein described and illustrated in the drawings.

In the drawings, Figure 1 is a side elevation of one form of the improved device, showing the

same in connection with a snare-drum and operating with a phonograph of the disc type. Fig. 2 is a top plan view of the same. Fig. 3 is a front elevation in detail of the sound wave transmission portion of my improvement. Fig. 4 is a top plan view of the same. Figs. 5 and 6 are front elevation and end views of a modified form of resonator used in connection with my improvement. Fig. 7 is a transverse vertical section taken on line 7-7, Fig. 3, looking in the direction indicated by the arrows and showing the maner of connecting and adjusting the vibrating arms.

#### VIM CO.'S NEW QUARTERS IN DES MOINES

(Special to The Talking Machine World.)

Des Moines, Ia., June 7, 1906.

The Vim Co., whose headquarters are in Chicago, Ill., and who are among the largest Edison jobbers have secured magnificent quarters in the five story Iliad Block, 808 Walnut street, this city, which is handsomely fitted up with private demonstrating rooms and every convenience for the proper display of their specialties. They will carry one of the largest stocks to be found in any establishment West of Chicago, and expect to build up a business of much larger proportions than ever before.

#### COMMENCEMENTS BY PHONOGRAPH.

Graduating "orations" from a phonograph, and without a pupil in the class, were the features of commencement exercises in the little red schoolhouse in Sell's Corners, Marion, O., last week. Roy E. Prettyman, the teacher, held the exercises in order to sue for his salary. He was hired for two months, but all the pupils quit after the first month. The Board of Education would not pay his salary, but he continued the work, and for several weeks has opened the school, rung the bell and waited for pupils who came not.

#### UNIVERSAL HORN CRANE IN DEMAND.

The Universal Horn Crane, which has quite recently been put on the market by the Ideal Fastener Co., of New York, has met with considerable success in the talking machine trade. Its excellent and novel features have caused a lot of favorable comments among the jobbers and dealers. The device for raising or lowering the

horn is attracting as much attention as the unique manner by which the crane is attached to the machine.

L. Silberstein, who has been identified with the talking machine business for many years, has taken charge of the business end, and so far is highly pleased with the results. The Ideal Fastener Co. will before long have another article upon the market, which they feel confident will cause a surprise in the talking machine trade in general.

#### HAWTHORNE & SHEBLE'S NEW FACTORY.

(Special to The Talking Machine World.)

Philadelphia, Pa., June 10, 1906.

The Hawthorne & Sheble Mfg. Co. have now

moved their offices to their new factory, southwest corner Howard and Jefferson streets, where they have installed every modern convenience to assist them in handling their rapidly expanding business. The new factory consists of five floors, contains about 80,000 square feet, and is connected throughout with a private telephone exchange whereby each department is in close communication. A multitude of new machines have been installed, largely of their own design and construction, as they are preparing to double their present output of talking machine supplies. They report many of their patented horns and sundries as meeting with a phenomenal sale, and believe that their increased equipment will enable them to give prompt and efficient service to their trade.

## YOU HAVE WAITED FOR THIS!

AN ATTACHMENT FOR HOLDING SOFTERTONE AND MEDIUM TONE NEEDLES IN THE NEW SPRING CLAMP NEEDLE ARM OF THE VICTOR EXHIBITION SOUND BOX

Here it is attached to the sound box. The sound box is turned up and the attachment inserted with its flat side opposite the lever, as shown in illustration.

Here is the Needle Clamp Attachment separate.

Without this attachment it is impossible to use softer and medium tone needles on the spring clamp needle arm. It is perfectly simple, easily attached, holds like a vise and is made in two sizes—for softertone and for Medium tone needles. Order as NEEDLE CLAMP ATTACHMENT and specify which needle is to be used.

Price, 25 cents each

Special prices to jobbers and dealers

**The Softertone Needle** is growing in popularity every day. The loud tone needle, of course, is a necessity to the dealer for selling machines, but it is often too loud for home use. When a customer takes a machine home he finds the softertone needle a great relief. Instead of tiring it perpetuates the use of the machine. This means record sales.

**It Costs Less** One Softertone needle will play six records. Less time is used in changing needles, and there is less wear on the records. A record will last three times as long when the softertone needle is used. We did not accept this fact until satisfied by numerous tests. You owe it to yourself to make a test if in doubt.

## MUNICIPAL CLUB VISITS ORANGE.

Inspects the Buildings of the National Phono-  
graph Co.—Dinner at the Hotel Martinique  
—Remarks by Messrs. Durand and Weber.

The members of the Municipal Club of Brook-  
lyn on May 26th visited the factory of the Na-  
tional Phonograph Co., at Orange, N. J., for the  
purpose of getting pointers on the construction  
of factory buildings of concrete, which is being  
used in building in connection with the addition  
to the big plant now under way at Orange.

General Superintendent Weber, of the Edison  
concern, piloted the club through the factory and  
showed how every man may enjoy a grand opera  
at his own fireside. They were shown how re-  
cords were made. Mr. Weber explained how the  
business was growing rapidly, and said that in  
spite of the fact that three thousand persons were  
employed in the factories, the company had  
orders for two million records that are waiting at-  
tention. Wm. McAndrews and Thomas P. Peters  
talked into one of the machines and later heard  
themselves speak. The members of the Club then  
visited the laboratory where Thomas A. Edison  
has perfected many of his great inventions, after  
which the big concrete factory, now being erected,  
was examined in detail.

The club then returned to New York and took  
dinner at the Hotel Martinique. A number of  
interesting addresses were made regarding the  
value of concrete as applied to factory building.

General Superintendent Weber made a few  
humorous remarks, saying that he never knew  
when to stop talking, and so he went into the  
talking machine business and let the machine do  
the talking.

Nelson C. Durand, of the National Phonograph  
Co., spoke on the commercial value of the phono-  
graph and drew comparisons between that sys-  
tem and shorthand. Mr. Durand told a story  
showing the early commercial instinct of Thomas  
A. Edison. When Mr. Edison was a newsboy on  
a train during the war, he discovered that papers  
sold well after a big battle.

When news came of one of the big battles, Mr.  
Edison went to the Detroit Free Press and got the  
editor to trust him for 1,000 papers. Then he  
went to the telegraph operator in the station and  
offered to "divvy" if the operator would send  
news ahead that a boy was coming along with the  
latest news of the battle. The operator was  
agreeable, the message went, and later Mr. Edi-  
son. First he sold the papers at 5 cents each, but  
before he reached the end of the line they were  
selling at \$1 each, and Mr. Edison and the op-  
erator pocketed a handsome sum.

To show the actual commercial advantages of  
the phonograph Mr. Durand had a letter dic-  
tated into a machine, and three minutes later a  
typewritten copy of the letter was read to the  
members.

The Bloomfield Phonograph Co., of Bloomfield,  
N. J., has been bought out by John B. Glennon.

## CONCERT BY TELEPHONE.

Successful Novelty Inaugurated by the Owner  
of a Talking Machine Up the State.

A talking machine concert by telephone was a  
novelty tried in a village up the state a short  
time ago with success. A lady had invited a  
number of friends to her house to hear some  
new records, and the evening proving very  
stormy, and but few present, she arranged with  
the central office to connect her with all of her  
friends that had 'phones in their houses. She  
then placed the receiver close to the horn, and  
the records on the machine. The result was  
very satisfactory, and those at the other end of  
the wires heard every sound as distinctly as if  
they had been in the room, minus the scratch,  
which was not noticeable. The experiment  
proved such a success that she intends repeating  
it in a short time, and will arrange to have  
friends at a distance enjoy the concert. It will  
be an idea for dealers who want patrons, who  
cannot conveniently come to their places of busi-  
ness, to hear the latest selections, and in that  
way take their orders by telephone.

Eduard R. Lankow, on the Edison talent staff,  
sailed for Europe May 9, where he has a five  
years' engagement to sing with the Dresden  
Opera Co. He is a close friend of the late A.  
Theo. E. Wangemann.

## With the Makers, Sellers and Users of Automatic Specialties

### THE MONTH'S HAPPENINGS

In the Automatic World—Business Good—The Roller Skating Craze—Films of San Francisco Disaster in Great Demand—Slot Parlors Increasing Hold on Public—Sheet Music Possibilities.

During the past month business in the automatic world has been very brisk, the demand for slot controlled devices having increased so rapidly that many of the largest manufacturers of these devices are hopelessly tied up. As one of the prominent members of this trade expressed it in a chat with *The World*: "Incomprehensible, as it seems, business is too good. Notwithstanding the fact that we have but recently enlarged our plants and increased our working capacity to double their size, we are forced to turn away a greater part of the new business which keeps coming in in order to at least make an effort to supply our old patrons. This, in some ways, is demoralizing to new investors, and in many instances will blast all hope of future business in their direction."

There seems to be a well defined craze for roller skating throughout the country, and the summer parks have recognized the revival. This should interest makers of automatic pianos and other devices, which properly find a place here. Any number of resorts have converted dancing pavilions into rinks, while others have erected special buildings for the accommodation of the skaters. The roller skating craze which has been sweeping over the country during the past year, has at last struck New York, and struck it right.

"It's an ill wind that blows nobody good," though to make this saying applicable to the terrible catastrophe at San Francisco seems scant short of sacrilege. However, commerce and sentiment, no matter how worthy, do not work together these days. Indeed, some of our American corporations are turning the disaster into a veritable mint, where money is being coined at a madcap pace. The moving picture concerns are reaping a wonderful harvest on their films taken during the earthquake. One company, since that memorable April 18, have been selling these pictures at the enormous rate of 20,000 feet a day, which up to the present time represents something like 270,000 feet, or over fifty miles of these films. Gigantic reproductions of the disaster are taking the place of the famous Johnstown flood shows at all the leading parks. And the business these attractions are doing goes far toward proving the incessant demand for the new and novel.

Notwithstanding the fact that Luna, Dreamland and other parks in and about Manhattan are in full swing, with their many and varied wonderful attractions, the arcades, or slot parlors, of New York lose little of their hold on the public. The parlor of to-day is scarcely to be compared with the earlier ventures in this line. We speak more particularly of the one on 14th street owned by the Automatic Vaudeville Co. as being without a doubt the most up to date and best appointed in this city. This place is no longer simply a parlor, but a veritable "Midway." One of the greatest attractions is the cascade stairway leading to what they term Crystal Hall. Here a continuous perfor-

mance goes on at an admission fee of ten cents. The stairway is built of glass, with colored electric lights set in beneath, between which and the upper glass dashes a continuous stream of water. The effect is very beautiful, and keeps the place packed continually.

Where it is practicable a regular shooting gallery makes a great feature for the automatic parlor. If a separate range for strictly target practice is possible so much the better. Prizes to be shot for by qualified shots adds zest to the thing, giving it a boost.

We wish to again call the attention of this trade to the great possibilities in a sheet music department for arcades. Without a doubt it is not only a great drawing card, but the profit derived is large in comparison to the small extra outlay of money. And apparently expense seems but a secondary consideration to our open-handed parlor men.

### HAS A CLOCK THAT TALKS.

Eastern Firm Will Show Novel Timepiece at Cincinnati Fall Festival.

(Special to *The Talking Machine World*.)

Cincinnati, O., June 6, 1906.

A clock that talks will be a novel exhibit at the Fall Festival.

An Eastern phonograph manufacturing concern has applied to the Fest authorities for space in Music Hall, a description of their booth accompanying the inquiry.

The concern has a clock which can be set like

an ordinary alarm timepiece and at the hour desired it will call out:  
"Get up, you sleepy-head, get up!"  
And in two or three minutes, unless the sleeper does as requested by the clock, it will repeat, in a voice like a foghorn.  
The hours on the clock are also talked off instead of being sounded on a gong.

SOME RECENT TRADE NEWS.

The American Mutoscope and Biograph Co., of this city, are having strenuous times. For the past month they have had so many new irons in the fire that there has been no rest for any one from president down to office boy. Their great deal with the Pathé Cinematograph Co., of Europe, whereby the entire stock of films of the Pathé Co. will be available for use on the mutoscope machines, has added a stack of new orders to their endless list. Their immense plant at Hoboken, N. J., is running full blast all through the week, including Sundays and at night in order to make shipments in anything like prompt order. Their offices and showrooms are located at 11 East 14th street. They are now occupying the whole building, and are fitting up in solid mahogany the large hall on the west of the front entrance. This, when completed, will be one of the handsomest showrooms in the country, as no expense is to be spared in its fittings. The mutoscope films of the San Francisco disaster have won high praise, and the rate these wonderful reproductions have been going proves how interested are the public who desire a more definite idea of the terrible catastrophe than that gained through printers' ink. The new Pacific Coast branch is located at 2623 West Pico street, Los Angeles, Cal., and is in charge of ex-Senator Otis M. Gove and A. H. Van Guysling, brother of G. E. Van Guysling, manager of the New York end. Several carloads of reels have been shipped, and a rental bureau opened where films may be obtained by Western operators.

The Rosenfield Manufacturing Co., 587 Hudson street, New York, are having difficulty in supplying the large demand for their famous illustrated song machines. These machines are ever increasing in popularity, and are now to be found in all the arcades and prominent places of amusement. They are making a specialty of the complete fitting up of slot parlors of all kinds. Their long experience in this business gives them a great amount of prestige with park managers. They have just completed a handsome place at the new Luna Park in Mexico City.

Roth & Engelhardt, manufacturers of the famous Peerless nickel-in-the-slot pianos, have just issued a handsome advertising card illustrating the gold medals awarded them at the three great expositions held in recent years, the Pan-American, held in Buffalo in 1901, the Louisiana Purchase Exposition at St. Louis in 1904, and the Lewis and Clark Exposition held in Portland in 1905. These medals are for excellence in the make of their Peerless and Harmonist piano players, and for their celebrated actions made at their great action factory at St. Johnsville, N. Y. They are now issuing a monthly catalogue of their perforated music rolls in the form of a postcard, with a return card, containing a blank list attached. Drop them a line.

The details of the new copyright bill, which appears in another part of this paper, will be of interest to arcade and parlor men, Sections 38 and 4966 being especially pertinent.

The Regal Piano Co., of 889 Southern Boulevard, New York, have been making several large shipments of their well-known automatic pianos to leading parlors and resorts. There is also a demand for their players. Among recent shipments were a carload to their dealer in Sacramento for distribution to the various points along the coast, but mainly to San Francisco,

where they will cheer up the unfortunates who have been rendered homeless and give pleasure to the workmen who will build new homes for them. Another very important shipment was a carload to a dealer at St. Johns, Newfoundland. These instruments have become very popular in that province, as well as in all Canadian seaports, and this enterprising firm are doing everything in their power to encourage dealers in that section to push them.

F. S. Zimmerman, the New York agent for the Caille Bros., Detroit, Mich., and general dealer in all slot-controlled devices, has some new and very attractive machines, which he is displaying at his showrooms, 5 East 14th street. Any person requiring anything in this line can get the latest and best information by dropping him a card to the above address.

The new automaton palm reader, invented by Marvin & Casler, of this city, may now be seen in most of the prominent arcades, and has proved a great money getter. There have been a number of serious delays in getting this machine on the market, owing to the condition of the metal market and the scarcity of skilled labor. On account of the large list of accumulated orders there may be some delays for a time in making shipments.

Gentlemen:-

It gives us pleasure to state, that we have sold a great many of "STYLE" #44 Nickel-in-the-slot Automatic Peerless Pianos, and they have given the very best of satisfaction to our customers.

Our customers state that they have never made an investment that has brought the same returns and most of them have had experience with other nickel-in-the-slot Pianos, as well as other nickel-in-the-slot Music-boxes.

Yours truly,

NATIONAL NOVELTY CO.,

Gentlemen

We have one of your Peerless Electric Pianos in operation in our Picture Arcade & also in our Saloon, the one in the Saloon has been in operation for eight months we kept it playing constantly from 8 am to 10 pm every day during this period, without once getting out of order, and we firmly believe that the Peerless Piano has no equal.

The one we have in our Saloon is a money getter and a great drawing card for the Bar

Very Respectfully Yours

Gentlemen:-

In reference to our PEERLESS ELECTRIC PNEUMATIC PIANO, which was the first in Memphis, we are glad to advise that we are more than pleased with it. We do not see how there could be a better COIN OPERATED PIANO than this one has proved to be.

The PEERLESS was installed in our place on Sept. 16th, '03, and up to this date, a period of four months and fifteen days, it has earned \$490.15, or an average of \$108.92 per month. In addition, it has materially increased our sales by making our place more attractive to our patrons.

Among its many points of merit are-- beautiful quality of tone and durability. Our PIANO has not required any tuning, and it has not cost us a cent for repairs.

Very truly,

*Friedman & Rosenbaum*

Roth & Engelhardt, Prop.,

#2 E. 47th St.

New York.

Gentlemen:-

About one year ago we purchased one of your Peerless Nickel in the slot pianos for use in our Penny Arcade. This instrument has been running steadily every day except Sunday from nine o'clock in the morning until ten o'clock at night, a steady run of thirteen hours each day, and it is as good now as when we purchased it. It requires only a few minutes attention each day and we freely give you this endorsement because we consider it positively the best Automatic Piano both Structurally and musically that has ever been produced.

Wishing you success, we are,

Yours truly,  
Treon & Miller.

*J. B. Miller*

# Seasonable Edison Advertising

A PORCH CONCERT WITH THE  
EDISON PHONOGRAPH

(The June Ad.)

The cut shown on this page is the illustration used in our advertisement for this month in the leading periodicals throughout the United States. It contains a suggestion that the public will appreciate. The public's appreciation of Edison goods means business and prosperity for Edison Dealers, and the proof that they are prospering lies in the fact that our factories are working at full capacity both day and night to keep dealers supplied. We help our dealers by advertising extensively, referring inquiries to them and strictly maintaining prices.

Write to us to-day, and we will gladly tell you how to become an Edison Dealer.

## VAST SUMS FOR RECORD MAKERS.

One Concern Spends \$100,000 a Year for Instrumental and Vocal Masterpieces—Better Incomes Than Are Made in Vaudeville and Appeal to Large Audiences the World Over.

The presiding genius of one of the record laboratories found time the other day to chat about the "mysteries" of the craft, or art, whatever you please to call it, and actually startled the "knight of the quill" by stating that his house pays about \$100,000 a year, or \$2,000 a week, to singers and instrumentalists who make records for them. These artists range from grand opera celebrities, who won't sing for less than a thousand or so, to men and women who get \$2 a song. He said further:

"We paid Edouard De Reszke an even \$1,000 for three songs, which consumed about half an hour of his time, including waits while fresh records were being put on the machine. Another well-known lady, a member of the Grand Opera House Co., got \$3,000 for three songs. The \$2 a song which we pay comparatively unknown artists may seem a small stipend, but it isn't, because most of our people sing fifteen or twenty times during the day, and we make use of them right along.

"Salaries are now paid to the majority, including three bands for different kinds of music, a couple of quartets and a number of vocal and instrumental soloists, to say nothing of two accompanists and two announcers. Most of these make more money than they would in vaudeville. Almost all of them have been on the stage and have given it up for steady work with us.

"Singers and players are growing wise to the fact that making talking machine records is a good thing for them financially, and the result is that we are besieged with applications for engagements.

"Most of these people are inclined to be rather superior in manner when they make us their first kind offers of assistance. They have an air of feeling that it is rather beneath them to sing into a mere horn—that the work is dead easy.

"This is where they are away off. The horn may be unresponsive. It doesn't applaud, but it knows what it wants and won't do its part unless it gets it.

"Because it is so hard to obtain the right kind of voices for the horn, and because we have to keep up to Broadway with new songs, as well as to make fresh records of old ones, we are looking for good singers all the time, and give almost everybody who comes in a chance to show what he or she can do.

"About one in twenty-five of those who try comes anywhere near filling the bill. We expect the singer to give his song with much distinctness and strength, and to get in the expression without too much variation in tone. He has to be very careful in his words, because the little needle that is putting it all down is more sensitive than the average ear, and has a cold-blooded way of exaggerating a singer's faults.

"Then there is more or less gymnastic work connected with singing to the machine. For notes that are soft and low you must thrust your head into the receiver, and must draw it out again just as rapidly or as slowly as you increase the volume of sound. In a piece that has sudden changes the singer's head keeps bobbing back and forth all the time. To be a good 'talker' specialist you must be able to vary the distance of your voice from the receiver in exact accordance with the sound. If a soprano is singing, for example, she must put her head as far as it will go into the horn when she's on her very low notes, and when she soars to the heights she must draw quickly back and sing straight to the ceiling. If she doesn't, the machine will transform Mary Jane's top notes into a grating shriek.

"The knowledge of how to do these things comes only from experience. We don't expect to hear at a first trial a voice that is just right for the machine. We listen merely to find out whether it contains material that will make it suitable for the machine.

"Some of the people whose trials show that they would be utterly useless to us have had more or less success on the stage. These are the ones who do not depend upon their voices alone for the success with audiences. The machine, of course, is not susceptible to a romantic appearance or a winning smile. It is the voice alone that it records on the wax, and this is where some of our most confident applicants for engagements fall down.

"On the other hand, a singer who has failed on the stage not infrequently makes a big success with us. His looks or manner hasn't appealed to people out in front. He lacks the magnetism necessary to make the house warm up to him, but the voice is there, and that is what we are after. Numerous singers of this kind have been saved from poverty and despair by talking machine work.

"The opportunities in this special field are greater for men than for women. The male voice is much the more satisfactory, being stronger and steadier. The machines have not yet been sufficiently perfected to record the delicate shades and wide range of the voice of the woman singer. On our staff the proportion of men to women is about ten to one.

"Few of our musicians are in love with talking machine work. While they like the good money they get for it, most of them complain about the uninspiring nature of the work itself. The point is that they miss the applause of the crowd. But the songs reach a great audience.

"A friend told me that last summer out in the wilds of New Mexico, apparently a long way from civilization, he heard the moving strains of the 'Holy City,' and of ballads popular on Broadway issuing from a wigwam in an Indian settlement. The chief was entertaining a company of braves and squaws with a talking machine.

"In addition to its pleasure giving activity, the talking machine is becoming more and more of a factor in serious matters. Machines were used as substitute spellbinders on wagons in our municipal campaign last fall, and we are preparing to have a lot of them play the part of political gatling guns and pour hot shot into the ranks of the enemy in the coming fight for the presidency.

"Another plan which we are beginning to put into operation is one to get records of the voices of all the famous men of the country. In a year from now we expect to have a big list. The best of these records will be preserved on specially prepared metal molds, which will remain in good shape for centuries. It would be interesting if we of the present day could listen to the voices of Shakespeare and other great ones of the past, wouldn't it? Well, we are just beginning systematically to provide for the handing down of the voices of our celebrities to our remote descendants. We feel that it will be work worth while."

## "TALKER" CONCERTS IN THE PARKS.

(Special to The Talking Machine World.)

Cincinnati, O., July 2, 1906.

Graphophone concerts will be given in the down town parks during the summer months. The agent of a machine said to be too large for use except in the open air, made application to the Board of Public Service recently to give concerts in small down town parks during the evenings without cost to the city. The request was referred to Director Bender, who gladly gave permission.

## THE VALUE OF SNAPPY PUBLICITY.

How the Talking Machine Dealer Might Extend His Business by Well-Written Advertisements Properly Placed.

Scanning carefully the sign-covered sides of the trolley cars which carry me to and from the office, I have often marveled at the skill displayed by the advertisers, and asked myself this question: "Would not an attractive jingle or illustration in honor of the many 'graphs or 'phones which make up the talking machine world, if inserted in a local paper, do as much for the great industry they represent as the street car advertisements do for the thousands of successful enterprises which are exploited in that manner?"

This method of booming one's business is rather expensive, 'tis true, but I sincerely believe it is more conducive to quick returns than others for this reason: People reading their evening paper or magazine naturally turn their gaze in the direction of the advertisements because of the good reading they know they will find there. They appreciate the change from dull prose to the quick, snappy jingle or witty paragraph of the "Adv. Column." It is after the paper has been consumed, literally stripped of news, that the advertisement gets in its work. For instance, we will suppose we have just digested an editorial on the ice question, and our brain is full of figures and hard things we would like to do and say to the ice trust. We are about to throw down the paper in disgust, when our eye catches this jingle:

Did you ever come home tired:  
"Down and out" from office grind,  
Longing for some slight diversion  
To patch up your shattered mind;  
Something that would soothe and rest you.  
Smooth your frown into a laugh?  
This is the best way to do it:  
Buy from Jones a phonograph.

We read it again and again until it clings to the crevices of our mind and we determine to investigate the machine that has the power to turn sorrow to gladness and languor to hilarity.

The result is that while down town next day we purchase one of the numerous 'phones or 'graphs above mentioned, and are happy ever afterward.

*Envoi.*—Advertising of the right kind, even to the small dealer, can safely be considered a good investment, inasmuch as results are sure to materialize eventually. HOWARD T. MIDDLETON.

## TO MAKE INDESTRUCTIBLE RECORDS.

The Indestructible Phonographic Record Co. was recently incorporated with the secretary of state of Maine for the purpose of making and dealing in phonograph records; capital, \$1,000,000. President and treasurer, I. L. Fairbanks; clerk, L. A. Burleigh, Augusta, Me.

## "TALKER" BETTER THAN ORCHESTRA.

When Miss Edith Perry, of Oregon, Wayne County, Pa., and Charles Treat, of Carbondale, were married last week at the home of the bride's parents, the strains of the wedding march from "Lohengrin" issued from a clump of evergreens in a corner of the room. It was played by a talking machine, and it was so effectively rendered as to excite the highest compliments from the fashionable assemblage. It was better than many orchestras.

The Cable Company, Chicago; the Proudfit Sporting Goods Co., Ogden, Utah, and the Clayton Music Co., Salt Lake City, have been added to the list of Edison jobbers.

# Majestic Self-Playing Piano

*The Pneumatic Coin-operated Piano without a fault. The best Spring and Summer Proposition a Dealer can take hold of*

View of Majestic Pneumatic Self-Playing Piano closed, showing its neat and artistic appearance. It sets close to the wall and all working parts are inside—away from meddlers. The special endless music roll is used and repeats itself automatically at the end of the program. This style is also playable by hand.

## THE SEASON of the MAJESTIC IS NOW!

You are looking around for a big seller that will yield a nice profit and keep things moving. Here it is. Pianos in public places often take in \$5.00 to \$10.00 a day.

## THE MAJESTIC SELLS ON SIGHT

to Cafes, Hotels, Restaurants, Soda Fountains, Skating Rinks, and Amusement Parks and Resorts of all kinds, because they all appreciate its value as

## A WONDERFUL MONEY MAKER

Their customers pay for it. The returns are usually far more than is needed to

meet their payments on the instrument. This means satisfaction all around. To illustrate its value to the Cafe, etc.—if the Majestic played only 10 times in 24 hours the Cafe would still be making 36 per cent. on the investment. One of our dealers last season

## SOLD EIGHT MAJESTICS IN ONE MONTH!

another seven—and so it goes. An unique feature of the Majestic is the ability to start it playing from any table in a resort by simply dropping a nickel in the slot at that point. The Majestic has a great many other exclusive features which make it by long odds the best Automatic Piano on the market. These are fully described in our catalogue, which will be furnished on application.

## SPECIAL OFFER OF EXCLUSIVE AGENCY

to those who take up the matter at once. Tear off the coupon in the lower corner and mail it to us to-day for full particulars. Address Dept. D

View of Majestic Jr. closed and ready for use. This is the smaller size 44-note player without keyboard, and is a perfect model of simplicity. It also uses the endless music roll, and is not affected by climatic changes.

## TALKING MACHINE AND ART.

**John Philip Sousa Pays Great Tribute to the Talking Machine and Its Position in the Musical World, Although He Didn't Mean To Do So.**

That is a most interesting suggestion which John Philip Sousa made at the recent copyright hearing in connection with the increasing use of phonograph and kindred machines, through which the productions of masters are brought to the people at comparatively small prices. The machines have been so perfected that at little outlay one may sit at home and hear a good programme in which standard operas and oratorios are drawn upon as well as the current popular plays and the lively selections of some famous band leader. The familiar old songs, long cherished in our literature, may be heard as sung by good singers, and, with an occasional bit of recitation or monologue, an hour may be spent in an enjoyable manner.

Mr. Sousa's principal interest is connected with what he believes is an infringement upon his rights as a composer. He says that in every catalogue of such machines and their supplies he is able to pick out anywhere from twenty to one hundred of his own compositions, for which, however, he received nothing in the way of royalty. This is an interesting problem, it is true. The band music can be purchased at regular rates from music houses. A band having paid the ordinary fee of 50 cents for a selection, or a larger amount for longer compositions, is at liberty to play these pieces anywhere, in the park stand with thousands listening, on an excursion boat, or even in concert where an admission fee is charged. The rights of the composer apparently cease when he sells his productions to the publisher. The talking machine is only another form of reproduction, and, if Mr. Sousa finds a hundred of his compositions catalogued he probably will have to accept the situation as one of the penalties of fame.

But, aside from this commercial question, Mr. Sousa makes another contention. People are getting to be so well satisfied with the machines that they are ceasing to sing themselves. The result is that the human voice is no longer heard as it once was, and the Cassandra-like prophecy of the bandmaster is that the vocal chords by reason of this disuse may become useless. It is doubtless if there is so much in this, properly remarks the Chicago Tribune, as in the other statement that, because of the popularity of the machines, there is a marked falling off in the sale of the banjo, the guitar and the mandolin. This seems natural. Many an individual has taken up one of these instruments with the purpose of meeting his need for music. Conscious of his failure to gain proficiency he has been glad enough to turn to the finished machine with its accurate reproduction for the enjoyment and comfort which his own feeble efforts have failed to give him. In like manner another, without even purchasing a mandolin, guitar or banjo, has found in the phonograph or the talking machine just what he needs to satisfy his desire for a little music now and then.

## A RATHER NOVEL SUIT IN DOVER.

(Special to The Talking Machine World.)

Canal Dover, O., June 30, 1906.

The Home Telephone Co. has been granted a temporary injunction preventing James Millin, proprietor of a moving picture show, from operating a large phonograph in front of the entrance of his place of business. The company claims that its operators are unable to give

## LATEST NOVELTIES

The "Cordock" Concert Reproducer for Puck and similar type machines. Acknowledged by experts to be the finest reproducer on the market for small Phonographs, 50 per cent. louder than any other reproducer of its kind. For volume, clearness and distinctness of tone, it stands alone unequalled. Factors should write for sample and wholesale prices, to

G. W. CORDOCK & CO.

High Street, Scunthorpe, Lincs, England.

proper attention to their work on account of the music, and the service is otherwise affected. A suit for damages to the extent of \$1,000 has been filed by the telephone company.

## "TALKERS" FOR SUMMER.

**Big Call for Records for Dancing—Owners of Yachts Very Partial to the Talking Machine—Dealers Should Devote Attention to This Phase of Summer Trade.**

There has been an unusually brisk summer trade for talking machine records, according to the reports of most of the large retail dealers in the city. For the most part, orders have been for from one to five dozen lots, and were to be packed for out of town shipments. In many cases these assortments are composed mainly of dance music, intended to take the place of the so-called orchestras for barn and similar dances. Yacht owners now regard talking machines as a very necessary part of their equipment, and they have been very heavy purchasers of records, mostly vocal. Country dealers will find it profitable to look after the boarders who possess talking machines, and arrange to supply them with the latest records, and save them expressage. There has also been a big demand for the cases in which to carry records and talking machines.

## HELPS TO SPREAD CIVILIZATION.

**Other Uses for the Talking Machines Than as an Entertainer—Fills Many Important Roles in a National Way.**

That the talking machine has been an active agent in the spread of civilization, in assisting exploration and in substituting peace for war, is shown by its history.

Col. Colin Harding, the English explorer of the wilds of central Africa, had many difficulties smoothed from his way by this instrument. Part of his projected journey through Barotseland and about the headwaters of the mighty Zambesi

river lay through a wild country peopled by blacks, who objected to the passage of a white man's expedition.

King Lewanika, of that country, approved of the expedition, but the difficulty was to transmit his wishes to the thousands of his subjects in the remote corners of his dominions.

The phonograph was brought into requisition. The Barotse sovereign uttered his commands into the instrument, and in this way records were obtained in which the monarch exhorted all his subjects to assist Col. Harding in every way.

Armed with these records, the explorer set out upon his hazardous journey. As he penetrated into the country, the native chiefs displayed unmistakable signs of hostility. On such occasions, the colonel simply set the talking machine in action, and the unsophisticated natives were almost prostrated by terror when they heard the tones of their august monarch proceed from what they termed the "speaking iron."

They looked at the instrument in awe and with gaping mouths, expecting every moment to behold the form or spirit of Lewanika to issue from the "witch thing." When they heard the royal commands they were very obeisant, and proffered their advice and assistance with the utmost prodigality.

In this way Col. Harding traveled over 8,000 miles without the slightest molestation and never had to use his rifle on a single occasion in self-defense against the blacks.

When the Americans were extending their occupation of the Philippine Islands, the people of a certain sovereignty manifested a disposition to rebel. The sultan was induced to visit a warship, and, while in the captain's cabin, was entertained by the productions of a phonograph.

So greatly was he pleased with the instrument, that he agreed to sign a treaty and "be good" if the phonograph was presented to him. This was done, the treaty was signed, and the sultan departed in high glee with his new treasure.

J. B. Kiusey, of the Crown piano store, Ft Wayne, Ind., has added a line of Talk-o-phones.

## Sell Them I. C. S. Records and Textbooks

You have many former customers who stopped purchasing records, either because they became tired of their phonograph, or because they found it too expensive an amusement. It would be worth a great deal to you to have these customers become purchasers again, wouldn't it? You may readily accomplish this by selling them I. C. S. records and textbooks. Those who have become tired of their phonographs as a fad, will be only too glad to turn their machines to some profitable account, and those who find it too expensive to buy amusement records, may be easily convinced that it is for their benefit to purchase this outfit, learn a language, and secure one of the fine paying positions as a translator or correspondent for some importing or exporting house.

The I. C. S. Language System has been approved by the highest educational authorities in the land, and by the French, German, and Spanish embassies. The pronunciation is guaranteed to be absolutely correct.

You are thus selling an article of real merit that will be of real benefit to the purchasers and of real profit to you, as has been proved by the experience of dealers who have tried it. Will YOU write to-day for full particulars?

PHONOGRAPH

## PRACTICAL SUGGESTIONS AND COMMENTS.

### LARGER CYLINDER RECORDS.

William F. Hunt, the well-known dealer of Wanatah, Ind., writes as follows: "I notice that many people fail to understand why the present cylinder phonograph cannot accommodate a record about an inch longer than the standard size, owing to the mandrel being about that much longer than the record. If people would only stop to reason a little they would readily understand why this is an impossibility, or, rather, would prove unsatisfactory. Owing to the composition of the record being subject to expansion or contraction from change in temperature there must necessarily be allowed some play room on the mandrel, for when the record contracts it will not go on to the mandrel to its original limit, and if expanded, vice versa, therefore if the record was made the full length of the mandrel and feed screw one would be unable to play one end or the other, depending on the temperature of the record. Manufacturers also claim that it is impossible to at all times get the same diameter of bore in the cylinders, which is also the cause of some records going farther onto the mandrel than others. The manufacture of longer cylinder records is not an impossibility, as some people are inclined to think, but it must be understood that the manufacturers have to consider the commercial value of a thing if they wish to continue in business. It, however, appears to me that the general public would be quite willing to pay a higher price for machines to play longer records, especially since sound reproduction has reached its present high standard, the records would, however, have to be considerably longer than six inches, as the six-inch cylinder is but little better than the standard length."

### HOW TO SET REPRODUCER STYLUS.

Much has been spoken and written as to the various ways in which the best reproduction can be obtained, says Henry Graham in a London paper. The three all-important points are: The set of the stylus, the weight of the reproducer on the record, and the thickness of the diaphragm. The first is by far the most important, as it materially affects the other considerations; and if the stylus is not absolutely right, not only will the reproduction be poor but the record will suffer

pointing to the left. In diagram 2 the proper position and angle of the sapphire, with the usual type of feed-screw machine, is shown. This is very similar to the first—only entirely opposite, as a native of the Emerald Isle would say. Diagram 3 shows the amplifying arm and stylus of the Edison B, which is fitted to old style gems. Diagram 4 shows the amplifying arm of the Edison C, but will do equally well with the Columbia Lyric, the main difference being that in the latter case the necessary pressure on the record is given by a spring and not a weight. Fig. 2 shows the stylus in correct position. In Fig. 1, however, the stylus is shown drawn out and at a sharper angle. This is done with a view to imparting greater impetus to the amplifying arm. This is a mistake, as the fantail thus needs extra weight to prevent the blasting which would otherwise occur. The second point—the weight of the reproducer on the record—can be settled in one sentence. With a properly adjusted stylus and a sufficiently pliant diaphragm, the weight may be anything up to  $\frac{3}{4}$  ounce. This weight is sufficient for even a large reproducer, with a 58 m/m. diaphragm. The pressure should never, on any account, exceed this limit, except where indestructible records are used. In the latter case the weight may be several ounces; that is, with a stiff mica diaphragm. The third and last point is the question of diaphragm thickness. A glass diaphragm selected carefully, in my opinion, is much sweeter and louder than mica. The thickness varies according to the weight and size of the reproducer, but as a standard I may say that about 7/40 m/m. will certainly be found best for a C reproducer.

### SPEED IN DISC AND CYLINDER MACHINES.

Arthur C. Mestraud, head of the Multiple Phonograph Co.'s new experimental plant in Massachusetts, writes: "It is lost time for any one to argue with Mr. Hunt regarding the art of record making, as it is very apparent, according to him, that he has nothing more to learn in that line. It is very unfortunate, however, that he should give statements concerning cylinders in proof of his argument on disc records. The two undoubtedly conflict. The 'much higher' surface speed alluded to was a change from about 140 to 160 revolutions per minute. The average cylinder record carries about 62 in 50, or 255 feet of record covered by the stylus in 2 min. 10.13 sec. The difference between the old-time speed (140) and the new (160) insured a noticeable improvement in tone notwithstanding the comparatively small increase in velocity. Should the speed be increased to 180 or 200 or even more, nothing like the former remarkable change for the better can be realized. Why is this, Mr. Hunt? Also why is there no material improvement in the quality of tone of a concert record, even a master, over the present 'gold moulded,' although the former's sound waves are over twice the length of the latter's? Since you aver that the speed has such a tremendous influence on the quality, tell me why the difference (if any) between the inner and outer circle of a disc is not nearly as great as the difference between the old style cylinder 120 or 140, and the new 160, although the inner sound undulations of the disc are only half as long as the outer. In other words, and figuratively speaking, the inside of a disc record only runs at half or less the speed of outside and the tonal improvement is so remote as to be almost imperceptible, and yet the difference created in a cylinder by an increase of only 20 revolutions in 160 is so great?"

### WHY 1 15-16 INCH DIAPHRAGM IS USED.

Mr. Mestraud also offers the following explanation to Mr. L. A. Wilcox's demand for information as to why the National Co. have stuck to the 1 15-16-inch diaphragm. After experimenting considerably upon the subject they found that in order to get better results from a larger diaphragm a greater weight must be brought to bear upon the record than the one now in use, and in order

to obtain anything like an improvement (applying, of course, the existing style of leverage in use by them), the record would have to be sacrificed at a single playing, on account of the great increase of weight pressure necessary to vibrate a diaphragm sufficiently large to show the improvement.

### TONE FROM COMMON SEWING NEEDLE.

Many peculiar little experiments can be tried by the uninitiated, and may engender more useful results by those that way inclined, says Mr. Mestraud, in a communication to The Talking Machine World. A very sweet but low tone can be obtained from a disc record, by substituting a common sewing needle, broken near the center, so as to leave it about one inch long, for the regular disc needle.

### THE HAND AS A SOUND BOX.

The impression seems to be prevalent that the human flesh is a positive non-conductor of sound on account of its elasticity. This is in a measure disproved by the following experiment. Take an ordinary disc needle and hold it firmly between the thumb and forefinger of the right hand, allowing the point to rest with moderate pressure on a disc record in motion. The needle will follow the track of the record the same as if attached to a sound box, and the nature of the selection clearly made out, even to the extent of plainly distinguishing the words of a song.

### A GOOD SOUND MODIFIER.

A very good sound modifier can be made by the use of an iris diaphragm, such as used in photographic lenses to reduce the quantity of light desired in making an exposure. I made a regulator this way, using the iris from an old discarded lens, and the result is the most satisfactory I have ever had from a modulator, as any aperture can be secured from 1-16 to  $\frac{3}{4}$  of an inch, as an outlet for the sound, thus reducing the capacity of a reproducer from the greatest to the lowest extent.

### SOMETHING ABOUT DIAPHRAGMS.

A common circle cut from a postal and dipped into ordinary carpenter's glue to give it rigidity makes a very satisfactory diaphragm. Brass (5-1000 in. thick) makes a very deep, sweet tone, but lacks volume and body. Aluminum is better, celluloid still more so, but mica so far is the leader. Wood offers quite some scope to the experimenter as a diaphragm on account of the variety to choose from. Different kinds give different results, and I must say that I have gotten some very satisfactory results from certain hardwoods, both in quality and quantity of tone.

A "dead" diaphragm is one lacking "ring." Oftentimes a mica diaphragm can be noticeably improved by the application of a coating of ordinary orange shellac varnish, and then being enclosed into partial vacuum to withdraw the alcohol. A very thin coating only must be applied.

### USING THE NEEDLE TWICE.

Some time ago a correspondent of The Talking Machine World imparted the idea that he discovered something of "great" interest, viz.: That he could use a needle for disc record twice by turning it around. In this connection we are in receipt of a letter from an English correspondent, who says: "The reason a needle should only be used once is because the outside or casing of the needle is harder than the inside. When a record has been played the point of the needle is worn, and thus exposes the soft part to the record, and a soft needle will wear away a record sooner than a hard one. If he doubts my word, let him sharpen a chisel on a very hard oilstone, and then on a soft one, he will then soon find out which has the most scouring properties. As to turning the needle round or half-way round, do not do this on any account. It is a most dangerous practice and will ruin your records. When a needle has been used, the point is worn flat, and being at one angle it forms a 'miter,' like the corner of a picture frame. You will thus see at once what a sharp instrument it makes for cutting into your records. I should like to say a word or two on the imaginary annoyance of hav-

DIAGRAM 1.

DIAGRAM 2.

as well. A reproducer stylus may be either button-shaped or ball shaped, but whatever its shape, it should always be a genuine sapphire, and not a glass bead. It is false economy to buy a glass stylus, as, in the end, it invariably ruins the rec-

DIAGRAM 3.

DIAGRAM 4.

ords. Care should also be taken that the sapphire is not chipped or misshaped in any way; and none of the fixative employed should be allowed to adhere to the business end of the stylus. The position of the stylus next engages our attention. Speaking generally it should be set at such an angle that it offers no resistance, but readily responds to the surface inequalities of the record groove. Diagram 1 shows the position and

angle of the stylus on the Puck and similar machines, on which the record runs toward the trumpet. In diagrams 1 and 2 the trumpet is

## Liberal and assured profits

Every *Victor* dealer can figure out just how much profit he stands to make on *Victor* goods and know to a certainty he will get every cent of that profit. He doesn't need to be afraid that some other dealer will start slashing prices and take all the profit out of *Victor* goods.

Our new contract with dealers prevents that sort of a game. We have always insisted that our prices must be maintained by dealers; the new contract in effect June 1, goes one better and makes it impossible for a dealer to get any *Victor* goods until he signs the contract to uphold our schedule of prices.

That shows how we protect our dealers and make profits sure for them. We help them to get business, too, by advertising

## Victor Talking Machines and Records

in magazines that reach 49,000,000 people every month.

What we do for the benefit of *Victor* dealers should spur them on to push *Victor* goods as never before.

You shouldn't miss the opportunity to follow up the impression created by our magazine advertising. Get after the trade in your neighborhood with local newspaper advertising, circular work and window displays. It is sure to bring new business to your store and is full of profit.

## Victor Talking Machine Company Camden, N. J.

P. S. Just a suggestion for you—it's a mighty good one. Place standing monthly orders for the new records with your distributor, and push this feature. (Keeps your customers calling at least monthly—they look for them.) Artistic Monthly Supplements furnished free for this purpose.

Full information and prices can be obtained of any of the Victor distributors as follows:

ing to change the needle every record. The talking machine is a lovely instrument, but much abused. Some people seem to think the records should be rushed through one after the other like the films of a cinematograph. A little time should be taken between each record, your little concert would last longer, and you would not be tired when it was finished. Another point, when the machine has once started and is going all right, leave it alone. A short while ago I was listening to a machine. The operator was a young lady, who, as soon as the machine had nicely started, could not leave the winding crank alone, also twisting the regulator in a most annoying manner, as if there was no time between the pieces. I felt inclined to kick the whole thing over, or consign her to regions the temperature of which does not require the use of an overcoat. It is such people as these who want educating to use the talker as it should be used."

#### RESTORING WARPED RECORDS.

It sometimes happens that a disc record will warp, either from continued standing on edge, as in the dealer's rack, or from close proximity to a stove or heater. When warping occurs, the face of the record covered with grooves, and offering the least resistance is naturally affected, the grooves closing up and making it impossible to properly reproduce the piece. There is a simple way, however, for returning the record to its normal shape, namely, by placing it face downward on a flat surface under a heavy pane of glass and allowing the sun to shine on it.

The Collinwood (O.) Citizen has negotiated with the Columbia Phonograph Co. to take orders for their machines, and has advertised the Twentieth Century Columbia in a very extensive manner. Orders are taken at the offices of the paper, where a sample line of Columbias is on exhibition.

M. H. Watrous has opened a new store in Susquehanna, Pa., where he handles the Victor, Edison and Zon-o-phone talking machines and records as well as a stock of sheet music.

### TALKING MACHINE ARTISTS.

#### A Knowledge of Their History Will Greatly Facilitate the Sale of Records.

Very often customers will ask questions concerning the artist who is responsible for their favorite selections, and if you are in a position to inform them fully, you will increase their interest and your record sales simultaneously.

It is a fascinating fad to collect the biographies, photographs, etc., of the people who sing and play into the horns and, taking advantage of this fact, a dealer may become famous in the eyes of his customers, not only as a dispenser of talking machines, but as a historian as well.

No talking machine concert is complete without some little anecdote of the artists being introduced between records. For example, we will suppose that Jones has called on Brown to hear some of his latest selections. He is at ease in a lounging chair, a good cigar between his teeth, and a glass of something cold at his elbow. Brown has just played "Lasca" for him, and he has become so intensely interested in the superb rendition that his thoughts are far away by a silent grave in Texas, down by the Rio Grande. Brown rouses him with the question: "How did you like it?" "Fine! excellent! I can find no words to express my admiration for Mr. Davenport; I believe that was the name given on the announcement of the record. Do you know anything about him, Brown?" His voice is eager, for he desires to learn something of the man who can recite so splendidly. "Why, yes," Brown answers, "my dealer posted me regarding him. He is an actor, at the present time supporting Mr. Hitchcock in 'The Galloper.' And, by the way, he is at the Lyric this week." Jones is more enthusiastic than ever now. "We'll go!" he cries, "and the tickets are on me."

The above is simply an illustration of the many good times a dealer can throw in the way of his customers by posting them concerning the histories of the artists whose voices and the

sound of whose instruments are engraved on the records he sells.

### SOUSA AND PHONOGRAPHY.

Remarks at Copyright Hearing at Washington Subject of Much Comment, Pro and Con —Frank Carr Twits Him Poetically.

John Philip Sousa's remarks at the recent hearing in connection with the new copyright bill, have been the subject of much comment in the daily papers. Some writers, who have yet to learn that the talking machine is no longer a toy, but a perfected medium for the interpretation of the best vocal and instrumental music, have been writing silly prattle; other writers have recognized in Sousa's statement a compliment to the "talker" inasmuch as it is a "foeman worthy of his steel." Frank V. Carr thus sums up the situation in the Green Bay (Wis.) Advocate:

Phil Sousa says the phonograph will sorrow soon be bringing  
Into this world,—he makes me laugh—he says there'll be no singing  
Or playing of pianoforte; the time will soon be coming  
When Pompey will not Dinah court as banjo he is thrumming.  
The phonograph and graphophone we will consign to the attic—  
All instruments to music known; songs plain and operatic  
Will not be sung by human voice, so says the famed bandmaster,  
Well, sometimes, if I had my choice, that would be no disaster,  
For I have met with those who thought the whole world should be ringing  
With praises that should come unsought from those who heard them singing.  
And we, who listened, thought them punk, them we would like to muzzle,  
Do they themselves or hearers bunk? this to me's a great puzzle,  
If Sousa ever lived around where some players were thumping  
A piano, at every sound or player he'd be jumping,  
Or had he ever heard, like me, some singers loudly screeching,  
The merits of phonography Phil Sousa would be teaching.

## VALUE OF WINDOW DISPLAYS.

**Opportunity of Introducing Many Pleasing Novelties That Will, at Once, Attract and Interest—No Better Salesman for the Dealer Than a Well Dressed Window.**

Strolling through a city district where talking machine stores are numerous, did you ever notice the very great difference manifested in the appearance of window displays? Some attract you through their beauty and cleanliness, while others, replete with dust and cobwebs, apail you and you turn away in disgust. Believe me, there is just as much difference in the manner in which windows are dressed, in the talking machine trade as in any other line, and it is a grave mistake, for no other business affords better facilities for attractive and even brilliant display than that of talking machines.

It is a field in which numerous novelties may be introduced in a striking manner to catch the eye and tempt the purse of the casual passer-by. For instance, if a dealer desires to create a run

AN IDEA FOR SUMMER WINDOW DISPLAY.

on one particular selection, as is often the case, he can readily do so. We will take, for example, "Cheyenne," the cowboy love song which is so popular just now. A window filled with the regalia of the western plains, saddles, spurs, rifles and revolvers, and if the Indian side is to be represented, Navajo blankets, bows and arrows arranged in an artistic manner will collect a crowd of the curious immediately.

To add still further to the pleasing effect, the selection may be played upon a talking machine inside the store and the sound allowed to travel through a tube into a horn outside, thus demonstrating the same to the people in a clear manner without the aid of placards.

There are stores in every large city which make a specialty of novelties of all kinds, and it is a very easy matter to rent enough material for a window display at a small cost, and sometimes, as the writer knows by experience, these stores can be induced to furnish it free if a small return in the way of advertising is promised. This is accomplished by placing a small card in the window stating the fact that "The contents of this window are loaned through the courtesy of Smith & Co.," or whoever may be responsible for the donation. There is scarcely a record in any talking machine catalogue that

could not be featured in this manner, varying the display according to the selection.

A great many suggestions welcome to the vacationist about to start on a trip to the mountains, country or seashore can be given through the medium of a showy window. A miniature camp with a little mountain scenery in the background, a glass lake, a stump or two, and perhaps a lay figure, may be arranged and, of course, it is very essential that the talking machine should play the chief role as entertainer. Have you ever been on a camping trip in company with a talking machine and a good supply of records? There is nothing really more restful, more thoroughly satisfying after a hard day's tramp or row, than to sit by the embers of a fire in the silent woodland far from the abode of man, with a briar pipe between one's teeth and a talking machine singing to you some sweet love song.

In the smoke rings a pretty face appears, and you sigh for the little girl who is awaiting your return in the great metropolis, but the sigh is one of happiness, for she is yours and you are content.

Then your thoughts turn to the afternoon you were attracted by the window display of a talking machine store and paused to examine its beauty. You remember that you went inside and enjoyed a courteous explanation of the many good points of the talking machine. You recollect also that you went home one hundred dollars lighter in pocket, but you do not regret it; no, you are glad that through the great inventive genius of man has come an instrument so tender, so human, so inspiring as the one on yonder log, and knocking the ashes from your pipe, you wrap your blanket about you and lie down to peaceful slumber. HOWARD TAYLOR MIDDLETON.

## "TALKER" AS A SPIRITUAL FORCE.

**How It Helped to Stimulate the Religious Fervor of Our Colored Brethren at a Camp Meeting in North Carolina.**

Persons who have spent any time south of Mason & Dixon's line have most likely visited at least one of the camp meetings held by the colored population and noted the extreme lengths to which their religious fervor will carry them. Their ministers and evangelists can so overcome them with an almost barbaric force of oratory that hysterics are the frequent result, and anything suggesting the supernatural affects their minds to a most remarkable degree.

A Southern paper recently told how a couple of young North Carolinians took advantage of the above conditions at a camp meeting held in Anson County, that state, to perpetrate a practical joke that, while it afforded considerable amusement for a number of younger whites, almost killed off a part of the negro population from fright.

It seems the camp meeting was to last three days and was held in a grove of very large trees in a decidedly rural district. Upon looking over the ground one of the jokers noted a very large tree that was hollow, and with an opening about twenty feet above the base; then the inspiration.

As the names of many of the colored brethren were known to the villains in the plot, the success of the scheme was already assured.

First, means were provided inside the hollow tree for making it possible to readily climb up the interior to the hole already mentioned. Here a small platform was erected and a talking machine placed thereon, with the visible parts of the horn covered with flat black paint to avoid detection.

Outside the hole a dummy was rigged up with outspread wings and flowing white draperies and clutching a trombone in lieu of a trumpet. This was to represent the angel Gabriel. The records were then made, and everything was ready for the trial.

The first two nights of the meeting were devoted to stirring up enthusiasm, and the third night was when the revivalists expected to reach the climax and induce the majority of those present to "get religion." Their plan worked to perfection. Preacher after preacher got up and exhorted the sinful until, as was usual, one called upon the Lord to give some token of his presence. Then the man in the tree got busy, as did the talking machine and "angel." With the flapping of wings and the growls of the record the fun started. First, the assembly was informed that their time had come in a way that caused eyes to look like porcelain knobs on a walnut door, and bodies to become fixed with horror. Then the chicken stealings of Eph. Brown were commented upon, as was the gambling of Noah Axman, the drunkenness of Sam Moody, and in fact the pet failing of about two dozen of the leading lights among the brethren, and in no instance was mercy shown by missing details. When the lecture paused through the necessity of changing records, the frightened ones thought it was the end of life, but in a few seconds the fateful voice again rent the air. Finally the supply of records was exhausted, and by a set of strings attached to different parts of its draperies the "angel" was whisked out of sight in a flash of flame, the result of flashlight powder, and those of the unwilling audience who were not unconscious or rooted to the spot started to hit the high places in the landscape in an endeavor to escape the apparition. One man ran for over ten miles before he dropped from exhaustion. The next morning several men and women were found on the grounds still too affected to move, and it seems as though there would be no more camp meetings in that section for some time to come. And an innocent talking machine was guilty of it all.

## NEW WAY TO STOP "TALKERS."

A dispatch from New Orleans, La., says that St. Charles avenue residents have paid \$4,000 for a phonograph shop that they may close it and stop the noise. Evidently these people have no music in their souls. Next they will stop piano playing, singing, *et al.* Think of going back to the old Puritan days in that city of the Latins—New Orleans. What next?

## TRADE HAPPENINGS IN CLEVELAND.

Manager Probeck Banquetted by a Host of Friends on Birthday—Progressive Man Is W. J. Roberts, Jr.—New Miniature Theatres Opened—He Heard the Voice of a Friend—The News of the Month in Detail.

(Special to The Talking Machine World.)

Cleveland O., July 6, 1906.

That Cleveland is a good talking machine town is evidenced by the large number of dealers and the large volume of business they are doing. Local dealers of talking machines and records generally report trade good, though this is considered the dull season.

Manager G. J. Probeck, of the Columbia Phonograph Co., said they were doing the usual amount of business, and that prospects were flattering. Mr. Probeck is a very popular young man, and well liked by the attaches of the establishment over which he presides. A few nights ago, as he was quietly resting at home, after an arduous day in his office, he was called to the door by an attache and told that he was wanted at the store, as a very important matter had been overlooked by him, and which required immediate attention. Hastily donning his coat he hurried to the store, and when he arrived was the most surprised man in seven counties. The counters, tables and goods had all been relegated to the wareroom, and in their place a banquet table was spread, embellished with flowers, with some fifty friends in waiting to greet him. He was apprised that the occasion was in commemoration of his birthday, which they desired to celebrate with him. At the close of the banquet, A. W. Robertson, in an appropriate speech, presented Mr. Probeck with an elegant gold chain and Masonic charm, the gift of his employees. Though taken so completely by surprise, Mr. Probeck managed to felicitously respond, thanking them most heartily for their interest in his welfare and for the beautiful present. He says he prizes the gift more highly than anything in his possession, presented, as it was, by employees of the office. The dishes and tables, after justice had been done the choice menu, were removed, and everybody danced to the music of the Twentieth Century Graphophone.

The Columbia Phonograph Co. have recently established a commercial graphophone department, which has started out under the supervision of H. E. Jones, with the most flattering success.

A prominent dealer stated that during the past twelve months the talking machine business had increased 200 per cent. in Cleveland, and was still on the increase.

One of the oldest dealers in talking machines in Cleveland is W. J. Roberts, Jr. He entered the phonograph business in 1898, with L. L. Berger. They purchased the Edison Phonograph Co., then located in the Arcade, and continued the business under that name for about a year, when they changed the style of the firm to the Berger Phonograph Co. In 1901 Mr. Roberts purchased Mr. Berger's interest, and conducted the business in his own name. In May, 1904, he opened a branch store at the corner of Erie and Huron streets, and continued jobbing the Edison and Victor machines from the Huron store. May 15, 1905, Mr. Roberts sold out his entire business to the Eclipse Musical Co., who soon after sold the store corner of Erie and Huron to the Cleveland Phonograph Co., and which was repurchased by Mr. Roberts, June 6, 1906. For the present Mr. Roberts will conduct a retail business. He is making a number of improvements, such as re-decorating and refurnishing, and when completed he will have one of the prettiest stores of its kind in the country. He stated business was very fair, considering the season of the year.

At the Bailey Co.'s department of the Columbia Phonograph Co. they are doing a fine trade. The company carry a good stock of machines, records and supplies.

W. H. Buescher & Son, 242 Erie street, report business fair, though it has fallen off some in the last two weeks. Their store is well stocked

with Victor and Edison machines and records. They have just opened a retail store at No. 254 Prospect street, in the Y. M. C. A. building. It has been fitted up in Flemish oak in a substantial and at the same time very ornamental style, and they have two as fine rooms—demonstrating and sales—to be found anywhere. Their stock of Victor and Edison machines is large and complete. This store is under the management of Hugh Gulley, an old and experienced talking machine man, and he is catering to the better class of retail trade, the jobbing trade being confined to the old store.

W. H. Buescher has also just opened up the "Penny Arcade and Moving Pictures," under the firm name of the "Marlo Amusement Co.," at Nos. 236-38 Erie street. It is said to be one of the finest in its fittings and furnishings in the country, and is well patronized.

The Eclipse Musical Co., under the management of T. H. Towell, president and treasurer, occupy fine rooms at their main store, No. 714 Prospect street, in the Electric Building. They are jobbers and retailers of Victor talking machines, records and supplies, and exclusive jobbers of Edison phonographs. Mr. Towell said that business was good, and that the prospects for a good fall and winter trade were never better.

The "Bijou Dream" a miniature theater, has just been started next door to the opera house, wherein "life is reproduced by the Edison cinematograph." The rental of the place is high in the thousands, and it has been expensively fitted up, seating two hundred. The promoter of this place has had sufficient faith in the desire of the public to spend its nickels to prompt him to incur an expense of \$10,000 to \$15,000 annually. And his friends say he will "make good."

A man, twenty-five or thirty years of age, attracted a crowd about him at one of the penny exhibits the other day by loudly exclaiming: "It's she! I know her voice! It certainly is her!" as he dropped the ear tubes from a machine that was emitting the words of a popular song, sung in a mild soprano voice, he picked them up again excitedly, and heard the piece through. With less nervousness he put another

penny in the slot, and as he intently listened, oblivious of the crowd about him, he leaned on the machine and cried like a child. A sympathizing bystander called the stranger to one side and inquired the cause of his grief. He said that he recognized the voice of the singer. That it was that of a girl he had known in his school days, in a central Ohio town. She had gone to New York, where, after indifferent success in amusement places, had died, with no friends near to cheer her as she ended her mortal life.

## THOUGHT CIRCUS HAD COME TO TOWN.

(Special to The Talking Machine World.)

Collinwood, O., July 10, 1906.

Residents within a radius of half a mile of the Gunn Block were treated to a high class free concert one afternoon last week. A giant Twentieth Century Columbia Graphophone in the third story of the building rendered band, orchestra and vocal selections with a power and clearness of tone that was equal if not superior to the original. Every selection could be heard distinctly for many blocks around, and a number thought it a premature arrival of the circus until the graphophone was located. The managers of Gunn's hall were so pleased with this famous Columbia machine that they at once opened negotiations with the owner, Frank A. Bowman, for the use of the machine for a dance, for which it is especially adapted. A grand Columbia dancing party will shortly be given with special new dance music for the occasion.

## A NEW LINE OF FLOWER HORNS.

The Hawthorne & Sheble Mfg. Co., of Philadelphia, announce a new line of flower horns for the fall trade. These horns are made in a superior manner, particular attention being paid to the general finish and decoration. The new line of horns are called "Artistic Flower Horns," and their neat decorative designs, as well as the brilliant and exclusive colors employed warrant these horns as being classed as works of art. The samples are now on exhibition at their factory, and they expect to have them ready for the fall trade.

## Needles Free To Prove Quality

### "THE BEST THAT MONEY CAN BUY"

**Playrite**  
TRADE MARK

#### NEEDLES

"THE NAME TELLS WHAT THEY DO"

Best for VOLUME, TONE and LASTING QUALITY. PLAY RIGHT from START TO FINISH.

PRESERVE RECORDS and can be used on ANY DISK MACHINES or RECORD. Packed only in RUST PROOF packages of 100.

RETAIL, 10c. per 100; 25c. per 300; 75c. per 1,000.

**Melotone**  
TRADE MARK

#### NEEDLES

"GIVE A MELLOW TONE"

REDUCE VOLUME and DON'T SCRATCH. Make records last longer. Each "MELOTONE" NEEDLE can be used SIX times without changing. Can be used on ANY DISK MACHINE OR RECORD. No special attachments needed. PACKED only in RUST PROOF packages of 200. PRICE, 25c. per package.

**FREE Samples of "Playrite" and "Melotone" Needles to Dealers or Jobbers who write on business letter head. Special Prices to Jobbers and Dealers. Write Now.**

#### New Style Place Record Brushes.

PATENT ALLOWED.

No. 2 fits *Standard* or *Home*.

No. 3 fits *Gem* or *Triumph*,

on Old or New Style Models.

LIST PRICE, 15c. EACH.

We give DEALERS and JOBBERS a GOOD PROFIT. WRITE for DISCOUNTS and Samples.

The Place Brush clamps under the speaker arm and AUTOMATICALLY removes all dirt or dust from the RECORD, so the sapphire runs in a CLEAN TRACK and insures a GOOD REPRODUCTION.

## HORACE PETTIT'S ARGUMENT AT FAMOUS COPYRIGHT HEARING.

His Amendment Accepted—Some Interesting Extracts from the Official Report of the Hearings Before Joint Senate and House Committees in Which the Purpose and Scope of the Talking Machine Are Referred to and Which Are Worth Perusing.

When the argument, submitted by Horace Pettit, counsel of the Victor Talking Machine Co., Camden, N. J., at the hearings before the joint meeting of the Senate and House Committees on Patents, to amend and consolidate the acts respecting copyright, was delivered June 6, his remarks were necessarily curtailed in the last issue of *The World*, to admit of a general presentation of the views expressed pro and con for the talking machine industry. Since then, however, the official report of the proceedings has been published by the government, and as Mr. Pettit's attitude toward the bill has occasioned wide comment, from the fact, possibly, that R. L. Thomae, connected with that company, was present at several of the copyright conferences, supposedly as the representative of the trade, they are given in full, as follows:

VICTOR COMPANY WANTS TO BE EQUITABLE AND JUST.

I represent the Victor Talking Machine Co. While I am not here as one of the advocates or proponents of the bill, it is very fitting, I think, at this time, immediately after Mr. Sousa's and Mr. Victor Herbert's appearance, that I should state what we have to say in regard to the talking machines. It may be that Mr. Herbert and Mr. Sousa have been somewhat abused by the talking-machine companies. They, however, certainly do not show it in their appearance.

Our position is to be equitable and just in the matter. We believe that there should be protection, and we are willing that this bill, with certain amendments we have to suggest, should be passed, substantially on the lines indicated, so that the composer should have the protection against his music or his compositions being copied on a record of a talking machine; with the understanding, however, that it does not apply to subsisting copyrights. I believe that is the understanding as expressed, although there is some ambiguity in the language, and, therefore, I would suggest that section 3, in that regard, be modified, either by striking out the section or by adding to it. Section 3 reads: "SECTION 3. That the copyright provided by this act shall extend to and protect all the copyrightable component parts of the work copyrighted, any and all reproductions or copies thereof, in whatever form, style, or size, and all matter reproduced therein in which copyright is already subsisting, but without extending the duration of such copyright."

I therefore would add to that, in view of that somewhat ambiguous language: "And provided, That no devices, contrivances, or appliances, or dies, or matrices for making the same, made prior to the date of this act shall go into effect shall be subject to any subsisting copyright."

TALKING MACHINE COMPANIES SHOULD BE PROTECTED.

This, I believe, is the intention of the framers of the bill, although it is somewhat doubtfully expressed. So much in that regard. Further, gentlemen, if the talking machine companies are to pay the author and composer, as they will under this act if passed, a royalty on the copyrighted compositions, the talking machine companies should also be protected. We might pay Mr. Herbert or Mr. Sousa or Mr. Caruso, or any of the opera singers a thousand dollars for making a record. It is perfectly possible, within the known arts, for that record, after we have made it, to be reproduced by a mere copper-plating process by somebody else and copied, so that we would pay the thousand dollars or so and have no protection against the party manufacturing a duplicate of it. Therefore, not only for that reason, but for the other reasons which I shall briefly mention, the talking machine manufacturers should be entitled to register the particular records which they prepare, and that, therefore, should be included in the act.

The bill evidently is intended to cover talking machine records, although it is somewhat doubtfully expressed. Section 4 is the section upon which everything more or less hangs, and that is: "That the works for which copyright may be secured under this act shall include all the works of an author." That is all that it says in that regard. The purport, however, is to cover substantially everything that was covered by the former copyright act. In section 18 the different things copyrighted are specified, in which section the duration of the terms are provided. Section 18 states, for instance: "For twenty-eight years after the date of first publication in the case of any print or label relating to articles of manufacture." Then comes a proviso, and then: "(b) For fifty years after the date of first publication in the case of any composite or collective work; any work copyrighted by a corporate body or by the employer of the author or authors; any abridgment, compilation, dramatization, or translation; any posthumous work; any arrangement or reproduction in some new form of a musical composition; any photograph; any reproduction of a work of art."

I would suggest that you include in there, after the word "composition," the words "any talking machine record," so that there would be no room for doubt but

what talking machine records are intended to be included. For this purpose I would also amend section 5 by adding before the word "phonographs," the following: "(j) Talking machine records."

RECORDS TO BE READ AUDIBLY, NOT VISUALLY.

I want to say one more word in that regard: The talking machine record is a new art. At the time that the former acts were passed and the Revised Statutes it had not acquired the state of perfection in which it is today. The talking machine is a writing upon a record tablet—not to be read visually, but audibly to be read through the medium of a vibrating pencil engaging in the record groove. This reproduces the thing that is uttered, in the characteristic manner in which it is uttered, and therefore that particular thing ought to be the subject-matter of a property right.

For instance, we might say that a particular piece would be sung or played by some country brass band, such as Mr. Sousa alludes to. The instrumentation there of that particular piece as recorded would be as different from the instrumentation of the particular piece when played by Mr. Sousa himself, from the stage of one of the great opera houses, as could be imagined; and what should be protected there is the particular instrumentation as it is played by Mr. Sousa, as he has rendered it. The same thing applies to any orator, or any actor, or any recitationist. It is a picture of the voice, as perfectly as a photograph is the picture of a man, or of a thing; and all the personality and all the characteristics of speech of the man uttering it are there recorded.

MR. BONYNGE (of the House Committee). Do you mean that if that lecturer delivers the lecture to one of the talking machines that you should take a copyright upon that disk, or whatever it is, that record, I suppose is what you call it, so as to prevent him from giving another reproduction of the same lecture to another talking machine?

MR. PETTIT. No, sir. That would be his right. His lecture is copyrightable. He has a perfect right to copyright that in the ordinary manner, and he has the further right, if he pleases, to have it copyrighted through the means of a talking machine record, or, with his permission, we could do so. But wherever the thing is primarily copyrighted we could not use it in any sense without his permission.

MR. BONYNGE. Yes; but after he has copyrighted it and you have got his permission to use it in your particular talking machine and have paid him whatever you may have agreed to pay him as compensation for the use of it, would you seek to prohibit him from giving that same lecture to another talking machine?

MR. PETTIT. That would depend entirely on the terms of the contract; but that is not the idea at all. It is merely the means of recording a voice, the production of a particular man or band, or instrumentation, with all the characteristics of that particular voice or instrumentation, which we think should be subject to copyright. There should be no question but that the particular characteristic utterances of a singer, or recitationist, or of an actor, or of an orator, or the particular instrumentation of a pianist, or leader of an orchestra, etc., independent of the composition itself, whether it is copyrighted or not, should

be equally entitled to protection, as a photograph or reproduction of a work of art.

A TRUE WRITING OF THE VOICE.

The present-day thoughts and ideas may be recorded and reproduced through this new form of writing—that is, by recording the uttered sound upon a properly prepared surface in a sound groove, by which the varied undulations of the voice are formed in the groove by corresponding undulations, lateral or vertical. Here we have a true writing of the voice, recording uttered sound, recording not only words, thoughts and ideas, but also recording the special particular expression and characteristic method of speech employed by the person uttering the sound. In other words, we have the exact voice, with all its individuality recorded, to be reproduced through the medium of the reproducing device employing a stylus operating in the groove.

Certainly a sound record is within the contemplation of the Constitution and should be unquestionably included in this proposed new act relative to copyrights. It matters not whether the subject-matter of the record is otherwise copyrightable or not. If the piece played is copyrighted as a musical composition it cannot be reproduced on a sound record, in accordance with the bill, without the permission of the composer. A Paderewski, however, may play the copyrighted selection, and a record of his rendition of it, with all his personality and individuality thrown into the piece, should be entitled to a copyright on a sound record for reproducing purposes.

This is true, also, of the voice of a Caruso or a Melba singing either a copyrighted or uncopyrighted piece. It is true, also, as a further illustration, of the recitation by Henry Irving of "Eugene Aram's Dream." What is here copyrighted in these records is the individuality and personality of the rendition by the performer. It is the picture of the voice or of the instrumentation as, for instance, a copyrighted photograph is a picture of a person or thing. Should another performer play the same piece played by a Paderewski the personality of Paderewski would be absolutely wanting, and the same difference between the two performances of the same composition would be in the respective sound records as would exist at the actual performance of the respective pieces. The same difference between Caruso's rendition of a selection from *Rigoletto* and a concert-hall singer's rendition of the same would exist in the sound record and the reproduction therefrom as would exist in the actual singing of the selection. This is true regarding the personality of every voice and instrumentation recorded.

A CHARACTERISTIC REPRODUCTION COPYRIGHTABLE.

A large portion of the selections, musical and recitatorial, on talking machine records are not copyrightable or copyrighted. These records, however, with all their originality, personality of the recitationist or singer, and peculiarity of arrangement, etc., should be copyrighted, and the private competitor prevented from purloining an artistic and characteristic production.

So-called talking machine records in this respect differ quite materially from the mechanical organ and piano for the reason that a so-called talking machine record is an exact record of all the modulations, and all the characteristic articulations of the voice, as well as of all the characteristics of an instrumentation. In other words, it is an exact picture of all the merits and demerits of the original, and the original is reproduced with an exactness, so that frequently, at a distance, in the present perfected state of the art, the reproduction may very well be mistaken for the original.

This record of the voice and instrumentation for

sound reproducing is an art which was not commercially available or perfected when the earlier copyright laws were passed, and therefore was not included.

The following was submitted by Mr. Pettit at the meeting of June 8, 1906, embodying his proposed amendments to the bill:

*"To the Honorable Joint Committee of the Senate and House of Representatives.*

"Gentlemen: Referring to the proposed bill 'To amend and consolidate the acts respecting copyrights,' now before the committee, I would propose the following amendments: Amend section 3 by adding continuously at the end of said section the following: 'And provided, That no devices, contrivances, or appliances, or dies, or matrices for making the same, such as referred to in clause (g), section 1, made prior to the date this act shall go into effect, shall be subject to any subsisting copyright.' Amend section 5 by adding before the word 'photographs,' the following: (j) 'talking machine records.' Amend section 18, clause (b) by adding between the word 'composition' and the word 'any' the words 'any talking machine record.' Amend section 23 by striking out from the clause marked 'first' the following: 'Or any device especially adapted to reproduce to the ear any copyrighted work.' Amend section 23 by inserting in the clause marked 'fourth' between the words 'of' and 'all,' the following: 'Any device, contrivance or appliance mentioned in section 1, clause (g) and.' These amendments to section 23 are for the purpose of making the penalty relative to unlawful use of devices, etc., enumerated in section 1, clause Z, one dollar instead of ten, which latter amount is excessive."

MR. PETTIT'S AMENDMENTS ACCEPTED.

Further along in the hearing, Mr. Putnam, Librarian of Congress, laid before the committees certain amendments suggested by the Music Publishers' Association, and which also embody Mr. Pettit's ideas, so that subsection g of Section 1 would be made to conform to the recent decision of the United States Court of Appeals, Second Circuit, in the White-Smith against the Apollo Co. case (the italicized words being new matter) as follows:

"To make, sell, distribute, or let for hire any device, contrivance, or appliance adapted in any manner whatsoever *when used in connection with any mechanism to reproduce to the ear or to cause the said mechanism to reproduce to the ear the sounds forming or identifying the whole or any material part of any work copyrighted after this act shall have gone into effect, or by means of any such device, contrivance, appliance, or mechanism publicly to reproduce to the ear the whole or any material part of such work.*"

"Sec. 3. That the copyright provided by this act shall extend to and protect all the copyrightable component parts of the work copyrighted, and all reproductions or copies thereof, in whatever form, style, or size, and all matter reproduced therein in which copyright is already subsisting, *and the devices, appliances, or contrivances mentioned in Section 1, subdivision (g) of this act, but without extending the duration of such copyright.*" And provided, That no devices, contrivances, or appliances, or dies or matrices for making the same, made prior to the date this act shall go into effect, shall be subject to any subsisting copyright."

## FROM THE WESTERN METROPOLIS.

Cable Company's "Talker" Department a Great Success—C. W. Noyes Off to the Coast—Wurlitzer's New Quarters—Westerners for Edison Reunion—Big Crowd Coming—Lyon & Healy Activity.

(Special to The Talking Machine World.)

World Office, Room 41, 195 Wabash Ave., Chicago, Ill., July 9, 1906.

The new talking machine department of the Cable Company has far exceeded the expectations of Joseph B. Leimert and J. W. Harrison in point of sales for June, really the first month of its existence. The handsomely fitted up quarters which occupy the entire second floor of the Cable building annex already give evidence of being entirely inadequate for the retail business alone, and in all probability another floor will be devoted to it in the near future. This additional floor it was first intended to devote to the wholesale department, but the development has been such as to compel the making of arrangements for handling the wholesale stock elsewhere. Half of the third floor of the big Bauer building, two doors south from the Cable Annex, has been leased, partitioned off, and is now being fitted up. Shelving and bins are being erected capable of holding 48,000 cylinder and 72,000 ten-inch disc records, while allowing plenty of room, is provided in addition for the 12 and 7-inch records. In the front of the floor will be a completely equipped repair shop. Extending over a large part

of the room will be a gallery for horns and accessories, and in the rear will be ample storage room for machines.

C. W. Noyes, secretary of the Hawthorne-Sheble Manufacturing Co. and Western representative of the American Record Co., left on the 25th for his trip to the Coast, which will take him until the middle of August. Malcolm B. Henry, who has been Mr. Noyes' assistant, has accepted the position of manager of the Denver office of the Columbia Phonograph Co. He is now on a visit to his home in Kentucky, but will go to Denver to assume his new duties next week. Some one will arrive from Philadelphia in a few days to look after the office here in Mr. Noyes' absence.

The Rudolph Wurlitzer Co. are still doing business under difficulties to some extent, the immense store at 266-8 Wabash avenue still being in the hands of the carpenters and decorators. The new front is one of the handsomest on the street. Five big record rooms on the ground floor are of unusual size, and of most convenient arrangement, the demonstrating machines being placed in a window in the rear of each room, and fed direct from the stock shelving by the operator. The wholesale talking machine and the extensive offices are on the entresol floor, which covers the rear half of the big floor. The automatic machine department will occupy the entire third floor.

The demand for machines and records keeps up remarkably well, considering the lateness of the season. It really looks as if the lines of demarcation of the seasons were being largely eliminated in the talking machine business, and the dealers here look for an active summer season, even exceeding that of last year, which was remarkably good.

C. E. Goodwin, manager of the talking machine department of Lyon & Healy, says that the business of his department both in a retail and wholesale way this year has simply astonished him. Every month of the present year, including June, has shown a remarkable increase over last year, and there is no evidence of any immediate decrease in the volume of trade.

Western Edison jobbers are preparing to descend on New York in a body to attend the reunion arranged by the National Phonograph Co., for the week of July 17, 18, 19, 20. So many of the Western people have expressed their intention of going that a movement has been set on foot—headed by R. E. McGreal, of McGreal Bros., the Edison jobbers at Milwaukee—to have the cohorts meet in Chicago and go from here together.

The railroads are alive to the opportunity, and are in competition for the privilege of carrying the crowd. From present indications the West-

ern people will meet here on Saturday, the 14th, making their headquarters at the Auditorium annex, and will leave Sunday, probably over the Lake Shore, although these details have not been deliberately decided as yet. Chicago will, of course, be strongly represented. Among those who are making preparations to go are C. E. Goodwin and J. F. Bowers, of Lyon & Healy; Edwin H. Uhl, manager of the Chicago house of Rudolph Wurlitzer & Co.; Fred Babson, Joseph W. Ranert and J. W. Harrison, of Babson Bros.; James I. Lyons, and Mr. Olmstead, of the Vim Co. All of the Western travelers for the National Phonograph Co. will join the party, and G. M. Nisbett, who has been the manager of the Chicago office, will also attend, and will help to entertain the visitors on the way. Mr. Nisbett, by the way, will not accept the National's offer of a position in New York, but will go into the jobbing business in the West, either opening a house of his own, or acquiring an interest in an existing concern. The affairs of the Chicago office have now been practically wound up. Nearly all the office help have found employment elsewhere. So far as transacting business the office has been closed since June 1, all orders coming in since then referred to the factory for distribution. All the traveling men who have been heretofore working from the Chicago office have been retained, but are now working direct from the factory.

## NOVEL SCHEME TO ATTRACT BUSINESS.

L. Finch, of Finch & Hahn, having establishments in Albany, Troy and Schenectady, N. Y., incidental to his wedding trip, now being enjoyed, when in New York in the latter part of June, took occasion to visit the plant of the Edison phonograph works, at Orange, N. J. The firm have leased a three-story building on Broadway, Albany, N. Y., for their wholesale business, the present State street store being devoted solely to the retail trade. As a novel scheme to attract business, George P. Watson, the yoddler, recently put in an entire week, from 12 to 3 daily, demonstrating the art of record making in F. & H.'s Albany place, crowds listening and wondering while Mr. Watson sung for a record, reproduction following immediately.

If the rumor is true that President Reynolds of the State Line Telegraph Co. had a phonograph at work behind the screen when the New Rochelle, N. Y., aldermen called on him and are alleged to have talked "boodle" it looks as if it were all over but the shouting. And while the rumor is probably untrue yet there is ample suggestion here of a new use for the phonograph.

## TALENT INTELLIGENCE BUREAU.

**A New Development in the Talking Machine Trade Which Has Been Brought About Through the Wonderful Growth of the Industry and Its Varied Diversifications.**

New developments in the trade are not only looked for, but expected, and the rapidity with which inventions, improvements and innovations are announced is bewildering, to say the least. The greater number of them represent distinct progression, and few, indeed, are altogether useless. In record making, for example, the present advanced stage of sound reproduction is one of the marvels of the business. The selection of material entirely suitable and adaptable for the purpose in the way of "talking artists" or talent, however, as well as the subject matter—whether instrumental or vocal music, or oral deliveries—still remains in the comparatively crude state established in the old wax-record days. To be sure more and better "talent" is available, more exacting and adequate tests are required, and sound recording is practically unlimited, not only in the repertoire of entertainment, but for commercial purposes and scientific study and demonstration. The latter fields of development are in the hands of capable people; and, in a measure, so is the making of the average musical and talking "masters." The tasks imposed upon managers of recording laboratories is by no means light in giving audience to alleged "talent," and listening patiently to the recital of their supereminent and specially adaptable qualifications for record-making, not to mention the waste of time and "good wax" in "testing." Quality is uppermost in the manufacture of records, and variety of selections the next requirement.

That some one would recognize and fill the long-felt want of specializing and tutoring or training "talking artists," and supplying the laboratories with "talent" of the right calibre, capable of making records of quality, but salability as well, was only a question of time. Such an institution has been established in New York, and it bids fair to be a useful adjunct to the business, as it is under the control of experienced management, practical and well-known "talent" or "record artists." What the lyceum, which is termed "the home of mirth, melody and ideas," proposes doing is set forth in the appended interview with its manager, who said to *The World*:

"We will present and popularize musical publications to each and every one of the talking machine companies now engaged in the manufacture, sale and exploitation of musical records, using every proper means and influence within their power to secure representation of their publications in the catalogues of the companies. Also to present and popularize musical publications to the entire staff of talking machine artists, contributing their services to the companies, by personal solicitation and by placing the entire facilities of our offices at their disposal, such as piano and voice rendition, coaching and thorough musical exploitation. Finally to make reports in detail as to the success we meet with in the work of popularizing these publications, mailing catalogues of such talking machine companies as are listing the publications, and whenever practicable also advising as to what artists are using them.

"As you may notice, our musical publications are properly arranged, and the selections comprise those best adapted for recording most successfully. You know publishers, of the vast amount of stuff they issue, only push eight or nine pieces. We get them all, from over thirty of the leading houses in the country. Our collection of stories, anecdotes and general 'talk' line is comprehensive, covering at least two hundred titles—everything imaginable—indexed and filed away so as to be accessible in a moment. We have believed such an office, or bureau or lyceum, as one may be pleased to call it, was a real necessity in the talking machine business. The managers of the recording laboratories: Walter Miller, with the National Phonograph Co.; C. G.

Child, Victor Talking Machine Co., Philadelphia; Vic. Emerson, Columbia Phonograph Co.; J. O. Prescott, American Record Co.; Geo. K. Cheney, Universal Talking Machine Mfg. Co., and others, have their hands full with the practical work of their responsible and onerous positions. Heretofore, they have done remarkably well in securing 'talent' who are creditable to their judgment; but we are going on the assumption that in specializing the business we can render the laboratories a distinct and valuable service by having on our staff just the right kind of artists for whatever record is desired. We know what is a good record, and what is necessary to accomplish this by no means easy object. Besides, we are training new people, for 'new blood' is essential, and we guarantee their work.

injury. Some of the best known people in this line—Ada Jones, for one, Len Spencer, and others—are under our direct management, and the results are mutually beneficial and satisfactory. This feeling is to be deplored, but we are certain it will wear away when the aims and objects of our business become more familiar to the trade."

## THE SPOKANE PHONOGRAPH CO.

Among the Enterprising Talking Machine Dealers of the Northwest.

The talking machine dealers throughout the Northwest are among the most enterprising in the country. Their stores are admirably equipped with every device for the proper display of their

SPOKANE PHONOGRAPH CO.'S DISPLAY ROOMS.

"The talking machine companies appreciate our efforts in this direction by engaging the 'talent' who come to them on our recommendation because they know it is a practical solution of a vexing problem. Our professional advice is also sought as to the best voices for certain selections. The only drawback, if it may be dignified by so calling it, is the apparent lukewarmness of the recognized 'talent.' They praise us openly, but quietly stick the knife wherever they think it will do us harm. This is mentioned more in sorrow than in anger, because personally we are well, and, we hope, favorably known to them all, and have never knowingly done any one an

wares. For instance, the Spokane Phonograph Co., of Spokane, Wash., have built up a very successful following, and carry a large stock, as can be seen from the illustration herewith. Their business is steadily expanding, and they expect this year to make a record of which any talking machine dealer can well feel proud.

## A SUGGESTION.

Knicker—The packers say they use everything except the squeal.

Bocker—Couldn't they can that in a phonograph?

## READY FOR THE EDISON JOBBERS.

Arrangements for the Entertainment of the Invited Guests of the National Phonograph Co. Are All Completed and They Are Certain to Enjoy a Splendid Time—Nothing Has Been Overlooked to Make Their Stay in New York One of Great Enjoyment.

Arrangements for the entertainment of the Edison jobbers of the United States and Canada by the National Phonograph Co. in New York City and Orange, N. J., July 17-20, are completed with this issue of The World. As the Edison Phonograph Monthly says: "It will be unique in the history of the talking machine industry. Few events of similar kind and equal magnitude have ever been given by a manufacturing concern. This entertainment is given for a two-fold purpose—to afford an opportunity for Edison jobbers to come together for their mutual advantage, and to commemorate the greatest year's business of the National Phonograph Co. The matter of bringing our jobbers together has been under consideration for more than a year, but it did not take concrete form till the close of the fiscal year on February 28 showed the phenomenal increase that had been made in the business of this company. This was so largely due to the splendid and enthusiastic co-operation of the Edison jobbers that the coming event became necessary as a means for working off our feeling of goodwill."

\* \* \* \*

A number of export houses will also be represented. At the Waldorf-Astoria Hotel, Fifth avenue and 34th street, New York, in addition to the guests being assigned rooms for their private use, special accommodations will be provided where they may conduct their correspondence with the aid of Edison business phonographs and a corps of stenographers. At the visit to the factory the following day it is expected Thomas A. Edison and President Gilmore will assist in receiving the visitors. It is also expected that luncheon will be served on the third floor of the new office building, an illustration of which appears elsewhere, and which was rushed to completion to extend this courtesy. The remainder of the programme has already been announced for the succeeding days, and nothing will be left undone that will add to the comfort, pleasure and enjoyment of the company's guests.

**WANTED:**

Thoroughly first-class salesman acquainted with the phonograph trade, to handle our language instruction outfits. One speaking French and German preferred. State age, experience, salary expected, and give references. No attention will be paid to applications not giving full particulars. Apply by letter only.

**SOL. BLOOM, 3 E. 42d St., N.Y. City**

J. R. Schermerhorn, assistant general manager of the National Phonograph Co., who has been in Europe since October last looking after the company's branch plants and offices, arrived in New York, June 26, on the "Kronprinz Wilhelm," of the Hamburg-American line. His visit is for the special purpose of attending the Edison jobbers' entertainment next week, after which he goes abroad again for an indefinite stay, and where Mr. Schermerhorn will rejoin his family.

\* \* \* \*

In the programme issued by F. K. Dolbeer, chairman of entertainment, on July 18, after the visit to the Edison laboratory and factories at Orange, N. J., the evening entertainment will be on the roof garden of the New Amsterdam Theater, New York, as the Hippodrome is closed for the season. A number of boxes and practically the entire orchestra floor have been engaged. With this exception the original programme will be followed.

\* \* \* \*

Speeches will be tabooed at the banquet, to be given in the Astor Gallery of the Waldorf-Astoria Hotel, during the evening of July 20. Entertaining will reign supreme. A stage will be erected at one end of the gallery, where the Edison "talent" will entertain the banqueters. The arrangements are: One "honor" table, at which will be seated Messrs. Edison, Gilmore, Dolbeer and a few other prominent people, with the guests placed at small tables, accommodating eight persons each. The entire seating capacity—about 270—has already been exhausted, and still further applications are being received.

\* \* \* \*

When Thomas A. Edison was asked whether he desired to invite any special guests to the banquet, he promptly replied: "No, sir. This is to be a phonograph banquet only. Nobody else is wanted." The pressure for invitations from outsiders has been heavy, but Mr. Dolbeer is refusing every one, and besides the press representatives, the Edison jobbers and the company officials will be the only ones present.

**A HANDSOME COLLAPSIBLE HORN.**

The New Jersey Sheet Metal Co., of Newark, N. J., deserve the credit of having perfected and placed on the market the first practicable sheet metal collapsible Flower Horn. This horn is a wonder for compactness, beauty and acoustic qualities and reflects credit on this company. They have succeeded in making a sectional metal horn that will not rattle and can be easily put together. The New Jersey Sheet Metal Co., in order to handle their fast growing business, have been forced to remove their factory to larger quarters at 9-11 Crawford street, where they occupy the whole building. They have also opened New York offices at Billings Court, corner Thirty-fourth street and Fifth avenue, where their extensive line will be on exhibition. Herman Ringel will be in charge.

**W. L. ECKHARDT'S "SPEECH."**

When the Eastern Talking Machine Jobbers' Association was on the point of adjourning at its last meeting, W. L. Eckhardt, the brilliant manager of the Columbia Phonograph Co.'s wholesale department, dropped in en passant. He was immediately called upon for a speech, from which he begged to be excused just then, but was prevailed upon to make a few remarks, which he did, and to the point. While he was commending the object of the association, two powerful hotel porters came in the room at the Breslin, lugging an immense trunk, which they announced in stentorian tones, "contained the speech of Mr. Eckhardt." Sol Bloom is said to have been responsible for the joke, which W. L. E. enjoyed immensely. That of having "M. E. Gilmore, president of the Columbia Phonograph Co.," preside at the meeting is also charged up to the chairman of the committee on publicity and promotion, which was accepted as authoritative by the "yellow" butter-in. The trade is not through laughing yet at the egregious "bull."

**Goods shipped  
same day  
order is received**

This sort of service may be new to you, but it is no more than a dealer ought to expect from his jobber.

It's our way of doing business; and you can depend upon it that a concern that handles orders promptly is up-to-date and does things right in other ways.

Doesn't matter what you want in Victor talking machines and records, trumpet horns, fibre cases, English needles and other accessories, we have it in stock and send it to you without the least delay. You can tell exactly when the goods will reach you and be sure of living up to your promises to your customers if you had to keep them waiting.

That kind of dealing gives the greatest satisfaction all around. It makes your business run along more smoothly, you always know just where you are and you have no trouble in hanging on to your customers.

Give us a trial order and see how quickly and satisfactorily we handle it. We'll be very much surprised if it doesn't make you long for our kind of service all the time.

Write for our latest catalogue, pick out the things you want and put it up to us to make good.

bottles. Furnished without bottles.

21 Drawer Cabinet furnished complete with 56  
bottles in top of cabinet.

## LATEST NEWS FROM THE "HUB."

**Business All That Could be Expected—Talking Machine Salesmen's Club to Give Dinner Next Month—Sisters of Charity Amazed at Talking Machine—Talker Used in Charleston High School—Andrews' Auto Trip to New York—Phonograph in Unique Marriage Ceremony—Other Items of Interest.**

(Special to The Talking Machine World.)

Boston, Mass., July 6, 1906.

Business in the talking machine trade is very good for this time of the year, but it is not a good time of the year for business. This is about the secret of the condition of affairs here. No one is complaining, for everybody feels that he is getting all that is coming to him and that there is no more to be had anyway.

The Talking Machine Salesmen's Club is preparing for the big clam bake and fish dinner which is to be pulled off sometime next month at one of the beach resorts.

At the Oliver Ditson Co.'s store an interesting spectacle was witnessed this week when two Sisters of Charity who had not been out of their convent for sixteen years were brought in to hear a talking machine. Maybe their eyes didn't stick out, for the operator put in such records as the duets by Scotti and Mme. Sembrich, and Caruso and Scotti, etc., with lots of band music, and the two Sisters were amazed at what they saw and heard. Verily, the world do move in sixteen years.

The Charlestown high school has adopted the phonograph as a means of teaching French to the pupils, the deal being arranged by Mr. Freeman of the Eastern Talking Machine Co.

John H. Little, stock clerk at the Columbia Phonograph Co., died this week of consumption. He was 30 years old and very popular.

At the Boston Cycle & Sundry Co., Manager Andrews is arranging for an automobile trip to New York at the time of the Edison meeting, and will take quite a party with him, as his big

National car holds eight comfortably. Business at the Boston Cycle Co. is very good.

H. A. Winkelman, manager of the Oliver Ditson Co.'s talking machine department, has left for a three weeks' vacation at Onawa, Me. Some large trout, or else some large stories about them, are expected later. Meanwhile Mr. O. A. Piesendel is in charge of the department.

At the Columbia Phonograph Co. there is a great run on the new Columbia record, "Is It Warm Enough for You?" This piece is very catchy and takes well. J. A. Pyle has joined the force in the repair department, coming from the Detroit office.

Married in a shoe store, as a phonograph played the wedding march Tuesday night, Mr. and Mrs. James A. Reynolds, of No. 18 Temple street, are to-day receiving the congratulations of their friends on as novel a wedding as was probably ever witnessed in Boston.

July 30 Miss Edith M. Hook, of Concord, walked into the store of H. L. Purdy & Co., 44 Chambers street, and asked for Mr. Purdy.

"I want you to marry me," she told Mr. Purdy.

"U-u-uh! What!" gasped the startled Mr. Purdy.

Then she explained. She thought Mr. Purdy was a justice of the peace. A friend had told her so and had recommended him.

Mr. Purdy wasn't a justice of the peace, but he was willing to help the chic little woman, and he promised to find her a minister if she wanted to get married.

"And I've got to find a place where we can be married. We haven't much money, so we can't go to a hotel," she said, looking doubtfully at him.

"Then come right here," Mr. Purdy assured her. "I'll have the store open and the minister and witnesses here at 8 o'clock."

"All right," Miss Hook agreed. "Then I'll go and get the license," and she hurried away.

The Rev. Mr. Foster, of No. 44 South Russell street, consented to perform the ceremony. A phonograph was obtained with suitable wedding march records.

There were lots of customers in the store at

the time of the ceremony, and in the street there had gathered a big crowd.

The ceremony was very simple. The young people marched up before Rev. Mr. Foster, while the machine supplied the time-honored accompaniment. The service was read, the vows exchanged, and the two pronounced man and wife. The bride wore a pretty gown of alice blue and the groom a well-fitting suit of dark material.

## REVIEW OF TRADE CONDITIONS.

Business on regular lines has been slowing down for the past few weeks, which gives the manufacturers a chance to catch up on orders, of which they have availed themselves. On machines and records it is possible an opportunity for accumulating stock will be afforded, and, considering the drawbacks incidental to a shortage on the most salable goods, measures will be taken to avoid this in future so far as is possible. Jobbers, with an eye to having an anchor to windward, are working up an expanding trade on special goods, and their success is commensurate with their efforts. Export trade is strong, and orders of magnitude have been booked sufficient to tide over what appears to be several weeks of comparatively quietude. The horn situation is far from being dull, the manufacturers displaying a spirit of activity and aggressiveness quite surprising.

## THE EDISON COMMERCIAL SYSTEM.

The Travelers' Insurance Co., of Hartford, Conn., is using the Edison commercial phonograph system in their various departments. They have found it a tremendous time saver, a money maker, and commend it very highly. They have recently received some very flattering testimonials as to the merits of the commercial system from men eminent in all walks of life. The Home Trust Co. have just added the Edison business phonograph to the marvelous list of modern machines used by leading commercial houses in their equipment to-day.

## TIMELY TALKS ON TIMELY TOPICS.

The active members of the traveling corps have ceased their wandering, for the most part during the past fortnight, and have been enjoying well-earned vacations. The "boys" have "dug up" a lot of new business during the year and have been a credit to themselves as well as to their respective companies. From what may be gathered it is certain new high levels on sales records will be made the coming season, and the "stars" of the staff will doubtless receive some pretty hard rubs by recent additions, who do not come into the trade altogether raw to the talking machine situation.

Within the past few weeks one of the leading manufacturing companies hit upon a novel and apparently efficacious scheme for testing the business acumen of store management and salesmanship. Unheralded they sent out a party in a well-appointed automobile to every dealer of any size in the Greater New York territory, who was charged to inquire about certain machines—not confined to their own product, by the way—records, machines, etc. The gentleman was waited upon in the usually courteous manner, and on leaving, with but few exceptions, his name or address was not asked for. The test customer had the appearance of a most desirable "prospect," nevertheless no steps were taken to follow up the business. With this experience before them the general sales manager of the company, which indulged in the "rubbering" expedition, has since been wondering how many sales are actually lost by the careless methods and inattention to details he uncovered in so simple yet so effective a manner.

The so-called "original" talking machine man is getting to be something of a joke in the business since he has been discovered as such a multitudinous person. If he is the first dealer, or jobber or salesman, and springs the fact on another veteran with like claims in one class or the other, then is he ranked on the level of the first talking machine itself, and already fifty, if not a hundred, "number ones" have been "discovered."

Why not an automatic rewind instead of the crank for winding up the springs in the machine? This question has frequently been asked. It is held that were the winding up accomplished automatically, the playing would be more even, and uniformity of operation is the *sine qua non* in a talking machine. Perhaps the experts, inventors, creators, originators, discoverers, improvers, etc., may answer this query.

Undoubtedly the National Phonograph Co. are entitled to the time and undivided attention of their guests—the Edison jobbers—at least for the days they are enjoying the bounteous, magnificent and unprecedented hospitality of the company. It is to be expected competitive "but-

ting in" will not be unheard of, but it might be managed so as not to be offensive, at least. A large number of the jobbers will probably stay over in New York, for personal and other purposes, for several days, if not longer, and then the people who desire to do a stroke of business can get in their work and no one can say them nay. The hustling will be aggressive to get hold of the men they are after, and the schemes to secure a part of their time, just to "take up that little matter," will doubtless be many and ingenious.

A brief paragraph in last month's World that an agency for the sale, if not the manufacture, of the Pathe Frere records had been established here, occasioned many inquiries. Several times news to this effect has been published, mainly through the activity of the promoters claiming to represent the famous French house and the disposal of its product, and possibly the organization of an American company to handle the line. But the rumors, when run down, have disappeared into a hole in the ground, with something or other pulling the orifice behind them. It is admitted, however, that the party who claims to have the Pathe option has sold a few hundred Caruso cylinder records of the P. F. make to a New York jobber. The remainder of the story is pure fabrication.

Of the growing prosperity and importance of the South American countries to the talking machine trade, travelers' advices and observations on the spot are strongly corroborative. For example, in a recent letter from a well-known maker of "masters," he advised his company in the United States that if certain records proved successful in the reproduction one firm alone would order 100,000, another 20,000, and several 15,000 each. The writer declared the sale of American-made talking machine goods was phenomenal, and that the market was in its infancy. The buyers, however, insisted upon high quality, and that the practice of sending inferior records or imperfect machines would be a dead loss. He intimated that a word to the wise should be sufficient.

One community is not like another as favorable fields for the sale of talking machine paraphernalia. It is conceded Pittsburg, Pa., Chicago, Kansas City and a few other places that might be named are exceptionally splendid localities. Baltimore, Md., on the other hand, is now referred to as "one of the slowest towns in the Union, but has prospects." Or, as one particularly well equipped talking machine man remarked to The World, after having established what is considered one of the finest stores in the City of Monuments, "Baltimore is now about where New York was eight years ago—just waking up to the possibilities of the business. It will be a great

field yet, if not soon; but at present extremely conservative, to say the least." The aristocratic old place was never known for its hustling proclivities; but it always seemed pretty well satisfied with itself and finally got there after a fashion, if not quite on four feet.

It takes about four months after the "master" is made before a record is ready for the market. For example, as one of the "talent" described it: "After making a successful record of a current summer song hit the other day, the laboratory manager informed me that it was one of the best I had ever recorded, adding, 'but do you know the record will not go into the bulletins much before December?' 'In that event,' I replied, 'I had better commence on my Christmas stuff right off.' I tell this incident leading up to the advantages which would be derived from an indestructible record that is nearing the last stages of completion. On this record, disc or cylinder, a song may be recorded and inside an hour duplicated and ready for delivery, so that the very latest popular pieces may be had when they are actually reigning successes and not when they are in the 'sere and yellow' stage, as now. Melodies of this kind, you know, are evanescent, not expected to last but a few weeks at the most, and as they are conceded to be the best sellers, it seems to me this new record product will fill a long-felt want. I have tested them, and they are the equal of the best known records now turned out, having the further advantage of such flexibility that the discs may be folded up like paper and forwarded in the mails without the slightest danger of damage." If this be all true, why this coming indestructible record must be a "consummation devoutly to be wished," as "Bill says."

Distinct novelties in the line of needles have been sent here from Germany during the past week. The samples represent an advancement in high finish and improved tone quality. Among those shown is one in which an ingenious device holds eight needles that play 1,000 records. Another about perfects the so-called glass needle, overcoming entirely the loss by breakage. Several soft-tone needles are included in this notable assortment, of which more particular information will soon reach the trade, but it is believed they may interfere with devices now covered by American patents.

The building on the northwest corner of Fifth avenue and Eighth street that the National Phonograph Co. recently purchased for their New York headquarters will probably not be occupied before the close of the year. Possession was obtained July 1, and the remodeling of the interior will proceed rapidly. Besides accommodating the departments now at 31 Union Square, quarters for the repacking and reshipping for export being done at 251 West Broadway, will be provided. When completed it will be the swellest talking machine office establishment in the world.

The suit in the German final courts on the alleged infringement of Petit's duplex record patent, being prosecuted by the Odeon Co., of Lon-

## Buy from Headquarters

We manufacture all styles of cases for all makes of machines. Carrying these goods in stock we can make prompt shipment. Our quality is the best—our prices are right.

**Chicago Case Mfg. Co.**

142-144 W. Washington St.

CHICAGO

don, Eng., on which argument was to have been heard, has been postponed to September 13. A similar case in the Austrian court of the first instance has been laid aside. In this country pleadings in a suit on the same patent have been made in the United States Circuit Court, Southern District of New York. As yet comparatively few duplex or double-face records are on the market, but in Europe and other foreign countries they are a staple line and cut something of a figure, consequently the judicial determination of prior rights, or even invention, is by no means of minor importance.

## HAWTHORNE & SHEBLE IN NEW YORK.

**Have Engaged Rooms During Edison Ceremonial Week at the Chelsea Hotel.**

During the Edison ceremonial week, the Hawthorne & Sheble Manufacturing Co., of Philadelphia, Pa., have engaged a suite of rooms at the Chelsea Hotel, 222 West 23d street, New York, where they will exhibit a complete line of horns and talking machine supplies. E. A. Hawthorne and William McArdle will devote their entire time during the week to the entertainment of the visiting jobbers, and that means a whole lot.

## RECENT INCORPORATIONS.

The Hawthorne & Sheble Co., No. 106 Market street, Philadelphia, Pa., have been incorporated for the purpose of manufacturing all kinds of records of sound, machinery, etc., for making and recording sound, etc.; capital, \$500,000. Incorporators: Horace Sheble, Mascher and Oxford streets, Philadelphia, Pa.; Ellsworth A. Hawthorne, Springfield, Mass.; Theodore F. Bentel, Nos. 435-437 Wood street, Pittsburg, Pa.

\* \* \*

The Powers-Hill Co. was incorporated at Albany last week to deal in, manufacture and repair furniture, pianos, phonographs, etc.; capital, \$10,000. Incorporators: Patrick A. Powers, No. 625 Main street; Amos T. Hill, No. 267 Franklin street; Sophia M. Klee, No. 157 Morgan street, all of Buffalo, N. Y.

## AMERICAN RECORD CO.'S PROGRAM.

**During Next Week—Will Entertain Visiting Jobbers With Some Notable Record-Making Talent—Those Who Will be in Evidence.**

The American Record Co. have prepared a special programme of recording this week, in honor of the visiting Edison jobbers at their laboratory, 241 West 23d street, New York. Each day of the convention of the National Phonograph Co.'s great distributing staff there will be an interesting list of new numbers played. Messrs. Collins, Harlan, Stanley, Billy Murray, Henry Burr and others of the "talent" will be making records, and no doubt the gentlemen who handle the goods made famous by these artists will be glad of the opportunity to meet them in propria persona. J. O. Prescott, of Hawthorne, Sheble & Prescott, sales managers of the American Record Co., will be on hand to look after the comfort of his guests, whose visit to the laboratory will be made unusually welcome.

## CASE WILL GO TO THE HIGHEST COURTS.

It is believed that the suit of the Victor Talking Machine Co. against the Talk-o-phone Co. will eventually go to the United States Supreme Court on a question of international law, which the lower and intermediate appeal tribunals are inclined to fight shy of. This particular question, the wise ones say, has never been determined.

## SCHLOSS & CO.'S ART RECORD CABINETS.

When the Edison jobbers are in New York it is likely they will improve the shining hours by looking around the trade and getting in touch with the market. While devoting this time to such a laudable purpose, E. Schloss & Co. would be pleased to have them look over their line of disc and cylinder record cabinets, shown in the

Exhibition Hall of the Sol Bloom building, 3 East 42d street, New York. They are made on art lines, and to sell quickly and profitably. A visit is worth while.

## NEW LIFE IN SAN FRANCISCO.

**Larger Business Than Ever in Prospect—Sherman, Clay & Co. to Have Great Department—Clark Wise and Kohler & Chase Plans of Campaign—Other Dealers in Line.**

(Special to The Talking Machine World.)

Sau Francisco, Cal., June 3, 1906.

Shortly after the fire much doubt was expressed regarding the future of the talking machine business in this city, at least in the prospect of its immediate revival. Developments since, however, lead to the belief that the talking machine trade up to the time of the fire was merely in the preliminary stage, and the resurrection of the business has taken place in a way that will make San Francisco and vicinity one of the largest markets for machines and records in the country.

Sherman, Clay & Co., for instance, early last month had in their Oakland store over 250 machines in stock as well as 55,000 records, and shortly after a full carload of machines and records were added to the line, necessitating the enlargement of that department. Of course, the fact that Sherman, Clay & Co. sell the goods, at both wholesale and retail, accounts for the unusually large stock carried by them, but that such a stock can be distributed in the stricken section speaks well for the demand. This company are making ample preparations for taking care of the talking machine trade in their new building in this city, which will be at Kearney and Sutter streets. The department will be located on the third floor, will contain a series of sound-proof rooms for record trying, a complete record library, and in all ways will be an ideal talking machine salesroom.

Clark Wise & Co. have also made special efforts to build up the talking machine end of the business, and over a carload of machines and records are ready to be placed in the temporary store on Van Ness avenue.

Kohler & Chase will shortly have their talking machine department installed in their new store at Fillmore and Bush streets. Both wholesale and retail departments will be located on the upper floor of the building, and will be under the management of E. N. Clintsman, as formerly.

Among the other dealers who are giving close attention to the development of the talking machine business are the Goodman store, at 1132

Valencia street; Benj. Curtaz & Son, on Van Ness avenue; Byron Mauzy, Peter Bacigalupi and R. J. Christophe, of 1019 Valencia street. The latter started in business since the fire, and has put in quite an extensive stock.

## OFFICIAL OPINION ON RECORDS.

**Administrative Decisions Not the Law of the Land—Matter Comes to Light in Connection With Discussion on Copyright Bill.**

(Special to The Talking Machine World.)

Washington, D. C., July 11, 1906.

Apropos of the bill introduced in Congress before its adjournment, June 30, to revise the copyright statutes, a controversy over the dutiable value of "masters" and records was carried from the decision of the Collector of Customs to the Secretary of the Treasury which involved the crux of the situation. The authorities held that a "master" was a manufacture of metal, which was conceded. It was also contended by the defense that a sound record was a "writing," the reproduction of which was heard by the ear, in the same sense that staff notation was usually interpreted and the meaning of raised letters for the blind was conveyed by feeling. Here were the three primary senses at issue with the talking machine record an entirely new citation. Under this presentation the defense therefore argued that talking machine or sound records were a "part of a musical instrument, hence dutiable at 45 per cent." The Government accepted this construction and classified the goods accordingly. At this point the defense, having control of the case, deemed it advisable to stop, as the customs officials could not appeal. Of course, this procedure is regarded as an official opinion of the United States Government, but the fact is overlooked possibly that administrative decisions are not the law unless reviewed by the courts.

## ROBT. L. LOUD'S INTERESTING RECITALS.

(Special to The Talking Machine World.)

Buffalo, N. Y., July 7, 1906.

Talking machine recitals are a rule with Robert L. Loud, who is agent for Edison and Victor machines and records. He takes advantage of various special occasions for bringing the machines to the attention of the public, and recently gave an excellent concert for the benefit of the Fresh Air Mission. In connection with the talking machine selections numbers are rendered on the player-piano which tends to enhance interest in the entire line. E. M. Paul has charge of the recitals and concerts.

Long Distance Telephone—Number 1745 Gramercy.

NEW YORK, JULY 15, 1906.

A TRADE paper that is clean, wholesome and educational in its news columns, and at the same time instructive from a literary standpoint, is a help to any industry, and one of the best known men in the talking machine trade recently remarked before a company of gentlemen that the most helpful influence that ever existed in this industry is The Talking Machine World. It was certainly a high compliment, and one perhaps not fully deserved, but the aim of this trade newspaper has been to become a healthful and impelling creative force. We have only won our present strength through reciprocal support, and we can only hope to advance to a greater position of power through encouragement which we hope to receive through values which we offer our supporters in every part of the globe.

WE found it necessary on the fifteenth of the present month to advance the annual subscription price of The World to One Dollar. We believe there is no paper published which is putting forth a larger value to subscriber and advertiser than we are at the present time, and therefore, we believe, that our subscribers will not hesitate to admit that The World is well worth the trifling cost of One Dollar a year. In fact, we may say that we have received hundreds of letters from subscribers, who have urged us to advance the price, and many have not hesitated to say that they would willingly pay \$4 a year if necessary to secure the publication, for it contains matters of interest to them. Many more have taken advantage of the old price and secured themselves for some years to come. For instance, F. M. Barney, the well-known dealer of Elm Creek, Neb., writes us on June 18, as follows:

"Dear Sir:—I have rather expected you to raise the price of your Talking Machine World, as you have been giving more than the money's worth, and are now on a safe basis. I, however,

take advantage of the old price and include \$2.50 for five years advance subscriptions, for which please receipt me. Congratulating you on your successful publication, I am, Very truly, F. M. Barney."

TO be successful in any line, one must have ambition and dreams of high ideals to be attained and lived up to, and the policy of this publication at the start was "a square deal" for all. We have endeavored to stimulate and encourage trade. There is room in the conduct of a trade newspaper for the developing and displaying of good business traits, because a trade newspaper is closely related to industry, and its functions are infinitely superior to those of some of the daily papers which are forever presenting in glaring headlines the seamy side of life, and giving pages to a recital of the nastiness of the divorce courts and murder trials and scarcely a line to some of the inventions which have meant much to toiling millions. A trade publication largely appeals to the intellectual and thinking side, and it occupies today a very much different position in the world than years ago. The trade paper, properly conducted, should be clean and educational in its force, helping industry and emphasizing the advance made in inventive skill.

A READER asks: "Would you suggest advertising through the summer?" Of course we would. According to "Rusty Mike," a business can go along without much advertising, so can a boy go along without much eating, but he wouldn't grow very fast. The business that is not advertised gets along and it usually lands in the same row of graves with the farmer's mule. The owner of this human pile driver once conceived the idea of feeding his mule sawdust instead of oats. He got along all right for awhile, but just about the time he was getting used to it, he died. Business must have the oats of advertising—it cannot live otherwise, and any penny wise, pound foolish man who thinks that he can stuff this vitalized force with the sawdust called "I don't have to advertise," will wake up some morning and find the legal white crape, commonly known as the sheriff's notice, pasted on the door. In advertising, aim at the average citizen, and don't get rattled if the critic ridicules your copy, if it is sane. Remember that there are about seventy millions of average citizens, and perhaps a dozen critics of advertising.

THERE are some pretty big talking machine establishments in this country, and the problem of selling and maintaining a thorough sales-staff is an ever present one, for the manager is confronted constantly with the necessity of choosing from a large number of applicants. He must first study to serve the interests of the house in the talking machine field. It is important therefore that he should have a thorough and careful system of judging their capabilities and comparing their strong points. Experience in sizing up men, and reading human nature is not the sole essential by any means. Method is also necessary in the business of selecting recruits, and if the manager desires to save time and effort he is not particular, and feels satisfied that he has chosen from among the many applicants the most thorough and reliable man.

## Notice to Subscribers

On and after July 15 the Annual Subscription to *The Talking Machine World* will be ONE DOLLAR. Foreign Countries One Dollar and Twenty-five Cents.

ONE of the best tests in judging a salesman's efficiency is a question as to how he has handled the knotty problems of selling in the past. If conditions and character of the man seem to warrant it, it would pay to have him give an actual demonstration of how he would make a sale. The selling of talking machines, like everything else, requires clever, capable men, and the better the selling staff, the more business will be done, and the salesmen themselves should learn every possible point regarding their business. It was only recently that we were in a large talking machine establishment two weeks after new records were out, and yet some of the salesmen seemed in entire ignorance of any of the new records sent out by two or three of the leading concerns. Every month there are some specialties which people will buy instantly when their attention is called to them, and it should be the duty of salesmen to keep posted on new records, and to present their merits to their callers.

BUSINESS can be worked pleasantly and satisfactorily, and the best way a salesman can make money for himself out of the talking machine business is to make money out of his trade for his employer. The good things of life never come to men who are simply dreamers. No man ever succeeded unless he put more thought on his work than on what his proceeds would mean to him in the way of advancement and gratification.

WAREROOMS, too, should be attractive, and the instruments should not be set around in an indifferent manner. The display features are worth thinking over, and the more a dealer goes into the subject the more he can see the possibilities of betterment which will mean an increase in the money-making powers of talking machines, and it is the profit side that interests most men in business nowadays whatever their vocation may be.

CORRESPONDENCE from a number of cities shows that the talking machine business has kept up wonderfully well. One large jobber, in writing The World, says: "I have been more than delighted with my June business, and while I expect a little slowing up in July, I have got some novel means of pushing trade, which I think will keep business up in good form." That's the kind of spirit that makes trade.

DURING the visit of Mr. Edward Lyman Bill to Europe he consummated arrangements with W. Lionel Sturdy, a gentleman of wide experience in the trade paper and advertising world, who will act as representative of The Talking Machine World in London, England, and offices will be opened at a central point in that city at an early date.

## SOME LATE NOTES FROM CHICAGO.

(Special to The Talking Machine World.)  
World Office, 195-197 Wabash avenue,  
Chicago, Ill., July 12, 1906.

Manager Geissler, of the Talking Machine Co., is highly pleased with the business of the company since he took hold a few months ago. He has made five large new Victor dealers in Chicago the last two weeks and the initial order from the Cable Co. was one of the largest placed in Chicago. Mr. Geissler looks forward to a big business on the Land-O-Phone home recorder for disc machines for which they have been made distributors. They will be in a position to supply the trade with the new device by the time this issue of the World is out.

The first of the new Type B. M. graphophone to arrive here is on exhibition at the Columbia Phonograph Co.'s Chicago branch. The volume of sound is a mean between that of the B. C., Twentieth Century and the ordinary machine, and the price, \$75, will no doubt make it a remarkable seller.

H. L. Willson, manager of the Chicago branch of the Columbia Phonograph Co., is visiting headquarters in New York, and on his return will bring back with him Mrs. Willson, who has been spending some time at her former home in Pennsylvania. W. W. Parsons, of the Commercial Department, has just returned from the East, and E. C. Plume, who looks after the western jobbing interests, leaves this week for New York.

Mr. Thompson, manager of the talking machine and sporting goods departments at Rothschild & Co.'s, goes east on a buying trip the middle of the month. He reports a good business on the Thompson modifier, of which he is the inventor.

The Healy Music Co. are now thoroughly settled in their new location at Wabash avenue. Two handsomely finished private rooms on the main floor are devoted to talking machines. Besides the Zonophone, for which they are jobbers,

they also now handle the Victor and Edison machines in a retail way. The stock rooms are in the basement. Manager Faber, of the talking machine department, reports business as excellent.

The Chicago Case Manufacturing Co., 142-144 West Washington street, make a strong specialty carrying cases for every make of machine, both disc and cylinder, and also horn carrying cases and disc and cylinder record cases. The company carry constantly in stock what is probably the most complete line on the market, and special sizes can be promptly made to order, as the company have a large and excellently equipped factory. They also make an extensive line of band instrument cases.

## BUSINESS RUSHING IN SEATTLE.

Getting Trade Diverted from San Francisco—  
Difficult to Keep Stock Required—Johnston  
and Other Leading Dealers All Very Busy.

(Special to The Talking Machine World.)  
Seattle, Wash., July 3, 1906.

As a result of receiving a large portion of the talking machine trade temporarily diverted from San Francisco, the dealers of this city have been experiencing considerable trouble in keeping their stock up to the usual size. Not long ago one house received over 20,000 Victor records in a double shipment, and within a short time such inroads had been made into this immense stock that the company was short on many popular numbers. And as orders were taken for future delivery of the leading numbers, incoming shipments were depleted almost as soon as received. The record famine does not apply to any particular line of goods, for all are equally affected.

The outlook for continued good business in the talking machine line is excellent, everybody being busy.

The D. S. Johnston Co. have found that the low price of the Edison records (they are jobbers of the Edison goods) has proven a boon to the small dealers out of town, enabling them to

carry the entire catalogue with a comparatively small outlay of capital.

The other dealers, including Sherman, Clay & Co., Kohler & Chase, the Columbia Phonograph Co., Cline's Piano House and William Martins are all getting results from this branch of their business. Mr. Martins is the latest addition to the ranks, but he is holding his end up with the Victor line.

## JOHN KAISER'S GOOD TRIP.

A trip, covering one week each in New England and New York State by John Kaiser—"our old college chum"—for the Douglas Phonograph Co., New York, was fruitful of results, especially in securing a number of good sized orders for the Searchlight horn, on which the company controls the sale in the Eastern States. In Boston, C. G. Andrews, of the Boston Cycle & Sundry Co., has taken up the Searchlight extensively. Other jobbers are equally enthusiastic, according to the veracious J. K., who was shown many courtesies all along the line when calling on the trade.

## DEMAND FROM SOUTH AMERICA.

A great and growing demand for talking machine records for southern countries is in evidence. The American Record Co., Hawthorne, Sheble & Prescott, sole selling agents, Springfield, Mass., have received many favorable comments from their Mexican, Cuban and South American trade on their fine list of Spanish and Mexican selections by the Curti Mexican Orchestra, which appeared in one of their recent bulletins. The demand from the Spanish speaking countries is for high-grade musical numbers and operatic selections. Italian operatic records have as large a call as the strictly Spanish, or those of Spanish color.

Last week a single order of \$110,000 for machines and records was placed with the National Phonograph Co. by a New York City jobber. General Sales Manager Wilson is beaming.

## TO THE TRADE

We take pleasure in calling  
your attention to our new

Collapsible  
Flower Horn

MADE ENTIRELY OF SHEET METAL

This horn can be put together inside of three minutes and when not in use may be placed in a 6x20 carrying case. We guarantee this horn in every respect as to its wearing and accoustic qualities.

Owing to the increased demand for our product, we have been forced to move our plant to larger quarters at **9-11 Crawford St., Newark, N. J.**, and have installed new machinery to use heavier gauged metal in the manufacture of Flower Horns, which places our line as the strongest and best enamelled tinted Horn on the market.

**Jobbers are cordially invited while in New York to call at our offices and inspect our line.**

**NEW JERSEY SHEET METAL CO.**

**New York Offices, Billings Court, opp. Waldorf-Astoria, cor. 34th St. and Fifth Ave.**

## EDISON JOBBERS WHO ARE COMING.

List of Men from the Various States Who Will be in Evidence at the Invitation of the National Phonograph Co. This Week.

As referred to elsewhere in The World, every arrangement has been perfected for the entertainment of the Edison jobbers by the National Phonograph Co. this week. The headquarters will be at the Waldorf-Astoria Hotel, where the guests will register Tuesday afternoon. The completed list of jobbers who have accepted the invitation of the company and who will be present is as follows:

Germany—Thomas Groff, Berlin.  
 Canada—R. S. Williams, Jr., of R. S. Williams & Co., Ltd., and H. C. Stanton, Toronto.  
 Alabama—A. R. Boone, T. Williams, Birmingham; W. H. Reynolds, Mobile, Ala.; R. L. Penick, Montgomery.  
 Arkansas—S. M. Field, Little Rock.  
 California—F. J. Hart, of Southern California Music Co., Los Angeles.  
 Colorado—W. S. Ferguson, H. Shields, of Denver Dry Goods Co., and Thomas Hext, of Hext Music Co., Denver.  
 Connecticut—W. O. Pardee and H. L. Ellenberger, of Pardee-Ellenberger Co., New Haven.  
 District of Columbia—E. H. Droop, of E. F. Droop & Sons Co.; Sigmond Kann, of S. Kann, Sons & Co.; J. Macfarquahar and S. E. Philpitt, Washington.  
 Georgia—J. P. Riley, Atlanta Phonograph Co.; B. L. Crew, Phillips & Crew Co., Atlanta; A. C. Jones, Waycross.  
 Illinois—Fred K. Babson, of Babson Bros.; C. E. Goodwin and J. F. Bowers, of Lyon & Healy; J. W. Harrison, James I. Lyons, L. A. Olmstead, Samuel Insull, Edw. H. Uhl, Chicago; Eugene Zimmerman, Peoria; L. E. Caldwell and J. C. Caldwell, Quincy.  
 Indiana—W. E. Kipp, Kipp Bros. & Co.; Chas. F. Craig, E. A. Link, A. B. Wahl, A. P. Wahl & Co., Indianapolis.  
 Iowa—D. F. Hopkins, J. O. Hopkins, Hopkins Bros. & Co., Des Moines; Charles Stayman, Early Music Co., Fort Dodge.  
 Louisiana—E. H. McFall and F. J. Buckowitz, National Automatic Fire Alarm Co., and William Bailey, New Orleans.  
 Kentucky—C. A. Ray, Louisville; B. F. Magruder, Goshen.  
 Maine—E. H. Dakin, Bangor; W. O. Ross and F. C. Smith, Portland.  
 Michigan—E. Percy Ashton, Detroit; C. A. Grinnell and I. L. Grinnell, Grinnell Bros.; Max Strassburg, Detroit.  
 Massachusetts—C. G. Andrews and F. M. Linseott, Boston Cycle & Sundry Co.; E. F. Taft, Eastern Talking Machine Co.; E. E. Currier, Frank S. Boyd, William L. Veale, S. J. Francis, D. R. Harvey, C. E. Osgood, F. A. Bliss, Fitchburg; Thomas Wardell, Lowell; W. H. Bassett, New Bedford; J. C. Brickett and George W. Flint, Springfield; H. P. Emory, Worcester, Mass.  
 Minnesota—Thomas C. Hough, Minneapolis; G. H. Heinrichs, George W. Koehler, L. H. Lucker, C. Lucker, George W. Maire, O. P. Stickney, St. Paul.  
 Missouri—T. P. Clancy, P. E. Conroy, Conroy Piano Co.; A. G. Quade, E. B. Walthall, St. Louis; C. J. Schmelzer, Kansas City.  
 Montana—Frank Buser, Helena.  
 Nebraska—George E. Mickel and D. W. Shultz, Omaha; H. E. Sidles, Lincoln.  
 New Jersey—A. W. Toennies, Jr., and A. W. Toennies, Sr., Eclipse Phonograph Co., Hoboken; A. O. Petit, Edison Co., Newark; James K. O'Dea, Paterson, N. J.; A. F. Stoll and John Sykes, Trenton.  
 New York—R. Bernaniji, John W. Blackman, John F. Blackman, J. N. Blackman, Blackman Talking Machine Co.; P. L. Waters, Alfred Weiss, G. Vintschger, V. H. Rapke, William C. Shields, Lipman Kaiser and S. B. Davega, of S. B. Davega; Robert C. Ogden, of John Wanamaker; C. V. Henkel and A. P. Petit, of Douglas Phonograph Co.; J. T. Maclean, William M. Hollins, N.

Goldfinger, with the Siegel-Cooper Co.; Otto Lion, W. E. Peck, Sol Bloom, B. R. Barklow and F. G. Loeffler; Battini Phonograph Co.; A. H. Jacot, C. H. Jacot and Marc K. Mermod, of Jacot Music Box Co.; Charles Klimper, I. Davega, Jr., John P. Kelsey, Brooklyn; H. A. Gordon, H. S. Gordon, Winchester Britton, J. R. Bradlee, John Rose (Astoria), F. Bockhorst, New York City; P. A. Powers and Robert L. Loud, Buffalo; W. O. Crew and John N. Willys, Elmira; N. D. Griffin, Gloversville; William H. Davis, Kingston; Frank E. Bolway, Oswego; A. J. Deninger, John F. Griffin, G. B. Miller, S. T. Williams; W. J. Smith and E. B. Smyth, Rochester; W. C. Finch and W. E. Hahn, of Finch & Hahn; J. A. Rickard and J. W. White, Schenectady; C. N. Andrews and W. D. Andrews, Syracuse; W. F. Carroll, J. L. Fairbanks, Arthur F. Ferriss, William Harrison and M. C. Robinson, Utica.

Ohio—E. J. Heffelman and Charles B. Klein, Canton; Geo. Ilse, of Ilse & Co.; Howard E. Wurlitzer and Rudolph H. Wurlitzer, Rudolph Wurlitzer Co., Cincinnati; P. B. Whitsit, of Perry B. Whitsit Co., and L. M. Weller, Columbus; T. H. Towell, Cleveland; Edw. F. Dohso and Chas. F. Niehaus, Dayton; E. F. Ball and James Fintze, of Ball-Fintze Co., Newark; J. M. Hayes, Toledo.

Pennsylvania—G. C. Aschbach and M. J. Peters, Allentown; Henry Braun, Allegheny; William Werner, Easton; S. K. Hamburger, Harrisburg; T. W. Barnhill, of Penn Phonograph Co.; A. M. Collins, Louis Buehn, of Wells Phonograph Co.; Harry Goodman, A. C. Weymann and Harry W. Weymann, of H. A. Weymann & Son; Adolph Weiss, of Western Talking Machine Co.; H. F. Miller, John B. Miller and R. J. Minchweiller, Philadelphia; Theodore F. Bentel, of Theodore F. Bentel Co.; W. E. Henry, of Powers & Henry Co.; D. M. Wagoner and J. L. Wagoner, of Pittsburgh Phonograph Co., and F. Olmhausen, Pittsburgh; Edw. A. Gicker and O. F. Kauffman, Reading; G. L. Ackerman, J. Foster Davis and T. J. Foster, Scranton; M. V. De Foreest and W. C. De Foreest, Sharon; W. A. Myers, Williamsport.

Rhode Island—L. M. Darling and Charles Field, Pawtucket; J. A. Foster, S. A. Howland, Charles D. Rodman, J. Samuels, E. E. Saul, Eugene M. Sawin, A. T. Scattergood, E. A. Scattergood and H. Wonderlick, Providence.

Tennessee—A. R. King and Daniel Orndorff, Knoxville; F. M. Atwood, O. K. Houck, of O. K. Houck Piano Co., and F. E. Miles, Memphis; Olney Davies, Nashville.

Texas—C. B. Harris, Dallas; W. G. Walz, El Paso; D. Shepherd, Fort Worth; H. M. Holleman, Houston.

Utah—A. T. Proudfit and Clement Williams, Ogden; J. L. Daynes, Jr., Salt Lake City.

Washington—J. Carstens and W. H. Foster, Spokane.

Wisconsin—Hugh J. McGreal and L. E. McGreal, of McGreal Bros., Milwaukee.

## SEARCHLIGHT HORN IN GREAT DEMAND.

The Searchlight Horn Co., whose artistic announcement in last month's World attracted such widespread commendation, are again in evidence with another illustration of their horn which has won a tremendous vogue, judging from the way orders are coming in. The jobbers handling this specialty are receiving not only orders day after day, but appreciative words for this handsome creation. In fact, not only are inquiries reaching the manufacturers from all sections of the United States, but foreign countries have cabled asking for "rights." For instance, the Gramophone Co., of London, cabled at once, after the receipt of the last World, asking for "rights" for Great Britain, and negotiations are now under way. Perhaps nothing ever produced in the talking machine trade has made such a hit as the Searchlight horn, and those jobbers who have not investigated its merits will doubtless find occasion to call on the New York jobbers, the Douglas Phonograph Co., 89 Chambers street, during their visit to the city.

Henry B. Babson, president of the Universal Talking Machine Co., left New York for a hurried trip to Toronto, Can., Tuesday of last week, coming back Friday. The object of the journey was to establish a new exclusive Zonophone jobbing agency for the Dominion, R. S. Williams & Sons Co., Ltd., having relinquished the connection.

There is always a lull in the summer months, although many dealers and jobbers report a good demand for records particularly adapted to the vacation period. The American Record Co., of Springfield, Mass., are making a specialty of certain selections of the famous "Indians" for outdoor work. They consist of quartettes, duets, minstrel selections and several pleasing orchestral numbers for dancing.

The Universal Talking Machine Manufacturing Co., New York, recently received one of the largest orders for machines and records from Buenos Ayres, A. R., ever sent to the States. It will keep their factory running full up for a while.

## Syracuse Wire Record Racks.

A **Money Maker** for the jobber who sells them.

A **Money Saver** for both the jobber and dealer who uses them.

You are **Losing Money** unless you do one or both.

Better get in line if you are not already there.

Do it **now**.

**SYRACUSE WIRE WORKS,**  
**SYRACUSE, - - NEW YORK.**

(Special to The Talking Machine World.)

London, Eng., July 5, 1906.

Trade conditions in this city were never as satisfactory as at the present time. This view of things is based upon interviews with leading manufacturers, dealers and factors. Had it been December instead of July, the various houses could not have been working at greater pressure. This is not flamboyancy of statement but facts. Everything points to next season being the greatest in the history of the talking machine trade in this city.

\* \* \* \*

The Gramophone & Typewriter, Ltd., give me this exclusive paragraph for the benefit of The World: The Auxetophone, the invention of the Hon. Charles Parsous, of Turbine fame, is causing quite a panic among dealers throughout the world. Thousands are waiting anxiously for this machine, and the Gramophone Co. are giving to one and all a promise for early delivery in September.

\* \* \* \*

James H. White has tendered his resignation as manager and director of the National Phonograph Co. in this city.

\* \* \* \*

The Columbia Phonograph Co. are having erected some magnificent new offices in Oxford street. They will shortly be opened, and will be one of the finest buildings in the West End of London.

\* \* \* \*

S. W. Dixon, the popular manager of the Gramophone & Typewriter, Ltd., has arrived back in England from South Africa, where he has done splendid business for his company.

\* \* \* \*

The Gramophone Co. have raised the price of Caruso records from 10 shillings to 20 shillings. This is a most unusual thing to do, and I think they have made a big mistake.

\* \* \* \*

The sale of flower horns in England just now is enormous. They sell like "hot cakes." This next season will be a gold mine for go ahead lively dealers in these goods.

\* \* \* \*

One thing this summer season I am very glad to note wherever I go. There is no "close down" with the dealers. They are doing a nice trade, which I have always contended could be done with push, energy and discretion. The wholesale houses are co-operating with the retailer and the result must be pronounced a great success.

\* \* \* \*

The Neophone, Ltd., have just appointed one of the largest firms in Australia as their agents, in

Messrs. Tozer, Kemsley & Fisher. They have branches in Melbourne and Sydney, and will, therefore, be of considerable help to the Neophone Co.

\* \* \* \*

A. H. Brooks, late of the Nicola Record Co., has been appointed recording expert to the Odeon Co. This company is, of course, owned by the International Talking Machine Co. J. D. Smoot, who has been connected with the Odeon Co. for some considerable time, has been transferred to Berlin. He is now enjoying a well-earned holiday in the States before taking up his new post.

\* \* \* \*

The British Zouophone Co. have now moved into their splendid new premises, 43 City road. It consists of five very large floors. Mr. Long, the manager, informs me that since the reduction in the price of their records, the sales have been tremendous.

\* \* \* \*

The new Polyphone Supply Co., Ltd., have now acquired the good will and stock of the old-established firm, Nicole Freres, Ltd., Ely place, E. C. I wish them every success. They will not manufacture any disc or cylinder records, but will "factor" them only.

\* \* \* \*

The grand opera records put on the market by the National Phono Co. have been the greatest success they have ever touched on. Other noted singers will shortly be added to the list.

\* \* \* \*

The following companies are doing a bigger and better business now than they have ever done before. This should cheer up the real live dealer. Here is the list: National Phonograph Co., Ltd., Columbia Phono Co., Sterling (Russell Hunting Co.), Pathe Freres, Edison-Bell Co., Gramophone & Typewriter, Ltd., British Zouophone Co., Odeon Co. This don't show that the "talker" is dying out, eh?

\* \* \* \*

The Russell Hunting Co. have discovered a "new star" of sterling value in Miss Ella Retford. She was found at the Tivoli Music Hall in the Strand by Mr. Hunting. She is a native of Sunderland, and her specialty is coon songs. She asserts that her most successful song was the tremendous favorite, "Bill Bailey." She has just made six records for this company, including the "Little Rocking Chair." They are all excellent.

\* \* \* \*

Mr. Balcombe, the manager of Messrs. Barnett Samuel & Co., Ltd., in an interview, said that orders are certainly not as large as during the winter months, but, at any rate, the results conclusively prove that the summer trade is undoubtedly worth fostering. They are putting several new disc machines on the market, ranging in price from 35 shillings to £12 12s.

\* \* \* \*

The Gramophone & Typewriter, Ltd., gave a most successful recital at the Savoy Hotel recently. The arrangements and "get up" of the programme was excellent and reflected great credit on the management.

\* \* \* \*

The Edison-Bell Co. have just put on the mar-

ket three fine records by Chirgwin. They are absolutely lifelike, especially the "Blind Boy." They should sell by the thousand.

\* \* \* \*

The Columbia office graphophone has found a most appreciative public in London. A large number of the leading business houses in the city have had them installed. Mr. Wassley, the manager of this department, is making great strides for his company, and I expect shortly to hear that the office graphophone is to be found in every well conducted and up-to-date house.

\* \* \* \*

The Columbia Co. have just opened very fine new premises at 54 Market street, Manchester, where a brisk business is being done. Manchester is the very heart of the most densely populated industrial area in the world, and is in the north of England.

\* \* \* \*

The demand for the Edison productions in England has been so great that the National Co. have been compelled to drop the June American list of records, so that they can by this means catch up on orders of current stock. This is a remarkable statement for them to issue, but it clearly shows how great is the demand.

\* \* \* \*

Concerning the new "spun record" being brought out by the Edison-Bell Co., of Charing Cross road, which I mentioned in the June issue, Mr. Fox, the secretary of the company, told me that the new record would be of such a nature that it would "wear like iron." This, of course, does not imply that their present records are inferior to any on the market (from their point of view), but that the new process would considerably enhance the value of them.

\* \* \* \*

What a sight the Thames presented on Ascot Sunday this year! Everywhere we went we found the hundreds of steamers, houseboats and small crafts full of people, and in nearly every case you could find either a cylinder or disc machine on the boat. I never remember seeing so many "talkers" on fashionable boats, which should go a long way to prove to those false prophets that the talking machine business is not dying out.

F. PROCTOR.

M. Steinert & Sons Co., of Boston, Mass., the well-known jobbers of Victor machines, records and supplies, have been having splendid business during the past month. Under the able management of E. P. Cornell, their large store, located at 35-37 Arch street, has grown to be one of the leading "talker" centers in the East. This has been greatly due to their careful attention to dealers' orders and prompt return shipments. They are now handling a number of paying accessories in this line for dealers—one which they are themselves manufacturing and are featuring in their advertisement in this issue. These envelopes keep stock in condition and are made of a tough, transparent material which will wear like iron, and enable the user to see the number and name of the record without removing the cover.

## TRADE NEWS FROM ALL POINTS OF THE COMPASS

Henry J. Hagen, of the Victor Talking Machine Co.'s New York recording laboratory, writes from Buenos Ayres, A. R., S. A., that the "talent" in that part of the world are not at all modest in their demands. Here, where an average artist is paid \$2.50 for a song or talk, there \$4.50 is demanded. One supposedly high-grade gentleman, who hailed from Milan, Italy, offered to record 100 songs for \$2,000. Henry says prices on everything are sky-high, double the New York schedule, excepting in the liquid refreshment line, if the native product is consumed.

"Doc" O'Neill, the star traveler of the Zonophone staff, who came East before the 1st, went to Boston, his home, to enjoy the vacation rest. It was in "bean town" that the Doctor studied and practiced dentistry. Since then he has graduated into the ranks of the talking machine hustlers with high honors.

The "Edison Business Record" for June is a clever number, with illustrations to match. The expansion of this department of the National Phonograph Co. is marvelous, for which Manager Durand is given full and deserved credit.

Max Landay, of the Land-o-Phone Co., New York, sailed for Europe on the 7th, aboard the "Lucania" of the Cunard line. He will return in five or six weeks, and will combine business with pleasure—mostly the latter.

A needle-feed sound box has been finished and placed on the market by a Western concern. It is an ingenious device, but how practicable remains to be seen. So far, the goods have been shown a few jobbers, with the trade at large knowing little, if anything, about it.

A consignment of 400 Edison phonographs and 20,000 records, shipped to the National Phonograph Co.'s Sydney, Australia, branch house, was lost on the steamer Oakburn, from New York, which was wrecked near Cape Town, Africa, May 21. The loss was covered by insurance. As soon as the company's foreign department learned of the loss it duplicated the shipment. A total of 1,746 cases of Edison phonographs and records were shipped to their Sydney branch in that month. This is excellent evidence of the growth of the Edison business in Australia.

A Packard high-power automobile has been acquired by Edward B. Jordan, the Brooklyn, N. Y., manufacturer of talking machine cabinets. His New York friends in the trade believe he must have had an extra streak of luck with the "bones."

W. A. Lawrence, of the Standard Specialty Mfg. Co., who was in Boston the latter part of June stirring up the home situation, which is attracting marked attention these warm days, returned to New York in time to fittingly observe the "day we celebrate" and with a lot of good orders booked for early delivery.

Among the enterprising subscribers to The World in South America are Figner Irmaos, of Sao Paulo, Brazil. They are doing an immense business not only in American talking machines and supplies, but in all kinds of specialties. Their establishment is popularly known as the Casa Edison. They also publish a monthly paper called "The Echo," which contains much of general interest.

She—"Did you ever see the Homer twins?" He—"Yes." "Don't you think the boy is the picture of his father?" "Yes, and I also think the girl is the phonograph of her mother."

E. P. Cornell, manager of the talking machine department of the M. Steinert & Sons Co., the wholesale and retail piano house of Boston, Mass.,

who have branch stores in several other New England towns, was married last month and is now on a month's wedding trip.

Jones, Floyd & Co., of Ritchfield, Utah, are among the enterprising representatives of the Edison goods in that section of the country. Of course, they are World subscribers; in fact, every live house in this country as well as in South America and in Europe is numbered among our supporters.

The four stores of the Powers & Henry Co., Pittsburg, Pa., are spoken of by the traveling men as among the finest in the country, and their particular locations as chosen by a genius for trade.

Rumors are rife that many Edison jobbers of ordinary abstemious habits and inclinations are preparing to hop off the water wagon promptly on their arrival in New York this week, viz., July 17-20, but not before. Months have elapsed since a number of this engaging fraternity have indulged in the "waters of Bacchus," but the time of their deliverance from bondage is joyfully hailed as now at hand.

When the late Tamagno was singing in "Trovatore" many critics considered his method too strenuous and one of them said: "C'est Tamagnifique, mais ce n'est pas le chant!" It is curious how much sweeter the late singer's voice appears under the subduing influence of the talking machine.

Tom Murray, of the traveling force of the Columbia Phonograph Co., general, known everywhere for the size and character of the orders he corrals, was in New York early in the month consulting with Walter L. Eckhardt, manager of the wholesale department on the acceptance of several new jobbing accounts. Mr. Murray took great pleasure in calling on his many friends in the various branches of the business in and outside of his own company, and was given a cordial reception.

W. S. Long, of the phonograph department of F. T. Evans & Sons, Delaware, O., gives an open air concert every Sunday afternoon during the summer at the Mineral Springs, near that city. The music is of a religious and classical nature, and includes the latest pieces in both Edison and Columbia records.

The reports of the illness of Leon F. Douglass, vice-president of the Victor Talking Machine Co., Camden, N. J., are not of an alarming nature. Many inquiries from the principal centers have been received, indicative of the esteem in which he is held by the trade at large.

Robert L. Loud, one of the best-known music dealers of Buffalo, N. Y., is spoken of by the traveling men as qualifying to have one of the best talking machine departments in connection with his store in that city. He is giving the business his close attention, and the best results are predicted.

We have recently been shown a new compartment needle box that is a practical article of considerable merit. A patent has been obtained on the box, and other patents are pending. The patentees, Hawthorne & Sheble Mfg. Co., of Philadelphia, expect to have the boxes ready for the fall trade.

The Breslin House has been settled upon by the leading travelers in the trade as headquarters when in New York. It is centrally and advantageously located at Broadway and 29th street, and its appointments are up to date, being a comparatively new hotel.

The Columbia Phonograph Co. will have a splendid representation of commercial graphophones at the third annual business men's show to be held at Madison Square Garden from Oct. 27 to Nov. 3.

"Punch," in the character of a persistent week-end, complains that "it is practically impossible" to get any decent asparagus or up-to-date talking machine records in the neighborhood. The result is that two chauffeurs have left the week-end in two months.

At the recent sessions of the Interstate Commerce Commission held in Philadelphia, five commercial graphophones were used in getting out the daily reports of the proceedings.

"What's dat de orchestra was playin'?" asked the heavy-set young man with loud clothes.

"De programme says it's scraps from Wagner."

"Well, I knowed dey had a prize fight in de kinetoscope, but dis is de fust time I ever heard of one bein' set ter music. But judgin' by ear dis felly Wagner must be a daisy scrapper."

The current issue of Joe Chapple's National Magazine has a very interesting story showing how the Congressional reporters get out their copy by means of the graphophone.

## THE MELLO-TONE

Makes a Musical Instrument out of a Talking Machine.

The addition of the Mello-Tone perfects the Disc Talking Machine and makes it an enjoyable Musical Instrument for the home and parlor.

With the use of regular Victor Needles and the Mello-Tone everything that is on a record is brought out clear and distinct, though in soft mellow tones that are simply perfect. The Mello-Tone is easily attached or removed. Nothing to get out of order and will last as long as the machine does.

For the Victor and Zonophone Machines only.

**VICTOR CO. VS. KEEN CO. SUIT.**

Letter from David Keen, President of the Keen Co., Regarding This Litigation, Which Is Not Entirely in Conformity With the Facts as Revealed by Horace Pettit, the Well-Known Attorney—Letters Speak for Themselves.

Philadelphia, July 2, 1906.

Editor The Talking Machine World:

Gentlemen—The following subject may be an interesting one to you—the Victor Talking Machine Co. versus the Keen Co. in a pretended infringement on their disc record. The preliminary trial came off the 28th day of June in the Eastern District of Pennsylvania, before Judge McPherson.

The following is a correct occurrence: They sued us on the U. S. patents No. 334,533, 548,623. One of the patents, being an old method of making a disc record, was thrown out by the court and by their own attorney, Mr. Pettit, as records are not made to-day under that process.

Second patent being on a machine on a free swimming stylus, particularly claim 5-35, their counsel trying to mislead the court that the record is a part of said claims. The judges in Pennsylvania, knowing a little about talking machines, and the decision was rendered as follows:

The judge said: "I will not decide this case, but upon a bond of the complainant I will restrain the defendant so that it shall go up to a higher court."

The defendant was well represented by E. H. Hunter and R. M. Hunter, expert patent attorneys. It was immediately appealed. Gentlemen, if you wish to print this article in your paper, you will please not misconstrue any of these statements. Yours very respectfully,

THE KEEN CO., David Keen, Pres.

\* \* \*

RE-VICTOR T. M. CO. VS. THE KEEN CO.

Philadelphia, July 5, 1906.

J. B. Spillane, Esq., Man'g Editor:

Dear Sir—Replying to your favor of the 3d inst., asking for a brief summary of the above suit, and the result of the motion for preliminary injunction, would say that this suit was brought by the Victor Talking Machine Co. June 21, 1906, to restrain The Keen Co. from infringing the complainants' Berliner patents by selling talking machine records at a less price than that at which the records were licensed to be sold to the public. An order was entered on the same date that a motion for preliminary injunction be heard before Judge McPherson, in the U. S. Circuit Court for the Eastern District of Pennsylvania, on June 26, 1906, subsequently changed to June 28, 1906. On the latter date the motion for preliminary injunction was fully argued before the court based upon infringement of claims 5 and 35 of the Berliner patent No. 534,543 for Gramophone, of which the record is an important part. The complainant was represented by myself, and the defendant by Mr. Ernest Howard Hunter, of this city.

The defendant contended that because Patent

No. 548,623 had been decided by Judge Hazel to be restricted to the particular material of which the record was composed, which defendant did not use, that, therefore, the complainants had no right to claim restrictions upon the sale of records. Judge McPherson, however, in an opinion from the bench, decided that the complainants were entitled to a preliminary injunction based on their contention that the record was an essential part of the claims of the Berliner Patent No. 534,543, which had also been adjudicated by Judge Hazel and sustained in the suit of the Victor Talking Machine Co., et al, vs. The American Graphophone Co., September 28, 1905.

In accordance with this decision a decree was entered by Judge McPherson for the complainants on June 29, 1906, restraining the defendant, its associates, etc., from directly or indirectly, selling, or causing to be sold, or advertising for sale, or in any way disposing of talking machine records of the complainant's manufacture, forming part of claims 5 and 35 of the Berliner Patent No. 534,543, at a less price than the price at which the same are licensed by the complainants to be sold. A bond of \$2,500 was entered by the complainant. I think this will give you the information that you want and will be pleased to give you further data upon hearing from you. Yours very truly, HORACE PETTIT.

**NEW OFFICE BUILDING AT ORANGE.**

The new concrete office building of the Edison companies at Orange, shown below, is rapidly nearing completion. The time department has

THE HANDSOME OFFICES OF THE NATIONAL PHONOGRAPH CO., ORANGE, N. J.

already taken possession of its quarters on the ground floor. The departments that are to occupy the first and second floors expect to move in before August 1. The third and fourth floors will be occupied later.

This building is practically five stories high, for the basement floor is almost entirely out of ground. It is 137 feet along on Lakewood avenue and 50 feet deep. A hallway runs the full length of the structure on each floor, with offices on either side. The building will have a complete elevator service and every modern equipment for business. It is built entirely of re-enforced concrete and is absolutely fire-proof.

**"TALKER" AS AN ENTERTAINER.**

Pathetic Story of How the Talking Machine Brought Comfort and a New Life Into the Home of a Paralytic—Prays That It May be Introduced Into Every Hospital and Institution in the Country.

"I had never been a talking machine enthusiast," said a well known musician, "notwithstanding my ability to see how the development could bring about some remarkable conditions in the musical world, and by this I mean in the musical world of culture, but I ran into a talking machine situation which made me think in one moment that if nothing else were ever accomplished, no greater godsend had ever been thought of. The story is told very simply, but it leaves something to think about with every one who can feel for a fellow being deprived of health and liberty to go and come according to his own sweet will. I saw a home where the mother had been confined to her apartment for over ten years, a paralytic, but fully alive to the life outside. Her family was grown and in homes of their own, but for one exception. This son decided there must be some way devised to entertain her and as she had been a music lover and no way to have music in the home at command, he resolved to invest in a talking machine. The investment proved the best one that any human being ever dropped on to, as the old lady never tires because she is interested in every side, including the comical stories and vaudeville sketches, as well as every musical

record available. She has become perfectly intimate with composers and the different singers and she looks forward with the greatest delight to the next record that will come into the house. Yes, the talking machine has won its way into my heart. I cannot think of a more wonderful ray of light into the room of an invalid. I wish I could make everybody see it from this standpoint, I would make a petition that it be introduced into every hospital and every home and institution in the country."

## EDISON JOBBERS AND DEALERS SUED.

Test Case Argued—Snap Judgment Fails—Decision Reserved—Great Array of Counsel.

When the New York Phonograph Co., through Samuel F. Heymann, their attorney, served bills of complaint on a large number of Edison New York jobbers and dealers, in which an injunction was asked to restrain them from selling Edison machines and records, besides to render an accounting, and in which damages in each case to the extent of \$10,000 was demanded, those not cognizant of the actual conditions of affairs were misled into believing ruin was staring the National Phonograph Co., who defended the suits, in the face. There is no question the points in controversy are complex.

Since the decree was issued by the Court of Appeals such further proceedings taken emanated from the New York Phonograph Co., consisting, as the defense puts it, "mainly of sensational statements in the daily press, in which the amount of damages was placed at \$10,000,000; and as Mr. Edison's name was invariably mentioned as the principal, if not the sole defendant by inference, the yarns were evidently framed up to frighten the dealers and jobbers handling the line of the National Phonograph Co. As a general proposition, no one can say what will be the outcome of any kind of litigation, but the foregoing statement reflects the consensus of trade opinion, as expressed privately and at meetings in which the matter was specifically discussed. The legal aspects of the case are laid down on opposing lines, of course, by the attorneys on both sides, and of which the court is the sole arbiter."

It is evident, however, that the final stages of this celebrated suit, now before the trade for years, was entered upon on June 21 in the Supreme Court of Westchester County, at New Rochelle, N. Y., before Justice Keogh. A case each of a New York City jobber and a dealer was selected by the defense for a test on the questions at issue. Preliminary to argument the complainants wanted the court to grant defaults in all the other cases filed and injunctions issued, but the request was peremptorily refused. Counselor Heymann contended that the New York Phonograph Co. held a right in perpetuity to patented as well as to unpatented inventions of the National Phonograph Co. It was pointed out, in reply, that Judge Hazel decided they were not entitled to the Edison patents in perpetuity, but a right only to those acquired by the old North American Co.

The National Phonograph Co., Judge Hatch making the principal argument, attacked the motion for injunction and an accounting on the ground that the pleadings were insufficient to warrant the extraordinary relief asked for. They also contended it was a patent case, and therefore the State courts had no jurisdiction. Decision was reserved.

A great mass of affidavits was filed by the defense, covering all phases of the case, submitted by Charles H. Buckingham, Frank Dyer, William Pelzer, attorneys; Thomas A. Edison; W. E. Gilmore, president National Phonograph Co., and a number of others in various positions and departments of the company. The volume containing the affidavits and descriptions and illustrations of the exhibits is four inches thick. The

complainants were granted until June 26 to reply to these affidavits.

Samuel F. Heymann and another appeared for the New York Phonograph Co.; Judge E. W. Hatch, formerly of the New York Supreme Court, and of Parker, Hatch & Sheehan; Chas. L. Buckingham and Chas. M. Hough, recently appointed the new judge of the United States District Court, Southern District of New York, by President Roosevelt, for the National Phonograph Co., et al.

## CLEVER WINDOW DISPLAY

Of the Cleveland Branch of the Columbia Phonograph Co.

Clever window displays of talking machines and accessories are quite the thing nowadays and the various branch store managers of the

Columbia Phonograph Co. are vying with each other to produce effects that demand attention.

We illustrate herewith the plan of a horn display recently carried out at the Cleveland store of the company under the direction of Manager Probeck.

The central figure is a series of horns upon a revolving base, the motive power of which is an electric fan placed in a corner of the window. An octagonal base is best suited to the display of the horns. Surrounding this movable portion is a circle of stationary horns. Those marked "R" have red lights and those marked "G" have green lights. All horns used must be of aluminum, as brass casts a yellow reflection and detracts from the beauty of the lights.

## NORCROSS TO MANUFACTURE

A Coin-Operated Machine Which Is Very Unique.

T. W. Norcross, recently associated with Peter Bacigalupi, San Francisco, before the "quake," in his slot machine department, has now located in New York. He is the inventor of a coin-operated device whereby the record is illustrated as well as heard, and arrangements are now being made for manufacturing it on a large scale. Mr. Norcross is also the patentee of a new horn crane, which is described as one of the neatest, most compact and reliable articles on the market.

L. Kaiser, of S. B. Davega's talking machine department, has its exclusive selling agency East. For twenty years Mr. Norcross was in the theatrical business, being stage manager at the New York Casino during the Aronson regime, and is a man of diversified talents and a history.

## A NEW LINE OF HORNS.

The new line of art or dull finish horns—in various colors, solid, flower, etc.—just put on the market by the Standard Metal Manufacturing Co., 10 Warren street, New York, are the finest and best finished goods this enterprising concern has produced. Their shape, large size and gradual taper, is conducive to give better tone results, while the handsome decorative effects are not excelled. The company's new catalogue furnishes the particulars of the Standard horns, of which they aim to manufacture the largest variety and highest grade. Several interesting interior views of their factory in Newark, N. J., are shown in the catalogue, a creditable contribution to trade literature, though the first issued.

## OUR CYLINDER RECORD CABINET NO. 30

Is one of the handsomest Cabinets on the market, being well proportioned, has French Legs, Five Drawers, holds 150 Records. Golden or Weathered Oak or Mahogany Finish.

Write for Catalogue and prices or ask your Jobber for the Feige Cabinets.

## TRADE NOTES FROM WHEELING.

Conditions Satisfactory—Bard Bros. in New Quarters—W. H. Hug Visits the City—Some Notes of Interest from West Virginia.

(Special to The Talking Machine World.)

Wheeling, W. Va., July 6, 1906.

Conditions in this city are very satisfactory considering the season of the year. While the volume of sales are small in proportion to those of last summer the quality of business is extremely gratifying. The best people of the city are buying high grade outfits for their summer homes and it would seem as though the fall and winter business will be a winner. During June, Bard Bros., the exclusive talking machine concern, purchased the small goods and sheet music stock of the Hoehl & Gieseler Piano Co. Through this deal they secured immediate possession of the entire building located at 1045 Main street. This building will be remodeled and fitted up as an exclusive talking machine store. In connection with this they will continue the sheet music department, taking advantage of their immense record trade, which will no doubt have its effect upon popularizing many of the new songs. The Market street store will be continued the same as before.

Mr. Phillips, the manager of the C. A. House talking machine department, reports very good business, and says that when he comes back from his vacation he expects to make things hum in his department.

The F. W. Baumer Co. are enjoying prosperity for this season of the year in their talking machine department. One of the recent trade visitors was W. H. Hug, representative of the National Phonograph Co. This was Mr. Hug's first visit to the trade as representative of the Edison product. He made a most pleasing impression upon the dealers of this city, and there is no doubt but this genial gentleman will inspire the Edison dealers of this section to put forth greater efforts than ever.

Mrs. Nelson, formerly at the head of the talking machine department of the Hoehl & Gieseler Piano Co., has left for a vacation of several months to be spent at her home in Maine. After recuperating in the State of forests and lakes she will return to this city, having accepted a responsible position with Bard Bros.

## INITIAL LETTER POST CARDS.

The initial letter post cards which are being put out by the Rotograph Co., 684 Broadway, New York, are proving big sellers. The talking machine men are handling these specialties as well as other stores throughout the country, with great success. The cards consist of one large letter, outlined distinctly in a black border, inside of which are real photographs of famous stage beauties.

All the women dear to the heart of the public find a place in this gallery of initial letters. From Anna Held, Lillian Russell and Edna May to Maxine Elliott, Viola Allen and Mary Manning, the variety is certainly one to satisfy any and every kind of taste. Some very clever young women have discovered in these post cards a novel value. Indeed, one little lady in a Connecticut town has been able to get ideas upon a very effective manner of dressing her hair from the pictures of the various actresses shown on these cards.

Besides the real photographs on the initial letter post card there are artistic designs of fruit and flowers which decorate the frame of the letter. Letter I is decorated with iris, N with narcissus, Q with quinces, E with edelweiss, G. with geraniums, B with blackberries, V with violets, L with lilies, M with marguerites, etc. These designs are daintily unconventional and attractive.

One way in which these cards are adapted to the needs of novelty-loving Young America is this: A card is sent to a friend every day until the initial letters spell a word. Sometimes a message of more than one word is sent in which case a day must elapse, as space between two words.

## GRAPHOPHONE FOR MILAN.

Remarkable Instrument Completed by Columbia Graphophone Co. for Great Exposition at Milan, Italy to Celebrate Opening of Simplon Tunnel.

The Columbia Phonograph Co. have just completed a special graphophone made for display at the great exhibition to be held in Milan, Italy,

apt to characterize Italy as the land of song and story, ignoring the fact that the industrial development within the past ten years has been simply marvelous. In the silk and cotton industries Italy has won great fame, as well as in such newer industries as electric chemistry and electrometallurgy. This new graphophone made by the Columbia Co. is something entirely unique, and is destined to win no inconsiderable share of attention from the visitors to this great exposi-

REMARKABLE GRAPHOPHONE MADE FOR EXPOSITION AT ITALY.

to celebrate the opening of the Simplon Tunnel, and which promises to be as great a revelation to America as the World's Fair at Chicago and the Louisiana Purchase Exposition at St. Louis were to Europeans. The underlying purpose of the exposition at Milan is to reveal Italy's industrial expansion in the last decade. Too many are

tion, which marks the union, so to speak, of that thriving little republic, Switzerland, and historic Italy.

The Carlisle Commercial College of Carlisle, Pa., is among the latest institutions to add the commercial graphophone to its equipment.

## When Aladdin Rubbed His Lamp

it did wonders. To-day anyone can do wonders with any talking machine by simply rubbing a little "3-in-One" on the metal surfaces—by lubricating the action points, polishing the wood case and cleaning the disc and cylinder records with this wonderful oil.

"3-in-One" is best to use, easiest to sell—most satisfactory to the buyer, most profitable to the dealer. Why aren't you selling it? Just use "3-in-One" once, to satisfy yourself. You'll sell it ever after to satisfy your trade. And, incidentally, you will make good money—50 and 100 per cent.

Suppose you sit down right now and write us for a FREE sample bottle and the "3-in-One" Book. Better still, order a trial supply of "3-in-One" from your jobber. It will be gone before you know it—so will your customers' talking machine troubles.

**G. W. COLE COMPANY,** Sole Makers of "3-in-One"

Broadway and Liberty Streets,

New York City.

## ELECTRIC MUSIC GENERATING SYSTEM.

The First Station at Broadway and 39th Street, New York, Now Being Installed With an Equipment for Producing Music That Is Purely Electrical—Will be Distributed Like the Telephone to Residences, Hotels, Public Halls, Parks, Piers, in Fact, Wherever Bands or Orchestras Are Now Employed—Dr. Cahill's Labor of Years at Last Approaching Fruition.

There is now being installed in the Audubon Building, Broadway and 39th street, New York the first large station for the practical demonstration of the Telharmonic system controlled by the Cahill Telharmonic Co., of Washington,

system that supplies music of all kinds at any hour after 9 a. m."

As previously stated in The World, in connection with a descriptive article, the Telharmonic was invented by Thaddeus Cahill about

these dynamos. They sit at an ordinary keyboard and run their fingers over the keys just as if they were playing an organ, only there are no strings, no pipes, no stops, or any of the ordinary apparatus, but only wires which are attached to the keys and connect them with the dynamos.

The business will be managed on a system similar to that of a telephone company. Patrons will be asked to enter into contracts for a year or a part of a year. Hotels, restaurants, theaters and other public places will be first supplied. The terms have not yet been fixed, but there will

ELECTRICAL MUSIC TRANSMITTER IN OPERATION.

D. C., with a plant at Holyoke, Mass. In a talk with The World a member of the company said: "The Telharmonic with the opening of the New York station early this month, will enter the commercial field as a proven proposition, and the size of the station illustrates our faith in the success of the venture. The machine now being installed weighs 200 tons, and makes use of 150

ten years ago in Washington. He took the model to Oscar F. Crosby, of Washington, who, with F. C. Todd, of Baltimore, furnished him the means to perfect it. They organized a company and built a factory at Holyoke, Mass., where the first great instrument, now being installed here in New York, was made.
